Discussions with Sadat and Fahmy covered new ground in that both said that Egypt would start peace negotiations without preconditions. Changes in position or possible concessions are often mentioned in a list of unaltered positions—or are stated and then left out of subsequent discussions. In this context the willingness to start talks without preconditions was an important departure from previous Arab positions and presents an opportunity to move forward. Both Sadat and Fahmy said that no previous assurances were required for negotiations to restore territories, to end belligerency, in respect of the PLO, the status of Jerusalem, or for the future of conventional arms and nuclear weapons in the area but all of these issues would have to be negotiated thoroughly at Geneva. In effect, the Egyptians agreed to talk and set forth an agenda but did not attach conditions to the agenda.

Discussions with the Egyptian leadership set peace negotiations in a rather optimistic context. Perhaps the most important factor is that for the first time Arab leaders are willing to recognize the right of Israel to exist as an independent and secure Jewish state. Such recognition and an eventual settlement would probably involve some kind of international guarantee, and President Sadat has no objections to giving Israel whatever security guarantees it wants—United Nations, American, or other. Egypt would want for itself the same guarantees given to Israel. The two main issues which must be resolved eventually to bring about a peace agreement are territorial adjustment and the future of Palestinians.

President Sadat sketched a possible approach to peace. First, all parties would meet in Geneva for the purpose of reaching a peace agreement. Secondly, the state of belligerency would be officially ended. Third, Israel would withdraw from land seized after 1967 and a Palestinian state would be created on the West Bank. Finally, the status of the Golan Heights and other issues would be settled. Foreign Minister Fahmy explained Egyptian thinking on the distinction between a peace agreement and diplomatic relations.

A peace agreement accepting the existence of an independent and secure state was possible, but normal diplomatic relations or joint ventures with Israel would require more time and could be done in future years. President Sadat observed that in the Arab culture it is extremely difficult to have face-to-face discussions with an adversary, but that negotiations such as those resulting in the Sinai agreements were productive, and that direct contact could be practiced in the future by Egyptians and Israelis. Foreign Minister Fahmy suggested that the American reluctance to extend diplomatic recognition to Peking while relations were improved underscored the point that recognition is not a precondition to progress.

The Egyptian side expressed skepticism as to the likelihood of Israel's responding favorably to the possibility of peace talks. If the United States did not move quickly on a global peace package at Geneva, Foreign Minister Fahmy predicted that the Israelis would delay throughout 1977. Moreover, he said that the Israeli side would probably insist that the Arabs end the state of belligerency before talks begin. President Sadat insisted that a settlement between Arabs and Israel was possible, but he feared that Israel would try to impose a solution on her neighbors. Another possible obstacle would be Israeli insistence on open borders—which Sadat saw as not practical and not essential to a peace agreement.

President Sadat reviewed briefly the situation in Lebanon. He regretted the tragedy of the Lebanese conflict and the quagmire into which Syria had stepped. It was time to start anew by supporting President Sarkis of Lebanon and by placing the Arab forces in Lebanon under his command. Conflicts between Egypt and Syria over Lebanon were now part of the past, and President Sadat hoped that the worst was over and that Lebanon would rebuild.

Regarding the PLO, President Sadat said that before the 1974 Rabat conference he had tried to include King Hussein in the representation of Palestinians, but the Palestinians themselves were opposed. Today the PLO was divided into various sects and located in different countries. Yassir Arafat was the most moderate of PLO leaders, and Egypt would continue to accord him its support.

In late December President Sadat said that he and Syrian President Assad had agreed that the time had come for the Palestinians to set up a government linking a West Bank-Gaza state with Jordan. There were indications that some Palestinian groups might have been persuaded to accept such concessions toward a peace settlement. The Israeli reaction was cautious with Prime Minister Rabin reaffirming that the only Palestinian representatives his government would meet with at Geneva would be those attending as members of the Jordanian delegation.

Foreign Minister Allon was a bit more optimistic, praising the suggestion as a possible "turning point".

Points Regarding Relations Between Egypt and the United States

The candid and constructive talks with President Sadat and Foreign Minister Fahmy underscored the importance to Egypt of ties with the United States after a disruptive break with the Soviet Union. President Sadat expelled Soviet technicians in 1972 and cancelled the treaty of friendship in early 1976. He described his relations with the Soviets as still "strained." During the week prior to the delegation's arrival Soviet Foreign Minister Gromyko had met with Foreign Minister Fahmy; President Sadat said that the meeting produced nothing more than a communique stating that "each side had expressed its opinion." The Soviet withdrawal had brought some serious difficulties in the shortages of spare parts and other readjustments. President Sadat contrasted the Soviet refusal to reschedule debts with the American provision of $750 million in aid during 1976. Nonetheless, he thought that Egypt had suffered in military terms. After the 1973 war Israel had been rearmed and given sophisticated weapons. Syria was given tanks and planes. By contrast Egypt had to date not received any American military equipment. President Sadat appealed to the U.S. Congress to help him, arguing that our two countries were now friends and that President Sadat had proved himself to the United States in many ways including the placing of American technicians in the Sinai and in Suez.

Foreign Minister Fahmy was especially blunt in criticizing the ability of the Israeli lobby to go behind American administrations to obtain whatever it wanted from Congress. One example cited was President Nasser's acceptance of the Rogers Plan (former Secretary of State William P. Rogers) which Sadat said had been defeated by Israeli pressure on Congress. He feared that if President Carter were to present a peace proposal, Congress would "shoot it down." He noted that the Arabs don't have as powerful a lobby. Fahmy stated that the fact that the United States, and especially the Congress, backed Israel "completely" with military equipment meant that Israel had no fear of the United States and could produce atomic bombs. He stated that American nuclear scientists visited Israel two or three times per year, some of them on a personal basis. Fahmy was especially bitter about the fuel-air cluster bombs promised to Israel in the closing days of the U.S. presidential campaign. He observed that even American allies did not have such weapons and handed the delegation a recent article from the Christian Science Monitor describing the fuel-air bomb. The Foreign Minister stated that both the United States and Egypt should have the courage to move ahead with efforts but that such progress should not be complicated by American provision of lethal arms to Israel.

Domestic Affairs and Economic Development

President Sadat reviewed the progress in managing the Egyptian economy since the low point following the October 1973 war. Although Sadat was optimistic and determined to bring improvements, most American analysts believe that the economy is in poor shape: little investment, no growth, and general stagnation. A main step to attract investment and promote growth was Sadat's 1974 declaration of an "Open Door" policy. The policy was designed to encourage foreign investment consistent with Egypt's development plans. Egypt preferred investment shared with Egypt which brought new technology. President Sadat noted that the First National City Bank and Chase Manhattan had both established offices in Egypt. There had recently been private sector investments in cement and there were prospects for ventures in agro-industries. Nonetheless, progress under the "Open Door" has been scant and popular expectations of progress are likely to bring increasing difficulties as in the riots in mid-January 1977.

President Sadat reviewed some of the financial assistance Egypt had received since 1973. Immediately after the war Arab countries had provided some financial assistance, and a recently created $10 billion development fund had received $2 billion thus far. Sadat expressed thanks for the $750 million in aid provided by the United States in 1976. Egypt's immediate problem is a large sum of short-term loans at high interest rates; efforts were underway to try to convert them to medium and long-term obligations. President Sadat recognized the need to reorganize the Egyptian Government and to improve financial management and had taken steps in this regard just prior to the delegation's arrival. He expressed confidence that management would be improved and that revenues from the Suez Canal, from aid donors, and from foreign investment would be used productively. The main concentration until 1980

would be on expanding irrigation and mechanization and introducing new technology in the agriculture sector.

The first moves by the new economic management were consistent with advice given by the International Monetary Fund, the major Arab donors, and the United States. Faced with large deficits and price distortions, the Government raised prices by cutting off subsidies on a series of consumer items including those closest to the people: butane gas, bread, tea, and cigarettes. After the riots in several cities in mid-January the subsidies were restored. The forceful reaction by rioters demonstrated the precarious economic situation and the fact that the "Open Door" and cooperation with the West have not brought economic benefits anticipated.

The January 1977 riots involved denunciations of President Sadat and suggest that he will be under even greater pressure to prove the benefits of his economic policies, his room to maneuver has been restricted.

A discussion with Foreign Minister Fahmy relating Egypt's need to press forward with its economic development to the cost of national security was especially prophetic. Fahmy told the delegation that most Egyptians live on sweetened tea and one piece of bread each day. Egypt's population would double to about 75 million people by the year 2000. With so many people living in such extreme poverty, Fahmy said that it was essential to reach a peaceful solution. Egypt had to place resources now dedicated to defense to feed, house, and educate the Egyptian people. The recent violent reaction to price increases for those basic staples underscored Fahmy's message. Both the critical need to bolster a weak economy and the wisdom of reinforcing President Sadat's efforts to find peace argue strongly for an end to the harmful no war, no peace situation in the Middle East.

Conclusions Regarding the Middle East

Discussions such as those this delegation had with leaders of the Middle East are but part of the ongoing exchange of positions and testing of new policies. There were two basic points which represented changes on the Arab side. Though stated in other words, omitted, or amended in subsequent statements, the changes were significant. The first was the willingness to accept the existence of an independent and secure Jewish state in Israel. The second was President Sadat's statement that all parties involved with peace negotiations on the Arab side are prepared to begin talks without preconditions. Subsequent exchanges between the two sides suggest that both points remain alive.

The presence of a relatively moderate group of Arab leaders accepting the existence of Israel, and willing to talk, suggests that a peace initiative should follow this propitious state of affairs. There is distance between the Arabs and Israelis over the presence of Palestinians at peace talks, whether to go to Geneva, and the other issues. At the same time there are possible ways to accommodate the pride of positions taken while seizing the moment to move ahead. Regarding the role of Palestinians, there are a number of possibilities: inclusion in an "umbrella" delegation of the Arab side, agreement to include Palestinians after substantive negotiations have begun, or inclusion initially at a working group level with full representation after various substantive issues have been settled. It should be possible to find an acceptable approach to such present obstacles. President Sadat has said that a strong American role would be welcomed, and Israel has indicated that it would trade territory for peace.

Many Middle East leaders were eager for the United States to assume a leading role and stressed that American initiative was imperative to start a serious movement towards peace. All sides agreed that no serious progress would take place without an American lead. The exchange of positions by statements and by talking with intermediaries simply measures the potential for progress. For talks to start and for concessions to be made, it is clear that the United States will have to take a leading role in bridging the gap and moving both sides forward.

Successful negotiations will require flexibility on several issues. The main issue will be boundaries. Between the position sometimes stated by Arab countries that all land occupied during and after the 1967 war must be returned and equally forceful Israeli positions that the same land must be retained will lie the possibility for accommodation. The most useful principle of accommodation would be to allow Israel to have militarily defensible borders and to yield non-strategic territory.

For Israel, negotiations will mean looking beyond short-term security and heavy dependence on American military assistance to long-term security and recognition by neighboring countries that the resulting agreement was a just one. For the Palestinians it will mean renunciation of terrorism and recognition of Israel's right to exist as a Jewish state in return for territory, or the chance to establish a Palestinian state. For Egypt and Syria, peace will involve regaining territories in return for recognizing Israel's right to exist, renunciation of use of force, and acceptance of a system of guarantees.

The continuation of a no-war, no-peace situation in the Middle East prevents Israel, Egypt, and other countries from concentrating attention and resources to their economies. In Israel the high rate of inflation, abnormally high taxes, labor disruptions, declines in living standards and salary cuts, and problems of industrial development present a somber economic picture. In Egypt the lack of investment, economic stagnation, weak development management structure, and large external debt all demand strong corrective measures. The scope for diverting resources from defense to domestic investment is small in both countries if the threat of war continues. The following data give some appreciation for this argument. Egypt's per capita income during 1975 was $310 (World Bank estimate). The U.S. Government estimates that in 1975 and 1976 Egypt spent $40 per capita on defense. Israel's per capita income in 1975 was $3,580 (World Bank estimate), and per capita defense expenditures for the same two years were about $1,100 each year. During 1975 and 1976, by U.S. figures, Egypt spent about 20 percent of its Gross National Product on defense—an enormous proportion for a poor country. Israel spent about 35 percent—which is among the highest in the world. The prospects for worsening economic situations in Egypt and Israel argue both for serious concessions in moving towards a peace settlement and for a strong American effort to take the lead.

All parties expect the United States to take the lead in the Middle East. Several leaders underscored the view that timing was crucial: conditions for movement towards peace are presently favorable and the United States should move quickly in order to maximize this opportunity. Not to put forward a plan early in 1977 would be to ignore a chance for peace. The basic commitment to a peaceful settlement stated by Prime Minister Rabin for Israel and offered by the Arab side by President Sadat stands as a significant signal despite the subsequent resumption of rhetoric and nuances in the Middle East. Any serious peace initiative will have to be developed despite the ongoing exchanges of public statements. An American involvement in a peaceful settlement is inevitable. There will be requests for international guarantees which may include use of American resources. Such costs will have to be weighed against the cost of future wars and the increasing danger of devastation with new weaponry. The benefits of a peace agreement with guarantees outweigh the risks of an accelerated arms race and another war.

III. UNITED STATES POLICY TOWARDS IRAN

Strategic and political considerations

The delegation spent from November 15th to the 20th in Iran meeting with Government officials and Americans in Teheran, Isfahan and Shiraz. Discussions were held with Ambassador Helms and several members of the embassy staff, His Imperial Majesty the Shahanshah, Prime Minister Hoyevda, Vice Minister of War General Toufanian, President of the Iranian Atomic Energy Organization Dr. Etemad, and regional and city officials in Isfahan and Shiraz. The extensive and growing relationship between the United States and Iran has several facets, including cooperation in strategic interests, investment and trade (especially the sale of oil by Iran and defense and non-military equipment by the United States) and lately the issue of human rights. The delegation reviewed these issues within the limits of time available.

Strategic considerations and arms sales

The difficulty of coming to grips with American policy towards Iran is that two major strategic factors are paramount: Iran has a 1200 mile border with the Soviet Union, and Iran is among the largest purchasers of American arms. The strategic importance of the Soviet threat and the need for a rational, orderly arms export policy are underlying factors which require assessment.

Strategically Iran is an important friend in a critical and unstable part of the world. Iran needs support to maintain its integrity free of Soviet influence. Iran was subject to Soviet pressures after World War II and has since maintained a strong posture of pro-Western resistance to the Soviets. In 1971 the British withdrew from the Gulf, making some sort of adjustment—another Western reinforcement or a stronger Iran—a necessary compensation. Iran is concerned with a number of potential problems within the region: the Arab/Israeli conflict, Iraq and its possible threat to Iran with use of Soviet arms, and the uncertain state of affairs in Afghanistan. These factors plus the need to protect the oil lifeline from the Gulf oil producers through the Straits of Hormuz to the Western world all draw attention to the strategic importance of Iran.

The Straits of Hormuz have become a point of exceptional importance in the Western world's dependence on the Persian Gulf area for energy. The delegation made a flight over the Straits to gain a sense of the geographical configuration through which a loaded tanker exits the Gulf every eleven minutes. The passage has a minimum width for navigational purposes of about 20 nautical miles with a preferred channel of only a few miles. During calendar year 1975 about six billion barrels of oil were shipped through the Straits, or about 16.6 million barrels per day to world oil markets. During 1975 about 7.5 percent of total American oil consumption passed through the Straits. The proportion increased dramatically during 1976 to roughly 18 percent of total American consumption. During 1975 about 52 percent of Western Europe's oil consumption and 75 percent of Japan's came through the Straits. The proportions for Europe and Japan did not change markedly during 1976. Iran provides the defense capacity which overseas the security of the Hormuz Straits.

The American decision to arm Iran after the British withdraw from the Gulf and as a corollary to the Nixon Doctrine was an alternative to a greater American presence. In a broad strategic sense, the weakness of the Southern flank of NATO to the West and the paucity of pro-American strength stretching to East Asia makes Iran especially important to the United States. In light of Iran's strategic value, the question of the nature of military relations that should exist requires consensus within the United States.

The Iranian response to these questions was presented to the delegation. Iranian officials strongly believe that ties with the United States should be solidified through continued arms sales, American investment, and a broad range of cooperation. Iran sees itself as a sovereign equal who supports the West and deserve American backing.

In light of Soviet military strength and Iranian memory of previous Soviet occupation, Iran does not dismiss the possibility of a Soviet attack. Iranians suggest that proxy attacks are possible, such as one from Iraq with Soviet weapons. A competent and well armed Iranian defense force is required to discourage possible aggression. Finally, the role of paramount regional power is suggested as being inherently in the American interest.

American failure to agree upon the strategic importance of Iran will make all the more difficult the second set of decisions including arms sales. What constitutes the appropriate American role of reliable supplier of modern military equipment to this important friend. A recent Senate Foreign Relations Committee report made the important point that the initial strategic or "front end" aspects of arms sales receive considerable attention. The maintenance, training, and other absorptive factors—the "back end"—receive less, and the report concluded that Iran was having problems absorbing military assistance. That those conclusions were disputed by some in Iran is less important than the need for a coherent arms export policy to fit our strategic/military posture towards Iran. If Iran is deemed both critical and threatened, then "back end" backups can be tolerated and extra expense to alleviate them may be in order; the reverse is equally true.

The decision by President Nixon in July 1972 allowing Iran to decide what it needed for its defense invited a long shopping list. In effect, defense industries acted without official U.S. guidelines in supplying arms. Iranian officials defend the weapons systems requested and point out that they pay cash unlike other countries receiving American equipment. Iranian military officials do not suggest what the limits are to the kinds and numbers of weapons they need. Iran has F-4 and F-5 aircraft, and in 1972 agreed with the United States to purchase the F-14 with the Phoenix missile. Iran has received approval to buy the F-16 and has requested the F-18L, and the Airborne Warning and Control System (AWACS). Whether these systems should be sold is beyond the work of this delegation. These systems were discussed, but each is a complex matter requiring thorough study. The point is that the United States will have to deal with these requests from an essential ally and important friend while deciding specific cases within broad strategic and arms sales policies. The absence of such policies will make agreement on sales of nuclear reactors all the more difficult.

Oil exports and economic relations

The focal point of the Iranian economy is the export of oil and the importation of the means to diversify the economy and develop structures not dependent on oil. Believing Iran's ability to export oil is limited to less than thirty years, the Shah has launched an ambitious economic development program financed by the investment of oil revenues. The United States and other Western countries are especially involved in the infrastructure and manufacturing aspects of Iranian development efforts.

Prime Minister Hoyveda estimated that 19 percent of Iran's imports excluding arms purchases are from the United States. The Prime Minister told the delegation that the non-oil economic sectors had grown by 22 percent in constant prices during the past three years. He stressed that while national security is important to Iran, defense is still only 13 percent of the Gross National Product.

The delegation raised the question of the price of oil and the then forthcoming OPEC meeting (December 1976) to consider an increase in oil prices. One Senator asked what the effect of the projected 15 percent price increase would be on countries such as Italy and the United Kingdom, and how 15 percent could be justified since inflation in many countries such as the United States is less than 15 percent. Prime Minister Hoyveda replied that it was not oil which put Italy and the United Kingdom in their present economic difficulties. Iran, Hoyveda said, strongly supported the concept of tying the price of oil to an international measure of inflation through an indexing system. Another Senator urged Iran to defer a decision to increase the price of oil in order to give the new American President a chance to consult with Iran and other oil-producers on oil prices within the context of controlling world-wide inflation.

Human rights

The members of the delegation were cognizant of and concerned about human rights issues in Iran, especially alleged instances of torture. While there are limits to what one sovereign state should say to another about internal affairs, the growing importance of American economic and security cooperation with Iran add importance to questions about human rights and any other potential stumbling blocks to close relations.

The delegation regretted that neither the focus of its mandate nor availability of in-country time allowed pursuit of this important issue in significant depth. Nonetheless, this subject was raised in discussions with the Shah and with Iranian officials and Americans in Iran.

Senator Griffin preferred the following language on the matter of human rights in Iran:

"The members of the delegation were aware of, and deeply concerned about, charges of torture and other abuses of human rights in Iran. However, neither the focus of our mandate nor the availability of in-country time allowed us to give this important subject the serious attention we felt it warranted.

"Because we were unable to investigate firsthand the various charges that have been made concerning the violation of human rights in Iran, we have refrained from drawing conclusions on this subject in our report. In our view, the matter is much too important, and the charges too serious, to be dealt with in a casual manner.

"Nevertheless, members of the delegation did express their deep concern for human rights in conversations with the Shah. The issue was also raised by individual Senators in discussions with other Iranian leaders and with Americans in Iran."

Other groups have reported on this question, most recently the State Department's report to the House Committee on International Relations of December 31, 1976. Recent developments give cause for both optimism and dismay. On the one hand the Government of Iran has received discreet, official American representations on this sensitive internal matter and has received delegations from the UN Human Rights Commission and the International Commission of Jurists (both in 1975). The Government and the Shah himself appear responsive to international concern. On the other hand accounts of torture by the security police (SAVAK) continue to be reported in the press and denied by Iranian officials. According to Iran and the State Department terrorist opposition to the Government from both the right and left persist.

A fair measure of human rights in Iran must place achievements in human rights alongside allegations of violations. In both the context of Persian history and compared with other countries in the region, the present Government of Iran is a regime of economic and social progress. Under the Shah a national system of elected representatives has been established. While the important decisions still are made by the executive, the creation of a two-chamber parliament and its assumption of some duties is a positive step towards popular participation. The June, 1975, elections for the two houses have been cited as a marking point in evolution towards more complete democracy. The delegation met with elected officials in the cities of Isfahan and Shiraz, where accounts of urban elections and officials being turned in and out of office resembled city politics in many places. The "Shah-people" revolution of the past two decades has involved extensive and basic changes in all aspects of life. Land reform since 1962 has affected about a third of all Iranians. A health corps started in 1964 has sent 9,000 corpsmen to rural areas. A literacy corps created in 1963 has engaged 100,000 Iranians to bring literacy to villagers. A basically agricultural extension and development corps has involved 24,000 participants. Voting rights were revised in 1962 extending the right to vote to Iranians who had never voted, and in a drastic break with the past gave the vote to women. Education is free through high school and there are financial support programs for higher education. Through the considerable social change a middle class is emerging. Many of the positive goals of human rights movements are being reached through the rapid development of Iran.

Awareness of human rights issues will continue to be a part of the American approach to foreign policy. The question of how much progress in human rights the United States should expect of an important, sovereign friend sharing out strategic interest is difficult. Many of Iran's neighbors are also accused of human rights violations but lack strong records of accomplishments, and do not support the United States. The delegation believes that human rights issues and movement towards political and civil liberties will affect the way we view Iran. Such issues must necessarily be part of the American approach to foreign policy in this part of the world and deserve further scrutiny in the future.

Meeting with American communities in Iran

The number of Americans residing in Iran has increased in recent years to roughly 25,000. The delegation had two open meetings to receive the thoughts and advice of the American communities, one in Isfahan and the other in Shiraz. A few hundred Americans attended both the Isfahan and Shiraz meetings. Those attending were mainly students and employees of American corporations, both defense industries and non-defense.

A number of issues were raised. The most prominent and deeply resented issue was the recent change in the Tax Reform Act of 1976 and its treatment of overseas Americans. The Act reduces to $15 thousand a year (from $20 or $25 thousand) a year the amount of income an overseas taxpayer is permitted to exclude from his reported earnings. Furthermore, foreign taxes paid on the amount excluded cannot be applied as a credit against U.S. income taxes as previously. Making the tax change retroactive to the preceding Jan-

uary was strongly condemned as an unfair way of digging tax money out of those not present and unable to speak for themselves. Several speakers argued that taxing the allowances intended to adjust for overseas living would simply add to the cost of products sold and thereby result in lost contracts for American bidders.

The two American communities said that they enjoyed living in Iran, liked the Iranians and in general had good working relations in their host country. One complaint heard on various occasions was the difficulty of voting in the United States while living overseas. Americans informed the delegation that they had trouble obtaining information on elections in the United States and in casting ballots from overseas addresses. Among the other points made were the need to help a pro-American friend, the perception that talk in Congress of cutting off arms sales to Iran frightens people and the Government, and the judgment that Iran was making serious progress towards economic development despite inadequate infrastructure and unfamiliarity with much of the technology being imported. One speaker noted that because Iran was moving so quickly, the country lacked the "old hand" or "master sergeant" who had experience in managing technology. He judged that such experience would be attained and American corporations would assume a lower profile. Many students spoke Farsi and were closer to the citizens of these two cities than others. Some students criticized the distance and lack of communication they alleged existed between American corporation employees and Iranians. The allegations were disputed. Both the delegation and participants in these two exchanges concluded that such open meetings overseas were an excellent way to share perspectives with American representatives.

ADDITIONAL VIEWS OF SENATORS CULVER AND EAGLETON

The Delegation's report on Iran raises important issues without resolving them. It says that we need a consensus on our military relations, that the absence of a policy on conventional arms sales makes it harder to deal with the question of nuclear reactors, and that human rights issues deserve discussion.

We agree on the need for consensus, for a clear arms sales policy, and for close attention to human rights issues. Accordingly, we offer our own assessment of what U.S. policy on these matters should be.

Background of U.S. Policy: Since World War II the United States has been closely associated with Iran. For more than three decades we have provided military equipment by grant or by sale. The United States was intimately involved in the Shah's coming to power, and official policy has been to strengthen and support him ever since.

This close association is said to serve some important American interests, not least because of Iran's oil supplies and its geopolitical situation which contributes to stability in the Middle East and acts as an obstacle to Soviet expansion toward the Persian Gulf. In addition, we enjoy special intelligence facilities in Iran. We believe that the new Administration should fundamentally review these premises without accepting them uncritically. For example, we should consider the risk that massive arms sales may not contribute to regional stability and a continued flow of oil—if such sales increase rivalries and instability within or among nations of the area or if they lead to conflicts which halt the flow of oil.

Despite this foundation of mutual interests, our relations with Iran today are far too dependent on a highly personalized relationship with the Shah. In fact, U.S. policy over the past twenty years under Administrations of both political parties has held and continues to hold that the Shah's responsiveness to our interests depends in large part on our continuing to reassure him, and to make clear to other countries that American relations with him and Iran are extraordinarily close and intimate.

We question this reliance on interpersonal harmony and on expressions of goodwill rather than on the solid foundation of mutual interests where they exist and the inherent right to disagree when broader U.S. interests must be served. We want cordial relations with the Government and people of Iran, but this must not be our sole objective nor the barometer of good policy.

During the past quarter century, the United States has provided Iran with about $15 billion in arms transfers, more than to any other country except South Vietnam. In addition, we furnished economic development assistance, especially in the 1960s, which helped Iran to make rapid and sustaining growth. Today Iran's current and potential wealth are great, and its military forces are preeminent in its region.

Americans are in Iran in large numbers to help carry out the wide range of official agreements and private contracts which are strengthening Iran both militarily and economically. It has been estimated that the present figure for Americans in-country, 31,000, will grow to 50–60,000 by 1980. The growing numbers in recent years have led to cultural adjustment as well as personal security problems, which are likely to increase rather than diminish in the years ahead.

A specific example of the friction that will surely increase if more Americans are required in Iran for technical support is in the area of housing. There is a significant housing shortage throughout Iran with 3-bedroom apartments renting for $2,000/month in Teheran. Some Iranians blame the influx of U.S. personnel for their high costs. Americans in some cases are being compensated by their corporations for these exorbitant prices but this recoupment capacity gives the American technicians an unfair advantage in bidding for the available housing. The danger here is that an "Ugly American" sentiment may intensify, even among middle-class Iranians, as a result of this continuing inflation.

Not only are American officials advising Iranians in many aspects of government, but also a new class of retired military personnel has emerged and has taken key posts. It is unclear whether these new networks provide valuable continuity or merely perpetuate profitable contracts.

Problems with current policy: The most troubling aspect of current U.S. policy is the large volume of highly sophisticated weaponry which we are selling from our own arsenals. These sales dominate our present relations with Iran because of both their magnitude and perceived importance.

Although the United States over the years has provided new weapons to modernize Iran's forces, the floodgate really opened only in 1972, when President Nixon decided to sell the Shah virtually any conventional weapons he desired and exempted such sales from normal bureaucratic scrutiny. In recent years, according to unclassified sources, Iran has expanded the number of men in its Army by 50 percent; the Navy has more than doubled; and the Air Force has quadrupled in personnel and doubled in the number of combat aircraft. Qualitatively, Iran has improved its military potential dramatically with the acquisition of the latest and best American equipment such as our F–14 fighters with Phoenix missiles.

These sales raise serious questions as to the ability of Iran to absorb them economically and to operate them with adequate numbers of trained personnel. But these sales have also occurred at a time when our own forces are short of some equipment items which are being shipped abroad before U.S. units are at full strength.

Until recently the absence of thorough review of these sales within the U.S. Government thwarted the raising of these important issues. Even now, the Congress has not been provided the overall policy review promised by the Ford Administration as a basis for assessing future sales.

We believe that there has been insufficient recognition of the possible long-term dangers of the policy of massive sales. These dangers include the unwitting transfer of highly advanced technology, the threat posed by any sudden change in government to a less pro-American regime, the uncritical acceptance of Iran's internal policies and external designs which is inferred from these sales, and the high prices which American consumers must pay for oil from Iran and other OPEC nations in order that they may continue to expand their military forces. There is also a danger that expanded sales may create an unhealthy mutual dependence in which U.S. arms manufacturers come to rely excessively on such sales and U.S. forces need them to reduce unit costs. The Iranians in turn may require costly and extensive technical support and may resent any shortfalls in anticipated U.S. help. Such dependence may thus create pressures for closer links and ever-rising sales.

We believe that the purported advantages of arms sales must be carefully weighed against these general dangers as well as the particular disadvantages of specific sales programs.

The Iran we visited in November 1976 is a society slowly emerging from extreme underdevelopment. Despite a high degree of social and economic activity, Iran is still decades away from acquiring the infrastructure necessary to absorb the influx of foreign ideas and technology. Dr. Haibatolah Khakzar, President of the Iran College of Science and Technology, described the major obstacle to social and economic change in a recent interview with the Christian Science Monitor:

"Our biggest problem is giving students who have had no experience with technology some engineering sense. They are hardworking and clever, and they have a good background in mathematics and physics but most of them come from working class or poor families in rural areas of the country that are beginning to change for the first time in centuries. Since these young people have no experience with technology, they have no feeling for it."

Without joining the issue of Iran's strategic importance to the United States, we feel that the sale of vast quantities of sophisticated weaponry to an emerging nation with limited technical expertise raises profound questions about the U.S. role. With few exceptions we found the military forces of Iran unable to effectively utilize the American weapons purchased for them without an excessive degree of U.S. technical assistance. It is our view that equipment received which cannot be operated and maintained by Iranian forces would do little to enhance Iran's war-time defensive capability were the United States to remove its citizens at the outset of hostile actions.

We seriously question the position expressed to us by the Iranian Government that a continuation of unrestricted arms sales to Iran is in U.S. and Iranian interests.

Further, it is our view that any deterrent value derived from the acquisition of sophisticated weaponry is largely vitiated by the inability of the Iranan military to properly utilize and maintain the equipment and by the uncertainty of the U.S. war-time commitment. Iran's security will be diminished rather than strengthened if the acquisition of advanced weapons dissipates the personnel and economic resources which might other-

wise be devoted to its most urgent defense needs and its most likely military contingencies.

During our visit, we were advised that, contrary to the general perception that the U.S. will sell any weapon to Iran, a number of requests for exotic systems have been rejected by the Defense Department. A subsequent check indicated that these requests included systems which seemed to exceed Iran's self-defense requirements; e.g., troop-carrying vessels, landing craft, and anti-ship missile defense system and highly sensitive U.S. systems not available for foreign sales even to NATO countries. While it is reassuring that some minimal restraint has been imposed in the past by the U.S. Government, these requests raise troubling questions about Iran's broader military aspirations.

Of particular concern to Iranian and American officials was the acquisition by Iran of the F–14 aircraft. This sophisticated system, which Iran was able to purchase from the Grumman Company production line even before the U.S. Navy received its required quantity, in many ways represents the microcosm of the problems which will surround proposed future purchases of sophisticated aircraft, assurances to the contrary notwithstanding.

We agree with the observation in the staff report of the Subcommittee on Foreign Assistance of the Committee on Foreign Relations in its excellent July 1976 report that the F–14 is "not very useful to Iran in the probable contingencies that it might face." Perhaps the most serious problem is maintenance. The F–14 is a highly complex system which is exceedingly difficult, even for our own Navy, to maintain. According to Navy records, the operational availability of the F–14 remains at 30 percent or less. These problems are compounded in a country such as Iran.

In addition to complexity, the F–14 also raises important issues of safeguarding U.S. technology. There are, of course, no guarantees that an Iranian F–14 pilot would not drift across the 1,200-mile border with the Soviet Union. Our technological secrets might also be lost if an F–14 were downed in regional combat, as could have happened when an Iranian F–4 was lost during counterinsurgency activities in Oman. Since the U.S. expended great sums of money to recover an F–14 from the depths of the North Atlantic, it is clear that the compromise of the Navy's front line fighter and its Phoenix missile would be a major loss. Our concern over incremental technology transfer must pale against the possibility of such a loss. Yet, nowhere did we find that this risk-factor played a significant part in the decision to sell sophisticated weaponry to Iran.

Certain proposed future sales of military equipment to Iran will in our view compound the current difficulties. Iran has, for example, indicated an interest in purchasing the Airborne Warning and Control System (AWACS). This system contains some of the most sophisticated and esoteric electronic gear in use anywhere in the world. It is also the most expensive aircraft system ever produced.

In justifying his desire to purchase AWACS, the Shah emphasized the importance of surveillance along his 1,200-mile border with the Soviet Union. He stated that a look-down radar and tracking system was essential for this purpose. AWACS is a Boeing 707 packed with radars, computers and communications systems. It is clear that the sale of AWACS to Iran will entail a major commitment of American personnel. AWACS represents the most sophisticated state of the electronic engineer's art and contains the most modern, and most sensitive, electronic equipment. If it is to remain operable, the Boeing Company and the Air Force will have to provide technical assistance to Iran for the life of the system.

Iran's announced desire to purchase the F–18L raises additional questions about U.S. arms sales policy. The F–18L is a land-based version of the F–18A, to be built for carrier use by the Navy. It is a derivative of the Northrop Company's twin-engined F–17 which lost a competition with the General Dynamics F–16, chosen to be the Air Force's lightweight fighter.

If Iran is allowed to purchase the F–18L, it will have five fighter aircraft systems with their separate logistics systems to maintain. The F–18L, it is argued, would be used in a close air support role, thereby freeing the F–16 for the air superiority mission. The expensive F–14 apparently would then be able to avoid contact with enemy aircraft in support missions, as it would be used in a stand-off air defense role. Of course, each of these new systems can perform multiple missions. Clearly, justifications which place each aircraft in an exclusive role ignore the cost and logistical benefits derived from keeping to a minimum the different types of aircraft. While the Shah feels that cost is no barrier in these calculations, it seems clear that his government has not given adequate attention to the requisite and indispensable manpower needed to operate, maintain and service such highly complex equipment.

Policy Recommendations: We do not wish to renounce all ties to Iran or to end our arms sales, but we believe that our relations can and should be put on a different, less personalized, more enduring basis.

There is no question about the need for this nation to retain friendly relations with Iran. But this should be in the context of a more rational and consistent foreign policy, based on our own standards, ethical values, and national interests. We should not become too closely and secretly intertwined with any nation, to the extent of catering to that regime at the expense of our own interests and standards.

We have made available to Iran our most sophisticated technology and weaponry. This results in the deepening of our future commitment and makes it necessary to furnish an ever-increasing contingent of technicians and advisors to assist in the operation of the equipment we have sold.

Allies we are and should remain, but, just as we hopefully learned from our Vietnam experience, it is not in our national interest to become too deeply and submissively involved in the affairs of Iran or any other nation to the extent that we are cemented in and can't control our commitments or extricate ourselves if it becomes in our interest to do so.

The dilemma which we face was pointed out two decades ago by Walter Lippmann in his prescient critique of a rigid containment policy. Lippmann noted that, for this policy to succeed, "we must stake our own secuity and the peace of the world upon satellites, puppets, clients, agents about whom we know very little. Frequently they will act for their own reasons, and on their own judgments, presenting us with accomplished facts that we did not intend, and with crises for which we are unready. The 'unassailable barriers' will present us with an unending series of insoluble dilemmas. We shall have either to disown our puppets, which would be tantamount to appeasement and defeat and the loss of face, or must support them at an uncalculable cost on an unintended, unforseen and perhaps undesirable issue."

We cannot presume to judge the threat assessment which another nation makes, nor the policies which it may adopt to preserve its security. Without doubt, any nation must be concerned about the intentions and capabilities of its neighbors, as Iran properly is. But neither can the United States neglect its own responsibility to examine its own interests, especially before we transfer highly sophisticated weapons abroad, and the global hierarchy of values and policies which we profess. In the case of arms sales, we can expect and demand clearer justifications from purchasing nations and better proof that new weapons will be properly and efficiently used.

We do not seek to dictate a particular internal political arrangement to Iran or any other nation, but neither can we praise or ignore the current situation in Iran. From the evidence available to us, we believe that Iran is an authoritarian nation whose internal policies often appear antithetical to American values. Serious allegations of repression, violations of human rights, and even torture have been made and are now under increasing scrutiny by international bodies, by American organizations concerned with international human rights, and by Congress itself under the provisions of recent arms sales legislation. The State Department's recent report to Congress on human rights even said that "one cannot discount the reports" of use of torture and that the U.S. Government in the past two years has discussed the human rights situation in Iran with its government. Furthermore, by the Shah's own admission, his secret police (SAVAK) actively watches Iranians living in the United States. And other published reports suggest that these agents act in ways which appear to violate the laws of the United States.

Again, it is not for us to prescribe how Iranians should live or what their government should be. That is their business, not ours. But the United States should refer to its own values and standards of conduct in determining the character of its relations with a government and leader who do not subscribe to those values and standards.

Since the United States does not approve many of Iran's internal practices, we must avoid or minimize actions which have the effect or clear implication of supporting or strengethening these undesirable practices. So long as Iran acts in a way contrary to our own values, we must maintain an arms-length relationship, based only upon cold calculations of national interest and without hypocritical declarations of warm friendship.

The touchstone of U.S. policy should be U.S. national interests. In this regard, it appears to us that there is considerable evidence that the Shah himself conducts his foreign affairs far more from his perception of his own interests than from reassurances of friendship. He has not hesitated to take the lead in pushing OPEC to increase oil prices, despite our urgings against his doing so and our arguments as to the effect of these price rises on our own economy and on the economies of the developing countries and Western Europe. The Shah nationalized Americal oil interests in 1973 over our protests. And also over our protests, he has even recently returned a Soviet defector to the USSR.

These actions suggest to us that the Shah will rebuff or respond to our interests in Iran according to whether he believes they will serve his interests. We should therefore act according to our own interests. Where our policy objectives coincide with those of Iran, we can and should cooperate fully. But where we differ, we cannot subordinate our disagreements to ritual demonstrations of friendship or declarations of "special relationships." Arms sales, for example, must not be undertaken as tokens of commitment or proof of close relations, but rather only when both sides benefit.

With regard to arms sales, we recommend that future sales be conditioned in three ways. (1) No additional sales should be made

of equipment in which U.S. forces are short of authorized levels unless procurement for American units at a faster rate would clearly be inefficient. (2) The Congress must be assured that, for all sales, Iran has the technical, economic, and personnel capacity to absorb and utilize the equipment effectively without substantial participation of U.S. personnel. In any event, there should be no diversion of large numbers of U.S. technical personnel from work essential to the readiness of U.S. forces. (3) There must be adequate safeguards against the transfer of advanced American technology to other nations, either by industrial espionage or defection.

In addition, we believe that many of the existing pressures for arms sales, and for subsequent bureaucratic approval of such sales by U.S. government, would be reduced if the personnel chiefly responsible for in-country planning and Washington-level review were, to the greatest extent possible, civilians in background, with no particular allegiance to a specific Service or weapons program.

While our direct observations and our comments have been largely confined to Iran, the largest single purchaser of our weapons, we recognize that this problem is global and that any ultimate solution will require the cooperation of many nations. Accordingly, we are encouraged by the announced policy of President Carter to review these sales more closely and to seek international discussions on ways to limit these sales. This policy is in line with Congressional declarations and can lead to a more stable and safer world.

ADDITIONAL VIEWS OF SENATOR CANNON

MILITARY SALES

This part of the report will deal with military sales to Iran. The subject has been controversial for some time and was accordingly explored by members of the delegation.

The matter was first discussed with Ambassador Helms at his initial Embassy briefing. It was later brought up with the Iranian Prime Minister at his meeting with the delegation and then finally with the Shah when he hosted the delegation.

Although a minority view, the feeling was expressed that Iran was buying weapon systems beyond their capability to support and that the country would metaphorically speaking sink from the sheer weight of the items being purchased.

American arms sales to Iran, especially the F-14, have been a subject of great controversy in key circles within the United States. The agreement to sell the F-14 and other sophisticated military equipment to Iran seems, like discussions of previous arms sales agreements to Iran, to be taking place in almost total isolation from the broader historical and strategic context in which the decision was made.

The prevailing United States strategic doctrine, with its notion of an American drawback from some areas of the world, is largely a naval doctrine—except for Western Europe—as far as direct U.S. commitment is concerned. It calls for a greater degree of burden-sharing by America's allies and friends in their own defense and American help in creating independent power centers that could maintain local stability. Congress has generally approved of this policy but in the case of Iran, it has come in for some very persistent criticism in regard to the transfer of modern weaponry. One of the most significant developments which convinced the Shah of the need for strengthening his military forces was the 1958 coup in Iran which installed the radical regime of Colonel Kassem—an event viewed in Iran with alarm as a harbinger of future changes to come.

Iran's arms modernization goes back to the Kennedy administration when negotiations already were under way to modernize Iran's armed forces. From Iran's point of view, an important event was the Indo-Pakistani war of 1965. The Shah was convinced that the failure of the United States to assist Pakistan or allow Iran to aid Pakistan with arms received from the United States meant that Iran would have to acquire the capability to fend for itself in local conflicts. It was at this time that negotiations began for what was then clearly the most sophisticated aircraft in the world, the F-4 Phantom.

The British withdrawal from Aden in 1967 strengthened Iranian conviction that a British decision to withdraw from the Gulf was near. The conclusive development which persuaded them that the time for the swift modernization of Iran's armed forces had come, was Britain's decision of 1968 to withdraw its forces east of Suez by 1971.

In regard to President Nixon's decision in 1972 to sell the F-14 and other sophisticated weaponry, it should be pointed out that the first F-4's were delivered to Iran in late December of 1968, approximately 11½ months after the announcement of Britain's decision to withdraw from the area. Hence from the Iranian side it is easy to discern a close relationship between the Shah's perception of the developing security situation in the area and the required military forces deemed necessary for coping with it.

It is worth noting, too, that the negotiations for and the delivery of the F-4 took place well before the great leap in oil prices. Indeed, some 15 months before President Nixon's visit to Teheran in May 1972, there were three squadrons of F-4's already on delivery to Iran and a total of eight squadrons delivered by 1974. The F-4's delivered during the Nixon administration were therefore a natural follow-on of the original sales agreement by the Johnson Administration.

Congress was well aware of these sales and there was little criticism of them even though at that time, in terms of the then existing aircraft technology, the F-4 was in a relative sense as sophisticated an aircraft as the F-14 is today. (Technologically the F-4 should be compared with the MIG-21, just as the F-14 corresponds more with the MIG-23 and the even more sophisticated MIG-25). In fact, at the time the F-4 was delivered to Iran in 1968 no one else outside Europe had received this aircraft; e.g., the F-4 was not delivered to Israel until 1969.

The F-14 was considered by both the Nixon Administration and the Shah as a fairly natural evolution in arms sales policy between the two countries.

There are many complex historical and strategic factors to be considered in any assessment of U.S. decisions on arms transfers to the Middle East in general and the Persian Gulf area in particular.

Iran occupies a key strategic position in the Middle East controlling the air lanes from Europe to the East, has a long coastline along the Persian Gulf through which moves a large percentage of the Free World's oil supply, and has long land borders with the Soviet Union, Iraq, Turkey, Afghanistan, and Pakistan.

Iran has been developing a modern military force during the last five years. Iranian leadership intends to put Iran in a position to defend its interests with its own resources and not be forced to rely on outside assistance in a crisis.

For Iranian leaders, the willingness of the United States to remain a reliable supplier of military equipment to meet the threats which they perceive to their security is extremely important. United States' willingness in this area is evidence of our continuing interest in them as a sovereign state with important national interests parallel to our own, a sign that we are concerned about their national integrity and an indication that the United States will not abandon its traditional friends while other countries continue to arm their allies.

The strategic, political, and economic importance of the Persian Gulf countries to the United States and its Western allies is high and growing. Western Europe and Japan will remain dependent upon Gulf oil for years to come, and our own dependence upon this oil is increasing, not diminishing. From a strategic point of view, we have a clear interest in preventing the Soviet Union from exercising political, economic, or military influence over the area. Moreover, our commercial interests in the area run into the many billions of dollars.

Iran is subject to a number of threats. Perhaps the most tangible threat to Iran concerns the vulnerability of her oil economy. If the flow of Iranian oil to the Western world were significantly reduced owing to military conflict, or the threat of military conflict, the political and economic impact would be grave.

The Soviet Union is significant, as Iran shares a long border with the Soviet Union, and most Iranians regard the Soviet Union as a potential adversary. The Iranians are also fearful of Soviet support of some of their neighbors especially Iraq, Afghanistan, and India.

The sale of new military aircraft to Iran not only strengthens U.S.-Iranian relations but also is viewed by other countries of the region as firm evidence that the United States will maintain a steady policy in support of its friends in this critical part of the world.

In the regional context, it would improve Iran's ability to carry out in the latter part of the 1980's and 1990's the major security missions on which we agree: serving as a center of strength and stability in the area; withstanding Soviet designs in the region which are carried out directly or through surrogates; and joining with Saudi Arabia in providing a strong defense for the Persian Gulf area.

Other countries of the region with which we maintain close and friendly relations have not voiced any objections to our proposed sale of new aircraft and it is not believed that it will have any adverse impact on our relations with them. In fact, it could have a salutary impact, inasmuch as regional stability should be enhanced.

The Iranian aircraft procurement proposals should not have a destabilizing effect on the Persian Gulf region. The government of Iran views new aircraft procurement as essential to its Air Force modernization program. The Soviet Union has several bases near the Iranian border which are capable of supporting the most advanced fighter aircraft in the Soviet inventory. These bases are within fighter operational range of the major industrial and population centers of Iran. Iraq currently possesses one of the Soviet's most advanced fighter aircraft—the MIG-23, as well as the supersonic BLINDER bomber. The current weapons system being purchased by Iran is the F-14 with its Phoenix missile. Iran has presently 18 F-14's delivered out of a total buy of 80 and all are expected to be delivered by July 1978. Their rate of delivery has been two a month for the first year and will be three a month for the following year. The delegation inspected the F-14 unit at Isfahan and found an air of activity involving the building of a new air base as well as flying training. They are presently flying eight sorties a day. Each sortie is about 1½ hours' duration.

A separate classroom building to house a Field Training Detachment was in being and an Air Crew Systems Building to house air crew systems was also being completed. It

accommodates three training systems—an operational flight trainer, a mission trainer (for radar operators) and a cockpit procedures trainer. The base and facilities are patterned after the U.S. Naval Station at Miramar and although still in a formative stage they appeared to be catching up.

One of the actions taken to enhance the F–14 operation was to stockpile all spare parts for the F–14 at Isfahan. Normally, Mirabad airport in Teheran which is where their Materiel Management Control Center is located is used to stock spare parts. The concept for maintaining the F–14 is the black box technique. Each sub-assembly is contained in a quick disconnect unit which can be easily replaced. Hence when a malfunction occurs the unit can be unplugged and repaired under shop conditions.

From the standpoint of maintenance capability, Iran has instituted a system which could develop into an outstanding and innovative setup. They have created a sort of super enlisted man known as a Homafar. He is a notch above our warrant officer, is paid the same as an Iranian Major, yet is not an officer. The unique feature is that he is enlisted for eleven years which should be the envy of the U.S. Air Force. Retention has always been a problem in our military forces. With a four-year enlistment very short utilization is experienced since the first year is spent in technical training, the second year as a journeyman to acquire on the job experience resulting in only the last two years being productive.

In contrast, Iran takes an educated individual and enlists him for eleven years. He is sent through language training, then through technical training, first at Grumman in Bethpage, New York, and then through the Technical Training Center at Chanute Air Force Base. This results in a highly trained technician with great potential because of his retainability. All in all the F–14 program is well planned and should be successful. The F–14, however, is not as controversial as the F–16, F–18–L, and AWACS, which are also being eyed by the Iranians to bring them militarily into the twentieth century. A discussion of each of these proposed weapon systems follows. The sale of the F–16 to Iran should be thought of in the context of the continuing plans of the government of Iran to modernize its Armed Forces, the history of our relations with that country and the important interests we have in the area.

First, the addition of the F–16 is a complement to, but not a substitute for, the capabilities of the F–14/Phoenix weapon system. Consequently, it does not represent an escalation in weaponry. Secondly, the government will need replacement or attrition aircraft for the older F–5 aircraft in the Imperial Iranian Air Force (IIAF).

The F–16 aircraft is capable of augmenting the IIAF F–14 primarily in an air defense role and, in addition, performing all the combat roles; i.e., air defense and close air support, currently performed by the IIAF F–5.

Thirdly, an assessment of the increased military capability provided by the F–16 aircraft must consider the time necessary for pilots and ground crew personnel to become proficient in operating and maintaining the aircraft. The delivery of the aircraft would not have an immediate impact because of the time required to become operationally effective.

Consequently, the sale of the F–16 will increase the military capabilities of Iran by the mid-1980's. It is estimated that the government of Iran will need approximately 3,000 trained maintenance personnel and 240 pilots to operate and maintain 160 F–16 aircraft. Sufficient personnel to support the program are available if Iran uses pilots and technicians that are presently supporting other military aircraft but which have to be replaced during the 1980's. It is anticipated that the IIAF will retrain/upgrade these personnel to fill the F–16 program manpower requirements.

At program activation, a facilities survey team and weapon system planning team (total: approximately 15 personnel) will be sent to Iran for approximately three months.

To support the program in the long term, it is estimated that about 1,000 contractor personnel and four U.S. Government personnel will be required. The contractor technician's duration will be from two to four years. Plans call for four U.S. Government personnel to serve as liaison of the cooperative logistics program on an indefinite basis. These estimates depend on support decisions to be made in the future by the government of Iran and on the progress of the program.

The proposed sale of F–16 aircraft to the government of Iran will have no adverse operational impact upon U.S. readiness posture or on the USAF F–16 program with the European Participating Governments (Belgium, Denmark, The Netherlands, Norway), providing the Iranian F–16 program is implemented and supported as proposed. However, based on historical experience with similar programs, the Iranian F–16 program will require special management to ensure that early production resources are properly allocated to the United States Air Force, the European Participating Governments and the Iranian Air Force. Fifteen per cent of each of the F–16 aircraft to be sold to Iran will be manufactured by U.S. Allies, the European Participating Governments, in accordance with our agreement with them.

The effect of introducing the F–16 in multiple operating locations simultaneously will place special demands upon the early support arrangements—spares and maintenance. This support is to be supplied by the prime contractor—not the Department of Defense. The contractor states that he can support this program.

Under the proposed program, the government if Iran will provide necessary funding for tooling required to provide additional stocks over and above U.S. Air Force requirements. This added production capacity could be considered a positive contribution to the U.S. readiness in the event of an emergency.

The details on how DOD proposes to implement the program follows. The program involves 160 F–16 aircraft and support equipment. Of the total, 136 are the single-seat F–16A and 24 are the two-seat F–16B. The configuration of the aircraft will be the same as that of the U.S. Air Force F–16 with the exception of nonreleasable systems such as nuclear weapons delivery.

The first phase of the sale is to provide 5 aircraft for continental U.S. training of Iranian instructor pilots. The aircraft will be located at a U.S. Air Force tactical training location for approximately 6 months. Maintenance support at this location will be provided exclusively by U.S. Air Force personnel.

The second phase will provide 160 F–16 aircraft in Iran. (155 operational aircraft plus the 5 training aircraft). The in-country support functions will be performed by a team composed of contractor personnel and the initial Iranian cadre trained in the United States. Functional areas will include organization, avionics, muntions, and field maintenance in addition to maintenance administration. The approximate number of personnel per skill level area is as follows: 1,000 apprentice level personnel; 1,400 journeymen level; and 400 supervisory level personnel for a total of about 2,800 people.

The F–16 should be significantly easier to absorb by Iran because it is relatively simple to maintain and operate.

The design-to-cost concept under which the F–16 was developed resulted in a much less complex airplane than its predecessors in Iran, the F–4 and F–14. The F–16 requires only one crewman compared to two crew members required by the F–14 and F–4. The maintenance manhours per flight for the F–16 are expected to be ⅓ to ½ those required to maintain the F–14 and F–4. Built-in test capability and automatic test equipment also replace skilled technicians.

The Air Force foresees no adverse impact on current aircraft procurement/production schedules provided the program is implemented and supported as proposed. The sale should have favorable impact on the U.S. Air Force program since the purchase of these F–16 aircraft by the government of Iran should reduce the unit cost per aircraft and will provide a pro rata share recoupment of research and development costs.

Various reports have indicated the concern of Congress over military acquisitions by Iran. The F–16 sale to Iran will receive close management support and control in the Department of Defense. Over the past year our management of activities in Iran has improved. The Department of Defense states it will stay on top of the F–16 program in every respect.

In summary, the F–16 program for Iran is structured to take into account the threat, their future fighter requirements and logical delivery schedule without an adverse effect on U.S. Air Force and NATO Consortium programs. The government of Iran was briefed by the DOD in early September 1976, on total program requirements and recognizes the increased program risk and costs associated with the early availability of the aircraft. After the acquisition of the first 160 F–16's Iran initially contemplated buying another 140 F–16's for a total procurement of 300 aircraft. This follow-on buy could of course be assimilated much easier because of the experience gained in implementing the initial purchase. There has been no U.S. Government decision, as yet, to offer the 140 additional aircraft to the Government of Iran.

F–18L program

Purchase of the F–18L would enable the IIAF to use the F–16 as an air superiority fighter, as replacement for the F–5 leaving the close air support role to the F–18L to replace the F–4. Although all aircraft can be used in multiple roles, they are each individually best suited for specific missions. The F–14, for example, with its standoff capability to detect an enemy aircraft 100 miles out is ideally suited for Fleet or Country defense—yet can also be used for close support—but it would be foolish to risk such an expensive weapon system for close support missions. Hence the reason for the U.S. Navy acquiring 800 F–18A's.

The procurement of 250 F–18L aircraft by Iran will result in a significant impact both militarily and economically. In the long term it initiates a program to provide a low cost, high performance, twin engine tactical fighter. In the short term it will modernize and greatly enhance the capabilities of the Imperial Iranian Air Force (IIAF) by replacing F–4 aircraft while realizing substantial savings for Iran and the United States Government.

The F–18L compared with the F–4 which it would replace in Iran is expected to be 40% lighter at takeoff and has 40% more thrust, 75% more lift, up to 3 times the mission radius, and about twice the combat performance in terms of maneuverability and available energy.

In addition to doubling the present capability provided by the F–4, the F–18L will bring the IIAF substantial gain reliability and maintainability over the current F–4. This in turn contributes to lowering operating and support costs as well as reducing the required maintenance/support level.

In the presence of the Navy program for procurement of 800 F–18's, and without interference to that program, the F–18L pro-

gram should bring substantial benefits to the Navy program (and thence to the U.S. Government) through reduced cost in the production and overhead as well as earlier confirmation of reliability and maintainability. Assuming that Northrop delivers 1,000 F–18L's to overseas customers, the savings realized by the USN F–18A program could be as much as $700 million. Also, the program value of F–18L overseas sales of 1,000 aircraft would amount to $8 billion, would bring a favorable balance of trade impact of $7 billion, and would provide additional U.S. Government tax receipts of $5 billion. Finally, and of great importance domestically, it would provide an average of 57,000 additional jobs per year.

In summary, the purchase of 250 F–18L aircraft by Iran will:

Double the IIAF capability attributable to the current F–4 force which will be replaced.

Reduce maintenance and support manpower by possibly 2,300 men below the level presently required for the IIAF F–4 force.

Initiate a F–18L overseas sales program to help modernize the air forces of our allies which could save $700 million for the USN F–18 program, contribute to a favorable trade balance by $7 billion, and provide 57,000 U.S. jobs per year when sales reach the first 1,000 aircraft. All of this would be obtained at no cost to the U.S. Taxpayer.

Initial action is necessary which will determine all the F–18L program elements before commitment on the part of either the U.S. Government or the Government of Iran for 250 F–18L aircraft. For this purpose a letter of offer is being contemplated for a $6 million (plus) effort on the pre-program engineering, price and availability planning over a period of four to six months. This effort neither obligates the U.S. Government to offer any hardware for sale nor does it obligate the Government of Iran to purchase any hardware; however, it does respond substantively to the request from the Government of Iran and provide the basis for subsequent development of a letter of offer for 250 F–18L aircraft. This second letter of offer, assuming U.S. Government and Government of Iran program approval, will be prepared at a later date and Congress will be notified in accordance with current statutes.

The Navy plans to buy 800 F–18A's being built by the aerospace team of McDonnell-Douglas and Northrop at the McDonnell-Douglas plant in St. Louis.

But Northrop executives are hopeful of selling hundreds more of the Iranian version, F–18L, to other countries as well.

It will cost about $250 million to tailor the Navy's F–18 to the Shah's needs, according to Pentagon sources. The F–18 is being built for the Navy for about $6 million a copy in FY 75 dollars.

The F–18L for the Shah would be lighter than the Navy's version since it would not have to be built to withstand the impact of landing and catapult takeoffs from aircraft carriers. The Iranian version would serve as a light bomber, replacing the Shah's squadrons of F–4's in the early 1980's.

The F–18L would not be the hottest plane in the Shah's inventory, since he already has bought the Grumman F–14 Tomcat, which is probably the most sophisticated fighter plane in the world, and has also ordered the General Dynamics F–16.

With the Navy's Phoenix air-to-air missile to hit airplanes 60 miles away and the F–16 to fight other planes close in, the Shah by buying the F–18L would be filling in what he sees as the need to support ground troops with a light and relatively inexpensive fighter bomber.

General Hassan Toufanian, Iran's Vice Minister of War in Charge of Arms Procurement, wrote Defense Secretary Donald H. Rumsfeld on September 12, 1976, that "the Imperial Iranian Air Force has a requirement to replace existing McDonnell-Douglas F–4 Phantom aircraft with a modern aircraft. Operational phase should commence in 1982. We have determined that Northrop's land-based derivative of the U.S. Navy F–18 will best fulfill this requirement."

The Navy would charge Iran a pro rata share for every F–18L to cover part of the cost of developing the basic airplane.

AWACS

The final weapon system discussed by the delegation to enhance Iran's military capability was AWACS, commonly referred to as E–3A.

It is a 707 Boeing Transport with a large radome on top, configured to provide an Airborne Warning and Control System of outstanding capability. The inside of the aircraft is identical to the arrangement found in a ground-based Air Defense Control Center, with its multiple radar scopes and communications systems. It, however, has far greater seeing capacity than a ground-based radar since most ground-based radars are limited by the horizon. Conversely, airborne radars can see over mountains and into valleys, over and around hills, and into neighboring borders of adjacent countries. Further, AWACS has a lookdown capability, seeing the enemy's order of battle by viewing all moving targets in the air—both enemy and friendly. With this intelligence the AWAC's controllers are able to vector their defense fighters against all intruders. In a fight for the Straits of Hormuz this would be an important capability.

AWACS has been a research and development item in the U.S. Air Force since the early 1970's and this phase of the program is nearing completion. The U.S. Air Force has funding approval for 19 production E–3A planes through FY 77 plus advanced procurement funds for 6 more to be requested in FY 78. The Air Force plans to buy 31 new AWACS and also intends to rebuild 3 of the R & D models to operational configuration for a total U.S. buy of 34 aircraft. The first production AWACS will be received by the Air Force in March 1977 and deliveries will be made at a rate of one every two months thereafter. NATO countries are also very seriously considering AWACS. The present NATO radar warning, command, and control function is performed by a series of ground-based radars stretching along the NATO border with Eastern Europe. They are extremely vulnerable since they are in fixed well-known sites. It is estimated that they would be destroyed in the first minutes of any future war. AWACS is much less vulnerable since it can operate 150 to 200 miles behind the battle area. With capability to see enemy aircraft and/or missiles and its lookdown capability to see to the curvature of the earth resulting in extended ground-level coverage, its utilization in future conflicts is mandatory. It unquestionably has tactical advantages in performance, survivability, and flexibility over ground-based systems.

The question of NATO interest was brought up by the delegation—and the following applies. The NATO ministers met on December 8, 1976, to discuss the purchase of AWACS and the decision was deferred until their next meeting in 1977.

Secretary Rumsfeld who attended the meeting said that a positive climate prevailed and that all governments agreed that a new early warning system was a necessity for the alliance. A question, however, of how much each member should pay developed. The United States had planned to pay about $800 million and the West Germans were asked to pay $600 million. The United Kingdom had allocated $450 million to build a smaller airborne system into their older Comet jets but expressed a willingness to switch to the American system. The Germans felt they should not be required to pay more than the British.

Accordingly, the ministers agreed to call a meeting of financial experts some time in January 1977 and then to meet later to endorse their decision.

The plan for NATO involves 27 planes. The American Air Force plans to acquire 34 such aircraft for the United States. The estimated total cost for the 27 NATO planes is $2.4 billion. The ministers' communique called for increases in defense spending by allied governments in view of stepped-up expenditures by the Soviet Union.

Iran is also considering the acquisition of AWACS. In Iran's case with its 1200 miles of Soviet borders, AWACS would be the payoff for not only protecting its big investment in military aircraft but also in their proper and effective utilization. It matters little to possess an outstanding weapon if proper command and control can't be exercised. In today's environment of sophisticated weapon systems the ability to see what one's enemy is doing is crucial to the outcome of any air battle. In Iran's case because of its mountainous terrain and that of adjacent countries, AWACS capability is all the more critical.

From the standpoint of acquisition, Iran is still studying the cost, schedules of availability, and other details relating to the program.

Suffice it to say, considerable interest exists, and from the delegation's majority viewpoint, Iran could support this weapon system. In fact, Iran is already maintaining 707's and the delegation was flown in an Iranian 707 to Isfahan, Sheraz, and over the Hormuz Straits. Iran has twelve of these 707's configured with KC–135 booms and wingtip hose and drouge refueling pods. Since the AWACS E–3A is basically a Boeing 707 Iran already has a capability to maintain this type of aircraft.

The total air defense modernization plan for Iran includes: new modern ground-based radars; airborne early warning; or new ground installations for improved command and control.

The ground radars are being upgraded by the Seek Sentry system. However, total coverage is impossible since:

Low altitude intruders can approach in the uncovered areas between sites, below the radar horizon, and in the areas shadowed by terrain;

The large ocean areas to the south are uncovered, thus making it difficult to maintain effective control of the Persian Gulf, Arabian Sea, and northern Indian Ocean for both defensive purposes and for ensuring the safety of oil exports and maritime imports.

The airborne surveillance capability achievable with the F–3A would supplement ground radars by filling the coverage gaps and extending both the low altitude and high altitude coverage; and in combination with the ground based sites, would provide continuous coverage. In the active defense role the E–3A would provide an overall picture of the air situation to the battle commander. In addition, the E–3A would provide close control via voice communication and/or digital links for the F–4, F–14, F–16, and F–18L aircraft. A second application of close control from E–3A involves control of tanker/fighter rendezvous for refueling operations in the areas remote from ground control sites.

The E–3A also can improve SAM operations significantly.

While the E–3A involves quite complex subsystems, major strides have been made in

simplifying maintenance and repair operations.

CONNECTICUT, VIRGINIA SCHOOL COUNSELORS ENDORSE COMPREHENSIVE YOUTH EMPLOYMENT ACT OF 1977

Mr. HUMPHREY. Mr. President, since I introduced the Comprehensive Youth Employment Act of 1977 on January 11, I have received a number of encouraging letters endorsing the bill. Two of these have come recently from the Connecticut School Counselor Association and the Virginia Personnel and Guidance Association. Both organizations represent counseling and guidance personnel who have day-to-day experience with the tragic problem of high unemployment among our Nation's young people. They are on the front line and know firsthand what must be done to help our young people in the job market.

I am pleased to have these two organizations endorse the Comprehensive Youth Employment Act of 1977, and I ask unanimous consent that their letters be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

JANUARY 25, 1977.

Hon. HUBERT H. HUMPHREY,
U.S. Senate, Russell Senate Office Building, Washington, D.C.

DEAR SENATOR HUMPHREY: The Connecticut Personal and Guidance Association strongly supports and applauds your efforts to enact S170-Comprehensive Youth Employment Act. Connecticut Counselors have been keenly aware of the need for Federal legislation to address the problems and needs of unemployed youth. Our State has experienced a prolonged and unhealthy period of unemployment. (It's still hovering around 10% and will not change much over the next 18 months.)

The youth of our State would benefit from such a coordinated approach of assisting both out of school youth and in school youth. The need for closer ties between school and the private economic sector fostered through this legislation will have an immediate effect in curtailing some of the severe social and economic problems which exist in the population centers of Connecticut.

Counselors are in need of a great deal of assistance in obtaining accurate, realistic occupational information to share with their students. We are pleased that this Bill will address the need for more career guidance services to assist in the career planning and decision making for our youngsters. Our only concern is the need to ensure that certified counseling personnel are included in the provisions of S170. This will enable communities to tap the many counselors whose skills are currently under utilized.

You can be assured that the members of CPGA will be watching the progress of this Bill and will be in contact with our State Senators to encourage support of S170.

I thank you on behalf of the youth and counselors in the State of Connecticut for being responsive and caring.

Sincerely,

ROBERT L. SANDAGATA.

JANUARY 26, 1977.

Hon. HUBERT H. HUMPHREY,
U.S. Senate, Russell Senate Office Building, Washington, D.C.

DEAR SENATOR HUMPHREY: I am very interested in S. 170, the comprehensive Youth Employment Act. I am writing in behalf of the Virginia Personnel and Guidance Association (VPGA). Our membership represents counselors and Student Services professionals in Virginia.

VPGA certainly concerns itself with all legislation affecting youth in the Commonwealth of Virginia.

Unemployment has a profound effect on the motivation of individuals. Youth old enough to join the work force but denied the opportunity can be very negatively affected at this crucial stage in their developmental process.

The section of S. 170 establishing a National Occupational Information and Career Guidance Service is enthusiastically endorsed. Hopefully, if the bill is passed, this service will be easily accessed by inner city youth who have the most obvious need. A job program without counseling would be ineffective.

VPGA is willing to provide support for S. 170. We join you in your concern for today's unemployed youth.

Sincerely,

THEODORE P. REMLEY, Jr.,
Virginia Personnel and Guidance Association, Government Liaison Worker.

CONVERTING COAL TO OIL AND NATURAL GAS

Mr. FORD. Mr. President, "while shortages and distribution problems interrupt oil and natural gas supplies, the Nation * * * sits on a great coal lode and shivers because it lacks the capacity to use it effectively"; this is the message of an editorial in the Friday, February 4, 1977, issue of the Washington Star.

As the editorial points out:

The technology for converting coal into oil and gas has been available for decades, but it takes money—large amounts—the plants are so expensive—estimated at $1 billion each—that probably not even the largest companies are going to get involved without Federal help.

The debate last year in Congress was over legislation to authorize Federal loan guarantees to private companies to build demonstration plants to convert coal to oil and natural gas. This measure was introduced by Senator JENNINGS RANDOLPH; it has been reintroduced by him this year as S. 429, the Synthetic Fuels Act of 1977.

As our colleague from West Virginia declares:

This is not a time to be timid. It is a time for commitment to the future. Greater Federal incentives are needed to cut the gordian knot of economics for the first generation of pioneer synthetic fuels plants in this country.

Senator RANDOLPH's bill will provide the incentives to develop synthetic fuels to serve our homes and industries. The Synthetic Fuels Act of 1977 is a long-range answer. This bill encourages the development of plants to convert coal to oil and gas, and we have an abundant supply of coal. It is time for us to recognize the seriousness of this problem and the necessity to find solutions. Conversion is expensive, but this alternative is essential for the health and welfare of the Nation. For this reason I urge the Senate to move forward with dispatch in the enactment of this legislation.

I ask unanimous consent that the Star editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Star, Feb. 4, 1977]

SITTING ON THE MOTHER LODE

The bitter cold has produced some bitter ironies. One described in a New York Times article the other day involved a mother and her retarded son living atop a huge coal deposit in southwestern Pennsylvania but freezing because they lacked oil for the furnance.

Coal has all but disappeared as a home-heating fuel. A spokesman for the National Coal Association says there is not a single coal dealer left in the District of Columbia. Even the association had to give up on coal heat last year and convert the heating system in its building on 17th Street to electricity.

Of the 665 million tons of coal produced last year, two-thirds went to electricity-generating plants and most of the remainder steel plants. Less than 5 million tons were was used by large industries, principally used by homes and small commercial establishments.

While shortages and distribution problems interrupt oil and natural gas supplies, the nation, like the family in Pennsylvania, sits on a great coal lode and shivers because it lacks the capacity to use it effectively. The United States has enough coal reserves to last an estimated five centuries. Oil and natural gas reserves are figured only in decades.

Is there any chance of going back to coal for heating in a significant way? Not likely. Aside from being dirtier than natural gas, oil and electricity, firing a heating plant with coal requires more physical exertion. There also are environmental factors to consider. But there are ways to make better use of coal; the problem has been the lack of national effort to exploit the vast supply.

The technology for converting coal into oil and gas has been available for decades. The Nazi air force used gasoline made from coal when the allies closed off Germany's oil supplies during World War II. The problem now is twofold: to reduce the cost of conversion to make the synthetic product competitive with natural oil and gas, and to produce it in a manner that is environmentally acceptable.

That takes money—large amounts—but Congress has been slow to recognize a governmental responsibility. Only recently has Congress provided sizable amounts for research, and some would argue that even these sums are small compared to the huge allocations for many other programs. Last year the Energy Research and Development Administration was given $375 million for work on transforming coal into gases and liquids and in finding better ways of burning coal for heat and electricity.

The big argument in Congress last year was over legislation to authorize federal loan guarantees to private companies to build demonstration plants to convert coal to oil and gas. Although supported by the Ford administration, the AFL-CIO and business groups, the legislation was defeated by a coalition of fiscal conservatives and environmentalists.

The fact is that the plants are so expensive—estimated at $1 billion each—that probably not even the largest companies are going to get involved without federal help. Not only is the construction cost high, but profits on production probably would be many years away. Even with natural gas and oil prices rising rapidly, it is not expected that the synthetic products from coal would be competitive for a decade or more.

In introducing a loan guarantee bill in the last Congress, Sen. Jennings Randolph of West Virginia said: "This is not a time to be timid. It is a time for commitment to the future. Greater federal incentives are needed

to cut the Gordian Knot of economics for the first generation of pioneer synthetic fuel plants in this country."

Perhaps the frigid weather will produce some congressional action this year. Or will Congress, and the nation, continue to sit and shiver on the mother lode of fuel?

UNITED STATES RETAINS EXTRADITION RIGHTS UNDER THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, over the years that the Genocide Treaty has been a topic of discussion, one major argument has repeatedly come up. This argument deals with the question of whether Americans could be tried with genocide in foreign courts. I take this opportunity to clarify the facts of this issue.

At this time, Americans in a foreign country can be tried for charges ranging from robbery, to shoplifting, to genocide. The Genocide Convention does not extend foreign jurisdiction at all. Actually, the Genocide Convention protects the rights of Americans abroad.

According to Mr. George Aldrich, the Deputy Legal Adviser for the Department of State:

> The negotiating record of the Genocide Convention makes clear that trial for acts committed in a foreign country could be held in the state of which the defendant is a national.

Under the Genocide Treaty, the United States retains the right of extradition. This clause can only be to the advantage to Americans in foreign countries. In this way, we may provide Americans added protection of their rights. Presently, this safeguard does not exist.

Mr. President, I firmly believe that the time has come for the Senate to ratify the Genocide Convention. The sooner this task is accomplished, the sooner Americans' rights will be protected in foreign countries. I call upon colleagues for immediate approval of this important human rights treaty.

HUMAN RIGHTS

Mr. KENNEDY. Mr. President, I call the attention of colleagues to a developing pattern of concern and of commitment to human rights in our foreign policy by the Carter administration that deserves our recognition and our full support.

Last September 29, just prior to the termination of the previous session of the Congress, I joined with Senators CRANSTON, CLARK, and ABOUREZK to examine briefly the human rights record of the prior administration.

It was a disappointing and gloomy analysis that exposed a basic failure to understand American ideals and the American people. It was that failure—in supporting the junta in Greece for so many years, in placing low priorities on the needs of refugees in Vietnam and Bangladesh, in embracing a bloody coup in Chile and its repressive aftermath—that produced a deep breach between our Government and the American people.

As Senator CLARK quoted from a participant in a town meeting on foreign policy:

> People seem to be saying, we know what kind of people we are, but does the government know?

Now it appears that the Government does know and the President has taken the lead in reflecting that knowledge from the moment he took office.

The President said on taking office:

> Our commitment to human rights must be absolute . . .

Since then, visible actions have reinforced that statement.

When we informed the new State Department that the previous administration had invited as a distinguished visitor a Chilean Air Force officer who had participated in the mock trials of political prisoners and reportedly been involved in the actual process of interrogation and torture, the visit was cut short and the individual sent home.

The State Department issued a strong public statement of support for human rights advocates in Czechoslovakia within days of taking office.

Similarly, the Department issued a vigorous and forthright declaration on behalf of Soviet dissident, Andrei Sakharov.

These statements plus the President's own reiteration of support for human rights last night evidence the impressive and laudatory breaks with past foreign policy that lend hope for a new foreign policy that incorporates as a high priority the values and ideals of the American people.

Obviously, there are many items on the agenda of human rights and humanitarian concerns yet to be achieved.

Strengthening the Coordinator for Human Rights and Humanitarian Affairs, submitting for ratification many of the human rights covenants which have been gathering dust for so many years, revising our immigration laws to make us once more the citadel of hope for political refugees from repression of the left or the right, insuring that our aid does not help dictatorial regimes maintain in power—these are all in the future.

However, the corner appears to have been turned and I want to commend President Carter and the new administration for having taken these steps and offer my pledge of support for further progress in raising human rights concerns to a high level of priority in our foreign policy decisionmaking.

JOINT ECONOMIC COMMITTEE REORGANIZED UNDER NEW LEADERSHIP

Mr. HUMPHREY. Mr. President, one of the many beneficial effects of the Senate reorganization is that the hearings and debates have induced a number of committees to examine their roles and functions to see whether their effectiveness can be improved. The Joint Economic Committee, in the current spirit of self-examination, has implemented a major modification of its subcommittee structure.

The JEC, under the able leadership of its new chairman, Representative RICHARD BOLLING, has taken two major steps. First, by merging several subcommittees, the number has been reduced from nine to five. Second, three subcommittees will be headed by cochairmen.

This innovation has the double advantage of cutting down on the number of subcommittees while at the same time permitting a greater sharing of the workload of the committee.

I add that all of us on the Joint Economic Committee take great pride in the support that was expressed for the JEC during the recent hearings in the Senate Rules Committee. In addition, numerous individuals and spokesmen for private groups wrote to the Rules Committee in support of the JEC.

One interesting aspect of this outpouring of support is that it came from so many different kinds of groups. Of course, the Joint Economic Committee is a nonlegislative committee. It has no natural constituency, as do many of the legislative committees. It is remarkable, therefore, that support for the JEC was voiced by spokesmen for business, including major corporations and small business, labor, urban and farm organizations, the Congressional Black Caucus, the U.S. Chamber of Commerce, and many others. Among the individuals who wrote letters to the Rules Committee urging that the JEC be continued were seven former chairmen of the Council of Economic Advisers, including: Arthur Burns, Walter Heller, Leon Keyserling, Paul McCracken, Arthur Okun, Raymond Saulnier, and Herbert Stein.

I am particularly pleased that the Senate Rules Committee, after hearing the testimony and reviewing the evidence concerning the role of the JEC pursuant to the Employment Act of 1946, saw fit to praise the JEC in its final report. In addition, the report also expressed the hope that the oversight jurisdiction of the Joint Committee on Defense Production would be transferred to the JEC. I hasten to add that neither the chairman of the JEC nor myself initiated the suggestion that this jurisdiction be transferred.

I consider the actions of the Senate Rules Committee and the Senate to be a vote of full confidence in the work of the Joint Economic Committee. As former chairman of the JEC and presently vice chairman, I am deeply gratified and very proud of these actions.

Mr. President, I ask unanimous consent that an excerpt from the report of the Senate Committee on Rules and Administration, entitled "Committee Systems Reorganization Amendments of 1977," be printed in the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

JOINT ECONOMIC COMMITTEE

The Committee on Rules and Administration reviewed the Select Committee on Committee's recommendation that all joint Congressional committees to be abolished and that the functions, duties, and responsibilities of these joint committees be assumed by the standing committees of the Senate. While the Rules Committee agrees that some joint committees could be eliminated, it felt that unilateral abolishment of all would not be in the best interests of the Senate. One such exception is the Joint Economic Committee.

The Rules Committee found, during the course of its hearings on Senate Resolution 4, that since 1946 the Joint Economic Com-

mittee has rendered valuable service to the Congress. Because it does not have any legislative responsibilities, the JEC has been able to provide the Congress with careful, long-range economic analyses which cannot be provided by the legislative committees of the Senate because of the lack of time.

The Joint Economic Commitee has led the way in providing the Congress with alternatives to the budget, national employment, and overall economic policies of the Executive Branch. A strong, viable research organization must be continued in the Congress if the balance of power is to be maintained between the Congress and the Executive Branch. The Committee on Rules and Administration believes that the Joint Economic Committee has performed this function well in the past and that it should continue to do so in the future. The Rules Committee sees no reason why the JEC should be eliminated, and urges the Senate to provide it with continued support.

For purposes of committee assignment limitation under this resolution, the Joint Economic Committee shall be considered as a "third committee assignment."

NASA HELPS HOMEOWNERS DETECT HEAT LOSSES

Mr. FORD. Mr. President, this past week President Carter asked the American people to accept "mutual sacrifices" to conserve energy. While I certainly agree with the need to make some real sacrifices for energy conservation's sake, we can also save energy by being smarter than we have in the past, not just by doing without.

For example, NASA is participating in a space age program to help residential homeowners determine if their homes are adequately insulated. The agency uses a low-flying airplane equipped with a camera that can "see" warm spots on the ground. This thermal scanner, when flown in an airplane, can cover many square miles of residential neighborhoods in just a few hours. Rooftops of homes with too little insulation will stand out on the photographs, so homeowners can examine the pictures to see how their own home looks compared to the others.

I have already written several gas utility associations to inform them of the very successful thermal scanning experiments already carried out in several cities. It is my hope that these associations will serve as the intermediary between local gas utilities and NASA to encourage the use of thermal scanning and proper insulation in other cities. NASA now has the names of private companies prepared to carry out thermal scanning in various areas of the country.

Because of the artificially low price of natural gas, insulation is even more economical for homes heated with oil and especially for those heated electrically. Hence, the utility of thermal scanning is not limited to advising homeowners who heat with gas. To the contrary, other homeowners can benefit even more.

Mr. President, I ask unanimous consent to have printed in the RECORD a NASA statement about their latest plans to use thermal scanning for energy conservation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NASA TO HELP HOMEOWNERS DETECT HEAT LOSS

Excessive loss of household heat creates financial hardship for homeowners and is a waste of precious fuel. But how do you determine whether your home is losing too much heat?

NASA's Lewis Research Center has agreed to participate in programs in Cleveland, Ohio and Springfield, Ill. designed to demonstrate the feasibility of using an airborne infrared scanner to identify residential heat loss.

At the request of Cleveland's Department of Community Development, a NASA C-47 aircraft will fly over demonstration areas on the city's east and west side. These special demonstration residential areas were selected from target areas designed by the Cleveland City Council. Residents there are eligible for low-interest winterization and rehabilitation loans from Housing and Urban Development.

The infrared thermal scanning unit onboard the aircraft flying at 1,000 feet is able to view a one-half mile wide swath. Data are recorded on magnetic tape and later processed into a picture-like image.

The thermal infrared image shows hot areas as white, warm areas as gray and cool areas as black. It is possible to determine which homes are losing too much heat by the degree of brightness of rooftops.

When this demonstration flight has been completed, residents of the target areas may go to their local community center or other specified area to view the imagery and to hear about the Cleveland Winterization Program. If a homeowner finds that his home is losing too much heat he will have the opportunity to apply for a low interest block grant rehabilitation loan through the Department of Community Development.

Springfield, Ill. has asked that Lewis also demonstrate this remote scanning system as part of their rehabilitation and winterization program being done in cooperation with HUD. Both cities will reimburse NASA for its role in their studies.

An energy conservation program has been in effect at all NASA centers for the past several years. Lewis has used the thermal infrared technique to scan all NASA centers in the country, checking for energy loss from roofs, ventilator fans and central heating steam distribution lines.

During the winter of 1975–76 Lewis Research Center conducted aerial thermal IR scans of NASA field centers which have resulted in an estimated $235,000 direct energy savings for NASA. This estimate is based on a recent field center survey of repairs, structural changes, and operating procedures initiated to eliminate excessive heat losses discovered by the IR scans. Since the entire IR scanning program, including data processing, cost only $94,000, it is estimated that another $230,000 has been saved by using aerial thermal scans instead of the more costly conventional heating system surveys. Total saving to NASA is about $350,000 in the first year of the energy conservation program.

At the Lewis Center the thermal scan showed several areas where heat was being lost. For example, underground steam lines were losing heat due to degeneration of insulation. Engineers found that several rooftop ventilating fans could be selectively turned off after hours to conserve building heat.

At the National Space Technology Lab in Bay St. Louis, Miss., the primary concern was to locate heat loss in more than 13 miles of underground high temperature hot water lines. The conventional spot check method, including excavation at selected locations, would have cost an estimated $100,000. Thermal scanning of the total heating system cost $7,000, resulting in a savings of about $93,000.

The goal of Lewis' participation is to make people aware that excellent, cost-effective infrared scanning technology exists and to encourage other states and cities to make use of commercial infrared scanners to help implement national energy conservation programs.

LINKAGE THEORY OF FOREIGN POLICY MAY BE DISCARDED IN NAME BUT SOVIETS HAVE TO TAKE INTO ACCOUNT U.S. PERCEPTIONS OF POLICY

Mr. CASE. Mr. President, during the past administration, the so-called linkage theory was an element of our foreign policy in dealing with the Soviet Union.

The basic concept was that the Soviet Union's actions on one issue or in one part of the world should not be viewed independently—nor would America's responses. Thus the Soviet Union's actions in intervening in the Angola conflict and the Middle East caused a general increase in skepticism about Moscow's overall intentions toward the West. In Congress, there were efforts to link trade concessions with a lowering of emigration barriers by the Soviet Union. In what seemed to be an effort to avoid upsetting the overall policy of détente, however, Secretary of State Kissinger preferred using quiet diplomacy in dealing with Moscow's violations of human rights and declined to use economic pressures against the Russian-Cuban involvement in Angola. In these instances linkage restrained the United States.

The new administration is discarding the label of linkage. President Carter was asked at his news conference Tuesday about the human rights issue and the following exchange took place:

Q. Mr. President, there have been a series of actions taken recently by the Soviet Union including the expulsion of American journalists and the arrests of Alexander Ginsburg, actions that we have taken issue with in one form or another. How concerned are you that by being outspoken on issues of human rights we may jeopardize possibly our relations with the Soviet Union on other matters?

A. This brings up the question that is referred to as linkage. I think we come out better in dealing with the Soviet Union if I am consistently and completely dedicated to the enhancement of human rights, not only as it deals with the Soviet Union, but all other countries. I think this can legitimately be severed from our inclination to work with the Soviet Union, for instance, in reducin deepndence upon atomic weapons and also seeking mutually balanced force reducing dependence upon atomic weapons and also seeking mutually balanced force reductions in Europe.

I don't want the two to be tied together. I think the previous administration, under Secretary Kissinger. Thought there ought to be linkage and if you mentioned human rights or if you failed to invite Mr. Solzhenitsyn to the White House that you might endanger the progress of the SALT talks.

I don't feel that way.

But, Mr. President, no matter how much one might wish otherwise, the impact of linkage cannot be disregarded completely as a psychological aspect of foreign policy. Neither the administration nor the Soviet Union will be able to ignore important linkages that exist in the minds of Americans.

We, and the Soviet Union must take

into account what I would call the perceptions of policy.

American perceptions of Soviet policies cannot be ignored in dealing with such important matters as SALT agreements, trade, and human rights. Our perceptions of Soviet violations of human rights cannot help but affect our attitudes when it comes to trade credits and SALT negotiations.

The Soviets should understand that how they treat their own people will, in fact, affect our assessment of how they may deal with other nations.

Events in the Soviet Union during the past week have been a harsh reminder that Moscow has chosen to disregard key elements of the 1975 Helsinki accord which they and other members of the Warsaw Pact signed along with NATO nations. The latest disturbing incident occurred with the reports this morning of the detention of Yuri Orlov, head of a Moscow group of Soviet citizens monitoring their government's compliance with the Helsinki accord.

Other causes for concern are the ouster of an Associated Press correspondent and the arrest of Alexander Ginzburg, a leading dissident and writer who already has served 7 years in prison.

I ask unanimous consent to have printed in the RECORD a description of the situation compiled by the staff of the Helsinki Commission.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DESCRIPTION OF THE SITUATION

Mr. Orlov, according to press reports today, was picked up by Soviet police after telling a news conference yesterday that 1977 could see a return to Stalinism in the Soviet Union.

He previously had been detained last month while on his way to a news conference with foreign journalists in Moscow.

For the first time in six years, the Soviets have expelled an American journalist, George Krimsky of the Associated Press. Last spring, Mr. Krimsky was one of three reporters accused in the *Literaturnaya Gazeta* of working for the Central Intelligence Agency. These charges were denied by all the reporters and it is clear that they were singled out because of their excellent knowledge of Russian, extensive contacts and friendships with non-official Soviets, and coverage of dissident activities.

On January 24, the press department of the Foreign Ministry summoned David Mason, bureau chief of the Associated Press, asking why Mr. Krimsky was still in Moscow and suggesting that he be withdrawn. The Associated Press refused. The *Literaturnaya Gazeta* renewed the C.I.A. charges against the three correspondents in an article on February 3 which, however, focused on Mr. Krimsky, accusing him also of having given a Russian informant special coupons available only to foreigners for use in special shops which are better than stores for ordinary Soviet citizens. This charge was also denied by Mr. Krimsky. The official charges against Mr. Krimsky are espionage and currency violations.

In a statement, Keith Fuller, president and general manager of the Associated Press, said:

"The expulsion of George Krimsky, in our view, is a flagrant violation of the Helsinki agreement as it pertains to news reporters carrying out their mission."

"From the facts before me, I can discern only that his sin was to be an aggressive reporter in the Soviet Union today where the rising voices of Soviet dissidents seem to be unnerving those responsible for his expulsion."

In retaliation for the Soviet expulsion of George Krimsky, the United States ordered the expulsion of Vladimir I. Alekseyev, correspondent for Tass in Washington.

The past few days have witnessed a further intensification of the Soviet campaign against domestic critics in Moscow and in the Ukraine.

Last summer a group of civil rights leaders organized the Public Group for Implementation of the Helsinki Agreements in the USSR which has issued a series of reports which document Soviet violations of the human rights provisions of the Final Act.

In January, in addition to detaining Yuri Orlov, the KGB searched the apartments of other leading dissidents, Alexander Ginzburg, Lyudmila Alekseyeva, Lidiya Voronina and Mr. Ginzburg's mother. Later, at a press conference, Mr. Ginzburg said that plainclothes police had planted 1,000 West German marks and about 100 dollars in cash in his mother's apartment. This action indicated that the authorities were preparing a possible criminal charge against Mr. Ginzburg on these grounds, since the possession of foreign currency by Soviet citizens is illegal.

This impression is strengthened in an article in *Literaturnaya Gazeta* of February 2, 1977, in which Mr. Ginzburg was attacked for his dissident activities and accused of illegal currency transactions. In response to this, a news conference was held in the Ginzburg apartment where he disclosed the details of a financial aid operation, the Russian Social Fund, set up by Alexander Solzhenitsyn to assist hundreds of Soviet political prisoners and their families. In their December search of his apartment, Mr. Ginzburg said that the KGB had taken 5,000 roubles from him in his capacity as administrator of this fund. In total, the fund has spent the equivalent of $360,000: in the second half of 1974, 120 prisoners or their families were helped; in 1975, 720 prisoners or their families got support, in 1976 about 630 prisoners or families received financial aid. Ginzburg attributed the decline in support to the release of some prisoners and to growing police pressure on some families to refuse help because it would be the worse for the prisoners.

The Russian Social Fund was started with money that the Solzhenitsyn family left behind in the USSR and supported by royalties from "Gulag Archipelago" sent into the USSR through legal transfers, with the Soviet government skimming off a third in taxes and passing on the rest to Mr. Ginzburg in rubles. When the authorities realized what was going on, they blocked further payments.

Yet, the fact that fully one quarter of the money to help political prisoners, $93,000, has come from people within the USSR points up a very significant change in Soviet political consciousness: political prisoners are no longer regarded as pariahs as they were in Stalin's heyday, rather, as people needing moral and financial support. It is perhaps the Soviet understanding of the importance of this new independence from the official government line on political prisoners—that they are all criminals and connected with foreign espionage organizations—which is determining Soviet actions against Ginzburg.

On February 4, he went out to make a phone call (since his telephone had been removed) and never came back. His wife called the KGB and was told that Ginzburg is being held in his place of exile, the city of Kaluga, 90 miles southwest of Moscow.

On February 7, the State Department said that it had informed the Soviet Union the the United States was "watching with concern" the situation of Alexander Ginzburg. More than 200 dissidents in the Soviet Union signed an appeal on the same day in support of Alexander Ginzburg, saying he is in bad health and that imprisonment endangered his life.

On Saturday, the Soviets ordered another member of the Orlov Group, Lyudmila Alekseyeva, to leave the Soviet Union by February 21, 1977. And in the Ukraine, the KGB moved against the group there monitoring Soviet compliance with the Helsinki accords—they arrested Mykola Rudenko, the 57 year-old poet who was the leader of this group and Oleksiy Tykhy, a school teacher in Donetsk. On the same day, they made house searches of two other members of this group, and during the arrest of Mr. Rudenko, the KGB forced Raisa Rudenko to strip naked as a humiliation before taking her into custody—she was released after being told that her husband was under arrest. These events were announced at an Orlov Group press conference in Moscow.

There are as yet no reported specific charges against Yuri Orlov, Alexander Ginzburg, Mykola Rudenko or Oleksiy Tykhy—except their forthright stand for civil liberties in the Soviet Union today.

DR. EDMUND URBANSKI

Mr. MUSKIE. Mr. President, Dr. Edmund Urbanski, a distinguished Latin Americanist, has recently retired from Howard University after a successful academic career spanning 35 years.

Dr. Urbanski has to his credit several books in Spanish and English currently used in American and Canadian universities. He has also represented the U.S. academic community in several International Congresses of Americanists and Hispanists.

Dr. J. David Suarez-Torres, a professor of Spanish at Georgetown University, has written a tribute to the scholarly achievements of his colleague. I ask unanimous consent that the tribute be printed in the RECORD.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

TRIBUTE

Dr. Edmund Stephen Urbanski is among the recently retired faculty members of the Washington, D.C., academic community. A keen student of Latin America, his academic career comprised thirty-five years of teaching and research in various institutions, started at the National University of Mexico and ended at Howard University. Before entering the academic life, he was engaged in other intellectual activities for ten years.

The retired scholar is the author of six books in Spanish, one in English, and one in Polish. He also wrote numerous articles and essays on Indianist and Hispanic topics, published in scholarly journals in the United States, Canada, Latin America, and Europe.

Professor Urbanski represented the United States at various international Congresses of Americanists and Hispanists, and on three occasions was elected their discussion leader (Madrid, 1964; Mar del Plata, 1966; and Mexico, 1968). He achieved intercontinental reputation mostly through his last two Spanish studies: ***Anglo-American and Hispanic America*** (Madrid, 1965), and ***Hispanic America, Her Races and Civilizations*** (New York, 1973), which were favorably reviewed in sixteen countries in seven languages.

The author propounded in them an unorthodox concept that Spanish America has not one but several civilizations, molded by her various ethno-cultural groups. This novel

concept has been accepted by most scholars in the United States, Latin America, and Europe.

The retired scholar has been also known for his pioneering, comparative research in Anglo-American and Hispanic American cultures.

Born in Poland (1909) and educated in Europe, the United States, and Spanish America, Professor Urbanski was favored with six research grants, and traveled extensively in three continents. He was honored by various U.S. and foreign academic associations. The following ones favored him awards: the Instituto Interamericano (1965), the Anthropological Association of Canada (1966), the Peruvian Instituto de Estudios Humanos (1966), the Colombian Academia de Historia de Santander (1969), the National Hispanic Honor Society (1970), the Portuguese Centro Cultural, Literario e Artistico (1973), and the International Social Science Honor Society (1974).

Interested in community affairs, Dr. Urbanski also participated actively in the programs of the Club de las Americas, the Anthropological Society of Washington, and the Inter-American Council.

During this retirement, Dr. Urbanski plans to continue his Latin American research on the early notions of the New World as perceived in th 16th and 17th century Iberian cartography, which most likely will take him again to Spain and Portugal. Curiously enough, this Maryland resident scholar spent the early part of his retirement aboard the U.S.S. Nimitz in the Atlantic.

Prof. J. DAVID SUAREZ-TORRES,
Georgetown University.

NEED FOR EFFECTIVE BRIDGE PROGRAM

Mr. CULVER. Mr. President, one of the most critical problems facing travelers and commuters today is the unacceptably high number of deficient bridges on highways and roads throughout our Nation. Many of these bridges are simply unsafe and should be repaired or replaced immediately, but it is becoming more and more obvious that the demands far outstrip the available financial resources.

Currently, $180 million is authorized annually for the special bridge replacement program through fiscal year 1978 for work on structurally deficient or functionally obsolete bridges on Federal-aid highways. Though this program has provided some necessary relief, we must realize that a much greater commitment of both Federal, State, and local funding is urgently needed. The U.S. Department of Transportation has classified over 34,600 bridges on Federal highways as deficient, and it will cost over $10 billion to replace them. And that does not even address the public investment which will be required to reconstruct deteriorating bridges off the Federal system.

In my own State of Iowa, for instance, there are over 900 bridges on the Federal-aid system which have been classified as deficient, a figure that places Iowa 13th among the 50 States in terms of the numbers of bridges that must be replaced. In addition, Iowa has posted over 10,400 bridges on local road systems for less than the legal loads, and it will cost over $550 million to replace them.

In recognition of this growing problem, I, along with several of my colleagues, including the distinguished chairman of the Public Works Committee, Senator RANDOLPH, recently introduced legislation to expand the special bridge replacement program. This bill, the Bridge Replacement and Rehabilitation Act of 1977, would increase the authorization of the special bridge replacement program from $180 million to $600 million annually and would require that not less than 15 percent of such funds allocated to each State may be used on bridges under the sole authority of counties.

In July 1976, President Ford recognized the importance of highway safety by a Presidential proclamation. Each of the 12 months of the National Bicentennial Highway Safety Year has been designated as a time to focus on specific safety problems, and February 1977 is the Safer Bridges Month. In accordance with this proclamation, the American Road Builders' Association has devoted this month's issue of its magazine to a discussion of unsafe bridges.

Several articles in this periodical underscores the need for more realistic funding for bridge replacements, especially in rural areas, and demonstrate the progress that has been made in certain States. I ask unanimous consent that these selected articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

FARMERS VIEW OF BRIDGE SITUATION

A small town newspaper editor in eastern Missouri, who had received data from The Road Information Program on the condition of the state's bridges, decided to interview some of the farmers in his county.

"Now you're looking into something that'll help all of us farmers. You bet, I'll be glad to show you some of the bridges in my area," was one response.

The editor was shown several bridges surrounding the farm and he agreed that all were structurally weak.

"We've got bridges over here that'll just scare you to death," the farmer said, and added, "and the sad part about it, is that all of them aren't that old. Even some recently built bridges are not worth a damn."

One of the "new" bridges was constructed from used materials. Several of the iron supports for the bridge deck had holes rusted completely through.

"Farmers are having to go to larger equipment in an effort to keep up. Yet we're expected to continue to farm and pay taxes, and get to our land by crossing bridges designed for horse and mule farming. It just doesn't make any sense.

"Look at this," the farmer said, thrusting a stick through a rusted hole. "How would you like to cross this bridge with a semi loaded with corn? It'd be a real thrill to ride a semi grossing 80 or 90,000 pounds to the bottom of that creek, wouldn't it?

"I used to worry about my equipment, but now I'm worried about myself. Heck, you can always repalce equipment," he said.

"Man, there's thousands of acres of farm and pasture land that must be served by these bridges. There's no other way to get to them and we're expected to haul cattle, crops and machinery across them. Maybe if someone got killed crossing one of them, they'd wake up."

One bridge the pair inspected was at least 18 inches to two feet lower at one end. Consequently, over a foot of mud and silt had washed down onto the bridge deck.

"There's no way I'd put a tractor across that, let alone a truck load of corn. Now you know why we get excited out here in the rural areas when nothing gets done," the farmer said, shaking his head.

In Indiana, another farmer complained. "The bridge inspection was made last November (1975) and they found the bridge to be unsafe and closed it the same day . . . and my house sits on one side of the creek and my farm on the other. It's required me to drive six miles a day to get back and forth until about three or four weeks ago. The county did cut the creek banks and put stone in for me so we could get the farming done this Spring without having to make that long drive.

"When we were harvesting it required making eight to 10 trips a day of six miles each to haul gasoline to the combines and take care of the grain so it got pretty expensive."

MINNESOTA'S BRIDGE PROGRAM

(By Keith V. Benthin, Bridge Engineer, Minnesota DOT)

The near collapse of a major bridge over the Mississippi River near Wabasha, Minn. a few years ago, emphasized the need and importance for a continuing program for inspection and replacement of bridges. In this instance one of the river piers collapsed from beneath the structure. The bridge remained in place and was subsequently repaired. We were fortunate that no one was injured or killed.

Occurring in the same time frame as the Silver Bridge collapse between Ohio and West Virginia, however, brought a remote concern closer to home.

Minnesota had at that time a loosely written bridge inspection law which varied from effective to useless, primarily dependent on the concern of the various individuals charged with making the inspections. The Silver and Wabasha bridge incidents awakened new interest in the state legislature. Our bridge inspection law was revised to incorporate the major features included in a bill then going through Congress. This state legislation also required annual bridge inspections on all pubic bridges in Minnesota, and designated the authorities responsible in each jurisdiction to carry them out.

As a result of the above action and reinforced by the Federal Bridge Inspection Law which was subsequently passed, Minnesota proceeded with its implementation. Included were bridge inspection and rating training sessions, uniform inspection procedures and reports, and centralized inventory reporting. For the first time we now had complete and uniform data available on the computer for every public bridge in Minnesota.

Using the information now available, criteria was set up to identify deficient bridges on the various road systems. Deficiencies were identified in the broad categories of load carrying capacity, structure condition, roadway width, and horizontal and vertical clearance. Having identified the deficient bridges from the centralized computer inventory file and making use of other information from needs studies, along with some engineering guidelines and assumptions, it was now possible to compile a statewide tabulation of actual bridge needs.

The accompanying table shows these results—4,403 deficient bridges with a current estimated replacement cost of more than $611 million dollars. In addition to this staggering sum, we projected that these needs will accumulate at a rate in excess of $35 million per year as other bridges become deficient due to age and deterioration.

Highway system	Bridges on system [1]	Deficient bridges [1]	Estimated cost	Percent of total cost	Average cost per bridge
Trunk highways	3,397	503	$268,188,000	43.9	$533,000
County State-aid highways	3,572	1,027	147,640,000	24.1	144,000
Municipal State-aid streets	229	61	28,302,000	4.6	464,000
County roads	1,477	500	34,845,000	5.7	70,000
Township roads	3,913	2,077	103,842,000	17.0	50,000
City streets	477	180	25,689,000	4.2	143,000
Miscellaneous (parks, etc.)	109	55	3,108,000	.5	57,000
Total	13,174	4,403	611,614,000	100.0	

[1] Only structures of 20 feet or more in length are considered as bridges. Deficient bridges are those structures which do not meet minimum standards in 1 or more of the following categories: Load—less than legal load-carrying capacity; condition—has progressed toward an advanced state of deterioration which will lead to posting or high maintenance costs; width—too narrow to safely carry current traffic; clearance—insufficient horizontal clearance to safely carry current traffic or less than legal vertical clearance.

It was evident the problem would not disappear, but only become more massive and costly. What was needed was a systematic long-range replacement program. With other highway needs increasing and highway funding falling behind inflation, additional funding for a bridge replacement program would be necessary.

Although helpful, the Federal Bridge Replacement Program to date has not been funded at a level which could be expected to make a dent in the needs. Even if this funding level had been increased dramatically, a large share of the replacement needs were not on systems eligible for Federal funding.

In previous years, attempts had been made to obtain bonding for replacement of specific critical bridges in the state. Although these attempts were seriously considered by the legislature, little real assistance had resulted. Based on preliminary information from the bridge inventory, attempts had been made to obtain a $200 million replacement bill in the 1974 session. Although these attempts were unsuccessful, 11 joint senate-house transportation committee meetings at several locations throughout the state were scheduled to explore the bridge problem.

By fall of 1975 the highway department had completed and updated the statewide bridge needs tabulation totaling $611 million. At the same time all bridges were rated for priority using information from the computer inventory and utilizing a system similar to the FHWA sufficiency index. Lists of deficient bridges in each county with a breakdown by road system were developed. Summaries of this data along with background information were included in a pamphlet which was distributed to interested citizens, organizations and members of the legislature. At the outstate transportation committee meetings, local deficient bridges were identified and shown with pictures and slides.

A bill providing for $600 million in bridge bonding over a 12-year period was introduced in the 1976 legislative session. After countless hearings, referrals, gathering of additional information, and much verbiage, a compromise bill was passed as the last major order of business. On April 20, 1976, it was signed into law by the governor.

The major provisions of the Bridge Replacement Act are as follows: $50 million in funding is provided, half out of general revenue and half in special bonding; $25 million is directed to bridge replacements or reconstructions on the state Trunk Highway System, $13.5 million to the county systems, $4 million to the Municipal Street systems, and $7.5 million to the township road systems. The act also calls for the Commissioner of Transportation to develop rules, standards, criteria, and specifications for administration of the program in cooperation with the road authorities of political subdivisions.

The commissioner's rules have been developed, using existing standards and criteria where possible. The hearing process to implement the rules is now in progress, with adoption now expected the first part of 1977. As proposed, these rules provide for the local units of government, acting through their county board or city council, to select deficient bridges in their jurisdiction which can be brought to early contract. The deficient bridge candidates are then referred to the appropriate regional planning commission or metropolitan council for review for consistency with long-term development plans and guides. They are then sent to the Commissioner of Transportation to determine priority for funding, based on general considerations included in the act. The procedure for state highway selections is similar, except that the department makes the initial selections.

We anticipate the entire authorization of $50 million will be committed by the end of 1977. It is also anticipated that legislative action will be taken to extend the financing of the program at the rate of $50 million annually until the replacement program is complete. We believe that if significant progress is made on actual replacement of deficient bridges on all road systems in Minnesota, funding to complete the program will be provided.

As time goes on, however, we must not forget about the other bridges that will become deficient due to age and deterioration. With yearly bridge inspection and computer processing of data, we now have the capability of identifying deficiencies so we can develop an ongoing replacement program. With such a program, Minnesota can avoid similar deficient bridge backlogs in the future.

The figures below are estimated 1975 costs to bring all bridges in the state up to current minimum standards as described below. No allowance has been made for cost increases between the estimate date and actual construction date, or for any increased yearly need as additional bridges become deficient due to yearly aging. Also not included in these figures are design and approach grading costs. These two items could conceivably total as much as the structure itself, depending upon the individual situation.

A Near Tragedy in Iowa

A school bus carrying students home from school in central Iowa last Spring crossed a bridge over a small stream while a man stood in the roadway taking pictures.

The man was putting together a slide presentation for the Iowa Good Roads Association to use in an attempt to get the Iowa Legislature to authorize more road and bridge construction funds.

The next morning, about the time another bus was scheduled to travel the route, the bridge collapsed and a pickup truck fell through to the stream below. The driver was shaken but unhurt.

How the advertising agency representative had selected that route and that bridge for his photos was not sheer coincidence. The superintendent of schools had suggested the road and bridge saying it had been a headache for the county and residents living along the route for some time.

One female resident, driving home the night before, also had a scare.

"It was raining real hard," she said. "I got the front wheels across the bridge, but the back wheels went down. I had enough speed to get across," She described the gap that had opened between the bridge and roadway.

When she arrived home she warned her husband "not to go flying" across the bridge when he went to work. It's a good thing he knew about it because even with advance information he barely stopped in time at the bridge.

A teenager on his way to school in a pickup truck wasn't so lucky shortly before eight the next morning. His vehicle fell through the gap and came to rest on its side at the bottom of the ditch. He had not seen the gap.

"One more bus across that bridge and we would have lost a load of kids down the river," one mother said.

The Ohio Struggle for More Road Bridge Funds

(By Howard Bovard, Executive Secretary, County Engineers Association of Ohio)

Convincing the voters in Ohio of the sorry condition of most of the state's bridges has been a continuing educational program for more years than many of those involved care to remember. However, the high point of the effort (perhaps it should be called the low point) was in 1975 when a $1.75 million bond issue was soundly defeated, in spite of an all-out effort by a large number of groups and individuals. The issue was actively and financially supported by the Ohio Contractors Ass'n.; The County Engineers Ass'n., of Ohio; The Ohio State Ass'n. of Township Trustees & Clerks; The County Commissioners Ass'n. of Ohio; and the International Union of Operating Engineers, Local 18. Numerous other groups joined the effort as the campaign progressed.

It was originally hoped that the constitutional amendment would be put on the ballot through a vote of the legislature. However, time ran out. So it was decided to put it on the November 1975 ballot by means of petition.

Petitions were circulated by hundreds of interested parties and a traveling exhibit was put on the county fair circuit. A tour through the exhibit provided information concerning all four issues and attendants were on hand to secure signatures.

In addition, a three-ring binder entitled "Ohio Counties One by One . . . the Problem of Inadequate Secondary Roads and Bridges" was produced. It contained maps, statistics, and photographs detailing road and bridge conditions on state, county, and township systems in all 88 counties in Ohio. This information was supplied by each of Ohio's 88 county engineers. A 92-page booklet containing a digest of the same information was included with the binder, inserted in a front pocket.

This format was used so that every state legislator, on a given date, found a personally inscribed copy of the binder on his desk. Personal copies were also delivered to all Ohio Senators and Congressmen in Washington.

Also, an over run of the smaller booklet made it possible to do a mailing to all newspapers, and radio and TV stations in Ohio, which generated a great deal of publicity throughout the state.

In Ohio, the most pressing need for funding attention at the local level is for bridge improvements. Ohio's county engineers are responsible by statute, for the upkeep of all structures on county roads, township roads, municipal extensions, and bridges over navigable streams. This, of course, creates a tremendous financial burden on the county engineers' roads. Most county engineering budgets are strained by regular administrative and operating expenses, plus routine

maintenance work. The few choices for additional funding are: increased license fees and gasoline taxes, Federal monies, or special state financing.

"Ohio Counties One by One" did its job of serving as an educational vehicle. The massive petition drive put all four constitutional amendments on the ballot.

As part of a "total blueprint for Ohio," the Transportation referendum was one of four. It was designed to provide $400 million to townships, counties, cities, and villages for long overdue capital improvements. It was estimated $1.75 billion in state money would attract $3.25 billion in Federal funds through highway, public transportation, and other Federal programs. The Federal share, would have more than paid for the interest on the bonds. To finance this program the state gasoline tax would have been increased 9/10 of a cent per gallon over a 30-year period.

All four issues, the others being Industrial Incentives, Housing Support, and City and Village Redevelopment, were promoted under the banner of "500,000 New Ohio Jobs," with an estimate that transportation improvements would account for 100,000 of them. For instance, there are more than 8,000 Ohio bridges rated unsafe by engineers. There would have been funds for inner city street improvements and street lighting, improvements in county airports, access roads to state parks, and bike paths. And funds would have been allocated for passenger rail service connecting the major cities in the state.

An all-media advertising campaign was established to promote the passage of all four issues. In addition, an extensive information program was launched throughout the state to generate interest in the road and bridge problem.

The county maps indicating each location of an unsafe bridge were widely used by newspapers throughout the state. In most instances some of the dots on the map were illustrated by actual photos taken locally by the papers.

Most news stories emphasized that roads and bridges, especially at the county and township levels, are deteriorating annually. In the entire state more than 8,000 structures need immediate replacement or repair.

Using prevailing construction figures it was estimated the total statewide expenditure for this massive repair and replacement program would exceed $750 million. In addition, more than $2 billion more would be needed to upgrade the roads to adequate standards.

The cost to Ohio's car owners was explained in this manner. If a car gets 13 miles to the gallon, and is driven 10,000 miles a year, which is considered the national average; then the program would cost the owner $6.92 per year, less than the price of one tankful of gasoline.

In 1961, local Ohio governments—counties, municipalities, and townships—received their last increase in state-collected transportation funds. That action added $16 million to local funds by removing the cost of the Highway Safety Department from the registration fee and adding it as a cost to be paid from the gasoline tax by the Ohio Department of Highways.

In the subsequent 14 years since 1961, the cost to local governments for street and highway improvement programs had grown faster than income. It now takes the total amount of state-collected highway taxes received by local governments simply to maintain their existing road systems. All replacement and reconstruction of streets, bridges, and highways must be accomplished with local taxes or assessments, including various bonds and notes. Such local funds had reached the end of the road.

"The Sorry State of Southwestern Ohio Bridges," as the story was headlined in the Hamilton Journal-News, surveyed five counties with a total of 2,041 bridges. County engineers reported 369 of them old and weak with reduced load limits. Seventeen had collapsed during the past five years, and nine had been closed. The shocking question in the story was, "Will it take another Ohio River Silver Bridge tragedy to make people aware of the situation?"

"Although the voters turned down the bond issue for statewide transportation improvements," said Karl Rothermund, Executive Director, Ohio Contractors Ass'n., "I firmly believe our campaign made them aware of the critical road and bridge situation. Perhaps our next effort will meet with more success."

A bill has been introduced into the 112th General Assembly. If it passes, license fees would be increased from $10 to $25 per year, excluding the permissive tax enacted by some counties and cities.

In Seneca County, during the campaign to pass the bond issue, two persons were killed on narrow bridges and two bridges collapsed because trucks failed to obey posted weight limits. "More of these things are going to start falling down and people are going to be killed or hurt," said County Engineer Earl W. Van Ho.

Fortunately, some voters do realize the need for additional funds and are willing to assume the financial responsibility. Miami County Engineer Art Haddad, an ARBA Director, in testimony before the Transportation Committee of the Ohio House of Representatives, explained how the voters in his county, recognizing that a critical situation existed relative to the condition of bridges, in 1951, voted themselves a five-year, one-mill real estate levy for replacement, repair, and maintenance of bridges on county and township roads, and a municipal street system for which the county is responsible.

A real estate levy was the only means available with which to finance these much-needed improvements. Haddad's department has worked with diligence to keep faith with the public to up-grade all the bridges within its jurisdiction. And, apparently the people of Miami County approve of the effort, because they have renewed the five-year levy four times since the original passage, the last time by a majority of 67 percent.

A man who can speak to the road and bridge problem from all angles is David L. Weir, newly-appointed Director of The Ohio Department of Transportation, former Assistant Director of ODOT and Ashtabula County Engineer for 10 years and, also, an ARBA Director. As 1972 President of the County Engineers Assn. of Ohio, Weir worked long and hard on legislation to increase motor vehicle registration fees which is the main source of local highway revenues in Ohio. He also participated in discussions on raising the fuel tax which would have provided increased revenues for the Ohio Department of Transportation. Unfortunately, it wasn't accomplished then, nor has it been since.

In his present position Weir is working with community leaders and legislators to accomplish as much as possible with the limited funds available.

"Through their vote, 86 percent of the people in Ohio said they did not have a transportation problem that needed funding," says Weir. "Since the people have spoken, The Ohio Department of Transportation is now trying to do the best we can with what we have. We work to obtain the best construction and maintenance programs for the dollars that come into the department. As a result, we have reduced more than 900 original projects that needed funding to 426 projects, with priorities placed on each. This is where our time and effort is now being concentrated, to obtain the best match between federal and state dollars."

The County Engineers Association of Ohio is continuing to work toward increased funding for secondary roads and bridges. The Association's recently-retired Executive Secretary, Merle Paul, stated, "We must rededicate our aims of our Association toward the revitalization of the local road system and the removal and replacement of nearly 9,000 substandard bridges on that system."

The C.E.A.O.'s new president, Delaware County Engineer Fred Stults, has served as chairman of the association's legislative committee for the past three years. His efforts to secure the necessary funding will continue.

Says Stults, "Our only reliable source for increased funds must come from license plate fees. Ohio still is 48th in rank of the cost of this fee. Indiana, for example, has a $12.25 registration fee, plus a tax based on the age and value of the car, and plates for a four-year-old car can cost more than $90."

He noted that in Arizona, it is not unusual for license plates to run as high as $150. "Even with a large increase in the fee in Ohio," he said, "it would be, comparably, a real bargain."

The Association will be proposing a license tag bill in this year's General Assembly. The fee will be based on car weight, the heavier car, of course, paying the higher fee. The small and energy-saving cars will be taxed at a lower figure to encourage the gas-savings inherent in less weight.

Certain auto manufacturers have recognized this factor by reducing the weight of some full-sized cars by as much as 15 percent. It is hoped Ohio lawmakers and the general public will soon recognize the critical needs of the state's local roads and bridges. Perhaps, before long, they will realize that even if they do not pay for road improvements, they already are paying these costs in higher costs of transportation, higher frequency of accidents and death, and higher insurance rates, as all costs of operation increase.

JOHN GARDNER—AN UNCOMMON CITIZEN

Mr. PROXMIRE. Mr. President, for a number of years John Gardner has been chairman of Common Cause, the citizen's lobby. Now he has decided to retire on the grounds that every institution should renew itself at regular periods and that a new person with new ideas would enhance both the policies and the life of this amazing organization.

And it is an amazing organization. Until Common Cause and Ralph Nader arrived on the scene, there were almost no lobbies which routinely supported the public interest.

Common Cause has especially pushed the cause of good government, of clean elections, and of higher public ethics. And it arrived on the scene at the right time. An organization of ordinary citizens, who had no particularly narrow cause to lobby for, and the awareness on the part of both the public and more and more people in both elected and appointive office of the need for civic reform, happily coincided.

The results have been both far reaching and amazing. There has been a major reform in campaign funding. The general level of ethical conduct among government officials is at a much higher level. One reason why the latter may not always seem to be so is that because of Common Cause and others the public now

requires a much higher standard of conduct than ever before. We are now seeing exposés of actions which until now went unexposed or were accepted.

In any case, in a wide range of activities—lobbying, public funding, ethical conduct, campaign activities, urban problems, environmental questions like the SST, and many others—Common Cause has helped to revolutionize the nature of government conduct and to raise the level of both public debate and action.

To say that is to say a very great deal. And one man who has led Common Cause during its birth and growth, John Gardner, deserves much of the credit for leading it in the right direction and for the great successes it has had.

Mr. President, I ask unanimous consent that an editorial entitled "The Causes of an Uncommon Citizen" from the Washington Post for February 9, 1977, be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CAUSES OF AN UNCOMMON CITIZEN

John Gardner's announcement that he would retire this spring as chairman of Common Cause bore a typical touch of high-minded understatement. "Every organization must renew itself," he said of the news that led others to envision the removal of a major institution from the public scene. It is not an institution, however, that is leaving the scene, merely a single citizen. And the significance of the event rests precisely upon that fact.

Mr. Gardner's public works since he left Lyndon Johnson's Cabinet nine years ago might be undervalued if seen as merely the extension of one prominent man's life work. Squads of public spirited citizens have moved through the upper reaches of the American Government, but only one went on to lead not one but two great experiments on the nation's toughest terrain—the quality of our urban life and of our political system.

At the height of the nation's urban trauma, he lent his talents, prestige and energies to the creation of the National Urban Coalition, and to a concept of city social problems through coalitions of the powerful and the excluded.

And out of that experience came two further insights that led to the creation of Common Cause. The first was that the murky nexus between money and politics had to be dragged into the light of day if ordinary citizens were to aspire to an honest deal from government. The second was that conventional power blocs, even those of the traditional "good guys," would fall apart on such issues and that some other base was needed. Hence the direct-mail, grass-roots lobby, now widely emulated.

It is no accident that Congress changed enormously in the seven years of Common Cause's life. And the changes began even before Watergate. The seniority system is not nearly as rigid as before. The new campaign financing law, whatever its defects, is on the books. A stiff code of ethics is now moving through the Senate and House. Even without the code, conflicts of interest became substantially more sensitive issues on Capitol Hill than ever before.

John Gardner has demonstrated that urban problems can be addressed in community-wide efforts. And he demonstrated that a citizens' lobby can successfully compete with the conventional lobbies. But there has been more than civics lesson in this phase of his career. Above all he has demonstrated that one citizen can indeed make a difference if he cares enough for the common cause.

OPPOSITION TO PAY RAISE

Mr. MUSKIE. Mr. President, I opposed the pay raise when the question came before the Senate.

The question is not whether Government officials merit the proposed increase or whether adjustments are needed to keep pace with the cost of living. The issue is one of national leadership.

We are emerging from a period in which our Government has recorded the highest deficit in our history. We are attempting to regenerate an economy which has kept millions of Americans out of work. At the same time as we are seeking to boost the economy, we are attempting to avoid the peril of a new inflationary cycle.

The average Maine family experiences, every day, the effects of inflation, and a weak economy. Its members cannot adjust their incomes to deal with the problem and they feel powerless to alter the situation.

Our citizens are looking to us for leadership in restoring the Nation's economic health, and improving their circumstances. Yet Congress gave up an opportunity to show the people that we are willing to stand with them in our effort to break out of our economic troubles.

The Peterson Commission, created by President Ford and charged with making recommendations about salary increases for officials at the highest levels of the three branches of government, has documented the problems of recruiting the most qualified Americans for those positions at current pay levels. The salaries in question have only been increased once—a 5-percent increase—since 1969. Private wages went up 70 percent in the period.

Nevertheless, I believe that Congress must be willing to show restraint at a time when we are asking the American people to show restraint while we struggle out of the worst recession in four decades.

During my campaign for reelection, I told Maine people I would work to improve economic opportunities in our State. I made that my number one priority. Congress had the chance to demonstrate that is still our first priority by rejecting the pay raise. Instead, by allowing the raise to go into effect, Congress will have to pay an enormous price in public confidence.

This is why I opposed the pay raise.

WHAT AMERICA MEANS TO KAREN JORDE

Mr. BURDICK. Mr. President, I am pleased to bring to the attention of my colleagues the accomplishments of a talented young constituent of mine, Miss Karen Jorde of Grand Forks, N. Dak.

In a recent oratorical contest sponsored by the Veterans of Foreign Wars, Miss Jorde submitted the winning oration for the State of North Dakota. Her views are certainly thought provoking and I would now like to share with you her winning entry entitled "What America Means To Me."

I ask unanimous consent that it be printed in the RECORD.

There being no objection, the oration was ordered to be printed in the RECORD, as follows:

WHAT AMERICA MEANS TO ME

(By Karen Jorde)

The melting pot of the world, a system that works in the face of a national nightmare, seemingly endless unbroken prairies, hot dogs, baseball, apple pie and Mom! This is America, the country more poets songwriters and novelists have described than any other nation. If you look you will find these things here, but you'll also find something more, because America isn't a country made of swan songs and Rose petals, it's made of people. It was built, very simply, on an immigrants dream of what could be!

356 years ago a small band of people risked everything they possessed, because they had a single-minded determination to worship freely.

156 years later the people of 13 unimportant colonies had a new idea, a country where everyone could be his own person, owing nothing to any earthly prince. 'Pure lunacy' it was said, but they fought for it long and hard, surprisingly enough, they won, it's been working ever since.

I can't lay claim to any ancestor of mine who was one of those people. But, I'm proud to say that I come from a new breed of people who were raw, independent and every bit as determined as the people who struggled for freedom before them. They were the pioneers. They came here on dirty little ships where disease played havoc with human life and often destroyed it. Yet they made it! It's estimated that 8.8 million people immigrated to America in the first decade of the 20th century alone.

These people were the misfits, poor and forgotten of the European world. But, they held within them the power to dream. I am a part of those people, a part of their dreams; the house I live in, the school I attend, the community which I was born in are all a part of their hopes. Countries such as ours, however, aren't built just on visions either. They're built because of the sacrifices of people who believe.

I owe my very existence to those people. I owe a debt to the future generations of America. I accept the responsibility to continue to work for and preserve the concept of individual freedom. For this reason I agree with Washington Post editor, Ben Bradlee who said ". . . if you let anyone take one bite out of your freedom, they'll take it all." The fight for freedom wasn't a battle won long ago and then forgotten. No, it's a never ending full-scale war.

Today unfortunately, there are some people who have lost faith in the principles of our nations founding. These people are fools and history will record them as such. I know we have problems to solve. But I still believe in America. Millions of other Americans do also. My faith in America is renewed each time I remember the vision of the immigrants who settled here. Years later the inspirational words of Martin Luther King captured the essence of this country and what it means to me, when he said, "When the architects of our republic wrote the magnificent words of the constitution and the declaration of independence, they were signing a promisory note to which every American was to fall heir. This note was a promise that all men would be guaranteed the unalienable rights of life, liberty, and the pursuit of happiness . . . I am not unmindful that some of you have come here out of great trials and tribulations . . . even though we face the difficulties of today and tomorrow, I still have a dream."

Like Martin Luther King and millions of other Americans, so do I.

AMERICA'S FAMILY FARMERS

Mr. LEAHY. Mr. President, few segments of our society have been ignored so much in recent years as the family farmers of America—the millions of families who still produce the bulk of our food and fiber. The fact is that small farms still comprise nearly a third of the land, 44 percent of the tractors, and 25 percent of the cattle. They are the place of residence for more than half of the total farm population.

Despite those who predict—and even encourage—the demise of the family farm, they are and must remain a strong and integral part of our national life.

An article entitled "The Quiet Farmers Agribusiness Ignores" which appeared in the December issue of Organic Gardening and Farming demonstrates that the small family farming is still viable. It also points out that the increased use of organic materials can be an effective method of stemming agriculture's increasing dependence on petrochemicals while at the same time promoting soil conservation and protecting the environment.

Mr. President, I believe that the views expressed in the article should be kept in mind by all of us as we consider the formulation of new agricultural policy and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE QUIET FARMERS AGRIBUSINESS IGNORES

(By Gene Logsdon)

It's easy to drive right past Dick Lessig's little farm in Hancock County, Ohio, and not notice it at all. Like thousands of other small farms, there's nothing exceptional about Lessig's place by the standards we use to measure "progress" and "status." At first meeting him, you'd say there's nothing exceptional about the man either. Together, they're just a plain, simple, 100-acre farm, a traditional old white barn and farmhouse, a line of old farm equipment, and a farmer more concerned with his team of horses than the price of corn in Chicago.

Agribusiness does not think Dick Lessig really exists. The champions of "get big or get out of farming" have predicted his demise for so many years that they have had to go ahead and bury the coffin—empty. Indeed, the number of small farmers is probably rising now, though there is no way to tell, because agribusiness, unable to predict the stubborn creature out of existence, has deftly tried to define him into nonentity. Only farms with high gross income and "full-time" operators are real farms, according to its criteria.

"It's how much you net, not how much you gross that matters," says Lessig, smiling as usual. "And if you check it out, you'll find that many of the big farmers are only part-time farmers, too." (I checked with a large accounting firm, Barnes and Misick, doing business with farmers in central Ohio, and received verification that many, if not most, large farmers have off-farm income from another job, another business or another investment.)

Can a man make a decent living on a small farm? "Oh, I think he can," says Lessig. "You might want to get a little off-farm work to tide you over the rough spots. You might have to accept a so-called lower standard of living, by urban standards. But there are still many farmers who derive a good living from 30 to 40 dairy cows and 100 acres. You don't hear about them because they are quite self-reliant and don't spend a lot of money for all the things farm advertisers tell them they have to have."

Mention the word agribusiness to Lessig and his smile disappears. "I don't like that word. Have you noticed how farm magazines are substituting 'agribusinessman' for 'farmer'? I don't think agribusiness really favors the farmer. It favors big business. Power is what the game is about. Agribusiness would prefer to deal with just a few farmers who are heavily indebted to it, not a bunch of small independent farmers who won't fall in line so easily. Before it is all over, we'll be like Russia, with the only really efficient food production on small, private holdings."

Small farmers like Lessig are attracted to more natural programs of crop production, away from chemicals. "It's for two reasons, I guess," he says. "First of all, on a small farm, you can succeed only by keeping costs way down. You have to think about how not to spend cash. I use less chemicals and all the manure and natural fertility I can get because I think it means keeping more of the money I do make. But also, I'm convinced that the technology of bigness today is a step backwards. I believe that the old ways were far better for everyone, and I've done it both ways." Lessig squeezed his preschool daughter, Heidi, who was sitting on his lap. "The world she will live in will have far lesser quality to it than what I have been fortunate enough to experience."

Some small farmers have turned completely away from chemical technology for similar reasons. I've gone to total organic farming," says young Johnny Adams in Bucyrus, Kansas. "I can't get the yields organically yet that we were getting with chemicals, but I just couldn't enjoy farming chemically. If you are close to the soil, you have no trouble switching to organic methods once you see what anhydrous ammonia does to soil life."

Other young farmers with mixed feelings about chemical agriculture still hang on the fence, wondering if they could succeed with natural methods. Mention organic farming to brothers Dan and Leonard Hostettler of Mineral Springs, Arkansas, and their eyes sparkle with interest. "We've been engaged in custom farming with our father, and now are starting our own farm. We'd like to do it right organically and avoid the waste and hectic pace we often observed in large-scale farming." The Hostettlers tried an acre of sweet-corn for retail sale last year as an experiment. "We sold all the corn in one day," says Leonard. "So we think a roadside stand or pick-your-own business might make a small, organic farm profitable. We know a grower in Indiana who does all right with blueberries."

SMALL FARM ECOLOGY IN MISSOURI FOR 50 YEARS

Missouri farmer Gene Poirot has been practicing and preaching sound ecological farm management for most of his 76 years and is still going strong. Thousands of visitors stream through his farm in Golden City, Missouri—congressmen, educators, students, sportsmen, farmers—to see why Poirot has won a whole fistful of soil and water conservation awards. "I was a life-long friend and co-worker of the late Dr. William Albrecht, agronomist at the University of Missouri. We proved on my farm that his theories, though snubbed and ignored by agribusiness, were correct. Albrecht was very critical of the way chemical fertilizers were and are being used—not against them, but against the excessive way they are applied to stimulate plant growth for quick profit, rather than to restore mineral imbalances in the soil. Albrecht also maintained that the use of pesticides was an act of desperation in a dying agriculture, that insects and disease were the symptoms of a failing crop, not the cause of it. That kind of talk is not relished by the powers that be. Albrecht's methods—which are my methods, too—would put too many agribusinesses out of business if adopted universally."

When Poirot started farming in 1922, he faced a monumental task. "The soil was so poor my first corn crop barely made the seed back. There was nothing there to build organic matter. I added minerals in any form I could get. I developed a process for making artificial manure out of straw and water. I built ponds for irrigation. Nature had been so mistreated here she had to be helped before she could help herself. Now, with fertility restored and organic matter accumulating rather than depleting, we use less fertilizer, not more. And we have controlled insects biologically for 40 years."

In place of a worn-out farm, Poirot's acres today teem with life. Crops yield seven times what they did in the 20's. Herds of healthy cattle roam the pastures—"disease-free for 32 years, ever since we got the soil minerals balanced properly." The water running through his farm in Coon Creek is clear and full of fish. "In 1922 we seined two miles of the creek and netted only 64 pounds of fish. Today you can easily catch more than that in one afternoon with hook and line in one hole."

Wildlife workers count nearly 30,000 ducks wintering on his ponds and feeding on corn left after harvest. In 1922 there were no ducks. There were no geese then either, but now 8,000 winter on the farm every year. "According to local records, there were no deer here for 100 years," says Poirot. "But in 1970 a doe joined our cattle herd and gave birth to a fawn.

"These benefits of wildlife, soil and water conservation—and the ultimate benefit of a healthier humanity—are by-products of good restoration farming," he continues. "They come as rewards, you might say, but my first reason for farming this way *is to save money.* Hedge fences are cheaper than steel posts; ponds are cheaper than wells; biological insect control cheaper than insecticides; sweet clover cheaper than chemical nitrogen; feeding hay in the pasture cheaper than hauling it to the barn and back, and hauling the manure out. And each practice in restoration farming results in many other benefits. The ponds produce great amounts of fish protein. The water in the pond becomes rich in fertilizer value from the fish manure. The hedge fences shelter birds which eat insects, and insects which eat other insects. The more works for you."

The Environmental Protection Agency has been so impressed with Poirot's farm that it has made a movie about it. It's a pretty film but doesn't really do justice to Poirot's methods, and he is insisting it be redone. Insiders at EPA tell me the film has had tough sledding because EPA officials "don't want to offend agribusiness."

OPTIMISTIC FUTURE FOR SMALL FARMERS

The future? Small farmers and organic farmers remain optimistic in the face of predictions of their demise. They point to the precarious financial position many large commercial farms are in. "To expand, many farmers have borrowed more money than they can possibly pay off in a lifetime, and they freely admit it. They bank on inflation to keep them alive. A depression would wipe out many of them overnight," points out Ralph Engelken, who's farmed 700 Iowa acres organically for 18 years. "But more to the point, when you are paying $100 to $150 per acre *just in interest* on a large farm you can't afford any setback. You have to keep on using chemicals whether you need them or not, just for insurance. You certainly can't afford to risk a changeover to healthy soil

which might mean a couple of years of lower yields. But if you don't change over—well, I just think that if you keep going for more and more chemicals, eventually you will go broke."

"I'm kind of old-fashioned," says Paul Lewis, a small organic farmer in Louisburg, Kansas. "I think we're going to see more small farms in the future because of labor. Despite all the fancy big machinery, the big farms still have to hire labor, and that's a real problem in agriculture. Good labor is hard to find and cheap labor can cost you more money than good labor. Remember how everyone got excited 15 years ago about cow pools, giant dairies where thousands of cows would be milked? Most of those experiments didn't work because hired help that will take care of cows *profitably* is extremely hard to find. Even when big farmers can find someone to do the work for them, it runs their cost of production up. If you think food is expensive now, did you ever think what would happen if we got union labor in all of farming? The small farmer doing his own work is much more efficient."

Other farmers point to the apparent limits of chemical efficiency as well. "There's a point beyond which pesticides won't pay," says E. J. Dietrick, president of Rincon-Vitova Insectaries in California, a firm offering biological pest control to farmers for $10 an acre. "Most of my work now is with big agribusiness farms like Hunt-Wesson Foods. They are learning you can't bludgeon nature into line with 100 percent chemical control. It costs too much money."

What small farmers emphasize most of all is the happiness they derive from their way of life. Roger Williams, who makes a good living on an 80-acre Wisconsin farm, says in Countryside, the up-and-coming magazine that addresses itself specifically to the small commercial farmer: "Anybody can do whatever he really wants to do, including making a living on a small farm. A lot of people have the impression that a small farmer is a poor, hard-up fellow using far-out methods and living in rustic, primitive surroundings. I feel they're wrong." But, points out Williams, money-making is not the small farmer's main interest in life. He likes to spend a lot of time with his family. He enjoys little things like the nesting birds, the geese passing overhead. There's something about the first flock of geese in the spring. Maybe other farmers wouldn't care, but if I were in a tractor cab instead of working with my horses, I'd miss the geese.

"With a bigger farm, you're dependent upon many people and many others depend on you. I like the idea of being free. I think I'm as free as I can be."

EQUAL RIGHTS AMENDMENT

Mr. BAYH. Mr. President, the national board of directors of the Girl Scouts of the United States of America has, for the first time in its history, taken a stand on a political issue—on January 30, the board voted to endorse the equal rights amendment.

As we move closer to the final ratification of this amendment, with the actions of the Nevada and North Carolina State Legislatures earlier this week, I am especially pleased that the Girl Scouts have taken this stand.

The equal rights amendment is a crucial step toward full equality of opportunity for all Americans, and I congratulate the Girl Scout board for its action.

COMPETITION IN TELECOMMUNICATIONS

Mr. HART. Mr. President, in a statement in last Friday's RECORD, I discussed the important telecommunications policy issues raised by the Consumer Communications Reform Act (S. 530), or the Bell bill as it has become generally known.

Telecommunications is being revolutionized as a result of innovations like microwave, satellite transmission, fiber-optics and computer switching. An important trend is the convergence of communications with computers in data communication networks which promise to play a vital role in many sectors of our economy. However, the statutory framework for the regulation of foreign and interstate communications is still the Communications Act of 1934, the product of the technological environment of 40 years ago.

The task before us is to introduce cohesive planning for our future telecommunications needs, beginning with a thorough overhaul of the 1934 act to redefine the public interest in this area. The Bell bill, which appears to equate the public interest with the special interests of the telephone industry's dominant monopoly, A.T.&T., is merely one of many possible approaches we might consider.

Far from establishing a presumption in favor of monopoly in the industry as the Bell bill would do, I believe that our starting point in the debate on the future of our telecommunications policy should be support for the contribution that competition has made in the two limited areas of the industry where it has been authorized by the FCC.

It is our general experience in this country, that consumers gain most from an unfettered free market. I have seen no convincing evidence that, apart from the public telephone network, the telecommunications industry should be an exception.

Today, I wish to draw my colleagues' attention to two new articles on the Bell bill. One, "Ma Bell's Consumer Reform Bill" from the January 1977 issue of Consumer Reports, is an excellent general introduction to this issue. It also indicates that the title of this industry-written legislation is a misnomer. Calling a fox a bunny rabbit does not make it a bunny rabbit. Calling an industry bill a consumer bill does not make it a consumer bill.

Indeed, not one consumer group has so far come out in support of the Consumer Communications Reform Act. The Board of Directors of the Consumer Federation of America stated its opposition to the bill in a resolution adopted on December 2, 1976. It said, in part:

The proposed Consumer Communications Reform Act should therefore not be approved since it seeks to reverse some existing FCC precedents promoting beneficial competition, and does not address the problems of regulatory failure, citizens access and the communication services needs of the average consumer. CFA, therefore, opposes the "Bell bill" and any similar legislation.

CFA urges review by Congress of communications policy issues as related to the needs of the consumer-user as well as the producer. Congressional overview and investigation should be concerned particularly with small town and rural users, and long range national telecommunications policy.

Another consumer group, Congress Watch, testified against the bill at the hearings held last September by the House Subcommittee on Communications.

I am also inserting in the RECORD "The Bell Bill—Is It Inevitable?" an editorial column by Datamation editor John L. Kirkley from the February 1977 issue of this leading computer industry journal, which reflects some widespread fears about the effects of the Bell bill on data communications.

I ask unanimous consent that the article from Consumer Reports and the editorial by John Kirkley be printed in the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From Consumer Reports, January 1977]

MA BELL'S CONSUMER REFORM BILL

In recent years, the American Telephone & Telegraph Co. has, for the first time, experienced the rigors of competition in a tiny corner of its vast empire. As a result of a series of rulings by the Federal Communications Commission, a number of smaller companies have been permitted to provide private business lines between cities and to sell the equipment attached at either end of telephone lines—telephones, answering machines, switchboards, and other such "terminal equipment." In the limited areas where they are allowed to compete with established phone companies, these new telecommunications firms have captured about 5 per cent of the market.

Having tasted competition, AT&T judges it bad—bad for AT&T, and, in the company's view, bad for consumers. To protect itself and everyone else from the consequences of free enterprise, the company's lawyers and other interested parties in the industry have composed a piece of legislation that was introduced in the last session of Congress and will be introduced again in the new Congress. Consumers should know what the bill says—and what it means.

Here are the main provisions of the "Bell bill," as it has come to be called:

1. The Bell bill declares that Congress finds it "contrary to the public interest" for regulators to authorize "lines, facilities, or services of specialized carriers which duplicate the lines, facilities, or services of other telecommunications common carriers" (meaning the established telephone companies).

2. The bill shifts from the Federal Communications Commission to the 50 states the power to decide what may and what may not be hooked up to telephone lines.

3. The bill requires those who would provide private phone service to businesses to prove that their services do not duplicate services that existing phone companies already provide or could provide in the future; that the competition would not force existing phone companies to increase rates; and that private lines would not impair the technical effectiveness of the telephone network.

4. The bill would permit existing phone companies immunity from antitrust suits so that they could buy up those competitors

that the bill would force out of business. (The stated reason for this provision: to protect the customers of the former competitors.)

5. The bill would permit the phone company to charge as little as it wishes for its services, provided its charges equal or exceed the "incremental" costs of providing the services.

In effect, the bill guarantees existing phone companies the monopoly they already enjoy and insures them a monopoly in future telecommunications technology. At the same time, the bill weakens or eliminates the very government regulation made necessary by a lack of competition.

AT&T calls its bill the "Consumer Communications Reform Act"—a title that's either ironic or imaginative, depending on your point of view. If the Bell bill becomes law, consumers in some states will probably lose their right, only recently acquired, to buy and attach extension telephones and answering machines of their choice, not the company's.

But the bill's long-run consequences for consumers are far more serious than that. A telecommunications monopoly would eliminate choice in telecommunications systems to come. The most important of these for consumers are information terminals attached to home phone lines. The terminals could make possible electronic mail, checkless financial transactions, remote shopping, electronic fire and burglary alarms, electronic informational and entertainment programs, electronic newspapers, and much more.

AT&T's mammoth size and reach insure the respectful attention of legislators. The company had assets of $89-billion in 1975, two-and-one-half times those of the Exxon Corp., the largest industrial corporation in the United States. AT&T controls the Bell System, which includes 25 telephone companies providing 82 per cent of the nation's phone service; Western Electric Co. (manufacturing arm of the system); and Bell Telephone Laboratories (research and development). The Bell System employs one million persons, had operating revenues of $29.6-billion in 1975, and operates in all states except Alaska and Hawaii. Thus, AT&T is an economic and political force to be reckoned with in virtually every congressional district. Small wonder, then, that soon after the Bell bill was introduced in 1976, more than one-third of the House and Senate, liberals and conservatives alike, had enlisted as sponsors.

AT&T can also claim the support of the 1618 "independent" telephone companies, most of them small, some cooperatively or municipally owned. Five holding companies dominate the independent sector: General Telephone and Electronics Corp.; United Telecommunications, Inc.; Continental Telephone Corp.; Central Telephone and Utilities Corp.; and Mid-Continent Telephone Corp. Although the independents provide 18 per cent of the nation's telephone service, they're not really competitors of AT&T. In fact, the independents rely on AT&T for long-distance service, and the revenue from that service acts as a subsidy from AT&T to some of the smaller independents.

WHAT MA BELL IS REALLY AFTER

The competition that the Bell bill is really aimed at is from a small group of electronic firms that, in the future, could challenge AT&T in the growing field of private business communications and terminal equipment. It was there that competition was first forced on AT&T.

In 1968, the Federal Communications Commission ended phone companies' exclusive right to provide all extension telephones, answering machines, automatic dialers, switchboards, computer terminals, and anything else attached to the end of a telephone line. In a decision concerning the Carterfone—a device that links mobile telephones to the regular phone system—the FCC stated that phone companies could not arbitrarily prevent customers from buying and connecting the telephone equipment of their choice. The effect of the decision was to stimulate the growth of a competitive telephone-equipment business. Consumers for the first time could buy extension telephones and answering machines, often at a fraction of what it would cost to lease similar equipment from the phone companies.

Phone companies responded by convincing state regulators to require installation of a connecting device (an "authorized Protective Connecting Module," or APCM) between customer-owned equipment and telephone lines. The APCM supposedly protects the telephone network from electrical damage that, the phone companies contend, can be inflicted by terminal equipment. (The FCC says there never has been a documented case of system harm from customer-owned equipment.)

The APCM requirement raises the price of owning terminal equipment. In states where the device can be purchased, it adds $30 to the price of an answering machine, for example. In states where the APCM can only be leased from phone companies, monthly charges range from about $4 to $13, according to the FCC. Either way, it is an unnecessary expense imposed on consumers by phone companies.

The FCC dealt with the APCM problem in what are known as its Registration Decisions of 1975 and 1976. The FCC adopted a program whereby manufacturers or users could have the FCC review and certify their equipment to assure it would not harm the telephone network. APCM's would not be required for properly certified equipment. (The WCC's certification program has been challenged in court and therefore has not yet gone into effect.)

Although competition for terminal equipment and private business lines is minuscule now, AT&T is worried about the future. AT&T claims it earns high profits in those markets and uses the profits to subsidize residential telephone service, keeping rates to consumers low. AT&T asserts that the competitors will skim those profits, thus forcing telephone companies to raise phone rates by as much as 75 per cent.

The FCC challenges those assertions. After examining the phone companies' supporting data and studies, the FCC concluded that established telephone companies will not only hold their own against the new competitors but will gain a greater share of dollar volume in the future.

The FCC found no evidence that profits from the lease of terminal equipment subsidize residential service, as Bell asserts. Rather, the commission said, there was evidence that the reverse was true—that profits from residential service actually subsidizes losses in terminal equipment, permitting Bell to offer such equipment below cost in hopes of driving out the competition. (The New York Public Service Commission determined that one carrier in that state was losing $225-million a year on terminal equipment. Regulators in Massachusetts and Vermont made similar findings.) The second area of competition, interstate private-line service for businesses, is another money-loser for the phone companies, the FCC contends.

Ironically, the logic of the FCC's findings suggests that AT&T and the other phone companies could provide residential service at *lower* rates if only they'd pull out of the equipment and private-line business.

DESTROYING COMPETITION AND REGULATION

In light of the FCC's expert findings, one might well wonder what benefit there is for AT&E *or* for consumers in the "Consumer Communications Reform Act." One need look no further than the preamble. The preamble says the Bell bill would "reaffirm the intent of Congress with respect to the structure of the common carrier telecommunication industry. . . ." Or, as the FCC translates it, the bill would give the blessings of Congress to a "vertically integrated" (meaning monopolized) telephone industry structure. Yet the legality of the existing AT&T monopoly is the subject of a pending Justice Department antitrust suit that seeks to separate Western Electric, AT&T's equipment manufacturer, from the Bell System, AT&T's operating companies. The Bell bill would, in effect, end the suit.

Another section of the Bell bill, as already noted, would strip the FCC of power to regulate terminal equipment; regulation would be turned over to the states. In some states, that shift would wipe away any chance for consumers and businesses to buy and attach equipment without need for the unnecessary and expensive "protective module" previously required by state regulators at the insistence of phone companies. Moreover, if states began to set their own individual technical standards for terminal equipment, it's likely that only AT&T would have the resources to qualify as a national marketer. States could even turn back the clock to the time when you couldn't use any auxiliary telephone equipment unless it was leased from the phone companies. North Carolina and Nebraska have already indicated their desire to do just that. (North Carolina regulators recently attempted to prohibit consumers from placing plastic covers on the phone books, since the covers were "foreign attachments" to the phone system.)

Companies that provide private-line services for businesses would fare no better under the Bell bill, since to enter the market they would have to prove to the FCC that their service was one that phone companies neither already provided nor could provide in the future. That's an impossible burden of proof. They'd be forced out. As we've seen, however, the Bell bill provides a decent burial for fallen competitors; AT&T would be allowed to buy them up with immunity from antitrust prosecution.

The section of the legislation that prohibits the FCC from rejecting phone company rates that are "too low" sounds like AT&T wants to offer bargains the government doesn't permit. Actually, the bill would merely legalize the illegal monopolistic practice of "predatory pricing"—*temporarily* pricing a product or service below actual cost so as to drive out competition. The Bell bill also requires the FCC, and, by extension, state regulators, to retain a rate-making accounting method favored by Bell. The method makes it impossible to ascertain phone companies' costs for individual services, thus preventing regulators from judging charges.

THERE MAY BE A BRIGHT SIDE

The Bell bill can serve a useful purpose if it focuses public attention on important but neglected telecommunications issues. One of these is subsidization.

AT&T controls long-distance telephone circuits and pools the revenue from their use. Long-distance revenues are then apportioned among individual phone companies by formulas negotiated between the phone companies and Bell. Many independent phone companies receive reveneues from the pool out of all proportion to their costs in handling long-distance calls. The long-distance revenues account for 35 to 70 per cent of the independents' total income. Bell thus subsidizes the independents.

The subsidies help stabilize and integrate the nation's telephone network. They allow the survival of such small rural phone companies as Arizona Telephone, with 850 customers, and Absaraka Cooperative Telephone Co. in North Dakota, with only 35 subscribers. And that's all to the good. But CU believes the problem of providing reasonably

priced vital services where private industry can't do it profitably is one to be solved by a politically accountable body, not by a monopoly taxing one class of customer to support another.

If, as the FCC and several state regulatory bodies suggest, phone companies use high profits from monopoly services, such as residential phones, to offset losses in competitive services, such as switchboards and intercity private lines for businesses, that represents another form of subsidy—one in which consumers are subsidizing business users.

A bigger issue in Bell's bid for monopoly is the future of telecommunications itself. More than 50 per cent of the labor force and more than 50 per cent of the gross national product are devoted to the production, processing, or distribution of information. Explosive growth is expected as computers are increasingly tied to telecommunications circuits.

A tidy distinction could once be made between data processing (computers) and communications. But with their growing interdependence, the distinction is blurring. One of the subsidiaries of IBM, the computer giant, is part of a consortium that plans to offer private-line circuits by satellite. RCA and Western Union also plan to go heavily into the satellite communications business. It should be noted that the FCC specifically prohibited AT&T from competing in satellite private-line service for a period of three years, to give the new competition a chance to get off the ground. AT&T considers this unfair. AT&T further argues that, as a regulated company required to provide certain services to all comers regardless of profitability, it is at a disadvantage against companies that could provide private-line communications to, say, only the 100 biggest corporations in the country but not to nonprofit organizations and small businesses serving consumers.

AT&T's arguments are not without merit; the shape and organization of new communications technology is no more likely to work out in the public interest if determined by competition between IBM, RCA, and Western Union than if determined by AT&T alone.

But if the Bell bill wins in Congress, AT&T need not worry about IBM, RCA, Western Union, or anyone else. It will have a perpetual monopoly over telecommunications. Then AT&T alone will decide what most of the information systems of the future will be. Industrial monopoly in the past has meant high prices, delayed innovation, inefficiency, and few options for buyers. Competition has meant the opposite, and, appropriately regulated, it's the preferred choice here.

[From Datamation, February 1977]

THE BELL BILL—IS IT INEVITABLE?

(By John L. Kirkley)

Among AT&T's not inconsiderable assets ($85.9 billion), there's one you will not find listed on any balance sheet: an overwhelming amount of chutzpah.

This fine old Jewish word translates roughly as incredible gall, a monumental arrogance that permits those who posses it to attempt things that ordinary folk would find inconceivable.

Like, for instance, asking the Congress of the United States to turn its back on our free enterprise system of competitive business and endorse monopoly instead.

Ma Bell's Consumer Communications Reform Act, the now notorious Bell Bill, proposes precisely this. It is a bold attempt by AT&T to kill off present and potential competitors in the domestic private line and terminal equipment marketplace, a move designed to reaffirm Bell's total communications monopoly now and for all time. As added insurance, the legislation also would set up a thicket of regulatory barriers to any potential rivals, large or small. A key provision would turn interconnection regulatory powers over to the states, a move that will fragment jurisdictions, frustrate users from establishing networks that use services other than Bell's, and encourage the development of different interconnect standards from state to state.

If the Bell bill is passed the best the communications-oriented dp manager can hope for is more expense, more headaches, and an abrupt slackening in technical innovation—a characteristic not only of AT&T but all monopolies. He will be forced to accept Bell's solutions to his problems all in Bell's good time. (For example, Bell's Data Under Voice digital transmission service over its existing lines surfaced only after Datran began offering digital transmission over special microwave lines.)

Because the states will have jurisdiction over interconnect, the dp manager's and the data communications manager's dream of a transparent interstate network will die aborning. Instead, interstate communications on anything other than Bell sanctioned equipment may be like shipping goods on the old railroad lines in Europe where different gauge tracks met in misaligned chaos at each country's borders.

A chill will be cast over the entire data communications marketplace, freezing out Bell's competitors and bringing a glacial slowness to the rate of technical innovation.

Like the glacier, AT&T prefers slow, massive movements, grinding everything in its path. If the skirmishes at the Federal level—in Congress and in the Justice Dept.—wear on over the next five to ten years, it's all to Bell's advantage. In the meantime, they will have achieved their objectives de facto, quietly establishing a data communications stranglehold in each of the 50 states, an end run spearheaded by the Dataspeed 40/4 and the new Transaction Network Service.

But unlike the glacier, AT&T's maneuvers are not inevitable.

Specific legislation to counter the Bell bill is needed now. Those in Congress who wish to reaffirm competition must move from the defensive to the offensive and propose legislation that protects and fosters a free and open marketplace.

The bill should define classes of regulation and clarify just what is meant by a common carrier. The total communications marketplace should be defined and the unregulated portions of that marketplace must be clearly delineated. And this means a fresh look at the Federal Communications Commission and the extent of its authority and responsibility.

Our crazy-quilt approach to federal and state jursdictions also needs a good airing with federal supremacy being cleanly established.

The FCC should be directed to determine which unregulated markets Bell can enter, and to be sure that Bell enters them only under the strictures of maximum separation—an arm's length arrangement preventing any cross subsidization and cross tying between the monopolistic parent and Bell's unregulated offispring.

Without an immediate push for landmark legislation of this kind, Bell will undoubtedly win this war of attrition as the press and the general public's interest wears thin . . . and the Justice Dept., the FCC and the data communications industry slowly capitulate under the inexorable pressure.

PUBLIC POLICY AND RURAL AMERICA

Mr. LEAHY. Mr. President, as you know I have been very concerned about the health of our rural areas and with improving the lot of people who live in small towns and rural areas. I represent a largely rural State, and I serve on the Agriculture Committee's Subcommittee on Rural Development.

Last fall, Rural America, Inc. sponsored the Second National Conference on Rural America in Des Moines, Iowa. In one of the opening speeches, Rural America Chairman Clay Cochran described the problems confronting rural areas. Pointing to the vast array of Federal programs which ignore or discriminate against rural people, Cochran called for the formation of a Presidential Commission on Rural America. Mr. President, I believe it is an idea which is worthy of serious consideration by the Senate, and I ask unanimous consent that Mr. Cochran's speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

PUBLIC POLICY AND RURAL AMERICA

(By Clay L. Cochran)

AMERICA WAS PROMISES

"America was promises. . .
East were the
Dead kings and the remembered sepulchres:
West was the grass.
The groves of the oaks were at evening.
Eastward are the nights where we have slept.
And we move on; we move down;
With the first light we push forward
We descend from the past as a wandering
people from mountains.
We cross into the day to be discovered . . .
America was always promises . . .
America is promises to Us
To take . . . with love but Take.
Oh believe that."

—Archibald MacLeish.

America Has Always Been Promises,

We Americans think of ourselves in many ways. Sometimes as in the moving words on the Statute of Liberty, "Send me your poor, your huddled masses, yearning to be free . . ." and those words echo on to imply a society of freedom and democracy and equal opportunity. Then we reflect that despite the promises and the seemingly infinite resources, for 240 years we nourished the fester of human slavery, and we are sobered.

Sometimes we think of ourselves as the people who carved "equal justice under law" across the marbled temple of our highest court, and that is certainly a promise, not a fact.

We think of ourselves as free, and in some sense many of us have been. We were free of a hereditary nobility with all its stupidities and waste. We were free to loot the native American of one of the richest pieces of geography on earth and we did not include him in our freedom since he was neither white nor Christian—and, he was in the way.

LAND WAS LIBERTY

Implicitly we thought the land was liberty, and it was, because it was opportunity. We took the land from the Indian sometimes by killing him inadvertently with our diseases and our whiskey and sometimes by treacherous legalisms and bad faith and ultimately with gun power and starvation. But the land was liberty and opportunity. With it, the gutter sweepings of Europe became sturdy yeomen and citizens and ceased to tug their forelocks in respect to the privileged.

America was promises. The promises were based on the land and the riches that flowed from the land and the exploitation of one of the richest natural heritages on the earth—from the buffalo hides to the forests. . . .

America was promises, although they never came true for many—the Indians were shamelessly and shamefully killed, displaced and degraded and the Blacks were enslaved and then only partially freed and the Mexican-Americans were pushed back onto the poor lands and ultimately layered into the exploited agricultural work force.

AFTER THE LAND

In time the land was all fenced in and belonged to somebody, and much of it had been ruined. We turned to the frontier of technology and industry and that was promises.

Along with the promises went incredible waste and the rise of empire, the international drive for power and wealth parading noble sentiments into which we poured our lives and resources to enrich a few.

THE USE OF INANIMATE ENERGY MAKES US RICH

With the riches of the continent, with the new tools of science and technology, millions of us came to live as royally as ancient kings in commanding the good things of life. Some of us became sturdy souls and really believed that all men were created equal if they get a decent break in life. We did not yearn to touch the hem of the robes of royalty or tug our forelocks to power . . . and this was good.

BUT NOT EVERYBODY HAS BEEN FREE OR RICH

But throughout our history there has been a nearly incredible maldistribution of income and wealth which has plagued us, giving rise to anger and alienation—and to myths and slogans designed to comfort us all and justify the arrogance of those who owned the toll gates through which so much of opportunity and wealth poured. Some came to believe and have the schools teach that the number of competent "managers" born to each generation was limited biologically and society must pay dearly for this God-Wrought talent lest it sulk in its tent and rob us of the good things it could produce with our sweat and its divine capacities . . . and there were robber barons who preached and believed that "the government of this country is best left in the hands of those to whom God in His infinite wisdom has given the property of the country" and asserted that "I can hire the working class to kill the other half" if need be.

BUSINESS AS A SYSTEM OF POWER

For at least half our history, the big businessman was king, and the so-called "free market" was his kingdom. Woe be to the common folk who challenged either the king or his kingdom. Beneath the gloss of unprecedented wealth the Supreme Court would outlaw child labor laws on the grounds that freedom of contract was sacred to the free market *and* the businessman and no state legislature could deny a child of 4 years the right to contract her labor to an employer.

Reliance on the market and its presumed natural beneficience prevented us from challenging the idea that living in a city of 15 million might not be the best of all possible worlds, and thereby led us to believe that sooner or later everybody would move to the city and live happily ever after. What matter if in the process, many millions of us have lost a sense of community and thereby lost much of our own identity and the ability to rely on our neighbors for love and security.

TECHNOLOGY AS A FAITH

Not content with technology as a blessing and a contrivance of man, the monkey's cousin, we went on a technology kick which led us to believe that we were gods, that we could manipulate nature and the earth as we saw fit, for our greater riches and glory. In time we came to believe that we could recreate the earth as our own fish barrel in which we could shoot fish forever with no ill consequences.[1]

Under the spell of these sentiments, for they are not worthy of being called thoughts, we maintained not only a class system and a caste system, but we looted rural people to enrich the cities. Were the cities not the flowers of our civilization and the bigger and richer and dirtier they were the more glorious our civilization?

We came to consume 40% of the world's energy each year, lavishing it on 6% of the world's population and this became a way of life, utterly unsustainable but nevertheless a way of life. In the midst of this incredible flow of energy, unprecedented technological knowhow and a massive accumulation of capital we found ourselves plagued by insecurity, losing our sense of community, gutting our natural home while many millions of our own people live in ignorance and appalling poverty—to say nothing of the tidal wave of population rolling outward across the earth in our direction.

ECOLOGISM—KNOWLEDGE COMES IN MANY WAYS

Little by little we learned, first that the whooping crane was threatened and few cared, not knowing that he was a symbol of the incredible damage we were doing to the earth . . . and then slowly but surely we learned that we were consuming a staggering proportion of the world's energy and the supplies were not infinite.

Their misuse was threatening the land and the water was so polluted the lakes were dead or dying. The sovereign sea, instead of purifying, dumped sewage and garbage on our finest beaches, even those frequented by the most privileged. The pollution not only made the air a stench so acid it dissolved rock, but it is carcinogenic. We are increasingly concerned that the great killer cancer which tortures and kills both the privileged and the degraded may flow largely from and be grim punishment for what we have done to the earth and the land and the air and the water which we thought were free and would nourish us forever . . .

And now we are troubled and largely leaderless because the divine rights of our uncrowned kings are challenged by nearly every fact at hand. We sense that many of our most cherished beliefs are questionable if not downright nonsense. But habits of thought and action are powerful forces and cause us to peer uneasily at proposed solutions which challenge our inherited views. This is not new, this conscious and subconscious and stubborn insistence that what we were taught to believe must be true. To ideas for change we listen vaguely and are afraid until one morning we awake and say "what else is there to do?"

A NEW BEGINNING

Soon we will have a new man in the White House and new faces in key positions all through government, executive and legislative, and our moral assignment is to lay down certain things on which we insist. To pass out a press release in the form of a manifesto is not the way. We must not only know where we are headed and show how to get there, we must continue to organize to that end.

The first thing we must do is to reshape our goals so that we can live and live well within our limited resources. Our plans must be made with full regard to the interests and welfare of all concerned, including the interests and welfare of small town and rural people.

We must insist that Federal legislation and policies be rewritten to give people in the non-urbanized areas equal benefits. That is no small task because most Congressmen, most administrators and most citizens do not understand how ubiquitous discrimination is. We need research and, based on what we already know or can dig out, we need to know to educate ourselves and the rest of the public.[2]

As a part of this we need a select Committee of the Congress—one or both houses—on Rural America, a kind of TNEC for rural people with enough funds to document the need in an orderly fashion and means of meeting those needs from housing to strengthening the family farm. We need to know who owns rural America and how they got it and how to get resources back into the hands of more people.

And if the Congress fails to respond or if it sets up a committee on just agri-business and not all of rural America, we need a Presidential Commission to do the proper study. We need this because we need the facts on law and policy and need and hurdles to be made. Rural America, our organization, does not have the resources to do this and it must be done.

We need to continue to press all rural groups into integrating their efforts and working together for the common good.

Rural America may not be the group to do much of this. We hope we are, but regardless of how it is done or by whom it is done, we need to pull together all the talent and leadership we have to the end that rural people cease to be passive in the face of change.

There is evidence all about us that this is under way.

This is the Second National Conference on Rural America.

There is a rural caucus in the House of Representatives broader than any we have ever had which must be strengthened and fed and encouraged, and, if necessary, harrassed if it is wrong-headed now and then.

We need to convert the Department of Agriculture into a Department of Rural Affairs which is concerned with all rural people and not just commercial farmers who have become a very small part of the nation and even of rural people. (Commercial farmers are only 3½% of the total population and about 13% of rural population by the narrowest definition of rural.)

We should use every device we can come by to see that every program of government is shaped and reshaped to serve rural people to conserve our resources, and open new opportunities.

In other words, we need a movement of which all of us have been a part in some sense a long time, but the parts have been scattered and unintegrated.

There is nothing in our program which will hurt the people of the cities, and there should be nothing in the future that will hurt them. The people of the cities are in deep trouble themselves and need help.

What we assert basically is that we are all a part of a whole and that the Federal officials and other government officials should see it that way and take action. We have powerful allies in the cities, and those allies are just as important to working family farmers and rural coops as they are to the non-farmer.

Abraham Lincoln once said "a nation cannot live half slave, half free". Neither can it live with vast portions of our people feeling that America may be promises, but not for them.

[1] I know because for several decades I believed that man and his technology could order this planet, if not the universe, as though it were—not a garden—but a hydroponic tank totally under our control.

[2] Toward a Platform for Rural America, Report of the First National Conference on Rural America, April, 1975, is only the beginning.

THE CONCEPT OF ECOLOGY

The most revolutionary idea of our time is the concept of ecology, the idea that man is not in command of the universe but is only one tiny part of a vast system of life, of networks or chains of life, and that we cannot control nature nor can we recreate the universe or even our small planet or even a small part of our small planet which is man's only habitat. And from the recognition, sobering as it may be, and hard to swallow, comes the opportunity for survival and for continuing to make promises come true; but only if we are willing to make peace with nature and learn and understand and feel. Above all we may come to the time when the brotherhood of man, the brotherhood of the tiger and the looter, could give way to a far deeper and more pervasive idea in which we learn that in this ecological system we are a part of all there is, and that we can survive only if we can grasp this perception and act on it.

So here in rural America we are not the tattered remnants after a century of "hemorrhaging" and the loss of many of the brightest and best and the subservience that comes from being told we were "left behind" and little more than a womb to be emptied each generation to feed the glories of the cities. There are from 54 to 80 million people [3] in what we call rural America. By the narrowest definition there are nearly as many people in the villages and the hinterlands as our 153 largest cities [4] . . . and if we are to fulfill America's promises to the rich *and* the poor, to the black and the red and brown and to the degraded anglos, if we are really to be "one nation indivisible with liberty and justice for all", we pick up the road from the concept of ecology and push on to something we might call civilization.

The ramifications of such a view of man and his universe sets forces in motion that run in all directions like the waves that roll outward when a rock is tossed into the water.

We work our way out of this present mess together, or not at all.

The cavalier assumption that we can continue to write laws and policies and administer programs as though rural people were the leftovers from yester-year's feast has to go. The discrimination against rural people in nearly every program of government and industry has to go. The idea that the cities can blossom and their luxuries shame the ancients while we turn rural America into a strip mine, a few giant agribusiness conglomerates poisoning and the land and the water and the people, and a great womb from which we empty the brightest and the best each generation is silly and unsupportable. Simply put, the concept of ecology is that we are all in this thing together . . . not only Americans but the rest of the earth, and an injury to one is an injury to all—an old Wobbly slogan.

NO BLUE PRINTS

There is no blue print for where we go from here, "men will die for a dream fluttering in the wrist" and may even survive the same way.

The grandiose schemes all falter—but if we can rightly conceive of our place in the universe and understand the nature of our garden—and be intelligent enough and humble enough to take our place in an infinitely complex system of life—the details can be had.

Each of us has to start where he is—and that is here and where we live and work—and above all it is in our heads—and oddly enough—most odd of all—ecologism brings us back to much of our most cherished—and violated—wisdom.

Who is to say what bird may sing.

[3] Population outside urbanized areas and outside towns of 25,000 or more.

[4] 153 largest cities, 55 million—towns of 2,500 and the hinterland, 54 million.

REORGANIZATION OF SENATE COMMITTEE SYSTEM

Mr. BAYH. Mr. President, the Senate spent several days debating a major reorganization of its committee system last week. This reorganization is the first comprehensive restructuring of the Senate committee system in 30 years, and many would say that it is long overdue. Since passing the legislative reorganization Act of 1946, the Senate has made piecemeal changes in the committee system from time to time, but growing inefficiency throughout the legislative process has necessitated major reforms such as those contained in Senate Resolution 4, as amended.

The major reason for the stymying of effectiveness in the Senate has been the proliferation of subcommittees during the last two decades. In 1947, for example, the 15 standing committees of the Senate had 44 subcommittees. Today the 18 standing committees have 140 subcommittees, an increase of more than 300 percent. Add to that total the 34 subcommittees of the various select, special, and joint committees, and one is faced with a potentially chaotic legislative maze. This proliferation of subcommittees takes its toll in fragmentation of jurisdiction, uncoordinated public policy, wasteful duplication of efforts, and impossible demands upon the schedules of individual Senators.

The reforms contained in the legislation we passed on Friday will take a major step forward in correcting this problem. Under this legislation, we will significantly reduce the number of select and joint committees, and by limiting the number of subcommittee assignments for each Senator to three per major committee and two per third committee, begin the necessary control over the proliferation of subcommittees.

Fragmented subject jurisdiction is perhaps the second most significant impediment to an efficient Congress. Fragmentation of jurisdictions in major policy areas has reduced the effectiveness of the Senate in developing systematic, coordinated, and comprehensive policies and oversight. The restructuring of jurisdictions for energy, environment, transportation, and international economics contained in the reform package goes a long way toward ending the confusion in these complex national policy areas.

The Senate has gone about this reform in a responsible and thoughtful way. I have supported the efforts to retain the Veterans' Committee, the Select Committee on Small Business, and the Select Committee on Aging. Each of these committees serve a very special constituency whose needs deserve the special attention and focus accorded by independent committee status.

I also am very pleased that the Senate accepted a compromise on the retention of the Select Committee on Nutrition for a 1-year period so that it can complete its valuable studies on a national nutrition policy begun in 1974. There is no other agency in the Federal Government or the Congress doing this important work. I am only sorry the Senate chose not to extend this committee for a longer duration.

I have received many letters from postmasters in Indiana who were concerned over the absorption of the Post Office and Civil Service Committee by the newly created Governmental Affairs Committee. I weighed the retention of an independent Post Office and Civil Service Committee very carefully. I agreed to support this merger only after I had received adequate assurances that the needs of the nearly 700,000 postal employees would be given the same just care and attention as part of the Governmental Affairs Committee. One way that the good faith of the Governmental Affairs Committee can be shown in this regard is the transfer of the ranking majority and minority members from Post Office and Civil Service to Governmental Affairs so that they can continue to provide their valuable oversight to the Postal Service.

Reform of the Senate committee system has been long overdue. With Friday's action on Senate Resolution 4, the Senate can now move forward with the many pressing problems facing this Nation in an efficient and timely manner.

KEEP ON TRACKIN'

Mr. MUSKIE. Mr. President, Warwick M. Tinsley, Jr., Maine State conservationist, has recently brought to my attention an ambitious effort by a group of Maine high school students to improve their school athletic grounds. Forty forestry and conservation students at Medomak Valley High School in Waldoboro, Maine, found a remedy to a field drainage problem that had rendered the school's athletic fields useless each spring.

Assisted by the Soil Conservation Service and Time and Tide Resource Conservation and Development Council—an organization of midcoastal Maine civic-minded citizens—the students provided the labor for the construction of a drainage system which drained off water at the rate of 5 gallons every 4 minutes in the dry season.

I am proud of the efforts of the students at Medomak Valley High School, and equally proud that Soil Conservation, a nationwide publication of the U.S. Department of Agriculture, detailed the story in the November issue. I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Soil Conservation, November 1976]

KEEP ON TRACKIN'

(By Doris Laber)

(Bogged down with a wet track, students and teachers at a Maine high school picked up shovels—and knowledge—as they put in a tile line with the help of a soil and water conservation district, school officials, and an RC&D council.)

Away.
Away.
Away.

That's how the track and field schedule for Medomak Valley High School in Waldoboro, Maine, has read every spring since the school opened in 1968. All meets have been held away.

"It's been an unbearable situation," Athletic Coach Arthur Dyer declared. "During most springs it has been so wet that a person walking on the track would leave footprints 2 to 4 inches deep.

The 100 boys and girls on teams had to compete—and even practice—on opponents' fields or neutral grounds. The entire student body was limited to indoor physical education classes each spring.

A remedy was found through student and teacher involvement in a special project of the Time and Tide Resource Conservation and Development (RC&D) area.

School officials found that the field drainage problem met the requirements for an RC&D measure. This could provide funds for the engineering design and materials.

The local sponsors—the Knox-Lincoln Soil and Water Conservation District (SWCD) and the school administrative district—would have to pay for labor and equipment, estimated at $4,000.

That left the project on the verge of bogging down as thoroughly as anyone who dared to venture out on the track.

Then Medomak students decided to pitch in and work for what they wanted. Their labors—in a learning situation—became the answer to the budget problems.

Under a detailed plan, 40 forestry and conservation students were released from classes for a week to prepare the area for backhoe work. Their teacher, Douglas Meservey, led the project. Meservey, a supervisor of the Knox-Lincoln SWCD, spent a week onsite with the students. He also was on call for assistance needed by other teachers supervising the job.

The athletic director and coaches were freed from regular duties to assist when needed. Other classroom teachers supplemented the team.

SWCD technician Raynold Holmes served as project director to see that the drainage system was installed according to specifications. He was "the thread of continuity for the program," said Meservey.

After lessons from Holmes in using a level, the students set grade stakes for the backhoe operator to follow.

Because of earlier work by students, they had use of a backhoe and operator at no charge. Students in building trades classes had built a storage shed for the town, so the town loaned them the equipment—the only heavy equipment used in the project besides gravel trucks.

After the trench was dug with the backhoe, students shaped the trench bottom to a grade of 1½ inches per 100 feet. They wielded shovels, spades, and wheelbarrows and carefully put gravel under and over 3,400 feet of title.

"The students were very conscientious," Meservey said. "Some areas were done and redone to get the job right."

The work was completed in the "dry" season. Even then, students figured that the completed system was draining off water at the rate of 5 gallons every 4 minutes—enough to fill more than five railroad tank cars in a month.

The track is now resurfaced with finely crushed stone and the disturbed areas have been reseeded.

Improvements are not limited to the track. The school plans to set up sites for javelin, shotput, high jump, and broad jump in the infield and in nearby areas outside the track. Also, some of the soil displaced by the tile line has been used to fill potholes in the soccer and baseball fields.

Not the least of the improvements is that considerably less mud should be tracked into the school. "And that makes for good relations between maintenance and administrative people," said Dyer with a grin.

Come spring, the teams expect to play a full schedule, with 4 weeks added to their spring sports season.

And, at last, the programs will be listing games at "Home."

JOHNNY POPHAM RETIRES

Mr. HOLLINGS. Mr. President, during the debate on the confirmation of Griffin Bell to be Attorney General, I referred to a conversation I had with Johnny Popham. For the past 18 years, Mr. Popham served as the managing editor of the Chattanooga Times and in the late 1940's and early 1950's, my beginning days in politics, he was the New York Times stringer covering the South. Popham covered a Mississippi meeting in Jackson back in 1948. With the racial feeling of whites running high and the incidence of the Dixiecrat Party, the audience was totally white with "lynch" in their eyes. Earlier this year, he was asked to be the speaker at a similar statewide meeting. He related how the audience was totally integrated with black civic leaders, black business leaders, black educators, and black officials. Here some 28 years later, one could see the dramatic change in Mississippi and in America. Mississippi has more black elected officials than any other State in America and Plains, Ga., was sending a native son to Washington to be President. Johnny exclaimed with wonderment and pride:

Where else but in the United States could such a social change take place over a similar period.

Popham is a man full of history and one of the few outstanding journalists that has stuck with his profession.

He retired from that profession on January 31. I ask unanimous consent at this time to have printed in the RECORD an article on Johnny Popham and an editorial comment, both of which appeared in the Chattanooga Times, on the day of his retirement. I am sure many of my colleagues know Johnny Popham personally and will find these articles enjoyable. I hasten to add that I doubt Johnny is going to disappear in retirement; we shall be hearing from him in the future.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Chattanooga Times, Jan. 30, 1977]

A RARE BREED: "DOLLOPS OF SORGHUM SYRUP SPAT FROM A GATLIN GUN"

Many men have tried to adequately describe in words and in print the man who has served this newspaper as managing editor for the past 18-plus years.

Most have failed miserably, for he is a rare breed. He is one of a kind, the likes of which isn't apt to hit the scene again for many years, if ever.

Claude Sitton, editor of The Raleigh News and Observer, came closer to capturing the real John N. Popham than any other.

The following excerpts from Sitton's column of May 19, 1974, entitled "Dixie's Cracker-Barrel Demosthenes."

"The Southern cracker-barrel tradition has given birth to countless story tellers of note. But a stubby Tennessee newspaper editor is perhaps the first around whom a duly constituted forum has been organized. This John N. Popham Seminar met quietly in Raleigh several weekends back. Its conveners issued no bulletins from behind the closed doors of the meeting room at the Velvet Cloak, which is just as well.

LOT OF TALK

"Their explanation, casting credibility to the winds, was that since Popham does in fact descend from the lord high chief justice of that name who sent Sir Walter Raleigh to the headsman, local reaction would be unpredictable at best. As was true of everything else about the seminar, it was a lot of talk.

"Whatever Popham's antecedents, time and circumstance have combined to make him a walking, talking encyclopedia of the Southern mystique. Born in Virginia, son of a regular Marine Corps officer, he grew up around bases scattered from here to China.

"Those years (when Popham was southern regional correspondent for The New York Times) found Popham trading jokes with Georgia's Herman Talmadge one week and dodging rotten tomatoes with Henry Wallace and his Progressives the next. It was not uncommon for a governor attending the Southern Governors' Conference to interview Popham before being interviewed by Popham's colleagues. Popham knew the South's Negro leaders better than they knew each other. And his acquaintances were by no means limited to the high and the mighty. No reporter was surprised when a shadetree mechanic back in some Appalachian cove asked after Popham's health.

MAN MATCHES LEGENDS

"The man comes as close as most to matching the legend. An elfin figure with a twinkle of Irish con in his eyes, Popham affects a fashionably shabby Brooks Brothers appearance. His attire is invariably topped off by one of two ageless hats, felt for winter, straw for summer. The hat parts company with his salt-and-pepper GI cut only for church and, presumably, for sleep.

"But the vintage Popham emerges only after midnight in some setting such as the Velvet Cloak. After his competitors have surrendered in silence, Popham comes alive. Eyes popping, eyebrows arching, knuckles cracking—all in furious concentration on the tale at hand—Popham launches into a soaring soliloquy.

"His delivery and Tidewater accent approximate nothing so much as dollops of sorghum syrup spat from a Gatling gun. This tidal wave of sound has been known to levitate a listener who, transfixed by the onrush of oratory, rises up on tiptoes, wide-eyed and open-mouthed. Not even strong men fortified by strong drink can stand against Dixie's cracker-barrel Demosthenes."

BILL CASTEEL.

[From the Chattanooga Times, Jan. 31, 1977]

JOHN POPHAM'S RETIREMENT

With the retirement, effective today, of John Popham as managing editor of The Times, this newspaper relinquishes the services of a man of a remarkable array of talents.

He is an excellent reporter with a keen sense of the news that is important today and will be significant in the shaping of tomorrow. He is a speaker of rare eloquence who astounds audiences with his command of the language. He is and has been, through his own interpretative writing and his oversight of material published in the news columns of The Times, a strong force in the creation of the New South. His influence and energies have been particularly felt in the

field of higher education through his untiring work with and through a number of regional organizations.

John Popham is not indispensable to this operation; no person is. His responsibilities will be ably picked up and carried on by Harry Young as the new managing editor.

But today we of The Times pay tribute to one who has been a valued associate and a warm friend for almost 20 years and invite our readers to join us. Fortunately for us and for the community in which he has been so active, he will remain close by, as busy and quite likely as voluble as ever. Our hope is that he will have many relaxing years of retirement in which to enjoy both working and talking.

CIVILIAN MANPOWER CEILINGS IN DEPARTMENT OF DEFENSE

Mr. BAYH. Mr. President, on January 31 Senator MATSUNAGA and I introduced S. 544, legislation which will exempt industrially funded personnel from Department of Defense civilian manpower ceilings. In my statement of introduction, I noted several persuasive arguments in favoring passage of this measure. In the January 31, 1977, issue of Aviation Week and Space Technology there appears a very important article on the work at the Naval Avionics Facility in Indianapolis.

I call this article to the attention of my colleagues because it describes work at an industrially funded facility and points to some of the difficulties presented to operations there by continued insistence on manpower ceilings which are unrelated to workload. A reduction in force of some 900 workers has resulted since 1968 at the facility in Indianapolis.

The work that my constituents are doing at NAFAC in Indianapolis and at the Naval Weapons Support Center at Crane, Ind., is vital to our overall defense efforts. It is likewise vital that we support defense manpower management policy that provide us with maximum utilization of the defense dollar.

Mr. President, I ask unanimous consent that this article be printed in the RECORD.

AVIONICS UNIT HANDLES SPECIAL NEEDS

(By Philip J. Klass)

INDIANAPOLIS.—Naval Air Systems Command's Naval Avionics Facility Indianapolis has a capability and a mission that are unique not only within the Navy but also within the Defense Dept.

With activities that range from exploratory development to pilot production, the facility is the equivalent of a medium-size defense electronics company. But it exists to handle specialized needs of the command and other Navy and Defense agencies rather than to make a profit.

One of the facility's most important functions is the result of its expertise in modern avionics manufacturing and quality control techniques needed for large-scale production. But the facility itself has no mission to compete with industry for large-scale production.

For a weapon such as the Walleye electro-optical-guided glidebomb, developed by the Naval Weapons Center, the facility functions as a pilot production facility to work out manufacturing and design problems before the weapon is transitioned to industry for large-scale production.

At the same time, the facility itself may develop a complex avionics fire control system, such as the new AWG-21 for use with the Navy/General Dynamics AGM-78 anti-radiation missile when the command is dissatisfied with the system developed by a defense contractor and when there is not sufficient time or money to begin a new outside program.

The facility operates financially as if it were an independent defense electronics contractor. It responds to problems or prospective projects posed by the command or other Navy or Defense agencies by submitting a proposal that includes both a timetable and cost figure. The latter may be either a fixed price or a cost-plus type.

Unlike many other Navy and Defense centers that receive "block funding" to support their activities and facilities, the facility must recover its fixed and variable costs by prorating them to each job it bids, as would a defense contractor.

There is one significant difference, however. Whereas a defense contractor who continued to meet its customer's needs could look forward to an expanding business, the facility has experienced a 26% cutback in size from approximately 3,400 people in 1968 to its present 2,500 figure because of Defense Dept.-imposed manpower ceilings and reductions.

The Indianapolis facility began as a defense contractor operation during World War 2, building Norden bombsights. The 6,000 employes were predominantly manufacturing personnel. In 1945, the Navy took over operation and it was named the Naval Ordnance Plant Indianapolis.

During the intervening years the emphasis has shifted to build up the facility's engineering and technical staff, which now includes almost 600 professionals. It is almost entirely a civilian operation, with only eight naval officers, headed by Capt. Grant F. Haggquist, Jr., the commanding officer.

Approximately 80% of the facility's activities are devoted to its parent command's needs, with most of the remainder being performed for other Navy commands. For example, the facility is responsible for overhaul-maintenance of about half of the inertial guidance systems for Polaris and Poseidon missiles.

Originally it was planned that overhaul would be performed by the inertial guidance system prime contractor, General Electric. But in early 1960, General Electric was threatened with a strike, forcing the Navy to seek an alternate overhaul facility quickly.

In April, 1950, the facility was selected and funded to build the necessary super-clean room facilities and begin training personnel at GE. By September, the facilities were complete, and the first inertial guidance system was received for overhaul in early October. Less than two weeks later, this system was shipped out, according to Charles R. McDaniel, Polaris/Poseidon/Trident program manager for the avionics facility.

Since that time, the avionics facility has shared the overhaul operations with GE to assure supply to the fleet.

The Air Force recently became a customer of the facility as a result of the avionics facility's key role in the Navy Electronic Systems Command's standard electronic module program. The objective of this program is to encourage contractors to design new shipboard systems around the use of a growing catalog of standard plug-in circuit modules whose high reliability already has been demonstrated.

The avionics facility functions as the design review center for contractor-proposed new standard module designs to determine if the circuit function can be performed by an existing catalog module. If not, the facility determines whether the new function has sufficient future potential to be designated a standard for entry into the catalog, according to Ronald Huss, standard electronic module program manager here.

Earlier, the facility was assigned by the Naval Electronics Laboratory Center to design several experimental shipboard radars using standard modules and modular microwave plumbing designs. Prototype models were delivered in 1976.

When the Air Force Avionics Laboratory decided to evaluate the possible use of standard modules in airborne avionics equipment, and selected the widely used vacuum-tube vintage APN-159 weather radar as a demonstration testbed, it turned to the facility to perform the standard module redesign.

Beyond redesigning the APN-159 to make it an all solid-state, standard module-built radar, except for the transmitter magnetron, the facility was asked to add built-in test provisions. Two prototypes of the new airborne weather radar recently were delivered to the USAF Avionics Laboratory and one of these is scheduled for flight test soon, according to Huss.

When USAF's Tactical Air Command needed a new generation of mobile ground-based weather radars, USAF's Electronic Systems Div. also turned to the naval avionics facility to build six preproduction units, also utilizing standard module construction.

When the Walleye was developed in the mid-1960s by the Naval Weapons Center, the avionics facility developed the manufacturing technology and processes, production drawings, and test procedures—collectively referred to as the "data package"—that would go out to prospective bidders when the Walleye was ready for large-scale production.

When Martin Marietta was selected, and later when Hughes Aircraft was brought in as a second source, facility engineers and manufacturing specialists worked closely with the contractors, both at the avionics facility and in the contractor plants.

The avionics facility prides itself on its competence in preparing data packages that can smooth the transition from newly developed weaponry to large-scale production, according to John D. Hague, technical director.

When the facility assigns a project engineer to a new program, it is a cradle-to-grave assignment that includes subsequent assistance to a defense contractor selected for large-scale production and still later handling any problems that may arise in fleet use.

The pilot production run here not only serves to work out manufacturing problems but also to obtain meaningful quality control data on test specifications and component tolerances.

Inspection/test measurements taken during pilot production are carefully analyzed to determine which tolerances are critical and may seriously affect yield, according to Donald Cheak, quality assurance division manager.

These in turn are examined by facility engineers to determine which can be relaxed without adverse performance effects or where design changes are needed to enhance yield.

The pilot production run here also is used to devise procedures for balancing the manufacturing lines and to develop realistic cost estimates for subsequent large-scale production.

This not only provides the command and other Navy and Defense agencies with a benchmark for estimating future program costs, but it better enables defense contractors to submit realistic bids without unnecessary "contingency padding," according to Hague.

An additional benefit is that the avionics facility data package, based on well-documented experience, enables greater participation by small businesses whose low-overhead

operations offer production economies to the Navy.

To encourage small business participation, the facility intentionally selects modest-cost test equipment for its pilot production (companies on a rental basis rather than using more complex and costly automatic check-out facilities according to Hague.

When the government orders an industry-developed weapon or avionics system into production at the developing contractor, it usually purchases a data package to enable the government to seek an alternative production source later if this proves desirable.

But the contractor lacks the incentive to provide a data package that may be used later by a competitor to win follow-on production. Where the original contractor has developed proprietary manufacturing processes, he may be reluctant to provide full details in the data package supplied to the government.

Because the avionics unit has a positive motivation to see that its data packages are sufficiently detailed and specific to enable even small business to handle follow-on production, it is being assigned by the parent command to examine data packages supplied by defense contractors to assure their completeness.

For example, the command recently selected Control Data Corp. to design and build the AYK–14 airborne digital computer, which the command intends to be a widely used standard for airborne applications.

By 1980, the command plans to buy AYK–14 computer modules on a competitive basis. To assure the data package that Control Data Corp. will supply is sufficiently detailed for this purpose, the avionics facility has been assigned to monitor its preparation. Additionally, the unit has been designated as the software support facility for the AYK–14, which will handle future software modifications during fleet use, according to Mickey H. Kinkade, deputy program manager.

The Walleye has returned to the facility as part of the Navy program to modernize the sizable number of weapons in the inventory so they can cope with more heavily defended targets.

The modernization includes the addition of longer wingspan aerodynamic surfaces to provide increased glide range and maneuverability and the addition of a pilot-controlled data link.

With the original Walleye, guidance was accomplished by aiming the television camera in the nose on the target and engaging the contrast tracker prior to launch. This required that the aircraft approach the target close enough for the pilot to discern the specific target of interest and the weapon tracker to discriminate between the target of interest and other possible nearby objects.

With the new Walleye-2 design, the TV camera in the weapon transmits back the imagery it is viewing, and the pilot at any time can take over control to re-aim the weapon as it nears the target.

The new design was developed by Naval Weapons Center with the avionics facility serving as the system engineer for the data link portion. The Indianapolis facility is now modifying the Walleye guidance section for a pilot-production quantity of the weapons, including installation of the data link, much of which is purchased from small avionic companies.

Using the experience gained in this pilot run, the facility will prepare the data package for industry bid, probably in 1978, for the modification and retrofit of large numbers of Walleyes.

Three prospective bidders—Hughes Aircraft, Martin Marietta and Rockwell—are monitoring the effort.

The AWG–21 fire control system, intended for the Navy/Grunmman A–6E aircraft, illustrates another key mission capability at the facility. The AWG–21 will be used with the General Dynamics AGM–78 anti-radiation missile to monitor emissions from surface/shipboard radars, analyze the signals and assess the relative threat of each, and display this data for the A–6E weapons control officer.

When he has selected the threat radar against which the missile is to be launched, the AWG–21 will transmit to the missile the data on the threat radar characteristics so the AGM–78 can lock onto its signals.

In the summer of 1973, the command assigned the avionics facility to develop the AWG–21 after concluding that a system designed by a defense contractor for the same mission was too unreliable and costly. Within nine months, the facility had delivered one preproduction prototype for flight evaluation, according to Fred Macreno, Jr., the AWG–21 program manager.

One reason the facility was able to respond so quickly was that the digital data processor used in the AWG–21 was designed around the use of available standard electronic modules. Of the 100 used in the data processor, 66 are standard catalog items, while the remainder are special designs originated at the facility, according to Macreno.

The radio-frequency portion of the system also was designed to make maximum use of off-the-shelf hardware. The AWG–21 console-control unit also makes use of the cathode-ray-tube display used in the APR-25/36 radar warning system.

The Indianapolis facility now is in pilot production on an undisclosed quantity of the AWG–21 systems, and one of the systems is now undergoing operational evaluation. The facility-developed data package is being verified during the pilot production run for release to prospective industrial bidders if the command decides to proceed into production.

On those occasions when a contractor to the command defaults or goes bankrupt, the facility steps in to fill the void. For example, in the late 1960s, a radar transponder developed for use in target drones by the Naval Research Laboratory was turned over to a small company for production without having undergone pilot production at the facility.

Shortly after the contractor delivered first preproduction units for qualification testing, it became insolvent. The avionics facility had to complete the program. It found contractor data incomplete and qualification tests showed design deficiencies in the transponder prototypes.

During the next several years, the facility produced an improved version of the transponder to meet urgent fleet needs while simultaneously upgrading the design and developing a complete data package so the transponder could later be put up for bid by industrial contractors. In another instance, a small contractor went bankrupt before delivery, and the facility was required to transfer the partially completed ultra-high-frequency direction-finder receivers and parts to its own facility.

Quality of workmanship was so bad that considerable rework was required. Yet within three months, the avionics facility began to ship qualified receivers, and within 10 months, it had completed the job.

The parent command turns to the facility also when the fleet encounters problems with older avionics equipment that has been out of production for many years. Under these conditions, the facility resorts to what Hague calls "selective surgery."

"Typically, we find that approximately 85 percent of our reliability problems involve only 15 percent of the circuitry," Hague explained. "Our philosophy is to locate that troublesome 15 percent and fix it rather than throw out the whole subsystem."

Often this involves developing in-house a solid-state circuit that can replace a vacuum-tube circuit on a few plug-in cards. With such selective surgery, Hague adds, "we protect the Navy's existing investment in spare parts and training. Insofar as the end-user is concerned, the equipment still operates in the same manner."

Although most prospective projects are submitted to the facility for its bid-proposal, "we have a quick-reaction capability that can be turned on simply by a telephone call from [Naval Air Systems Command]," according to Cdr. Frank Woods, executive officer. The command also turns to the facility for programs where it may be difficult to write definitive specifications that would be needed if the job were submitted for industry competition.

One typical example was the Aries program, which originally began in late 1969 as a project to upgrade the capabilities of the Navy's Lockheed C–121 Ferret (electronic intelligence) aircraft. The guidelines were only loosely defined: work with the fleet user to determine what is needed and what can be provided using off-the-shelf hardware at minimal cost, according to Cornelius Gallagher, Aries program manager.

By the early 1970's, the Navy had decided that it would be more cost-effective to substitute a new aircraft, the Lockheed P–3, and the Aries version was designated the EP–3E.

A hot mock-up was built here at the facility to demonstrate system operability, and the facility subsequently supplied a team of engineers to work with Lockheed to install and test the Elint system on the aircraft. The avionics facility will soon take over responsibility for overhaul of Aries system elements, according to Gallagher.

The present availability of a large catalog of different standard electronic module circuit functions and the facility's in-house background with modules enables the facility here to provide the quick-reaction design and pilot-production needed by the fleet.

For example, several years ago the Navy was experiencing reliability problems with the telemetry adapter used in the Poseidon missile and asked the facility to analyze the problem and come up with a fix.

The resulting design, built from standard module circuits, has proved to be so reliable that it is now used in all Poseidon test flights, and its cost is about one-half that of the previous design, according to McDaniel.

When the command needed a handful of shipboard check-out systems for testing multiple and triple-ejection bomb rack wiring, it asked the Indianapolis facility to design and build the equipment. Again, standard module construction was used.

When Naval Sea Systems Command was experiencing problems with a mechanical scan switch for shipboard sonar, it turned to the avionics facility to design an electronic-lower noise version using standard module construction. The facility built several models to demonstrate feasibility, and now similar systems are being built by defense contractors.

If the interior and exterior of the facility could easily be mistaken for that of a medium-size defense electronics contractor, discussions with managers reveal a sharply defined difference.

Where a defense contractor's objectives are satisfied if it has major production contracts that will extend for many years, management prefers the challenge of new tasks. It is uncomfortable if asked to manufacture items that it believes can be handled by outside contractors.

The facility has extremely modern in-house facilities for producing both thin-film and thick-film hybrid microcircuits, which are needed for its in-house system designs and pilot production. These include

such things as interactive computer terminals for generating microcircuit layout and artwork, and laser trimmers for precise adjustment of resistor values.

But the facility does not aspire to acquire the capability to fabricate semiconductor microcircuit chips, although it has considered this possibility in the past, technical director Hague acknowledges. The reason is that the investment would be too high, the technology obsolescence rate too fast, and the facility could not hope to compete with commercial semiconductor producers.

In addition to the facility's activities as a quick-reaction design and pilot-production operation, it has acquired other assignments that can profitably make use of its "hands-on" engineering and manufacturing skills.

For example, engineers are responsible for supervising the qualification testing of avionics equipment purchased by the parent command, usually at the contractor's plant, according to Ross Eckel, manager of the equipment evaluation division. Eckel also is responsible for in-house environmental test facilities, which are used to evaluate designs or contractor products where the latter lacks the required facilities.

SOVIET NAVAL CAPABILITY

Mr. HART. Mr. President, national defense is a subject of interest and concern for every Member of the Senate, whether or not he is a member of the Senate Armed Services Committee. Similarly, national defense is a complex and difficult subject for us all, including this member of the Armed Services Committee. It is in particular a difficult area in which to establish priorities between the many competing claims and needs, claims and needs which inevitably exceed our available resources.

Yet, I believe it is possible to see through the fog—and often the smokescreen—of the competing claims of the military services, and to establish certain priorities. If we examine the reasons for which we have our various types of military forces—sea, land, and air—it becomes clear that these reasons relate to our geography, our economic needs, and our foreign policy requirements. It also becomes clear that in all three categories, seapower relates most directly to our fundamental national needs.

Our geography is that of an island. Canada and Mexico are important friends, allies, and trading partners, but the majority of our border is shoreline, and our primary orientation has been and continues to be transoceanic. America was settled from overseas, and its ties continue to be primarily with nations lying across the seas. Our history was heavily influenced by transoceanic concerns even during our periods of nominal isolation.

The 20th century has increased our involvement in the affairs of other continents—not always happily—and our political, cultural, and economic links with and reliances on Europe, Asia and Africa are stronger today than ever before.

These transoceanic relationships are, naturally, dependent on free use of the seas as avenues for communication and commerce. Our earliest history as a nation was in large part the story of our struggle to establish our rights to freedom of the seas, a struggle against the dominant seapower of Great Britain.

The hemispheric element of our policy in the 19th century was carried out under the implicit protection of that same British seapower, which was the foundation of the Monroe Doctrine; America alone did not have the power to prevent European intervention in the Americas. The first requirement we have faced in our relationships with Europe and Asia in this century has been the establishment of American or allied control of the seas.

The economic relationship between the United States and Europe, Asia and Africa has been and continue to be a strong argument for naval power. The beginning of the 19th century found us deploying warships to the Mediterranean to protect American commerce. Throughout that century our Navy's predominant task was stationing cruisers and later fleets in distant waters to give protection and support to American commercial enterprise. The 20th century has seen our economic dependence on imports and exports increase steadily, until today our national economic life would virtually cease without the raw materials we import. These imports for the most part come by sea, they are vulnerable to destruction at sea, and they must be protected by naval power.

Much of the formal justification for the size and type of our military forces derives from the need to support our foreign policy. It is clear that our existing foreign policy commitments depend on our ability to use the seas freely. Our allies and our adversaries lie overseas, and we must use the sea lanes to reinforce the former and offer effective deterence to the latter. Our NATO allies would have little hope of receiving the reinforcement and resupply they require in time of crisis, or the raw materials their economies need at all times, if the sea lanes were under hostile control.

Our most important Pacific ally, Japan, is even more dependent on the sea than is Europe. It would be difficult, if not impossible, for the United States to support its diplomacy beyond North America without freedom of the seas.

As important as seapower is today in supporting our present foreign policy commitments, its future importance may be even greater. The world is changing rapidly, and it is difficult to foresee what our foreign policy will be 20, even 10, years ahead. The emergence of a Europe responsible for its own defense could have a profound impact on our foreign policy, as could the emergence of a major North-South axis in world affairs. Even 10 years could find us placing materially greater importance on relations with countries outside Europe, and outside our current structure of alliances.

How does this relate to naval power? As the history of Great Britain shows, naval power is an extremely flexible instrument of foreign policy. In the course of one century, the 19th, Britain demonstrated that sea power could be used to support three very different foreign policies: a continental policy, which Britain pursued during the struggle with Napoleonic France; an isolationist policy, which characterized Britain's relations with the Continent during several periods, and which, thanks to the dominance of British seapower, could be seen as "splendid isolation," and a policy of worldwide imperialism. This same type of flexibility could be of critical importance to the United States if we should find ourselves in an era of rapidly shifting international alinements and interests.

The importance of freedom of the seas to America is clear. And as long as there are hostile forces in the world, freedom of the seas can only be assured by adequate naval power. That hostile forces exist is apparent from the continuing effort of the Soviet Union to expand its own naval power, in a challenge comparable in many ways to that offered to Great Britain by Imperial Germany in the early part of this century. Driven by the new Tirpitz, Admiral Sergei Gorshkov, the Soviet Union, a nation with no defensive requirement for a blue-water navy, has built and deployed a worldwide naval presence. Just as Britain had no choice but to see the German naval program as an indication of aggressive intentions, so we cannot fail to be concerned by the growth of Soviet naval power.

To understand the nature and extent of the Soviet naval challenge, it is necessary to go beyond the question of comparative number of ships. Such a comparison can easily mislead in either direction; some are overly alarmed by the Soviet's great superiority in total numbers of warships, while others unduly negate Soviet capabilities by pointing out American superiority in total tonnage or in certain classes of ships, such as aircraft carriers.

To understand what the Soviet Navy really is, and what it can possibly do, it is necessary to study its capabilities in individual mission areas. Four such areas seem central in terms of both United States and Soviet mission requirements: defense of the Soviet homeland; cutting the sea lanes on which the United States and NATO depend; crisis confrontation; and the use of the navy as a tool for political influence.

It appears that the original impetus behind the Soviet naval build-up was concern for defending the Soviet homeland. In the 1950's, the United States began deploying nuclear armed aircraft on aircraft carriers. These aircraft had as their mission strategic strikes against the Soviet Union, in event of a nuclear war. To defend against this threat, the Soviets devised a new concept: anticarrier warfare. This concept held that it did not require aircraft carriers to fight other aircraft carriers; surface ships, land-based aircraft, and submarines, armed with antiship cruise missiles, could be used to inflict disabling damage on American aircraft carriers approaching the Soviet Union. As early as 1960, Soviet submarines based in Albania were conducting anticarrier exercises in the Mediterranean. In 1962, the first Soviet cruiser armed with antiship missiles, the *Kyuda*, entered service.

The Soviet anticarrier capability de-

veloped rapidly following the *Kyuda* class cruisers, of which four were built. In 1967, the *Kresta I* class cruiser entered service; again, four were built. The *Whisky Twin Cylinder* class cruiser missile submarine joined the Soviet Navy in 1960; again, follow-on classes were built, and the *Charlie* class, which can launch its missiles while submerged, is still being constructed.

Today, the Soviets have a very substantial anticarrier capability. With 43 cruise missile armed major surface units, 70 cruise missile armed submarines, and about 285 missile-equipped. Additions to all three elements of this force continue to be made, recent examples being the aircraft carrier *Kiev*, the first Soviet warship launched since 1968 to carry long-range antiship missiles, and the highly capable "Backfire" bomber.

However, just as the Soviets began deploying substantial anticarrier forces, the nature of the threat to the Soviet homeland changed drastically. In 1960, the first U.S. *Polaris* strategic missile submarine went to sea. By 1967, 41 *Polaris* submarines were in service. The strategic importance of carrier-borne aircraft was rendered insignificant by the deployment of the U.S. strategic submarine force, and the large Soviet investment in anticarrier forces lost much of its importance in terms of the mission of defending the homeland.

The Soviets quickly moved to extend their concept of defending the homeland from U.S. strategic naval forces by developing a significant antisubmarine warfare capability. Admiral Gorshkov has stated that ASW is one of the two main missions of the Soviet navy, along with anticarrier warfare. The *Kresta I* cruiser, which entered service in 1967, was identified as Bolshoi Protivolodocheuney Korabl'—large antisubmarine ship—in contrast to the "Raketuy Kreyser"—rocket cruiser—designation of its predecessor, *Kyuda*. It carries an antisubmarine helicoper, which the *Kyuda* does not have. The following *Kresta II* class may have as its main armament a dual purpose antisubmarine/antiship missile, in place of the long-range antiship missiles of the *Kresta I, Nine Kresta II* class ships have been built, with one more under construction. The *Kresta II* has also been supplemented by a larger BPK, the *Kara*-class cruiser, of which four are now in service with more building.

The clearest indication of the Soviet concern with strategic ASW was the introduction into the fleet in 1967 of the helicopter cruiser *Moskva*. This ship, which is a unique Soviet design, carries 18 ASW helicopters, and is exclusively an ASW ship. At 17,000 tons and its sister ship, *Leningrad*, are among the largest units in the Soviet fleet.

Again, however, just as the Soviets began achieving a substantial ASW capability—they now have 68 large antisubmarine surface units, plus substantial land and sea-based ASW aviation forces—their capability was outdated by U.S. technological improvements. The 1,200-mile range of the Polaris missiles on our first SSBNs compelled our submarines to approach the shores of the Soviet Union to launch their missiles, and the Soviet ASW forces could hope to operate effectively in those coastal seas. But by 1964, we had deployed the Polaris A–3 missile with a range of 2,500 miles, rendering it possible for our submarines to have firing positions far enough away from the shores of the Soviet homeland so that ASW dependent on surface ships and land-based aircraft would be largely ineffective. The new Trident missile will make this type of ASW even less feasible.

Thus, the Soviet capability to defend the homeland from U.S. sea-based strategic forces has advanced little, if at all, over the past 20 years, despite enormous effort and expenditure on the part of the Soviets. Has the Soviet effort all been wasted? As I will discuss below, it has not been wasted, because ships built for one purpose have been found useful for other missions. Indeed, throughout the modern history of naval warfare, ships have seldom been used for the purpose for which they were built.

Have the Soviets given up their attempt to defend the homeland? It appears that they have not. Admiral Gorshkov continues to give high priority to the strategic ASW mission. As I noted in my report to the Armed Services Committee on U.S. Naval Forces in Europe, the Soviet Union appears to be undertaking a significant research and development program in the area of strategic ASW. They may be exploring ways to detect submerged submarines from satellites. The SSN–X–13 missile, which is now in an uncertain development status, may have been intended as a strategic ASW weapon. While the U.S. SSBN force is virtually invulnerable today, we must not presume that it will remain invulnerable, given the extent of the Soviet commitment to homeland defense.

A final element of the homeland defense mission of the Soviet Navy is strategic deterrence. The Soviet actually had strategic ballistic missile submarines at sea 3 years before the first U.S. *Polaris*. These submarines, of the *Zulu* and later *Gulf* classes were not powerful systems—carrying only three missiles of very limited range—but they were evidence of early Soviet recognition of the potential of strategic missile submarines. The U.S. *Polaris* was far superior to the early Soviet SSBNs, and it was not until 1968, when the first *Yankee* class Soviet SSBN appeared, that the Soviets achieved approximate qualitative parity with the United States in this field.

However, the Soviet produced 34 "Yankees", each carrying 16 ballistic missiles, in the short time of 7 years. In 1972 the first *Delta* class SSBN was acknowledged, which is to date the largest type of submarine in the world. The later takes up to 16 SSN–18 missiles, with a range of 4,200 miles, exeeding the range of our Poseidon by over 1,700 miles. Not until 1979, when the first U.S. Trident submarines enters service, will the United States have a submarine launched ballistic missile of approximately equal range. Today, the Soviets have over 17 *Delta* class or *Delta*-class derivatives in service with more building. In this aspect of homeland defense, the Soviets have forged rapidly and substantially ahead, and their efforts have been highly effective.

This brings us to the second apparent mission of the Soviet Navy: interdiction of the sea lanes between Europe and North America in event of a NATO war. It is in relation to this apparent mission that the Soviet submarine force raises great concern.

The Soviet Union has always had a major navy in terms of its submarine force. In 1939, the Soviets had 180 submarines, not only far more than Germany, but enough to make the Soviet submarine force the world's largest. Despite the fact that this numerically powerful force achieved little in World War II, the immediate post-war Soviet naval building program continued to emphasize submarines. By 1950, the Soviets were producing the highly capable whiskey class attack submarine, which was based heavily on the technology of the German type XXI boat of World War II. New types were introduced rapidly in the 1950's, with submarines being built at a peak rate of almost 90 units in 1 year. Total strength of the Soviet submarine force reached well over 400 units.

In 1958, the first Soviet nuclear attack submarine of the November class, was launched. Of equal importance in 1960 the Soviets launched their first submarine armed with antiship cruise missiles. While the Soviets continue to build convetional attack submarines tdoay, they have built and continue to build nuclear attack submarines and both nuclear and conventional cruise missile boats. While numerical comparisons are only useful as illustrations, it is interesting to note that the Soviet navy today has a total of about 335 submarines, about three times the number of U.S. submarines.

What does this submarine fleet give the Soviet Union in terms of capabilities in specific mission areas? As I have already noted, their SSN force is an important and effective element in the Soviet strategic force. But what of the attack submarine force?

The capability of the attack submarine force, both for attacks on other warships and on merchant shipping, would appear to be considerable. Soviet nuclear powered attack submarines are the world's fastest. They have the services of highly sophisticated, increasingly satellite-based reconnaissance and command, control, and communications—C3—systems. Only the Soviet Union today possesses attack submarines which can launch antiship missiles while submerged. Soviet conventional submarines are also highly capable, taking advantage of modern battery technology to achieve submerged speeds and ranges in excess of those of the World War II U-boats.

In addition, it appears that the Soviet submarines will have the support of aircraft and surface ships which the German U-boats lacked. Soviet land-based naval aircraft will provide reconnaissance and ASW protection for Soviet submarines close to home waters. I noted earlier that the Soviets have made a substantial investment in large, capable

antisubmarine surface ships. While these ships have only marginal capability against the U.S. SSBN's which were their intended target, they are now available to provide tactical ASW support to Soviet submarines in home waters and possibly in areas where NATO intends to undertake ASW barrier operations. It has been suggested that the *Kiev*, the Soviets first aircraft carrier, is also the world's first counter antisubmarine warfare—ASW—ship, being intended to operate against NATO surface, air and submarine ASW forces in the area of the Iceland-United Kingdom gap. Unquestionably, the *Kiev*, the other Soviet ASW surface ships, and Soviet naval aviation can operate so as to increase substantially the capability of the Soviet attack submarine force.

Finally, to gage the capability of the Soviet attack submarine force it is necessary to look at the present qualitative balance between the attack submarine and antisubmarine forces. ASW has made substantial advances since the days of the battle of the Atlantic against the German U-boats. Modern passive sonars have impressive long-range detection capabilities. Onboard aircraft enable surface ships to strike at submarines at long ranges, and land-based ASW aircraft can also pursue distant submarine contacts. While no submerged U-boat was ever sunk by another submarine, NATO's submarine force is dedicated largely to ASW, and it is perhaps our most effective ASW tool. The centralized, satellite-based reconnaissance and C3 system on which the Soviet submarines depend could become vulnerable to destruction.

However, despite these advances in ASW, the qualitative balance on the whole seems to have shifted in favor of the submarine. In World War II, a German U-boat had to spend most of its time on the surface; submerged, its maximum speed was only about 8 knots, and its sustained speed only about 3 knots. Most submarines destroyed by ASW forces were caught on the surface. The destroyer, with a speed of about 30 knots, had a 10-to-1 speed advantage over the U-boat in any sustained engagement. Today, the modern, nuclear-powered attack submarine has no need to surface at all. It can sustain its top speed indefinitely, and that top speed is often faster than the speed of an opposing destroyer.

Even the modern conventional submarine has a high underwater speed and good endurance, and its extreme quietness makes its detection very difficult. Whereas the U-boats had to depend on their own very limited reconnaissance capability, the Soviet submarine force is supported by sophisticated outside means of reconnaissance and targeting. The development by the Soviet Union of cruise missile submarines has given the submarine effective standoff weaponry, so that it can lie outside a convoy's defenses and strike at the ships within.

Thus, it seems that the Soviets have a highly capable, large fleet of attack submarines. What do they intend to do with them? This is more of an open question than is suggested by Defense Department plans to organize convoys for a new Battle of the Atlantic. It is alledged that the main mission of the Soviet submarine fleet is the disruption of NATO's sea lines of communications, but it is not clear that the Soviets see it this way. It can be argued that their submarines will be devoted more to what Admiral Gorshkov gives as the two main missions of the Soviet navy—anticarrier warfare and strategic ASW—than to attacks on convoys.

Also, it would appear logical for the Soviets to commit their submarine forces to tactical missions directly supporting the ground forces' mission of winning a short war in Europe, rather than to the "long war" task of attacking convoys.

Possible short war tasks could include the interception and destruction of any carrier or amphibious task groups attempting to reinforce NATO's northern or southern flanks. It would appear consistent with Soviet operational practices, where mass is heavily emphasized, for the submarine force to be concentrated on these "short war" tasks, at least until it became clear that a longer war is in the offing.

Does this mean that the Soviets do not have the capability to attack the NATO sea lines of communication? No. Clearly, they have that capability. If a NATO conflict were to develop into a long war, their submarine force might be dedicated to this mission. Also, they might use their submarine force to interdict other SLOC's in other parts of the world, as elements of crisis management in a non-NATO scenario. We must be concerned about the Soviet capability to attack the sea lines of communication.

But we should not make the frequent error of automatically inferring intentions from capabilities, and risk missing the real mission assignments of the Soviet submarine force. Recognition of the real missions may somewhat degrade the U.S. Navy's relevance to the defense of NATO in a short war, both by reducing the requirement for Atlantic escort forces and by suggesting that operations with the Marine Corps on the flanks of Europe may not be feasible. But we must design and size our forces to real requirements, rather than designing the requirements to fit existing or preferred types and sizes of forces.

The third major mission area of the Soviet Navy which must be examined is that of crisis confrontation. Perhaps the most dramatic evidence we have seen of the growth of Soviet naval capabilities was the Soviet confrontation of the U.S. Sixth Fleet in the Eastern Mediterranean during the October 1973 Arab-Israeli War. Admiral Zumwalt, among others, has voiced doubt that the United States would have prevailed had the face-off between the Sixth Fleet and the Soviet Fifth—Mediterranean—Squadron gone to the shooting stage. My own recent visit to the Sixth Fleet made it clear to me that our capability in an encounter with the Soviet Fifth Squadron in the Eastern Mediterranean is marginal at best, particularly if the crisis does not involve our NATO allies. While our capability is substantially better in other areas of the world, the Soviets have shown an ability to move forces into these areas when a crisis develops.

The Soviet crisis confrontation forces stand as an example of the fact that ships are seldom used for exactly what they are built for. The Soviet Union developed its anticarrier capability for the mission of defending the homeland.

Then, with the advent of *Polaris*, the U.S. aircraft carriers ceased to be an important strategic force element. But the Soviets recognized that those safe carriers remain the backbone of U.S. capabilities in crisis confrontations, and that the anticarrier capability of the Soviet Navy could be equally useful in managing those crises. It is the anticarrier capability which is the heart of the Soviet crisis confrontation capability today.

How great is the Soviet capability in a crisis confrontation? Some argue that a major distinction must be made between the Soviet's capability in the eastern Mediterranean, where they have the support of land-based aircraft, and in other areas where that support is lacking. There is no question that the support of land-based aviation greatly increases Soviet capability in the eastern Mediterranean. But focusing too heavily on that element of their force could cause us to miss certain other elements of their overall capability.

The essence of the Soviet capability in a crisis confrontation, in the framework of their anticarrier concept, is their concept of the so-called "D-Day Shoot Out." This concept is based on the idea of a coordinated, surprise, preemptive strike by Soviet naval forces against the U.S. naval forces present in a crisis area. Because of the inherent advantages that accrue to the attacker, particularly if he has at least tactical surprise, and of the way Soviet ships are designed to maximize initial firepower, the Soviet capability in this scenario is considerable even outside the range of land-based aviation. If the Soviets can knock out of action the U.S. aircraft carriers present in the crisis area, through a massive coordinated strike of missiles, torpedoes, and gunfire, they may be able to achieve their political objective in the scenario. Because the United States today has only a small number of carriers, the number which the Soviets must knock out of action in any individual confrontation is likely to be small. Of course, the Soviets then risk an escalation beyond the local confrontation, but diplomatic actions might be able to minimize this risk in certain cases.

Again we face the question, do the Soviets intend to use their forces this way? Probably, they do not. Since the objective in a crisis confrontation is local and limited, and is defined basically in diplomatic rather than military terms, the Soviet objective is probably more one of deterrence than of actual conflict. It appears that they hope to neutralize one of the principal U.S. crisis management tools—the threat of naval intervention—by counterposing the threat of Soviet counterintervention, either against the U.S. forces directly or against the client the United States is seeking to support. It appears probable that they would be very reluctant to see the crisis go to a stage involving direct action by Soviet against U.S. forces. Nonetheless, the possibility of such a confrontation could

diminish the utility of U.S. naval forces in a crisis, thus advancing Soviet objectives.

This brings us to the closely related fourth mission responsibility of the Soviet navy: spreading Soviet political influence. The crisis confrontation with U.S. forces is one way that this mission is performed by the Soviet navy. The disposition of the Soviet fleet off the Libyan coast during the coup against King Idris was an example of the political use of the navy. The support given by the Soviet navy to the Angolan operation is another example. While actual Soviet power projection capability is small—only the aircraft carrier *Kiev* can project air power, and the Soviet naval infantry force is only about one-tenth the size of the U.S. Marine Corps—the utility of Soviet naval forces in the political role is evident. Soviet warships make frequent port visits in third world areas, and provide clear examples of Soviet power and capability to those nations. It is clear that naval forces are a useful tool for the Soviet Government in projecting the image of the Soviet Union as a world power; despite its lack of projection forces, the Soviet Navy seems to carry out this mission in a satisfactory manner.

In sum, then, the Soviets seems to have developed substantial naval capabilities in certain areas. While their efforts to defend the Soviet homeland from U.S. sea-based strategic retaliatory forces do not seem to have achieved significant results thus far, we must be concerned about continuing Soviet research and development work in the area of strategic antisubmarine warfare. The anticarrier capability developed for the strategic role has meanwhile become an important element in the Soviet capability in crisis confrontation scenarios, and the aircraft and surface ships originally built for strategic ASW would appear to be useful for tactical ASW and CASW in support of the Soviet submarine fleet.

It is not clear that the impressive Soviet capability in attack submarines is, in fact, dedicated to a battle for the Atlantic. However, that submarine force would be a powerful tool for preventing U.S. naval or amphibious action on the flanks of NATO in a European conflict. Should a NATO conflict last longer than expected, the force could then be directed toward interdicting NATO sea supply lines. It could also be used for the interdiction of sea lines of communication in a non-NATO scenario.

The Soviet capability to use naval forces as tools of crisis management and political influence has increased markedly, and must give us concern. It is not clear that the Soviets could not achieve their political objectives in a crisis confrontation with U.S. naval forces, either as the result of the outcome of an actual naval engagement or, more probably, by deterring U.S. actions against third powers. Areas in which this could occur include the eastern Mediterranean, where the United States has major foreign policy commitments. Soviet naval forces also serve under noncrisis conditions to protect the image of the Soviet Union as a world power.

All in all, these Soviet naval capabilities add up to a new dimension of Soviet military capability, a dimension not present even 20 years ago. Some of the improvement in Soviet capabilities are merely quantitative; others provide the Soviets with entirely new capabilities.

Should the United States attempt to respond to these new or improved Soviet naval capabilities? As I noted at the beginning, we are by nature dependent on the sea, which the Soviet Union is not. If we lose the ability to use the seas freely, our economy and our foreign policy is imperiled. So, in general terms, I do believe we need to respond.

We must act so as to preserve our strategic deterrence forces from possible destabilization in the event of a major improvement in Soviet strategic ASW capability. We should recognize that the Soviet surface navy is not intended for a Jutland-type action against the U.S. Navy, but that many elements may have potentially useful abilities to support the Soviet submarine fleet. If we are to undertake naval or amphibious action in support of our allies on the flanks of NATO, we should recognize that the Soviet naval capabilities in those areas are very substantial. If the Soviet submarine fleet is dedicated to this mission, at least during the initial 30 days of a NATO conflict, then we may need to improve our capabilities to project forces into these areas. We need to respond to the Soviet capability in the "D-Day Shoot Out" crisis confrontation scenario, in terms of being able to deny the Soviets both their military and their diplomatic goals. And we have to learn to live with the fact that Soviet naval forces will be active in peacetime in promoting Soviet political interest around the world.

The remaining question is, how do we respond? In the latter part of this month the administration of President Carter is to present the Congress with its revised naval shipbuilding program and overall naval budget. Through the past and present fog of statements by our naval authorities as to what our Navy needs and where it wants to go, it is only the shipbuilding program which stands as a clear indication of the answers to these questions. The administration of President Carter may have substantially different ideas on these issues from those reflected not only in the current shipbuilding budget for fiscal year 1978, but, even more importantly, in the present shipbuilding 5-year defense plan. I hope to offer some thoughts on the question of what our response should be once the details of the Carter administration programs are before us.

THE NATIONAL PRAYER

Mr. CHILES. Mr. President, over 3,500 guests, leaders of the United States and over 170 other nations of the world gathered in Washington, D.C., on January 27, 1977, for the National Prayer Breakfast at the Washington Hilton.

This annual event, which is sponsored by the Senate and House prayer breakfast groups, marks a time for us to gather in a spirit of fellowship and reaffirm our mutual dependence on God. It is a public opportunity to demonstrate that we are a nation founded on spiritual principles and that our strength derives from our adherence to God's way.

Mr. President, I think many can benefit from the words of the several speakers at the National Prayer Breakfast as did those of us who were in attendance.

Accordingly, I ask unanimous consent that the program and transcript of the breakfast be printed in the RECORD, and I commend these remarks, and the spirit in which they were delivered, to all.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

NATIONAL PRAYER BREAKFAST PROGRAM

Opening song, "Eternal Father" The Sea Chanters.

Presiding, the Honorable Marjorie S. Holt, Chairman, National Prayer Breakfast Committee.

Opening Prayer, the Honorable Julian M. Carroll, Governor of Kentucky.

Call to Fellowship, the Honorable Charles H. Percy, U.S. Senate.

Introduction of Head Table and Statement, the Honorable Marjorie S. Holt, U.S. House of Representatives.

Greetings from the House of Representatives, the Honorable Gunn McKay, U.S. House of Representatives.

Old Testament reading, the Honorable Jennings Randolph, U.S. Senate.

Greetings from the Senate, the Honorable Peter V. Domenici, U.S. Senate.

New Testament reading, General David C. Jones, Chief of Staff, U.S. Air Force.

Prayer for National Leaders, the Honorable Burt O. Lance, Director of Management and Budget.

Message, the Honorable James Wright, Majority Leader, U.S. House of Representatives.

The President of the United States.

Closing Song, "Seek Ye First" The Sea Chanters.

Closing Prayer, the Honorable Harold E. Hughes, U.S. Senate (Retired)

OPENING PRAYER: THE HONORABLE JULIAN M. CARROLL

May we bow our heads in prayer. Father of us all, as we come to you on this day of national prayer we would first ask that you forgive us for our failure to seek your daily blessing, even after two centuries of your blessings in this nation our needs are many. We thank you for a nation of believers and we thank you for the believers in other parts of our world.

But, Father, even among your believers we have many who lack the faith which gave birth to this nation and birth to Thy nations around the world. We recognize that from our beginning as a free people that our Declaration of Independence is declared this nation's dependence upon Your divine providence, and Your sacred trust.

We pray this day that You would renew the faith of all our people and the peoples of the world and strengthen us sufficiently to meet the challenges before us. We pray especially that you would comfort, that you would inspire, that you would guide your devoted public servant, Jimmy Carter, in all his days of service, the people of America. Bless his family.

We extend the same prayer to those who carry the burdens of leadership in his cabinet, and extend further your hand of comfort and divine guidance to members of Congress, and the other public leaders of America and the world.

That for all of us Your will might be done. Amen.

CALL TO FELLOWSHIP: THE HONORABLE CHARLES PERCY

To members of the Supreme Court, to members of the President's cabinet, my distinguished colleagues in Congress, and to members from the United Nations, and from Washington, in what we consider to be the greatest diplomatic corps in the world, and friends, we welcome you here to this fellowship breakfast.

As we gather today for the 25th Annual National Prayer Breakfast, at the dawn of America's third century, on the threshold of a new administration, and during the first weeks of Congress, we are all reminded again of the foundation of strength and fortitude that supports our great democracy.

The cornerstone of this democracy, built over the last 200 years in times of plenty and joy, as well as in times of want and trouble, is our national spirit of conciliation and understanding in pursuit of common goals.

This spirit guides us today as we join in prayer seeking divine guidance as individuals and as a nation for the days ahead. We pray for a continuation of the spirit of democracy that places the orderly and just resolution of differences in our communities, in our states, and in our nation, above all other objectives.

The United States is a nation with our foundation built on the national motto, "In God We Trust." Because we strive to be guided to the higher order we strive to stand as a beacon of freedom, justice, and equality for all the world.

The birth of America signaled a great migration of people, seeking a new home where they could worship and govern freely. The authors of the Constitution turned to God for guidance and strength, asking for His help in their effort to build a nation that would endure.

We seek that same guidance and strength today. The last day has been a tumultous time in America, but today we sense positive feeling among the people. Our President and the nation's Congress are seeking a renewed dedication to our basic principles. The American people are longing to, and have begun the process of reasserting trust in our leaders.

Together with God's help we pray that we shall be successful in reaffirming our principles, and thus be worthy of the public trust given to us.

In the President's Inaugural Address he said, "This inaugural ceremony marks a new beginning, a new dedication within our government, and a new spirit among us all. A President may sense and proclaim that new spirit but only the people can provide it."

I think, and I believe we all feel, that we can take this great concept, even one step further. There is a majestic difference between the inspiration evoked by a great idea and making that great idea a reality. Together we must work diligently to make the realities of our actions as noble as the ideas we profess.

Or as James Dickey said in his inaugural poem, "Lord, let us shake with purpose."

We must undertake this task with the realization that our power stems from the people we seek to serve and above all from our maker.

Reverend Billy Graham, the inspiration you provided to our prayer breakfast groups and to this nation and to the world, and every member of the clergy here today, all of us would profess that you are engaged in the noblest of all professions, to help man better understand his relationship with His maker.

That those of us here in government and in politics and in international affairs are privileged to engage in what I would consider the second noblest of all professions, the attempt to have man better understand his relationship with his fellow man. And may we take our inspiration and our admonition from Proverbs. "Trust in the Lord with all thine heart, and lean not unto thine own understanding. In all thy ways acknowledge Him and He shall direct thy path." In this spirit let us join in fellowship.

OPENING STATEMENT: THE HONORABLE MARJORIE HOLT

In every continent, over 100 countries, and all 50 States, over 100,000 servicemen and women are sharing this moment with us at breakfast at 1,000 military installations and ships. We are so pleased that they are able to be with us through the American Forces Radio and Television Service.

Here we recognize our common need for understanding and peace among us. How difficult it is, even within our own families, to resolve our differences of philosophy and economics and religion and politics, and how much greater are our difficulties when we try to cope with cultural differences, physical differences, language dissimilarities, with our varied backgrounds, and all those things that divide us.

But when we come here in a spirit of love and a desire to understand that each one has his own problems to deal with, his cross to bear, we have a much better chance to overcome these difficulties.

You know, ever since God said to man fill the earth and subdue it and have dominion over every living thing that moves on the earth, we've been struggling to work in brotherhood and sisterhood. We in the United States have come through great trials as we have ended our 200 years as a country and now as we're going into our third century, as Senator Percy said, there is abroad in this land a thirsting after unity and love and understanding.

And we believe that this morning will be a step in that direction. One of the most exciting things about being here is the thought that we represent small, intimate groups meeting weekly all over the world, to pray for God's strength and guidance. Think of it, think of what a source of energy that is. So I think that's why we feel the excitement here, the power here today. This once a year meeting is just a small glimpse, a very small portion of an effort that goes on constantly around the world.

Praise the Lord that the spirit of truth and understanding may prevail among us always. As the prophet Micah said, "It shall come to pass in the latter days that the mountain of the house of the Lord shall be established as the highest of the mountain and shall be raised above the hills, and all the nations shall flow to it, and many people shall come and say, Come, let us go up to the mountain of the Lord, to the house of the God of Jacob that He will teach us His ways, and we will walk in His paths: for the law shall go forth of Zion, and the word of the Lord from Jerusalem."

GREETINGS FROM THE HOUSE OF REPRESENTATIVES: THE HONORABLE GUNN MCKAY

Marjorie, Mr. President, Mrs. Carter, and guests all. The poet put it well when he said "prayer is the sole, sincere desire uttered or unexpressed." I bring you greetings from the Congress of the United States and the House of Representatives prayer breakfast group who meet each Thursday morning as each of you in various places do on occasion. And I think it's well that we join unifiedly here together as leaders of this great nation and of other nations to set an example, to the world of faith which is best expressed, I suppose, in the injunction of Paul to Timothy when he said "wherefore I put thee in remembrance of that gift that you stir up that gift that is with thee, which was before in your ancestors," and I am paraphrasing slightly, "and which we have in our ancestors". And our forebearers expressed it constantly, the phrases such as God and nature's God. And in that final hour of decision when the declaration was established they said, "resting our souls in the divine providence we pledge our lives, our fortunes and our sacred honor, understanding very well the balance need in the human existence for not only the spiritual or the physical, and striving for titles and glory, but also the need for spirituality in the souls of human beings to make them balance, and of course, for the need of assistance and inspiration."

We in the Congressional prayer breakfast have had some glorious experiences. We vicariously have heard and seen profiles in courage. As our members have affiliated with one another and have tried to follow perhaps best expressed the reason for prayer breakfasts, when the Saviour speaking to Peter, when He was asking him if he loved Him and so forth, and He said, "Peter, the devil hath desire for thy soul but I have prayed for thee, and when thou becomest converted, strengthen thy brethren." We have seen some examples in the House of Representatives where a member of the prayer breakfast has taken a brother in trouble and has assisted him to recovery with a great firm reliance on a divine being.

Not only that, you as you are here today with foreign dignitaries. We have had some of the great leaders of the world in our homes. My wife and I enjoyed the experience of having an electrical engineer from Manila, the President of the Indonesian Oil Company, the minister of that whole country in our home, with his wife. As well as the gentleman and businessman from Australia, from Barbados, from Ukraine in Russia, and other places. So that we get that unification of faith and to understand each other, the purpose is to strengthen one another that we might, as was the charge, make one another fellow citizens with the saints and no more strangers.

The counsel then comes strong to each of us and we rejoice with you in our greetings to you, in the final statement that the Savior gave, "if you would know whether this is My work or of Him who sent Me, do it and ye shall know."

OLD TESTAMENT READING: THE HONORABLE JENNINGS RANDOLPH

President and Mrs. Carter, sisters and brothers, I hold the Scripture in my right hand. This was a Holy Bible given to me by my mother when I was just a boy of 12, and I'm going to read the 100th Psalm from this Bible, a very short psalm.

On the fly leaf of this Bible my mother said these words, "Each for the other and both for God." I think that must be the feeling of all of us who are here today as we sit one with the other, but all with God.

"Make a joyful noise unto the Lord, all ye lands, serve the Lord with gladness, come before His presence with singing, know ye that the Lord, He is God. It is He that hath made us and not ourselves. We are His people and the sheep of His pasture. Enter into His gates with thanksgiving and into His courts with praise. Be thankful unto Him and bless His name for the Lord is good, His mercy is everlasting and His truth endureth to all generations." Thus endeth the reading of the 100th Psalm. What a lesson.

GREETINGS FROM THE SENATE: THE HONORABLE PETER DOMENICI

Mr. President, Mrs. Carter, distinguished guests and brothers, I bring greetings from the Senate prayer group. While I have been in the Senate for only a short time, I have great confidence today as I stand before you because I feel the strength of my brothers who have sent me to greet you, and with whom I pray often. Several years ago a distinguished United States Senator was nearly mortally wounded right here in Washington by an assailant's bullet. You and I and thousands in this land have heard Senator John Stennis often.

He has given us a living testimonial of

the power of prayer. He has told us that he personally felt the power and can attest to its greatness, in fact, the great Senator Stennis has said that without our prayers and that power he is sure that he would no longer be with us. We tapped a great power, the power of the Almighty, during a crisis.

Today, one of our distinguished United States Senators, Dewey Bartlett of Oklahoma, is recovering in New York City from a serious cancer operation. He has told us personally that he will be well and that he feels the power of our plea to the Almighty.

We have found it easy to tap that dimensionless power for him, as we did for Senator Stennis, and as we have done and as you have done for others before them. The example of these two men, and us, show us that the power of the Almighty is real, and can be tapped by each of us, if we will.

Mr. President, you are as aware as we are of an energy crisis, but I submit there is no power crisis. The problems confronting our families as institutions, our children as they grow and they confuse society, our country as it attempts to solve economic difficulties, and our world as it gropes for peace, may appear as hard to overcome as those near mortal wounds to Senator Stennis, and that drastic tumor that Senator Bartlett now battles.

But the limitless power of the Almighty can sweep before it every problem, no matter how great, no matter how complex, and indeed no matter how small. We have this assurance on the Word of the Master, and occasionally we believed it and heeded it.

The Senate prayer group hopes that you will all leave here today committed to the proposition that that great dimensionless power for good surrounding us will be tapped by each of you as you solve your own problems, our problems, America's problems, and mankind's problems. Thank you.

NEW TESTAMENT READING: GENERAL DAVID C. JONES

President Carter, Mrs. Holt, ladies and gentlemen. I bring you greetings from the Pentagon fellowship group. The reading of the New Testament I have selected from the New Living Bible portions of Chapter 13, Paul's first letter to the Corinthians.

"If I had the gift of prophesy and knew all about what is going to happen in the future, knew everything about everything, but didn't love others, what good would it do."

"If I had the gift of faith so that I could speak to a mountain and make it move, I would still be worth nothing at all without love."

"Love is very patient and kind, never jealous or envious, never boastful or proud, never haughty or selfish or rude."

"It is never glad about injustice, but rejoices whenever truth wins out."

"All the special gifts and powers from God will some day come to an end, but love goes on forever."

"Now we know so little, even with our special gifts, and the preaching of those most gifted is still so poor. But when we have been made perfect and complete, then the need for these inadequate special gifts will come to an end and they will disappear."

It is like this: "when I was a child I spoke and thought and reasoned as a child does. But when I became a man my thoughts grew far beyond those of my childhood, and now I have put away the childish things."

"In the same way we can see and understand only a little about God now, as if we were appearing as a reflection in a poor mirror. But someday we are going to see Him in His completeness, face to face. Now all that I know is hazy and blurred, but then I will see everything clearly, just as clearly as God sees into my heart right now. There are three things that remain: faith, hope, and love. And the greatest of these is love." Thus endeth the reading of the New Testament.

Thank you.

PRAYER FOR NATIONAL LEADERS: THE HONORABLE BURT O. LANCE

Let us be in prayer for our national leaders. Our gracious Heavenly Father, allow all of us to pray for all of the leadership of the United States of America. Everyone in a position of leadership is in a special place with many time heavy and awesome responsibilities.

Let us realize that the power to carry out the responsibilities and duties we have comes from Thee. Along with the power and strength we receive from Thee we also receive other charges and duties and obligations. Let us hear one or two of them. "Of those to whom much is given, much is expected."

"Inasmuch as you have done it unto one of the least of these, My brethren, you have done it unto Me." "What doth the Lord require of thee except to do justly, to love mercy, and walk humbly with thy God."

Our Father, let us hear and understand Thy words, and let us live by them each and every day. We would pray for Thy special blessings on Thy servant, President Carter, to guide, direct, and protect him and let nothing make him afraid. Let us pray for Vice President Mondale as he travels around the world, hoping to bring us closer together to the people.

Bless the President's cabinet; bless all of the people in government; bless the Chief Justice of the United States and all the members of the judiciary; bless the members and the leadership of the Congress of the United States, and all of their deliberations.

Bless the military leadership of this nation, and all of the people in the military; bless the governors of the fifty states and the leadership of the rest of the world.

Finally, Father, let the words "In God We Trust" be more than just a motto. Let those words become a reality and a way of life for us all. All of this we ask in the name of Jesus Christ, Amen.

Mrs. HOLT. And now, Mr. President, Mrs. Carter, ladies and gentlemen, it gives me great pleasure to present to you a man who has given our nation more than twenty years of dedicated service as a member of Congress. During those years he has received many major national responsibilities, and among them most recently he was elected to serve as the Majority Leader of the House of Representatives. The Honorable James C. Wright of Texas.

SPECIAL MESSAGE: THE HONORABLE JAMES WRIGHT

Thank you, Marjorie, and thanks to all of you for the privilege of participating in this great event.

I'd like to begin by reading a few words from St. Paul's letter to the Philippians, in which he said, "Even as it is meet for me to think this of you all, because I have you in my heart . . ." and a few pages later concludes by saying "The grace of our Lord, Jesus Christ, be with you all".

That doesn't relate particularly to anything I have to say here today. But I just thought, Mr. President, it would be nice for some of these others to know that St. Paul apparently came from our part of the country.

I regret to say, however, that he couldn't have been from Texas because he wrote on another occasion, "I have learned in whatsoever state I am to be content."

Jennings Randolph has read from the fly leaf of a Bible given to him when he was a boy by his mother. Apparently my father knew me better than I thought he did, because on Christmas of 1938 when he gave me this Bible he wrote in its fly leaf, "Dear Jim, there are portions of this book which you will never understand. . . ."

But then he continued, "Don't let that worry you. Those passages which leave no room for doubt comprise the only rules of life. Conform to them and you will have nothing to fear, from either God or man".

So listen with me, if you will, to some words that leave little room for doubt. They were written about 3400 years ago and yet they bear such a marvelous relevance to our time that they could have been written for us. They appear in the eighth chapter of the book of Deuteronomy.

"For the Lord thy God bringeth thee into a good land, a land of brooks and water, of fountains and depths that spring out of the valleys and hills . . . a land where in thou shalt eat bread without scarceness, thou shalt not lack anything in it. . . .

"When thou hast eaten and are full, then thou shalt bless the Lord, thy God, for this good land that He hath given me. . . . Lest when thou hast eaten and art full, and hast built goodly houses and dwelt therein; and when thy herds and thy flocks multiply, and thy silver and thy gold is multiplied, and all that that has multiplied; then thine heart be lifted up . . . and thou say in thine heart, my power, the mite of my hand hath gotten me this wealth. But thou shalt remember that it is the Lord, thy God, that giveth thee power to get wealth. . . .

"And it shall be that if thou do at all forget and follow after other gods and bow down before them and worship them, I testify against you this day, that you shall surely perish. . . . Even as nations which the Lord destroyeth before your face, so shall ye perish."

But then let us listen to some words of reassurance, the comfort of the promise that was given to Solomon and recorded in the second book of Chronicles.

"If my people, which are called by my name, will humble themselves and pray, and seek my face, and turn from their wicked ways, then will I hear from Heaven, and will forgive their sin, and will heal their land."

There can be no doubt that the people of ancient Israel thought of themselves as living in a very special relationship with God. To them it was He who had blessed them, He who enjoined them, He who forgave them, and He who held them accountable. And this applied both to the corporate life of the community as a whole and to the personal lives of the individual inhabitants.

In the United States we similarly have made some pretense at being a covenant nation. Our charter document begins with the declaration that we hold these truths to be self-evident, and all men are endowed by their creator with certain unalienable rights, and ends with an expression of profound reliance upon divine providence.

We open our sessions in the House and the Senate daily with a prayer. The Supreme Court daily begins its sessions with a supplication by the bailiff, "God save the United States and this honorable Court". Our coinage bears the emblem "In God We Trust." We speak of ourselves as one nation under God, indivisible. On occasions I am not completely sure whether this is religion or religiosity, humility or presumption.

It was genius in Israel's religion that not even the king was exempt from the demands of God. And the living heart of its faith was that God confronts each person in a very personal way.

In my view the most appealing and sympathetic character of the Old Testament was David. He was at once both heroic and human, combining elements of the noble and the plebian in his make-up. Yet he was not without his fault.

Once, we are told, David became enamored of another man's wife, and conceived a child by her. When all else failed, he gave orders to his general that the woman's hapless husband be placed in the forefront of the hottest battle and that the troops retire from him so that he be smitten and die.

But there was in Israel a prophet named Nathan who upon learning of these events came to confront the king. Because the king also was a judge, Nathan presented a case involving two neighbors.

According to the story as Nathan told it to David, the two neighbors lived side by side, the one extremely wealthy and the other utterly impoverished, having in his possession only one little ewe lamb which he considered almost as a member of the family.

But when a distinguished guest came to visit the wealthier of the two neighbors, he, rather than taking of his own plentiful flocks and herds to prepare for the table, instead stole the one little lamb from his impoverished neighbor and slaughtered it for his guest.

You can almost imagine that the veins stood out in David's neck. You can imagine that he pounded the table at the unconscionable thought, because he said, "As the Lord liveth, the man who has done that thing shall surely die".

And the prophet calmly replied, "Thou art the man."

Each of us finds it very easy to criticize the activities of others. Yet how many of us would be surprised if in the midst of such criticism the presence of God should come upon us and we'd be told, "Thou art the one."

It seems to me that the religious experience primarily boils down to a recognition by each human of those four words which God said to David through Nathan.

First of all He says, thou art a sinner. You're a sinner. Oh, we have denied that, but our denials only serve to betray our sick pride.

Once I had dinner with a man who spent most of the evening telling about all the times he'd been wronged by churchmen, and how often he'd been treated honorably by non-churchmen. Finally he came to the climax toward which he seemed to have been working when he said, "I don't belong to any church and I'm just as good as anybody who does."

Well, that may have been true. But somehow I could not avoid comparing him in my mind with a man who many centuries before had caught a vision of God in the temple and had cried out, "Woe is me for I'm undone. I am a man of unclean lips and I live in the midst of people of unclean lips."

Only he who has not seen God can be blind to his own sins. Let any one of us come to the end of the day and look back over all the things that he's said he didn't mean, the cutting words we shouldn't have spoken, the parts we played that were insincere or unreal, the cowardice displayed instead of bravery, and we'll be confronted in that moment by one whose word is: "You're a sinner."

Scarcely has this had time to sink into our consciousness when God confronts us, as He did David, also through Nathan, with a second word: "You are forgiven."

We can cheapen that if we will and make it sticky and sentimental. But it is truly a terrible thing to be forgiven. It strips us of all our assurances and breaks down all our defenses.

If a person seeks to get even with you for some real or imagined wrong you may have committed against him, the natural instinct is to prevent his retaliation, forgetting all about your own guilt in the bargain. But if he forgives you, then your pride is broken, so that you can make proper and fitting amends.

When the Nazis forced the Jews in Denmark to wear the Star of David on their clothing as a sign that they were to be despised and dishonored, the king of Denmark and his family embroidered that identical emblem on their royal garments and wore it as a badge of honor.

Do you not suppose it would have made some difference to you, if you had been a Jew in Denmark, that your king shared your suffering?

And so it is in a sort of mysterious way that those of us who claim to follow Christ have come to believe that God was through Christ assuming the suffering and guilt of humankind and reconciling the world to Himself.

That is the experience of religion: to know that you're a sinner but that forgiveness is yours. It's free.

There has been a lot of talk recently about amnesty and pardon for people who've done things that some of us don't approve of. Well, what is the religious experience except that of a complete pardon? Each of us ultimately must find that in the scales of perfect justice he has been tried and convicted, found guilty, sentenced, and then not paroled but unconditionally pardoned.

Well, that is a point at which some might have the religious experience to stop. But it cannot stop there. God has this further word for us. He says: "You are responsible."

That has been true ever since Cain was held responsible for his brother's death in spite of his cynical question, "Am I my brother's keeper?" And it's true today.

All of us find it very easy to condemn those whom we consider responsible for the troubles of the world. Let's be honest with ourselves. Is there not a sense in which we all are responsible?

We flail away at those people who brought on this energy shortage. And then of course, we overheat our houses in the winter and overcool them in the summer, and drive our big cars at 75 miles an hour when we think nobody's looking.

We say what a shame it is that powerful forces of selfish people can create inflation. And then we spend money we don't have, to buy things we don't need, sometimes to impress people we don't really like. God says, now look, we're responsible.

The religious experience is accepting some measure of the responsibility as an individual for the troubles we see around us. John Woolman began the anti-slavery crusade in this country by refusing to write out a bill of sale for a slave owned by his employer. That is how most great movements start—by one person becoming convinced that something is wrong and that he is responsible.

G. K. Chesterton wrote:

"The Christian Social Union here was very much annoyed,

It seems there was some duty that we never should avoid,

So we sing a lot of hymns to help the unemployed."

Well, of course we all know that social problems aren't solved merely by singing hymns. They are solved ultimately when enough people are convinced that they individually are responsible.

God doesn't leave us there, either. He has one final word. He says: "You are able."

A sure sign of sickness of a generation is the oft heard disclaimer, well there isn't anything I could do about it. How does that compare with the word of Paul who said, "I can do all things through Christ, who strengthens me."?

More than 3,000 people are here today from more than 100 nations. Do we dare to believe that we are able to usher in a new age? Do we dare believe that we could be the grain of mustard seed or the leaven for the loaf?

Please do not retort with a self-abnegating statement of the weakness of human nature. Of course it goes against the grain of human nature to replace hate with love and fear with faith. But simply to plead the weakness of human nature as an excuse not to change is to resign ourselves to Lady MacBeth's lament that all of our tomorrows must lead fools the way to dustry death. That is not an act of humility, but a denial of the power of God to work miracles through fallible human flesh.

God says, you are able. You have the power; it's here; reach out and take it. Let me ask each of us to do something right now. Reach out to both sides, get hold of the hand of the person there. Now we are all in touch, all connected together, all of us. And this chain of physical contact represents humanity.

God says we have the power to make a change. Let's let it begin.

You who are black: can you forgive me for my arrogance? I ask your forgiveness. God says you have the power to grant it.

You who are white: can you forgive them who are black for their occasional anger? God says we have the power to forgive, we of whom so much is forgiven. He asks us both to forgive and to love.

Republicans and Democrats, those of us who embroil one another in such a torrid turmoil of debate, my friend the Minority Leader John Rhodes, contentious and disagreeable people though we are; can we love one another? Can we forgive one another our past excesses of dialogue? Can we be reconciled as brothers? Hawks and doves of the Vietnam era: can we close that sordid chapter and turn that soiled page face down? Can we repeat together the prayer of Aristophones among the ruins of the Greek temples destroyed in the Peloponnesian War?

"From the mumur and subtlety of suspicion
With which we vex one another
Give us rest.
Make a new beginning;
Mingle once again among the nations
With the alchemy of love;
And with some finer essence of forbearance,
Temper our minds."

We make this prayer together in the spirit of Him who says, we're sinners but we're forgiven; we're responsible but He will supply the power to meet that responsibility.

So then perhaps together not just the United States but all the world could do as we were admonished last Thursday in the Inaugural Address. May we resolve that we shall "learn together and laugh together, and work together, and pray together, confident that in the end we will triumph together in the right."

Mrs. HOLT. Thank you for that wonderfully inspiring message. Oh, what a power we do have, isn't this amazing. Now, it's my great honor, ladies and gentlemen, to present the President of the United States.

REMARKS OF THE PRESIDENT

Jim Wright's comments made me proud to be a brother with him; to be an American, to be a child of God, and I think what he said exemplifies the finest aspirations of those who are assembled here this morning. And, Jim, I thank you for what your talk meant to me.

The first time I came to this Prayer Breakfast was in 1967. One of the attributes to which many have referred this morning is one that I had in great abundance then more than I do now, and that's humility. I had just been defeated in my first campaign for Governor, and I thought in response to some of the things Jim said I'd talk about humility this morning.

The first draft of my inaugural speech did not include the reference to Micah's admonition about justice and mercy and humility. But, I had chosen instead II Chronicles 7:14, which Congressman Wright quoted this morning. "If My people, who are called by My name, shall humble themselves and pray and seek My face, and turn from their wicked ways, then will I hear from Heaven and forgive their sins and heal their land."

When my staff members read the first draft of my speech they rose up in opposition to that verse. The second time I wrote my inaugural draft I had the same verse in it and

they came to me in mass and said the people will not understand that verse. It's as though you, being elected President, are condeming the other people of our country, putting yourself in the position of Solomon and saying that all Americans are wicked.

So correctly or wrongly I changed it to Micah, and I think this episode, which is true, is illustrative of the problem we face. Sometimes we take for granted that an acknowledgement of sin, and acknowledgement of the need for humility permeates the consciousness of our people. But it doesn't.

But if we know that we can have God's forgiveness as a person, I think as a nation, it makes it much easier for us to say, God, have mercy on me, a sinner, knowing that the only compensation for sin is condemnation; then we just can't admit an error or a weakness or a degree of hatred or forgo pride.

We as individuals and we as a nation insist that we're the strongest and the bravest and the wisest, and the best. And in that attitude we unconsciously but in the all pervasive way cover up and fail to acknowledge our mistake, and in the process forgo an opportunity constantly to search for a better light, for a better country.

Paul Tillich said that religion is a search for a closer relationship with God and our fellow man, and to lose the inclination to search to a great degree we will lose our own religion. And as those of us who are followers of Christ know, the most constantly repeated admonition from Christ was against pride.

Sometimes it's easier for us to be humble as individuals than it is for us to admit that our nation makes mistakes. In effect, many of us worship our nation. We politicians, we leaders, in that sometimes excessive degrees of patriotism equate love of others with love of ourselves.

We tend to say that because I am a congressman, because I am a governor, because I am a senator, because I am a cabinet member, because I am president, of the people, and because I love the people, and because I represent them so well, then I can justify their love myself.

We tend to take on for ourselves the attributes of the people we represent. But when the disciples struggled among themselves for superiority in God's eyes, Jesus said "Whosoever would be chief among you, let him be his servant."

And although we use the phrase, sometimes glibly, public servant, it's hard for us to translate a concept of a President of the United States into a genuine servant.

Another theologian that I read very often who could penetrate the pride of a nation in the most effective way and try to analyze what democracy was, said a kind of prideful thing, but I think it brings to us a consciousness of our own capability.

"Man's capacity for justice makes democracy possible, but man's capacity for injustice makes democracy necessary." If we as leaders of our nation can search out and extract and discern and proclaim a new spirit, derived not from accumulative goodness or badness of people, which is only equal to individual goodness or badness, not even to the noble concept of our nation which is superlative without doubt, but from the ultimate source of goodness and kindnes and humility and love. And that's from God.

Then we can indeed be good leaders and servants, we can indeed be strong enough and sure enough to admit our sinfulness and our mistakes. We can indeed be constantly searching for a way to rectify our errors and let our nation exemplify what we as individuals ought to be in the eyes of God. But that's a hard thing to do.

One of the books that made a great impression on me was *The Ugly American*. Written a number of years ago about people from our own country who in a sense of unwarranted superiority, would travel around the world and despise others, in an ostentatious way, because they were not Americans.

I haven't traveled as much as I would like, 10 or 12 foreign countries, but I've seen in my own travels a respect of us, a respect for our nation, because of the same vision of our forefathers who inspired us. But at the same time quite often a deep sense of disappointment that we don't live up to those original hopes and expectations and ideals.

Not too long ago I was in South America with my wife, and we had a chance to learn firsthand about the deep sense of religion there. We saw the impact of our own missionaries. When people could speak fluent English because missionaries had been there. An elevator operator in Manaos, Brazil.

And I visited the equivalent of their speaker of the house, and that evening in his home we spent time on our knees, worshiping the same God. I preached one evening in a church in Rio de Janeiro and a couple of years later my wife and I were in what's thought to be the tomb of Christ, by ourselves, and a woman came up behind me and looked at me in a strange way and said, "Don't I know you from somewhere." And I said, "no ma'am, I don't think so." And she said, "I think you preached in my husband's church in Rio.", and it was the pastor's wife. And the sense of communion that we can have under God throughout the world ought to convince us that we are not superior, that we ought constantly to search our national and human individual consciousness and strive to be better, which doesn't mean more powerful and autocratic, but more filled with love and understanding and compassion and humaneness and humility.

Within the last week my wife and I and Vice President Mondale, and Joan, have shaken hands with literally thousands of people; members of Congress and the diplomatic corps, people who worked with us in the campaign, and distinguished visitors from around the world.

The last receiving line we met was of the military officers of our country from the chairman of the Joint Chiefs of Staff down through a very large representative group of enlisted persons. And afterwards one of the news people who had the cameras focused on us all the time, said, "Have you noticed any difference among the receiving line groups?" And I said, "Yes, I have, a very strange difference. My wife and I both noticed it. A tremendous and startling proportion of the military people, when they passed by me, said, 'God be with you. We remember you in our prayers.' " Much more from the military, the symbol of our nation's strength, than from any other group, all fine people.

So a search for peace, I believe, can only be successful if we recognize a commonality of the aspirations of human beings throughout the world, and if we remember that cumulative humility ought never to be equated to dominant national pride.

CLOSING PRAYER: THE HONORABLE HAROLD HUGHES

Mr. President and Mrs. Carter, our distinguished guests and ladies and gentlemen. What a wonderful morning of sharing in the spirit of God in our midst, and since we are gathered together in our national prayer breakfast let us take a moment to really prepare our hearts for prayer as we bring to a close this morning's hour of praise, faith, worship and hope.

It is customary in the fellowship group here and around the world in which we meet and study the Scripture, to pray together to God Almighty that we join hands in our closing prayer and that we lift up the needs of those in our midst and all things.

I would ask you in this closing prayer if around each table and where you are if you would join hands in a circle of prayer, as you were there, and let us indeed bow our heads and within the next minute or two if any of you feel that of God, all tables, not just one, lift up a prayer to God and I will close as the Lord does lead....

Our dear Father in Heaven, we are indeed grateful this morning that once again we can gather together in freedom from the lowest to the highest, in a worldly sense, and unite as brothers and sisters. We thank Thee for those that Thou has brought to us from the nations of Your creation in this world, to come as the guests of this, our country, that we might be bound together in spirit, with the President of the United States, and our brother, Jimmy Carter. That we might be bound in spirit with the First Lady of our great nation, and our sister, Rosalyn Carter. We thank Thee, dear Lord, for their love for one another and for the Holy Spirit you have implanted in their family, as an example before this country and the world. We thank Thee, oh God, that fearlessly this man and this lady can accept the responsibility of public position and as fearlessly live by the faith that they have received by Your grace.

We thank Thee, oh God, that Thou hast bound us together in this nation in Thy spirit and that by Thy own word Thou art in our midst this morning. We lift up our hearts as a nation for those in the world who might think that we are their enemies.

Dear God, help them to know the intent of our heart is to live in peace and to walk by the teachings of Thy Son, Jesus Christ. Help us to be forgiving as a nation of those who may in any way intend harm against us.

We pray for their leaders that wisdom might be given them, and by that wisdom they can know and trust the leadership you have raised in this country. We pray for that wisdom in our own nation and those who are our friends that we can in like manner be bound by the truth of Thy word and have Thine intent in our hearts. And dear God, we pray as a people that You will grant us a great compassion for the poor, not just of this nation but of the world, for the hungry today who cry out as we eat so bountifully, that we might truly be called to sacrifice.

We pray for the suffering of the world and the illness that we might be called to share in that which You have given us, and that Thy healing power might pour out in their midst.

Dear God, we pray especially for those who are lost, oh God, Thou didst come into the world to save the sinner, and we are all sinners, so help us God that we might reach to those in need. And now, oh God, have mercy upon us and forgive our sins once again because we dare to come before Thee, because we have received Thy Son, Jesus Christ, and accepted the blessing that the shedding of His blood has paid the debt and that it is solved.

We are grateful, God. And now dear Father, we praise Your holy name. We lift up our hearts in joy and in peace, and we say thank you, for this wonderful opportunity of sharing the word You have given us as the truth of Your creation.

And now, dear Father, pour out a blessing on our President and his lady, upon the and the parliaments of the world that are members of the Congress of the United States present, upon the judges and judiciary who must make decisions of importance in the lives of many, upon the rulers and kings of Your creation that they might indeed be Thy servants, and bless and meet the individual needs of every person here whose heart may cry out to Thee now with special problems.

Care for us, protect us from evil, and keep us close to Thee until we meet together again. In the name of Jesus Christ of Nazareth, our Lord and Saviour, we pray. Amen.

TAXPAYERS PAY FOR LOBBYING BY DEFENSE CONTRACTORS

Mr. PROXMIRE. Mr. President, I recently wrote Secretary of Defense Harold Brown on the subject of putting an end to auditing policies which allow defense contractors to be reimbursed for their

lobbying efforts in Congress and the Department of Defense. I understand such a policy change is under consideration by the Pentagon.

My letter of January 26 recommended that the Secretary accept the suggestion of the Defense Contract Audit Agency that contractors not be allowed to be reimbursed for lobbying expenses.

A series of audit reports provided to the Joint Committee on Defense Production indicate that many aerospace corporations have attempted to charge the taxpayers for such items as salaries and expenses of Washington-based lobbyists. The joint committee's report on the behind-the-scenes lobbying effort on the Condor missile program documents just how intense the contractor lobbying efforts can be.

The current practice sets up a vicious circle. Contractors get generous allotments from the Government to produce weapons systems. But rather than using all of it for production of these weapons systems, they siphon some of it off to lobby for even more money.

The Defense Contract Audit Agency has stated:

We found no recognizable benefit to Government contracts (in contractor lobbying efforts) since the Department of Defense and other executive agencies make determinations of policy and program needs, and justify their own requirements for appropriations. Attempts by contractors to influence legislation favoring procurement of their products can be inimical to DoD policies as well as program determinations.

There is enough favoritism and behind-the-scenes influence on large defense contracts as it is without the added insult of having the taxpayer pay for the bill.

Mr. President, I ask unanimous consent that my letter to the Secretary of Defense be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JOINT COMMITTEE ON DEFENSE PRODUCTION,
Washington, D.C., January 26, 1977.

Hon. HAROLD BROWN,
Secretary of Defense, The Pentagon, Washington, D.C.

DEAR MR. SECRETARY: This committee has been reviewing reports on Washington office operations of major defense contractors prepared by the Defense Contract Audit Agency. One recommendation expressed by the Agency in several of these reports was that contractor claims for reimbursement of lobbying expenses be denied on the grounds that such expenditures are prohibited by Section 1913 of Title 18, United States Code, which states:

"No part of the money appropriated by any enactment of Congress shall be in the absence of express authorization by Congress, be used directly or indirectly to pay for any personal service, advertisement, telegram, telephone, letter, printed or written matter, or other device, intended or designed to influence in any manner a Member of Congress, to favor or oppose, by vote or otherwise, any legislation or appropriation by Congress, whether before or after the introduction of any bill or resolution proposing such legislation or appropriation."

This committee has not yet been informed of any decision on this policy recommendation, but I understand that such a decision is currently under consideration. I strongly urge that you rule in favor of the recommendation made by the DCAA, and find that such lobbying expenses are unallowable. It is my belief that Congress intended, in enacting this legislation, to prohibit such cost claims by government contractors. In essence, what must be decided in order to determine the applicability of this Act is whether appropriated funds, as defined by this Act, include monies, obtained by your Department through appropriation, which are passed on to corporations through the device of a government contract. I believe that the Act does apply in this situation.

However, your policy decision need not be based exclusively on your decision as to the applicability of this Act. Even if it were decided that this Act did not expressly prohibit such reimbursements, I would nevertheless strongly urge that you rule in favor of the DCAA recommendations.

I do not believe that the DOD should, as a matter of policy, reimburse contractors for their lobbying activities. The Department of Defense itself spends a great deal of time and money for the purpose of maintaining liaison with Congress and supporting DOD budget requests. Therefore, the department should not be paying from its weapons acquisition funds for additional unofficial and selective lobbying by contractors in support of specific weapons programs. In this regard, I endorse the DCAA recommendation, which stated:

"We found no recognizable benefit to Government contracts (in contractor lobbying efforts) since the Department of Defense and other executive agencies make determinations of policy and program needs, and justify their own requirements for appropriations. Attempts by contractors to influence legislation favoring procurement of their products can be inimical to DOD policies as well as program determinations."

I too cannot see how contractor lobbying programs have any connection with performance of a government contract. I strongly urge you to rule against the cost allowability of such contractor cost claims. Please inform this committee of your ultimate decision on this matter.

Sincerely,
WILLIAM PROXMIRE, *Vice Chairman.*

COMPUTERS AND REPRESSION

Mr. KENNEDY. Mr. President, in the last few years there has been considerable discussion of the potential threat that computer information systems pose to individual privacy. A recent article prepared for publication by Computer Decisions indicates that American computer systems are being used in Latin America as tools of repressive regimes. They are used in Chile to keep track of the opposition, those considered leftists or suspects, according to the article. Computer printouts are used in other Latin American police states to cross-check data provided by detainees. The United Nations, according to this exposé, found that the Ville Grimaldi in Chile, one of the main torture centers, has extensive communications equipment.

Reports of torture in Latin America indicates one of its major purposes is to generate more information on friends and acquaintances, information that will now be fed into computers.

The authors of the article, Hesh Weiner and Laurie Nadel, deserve high marks for a difficult and important piece of investigative journalism.

The previous administration informed my staff that they would not make available the details of whether American computer firms have been selling computers to foreign secret police agencies, unless I first agreed to keep the information confidential.

I find this point of view, based on a misguided Department of Commerce intent to protect the competitive position of the individual computer firms, highly questionable. I intend to not only request of the current administration a review of this situation but also to examine the possibility of legislation.

I believe that if the U.S. Government is licensing the sale of computers for these purposes to foreign governments, then not only the Congress but the American people have a right to know this information.

Also, when the Congress has initiated and the President signed legislation barring all forms of military support to the Government of Chile, including commercial arms sales, then it seems clearly contrary to our intent to provide additional equipment, such as computers, to be used for the purpose of tracking down opponents of the regime.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

WOULD YOU SELL A COMPUTER TO HITLER?
LATIN AMERICAN DICTATORSHIPS ARE USING COMPUTERS AS TOOLS OF REPRESSION. IT APPEARS THAT AMERICAN EQUIPMENT MAKES IT POSSIBLE TO AUTOMATE "THE FINAL SOLUTION"

(By Laurie Nadel and Hesh Wiener)*

Would you sell a computer to Hitler?

You remember Hitler. He maimed, tortured and killed millions of people. They were, as far as he was concerned, enemies of the state. That, he felt, was enough.

Some people escaped. But imagine if Hitler had had a computer to keep track of his victims and intended victims. Log in. Type give me the names of 20 Jews and 30 Catholics in Berlin. And . . . but why go on? Hitler died a long time ago. These things don't happen any more. Or do they?

There are countries on this earth with governments so cruel that you can't find words to condemn their actions. And these governments carry out their missions, it seems, with the aid of computers. American computers.

In Chile, Uruguay, Argentina or Brazil an agent of the secret police can come to your door and ask you detailed questions about one of your friends—or even about someone you hardly know. If you do not answer satisfactorily, you may be threatened or taken away.

If you are taken away by the secret police, you may be tortured. According to a United Nations report, you could be hung upside down in a vat of urine or forced to eat vomit until your memory improves. If it doesn't, what follows will make you wish you had drowned in the tank which you were hanging. You may be told that your loved ones will be treated even more harshly, although you probably can't imagine what more harshly means.

Like all modern police forces, secret police agencies have the latest in crime information systems, as sophisticated as their governments can afford. For example, according to a knowledgeable refugee, the Chilean government's computer systems store complete information about "the opposition, those considered leftists or suspects. The computer has all the facts." In South America, such

*Ms. Nadel is a journalist who worked for UPI and Newsweek in Peru and Chile. The authors thank Tom Mechling, editor of the newsletter Washington Watch for pointing out the need for a thorough investigation of this topic.

systems are running on American computers—the United States is the technological supplier of choice in this hemisphere.

The American computer manufacturers that supply Latin American governments with computers say they are not aware that their machines are used by the secret police. But they do concede that it is not possible for them to control how their machines are used by their customers. Most vendors say that they can not take responsibility for the ultimate use to which their products are put.

"We are in a position similar to a car manufacturer," says IBM's director of information, Dan Burnham. "If General Motors sells you a car, and you use it to kill someone, that doesn't make General Motors responsible.

"Once the manufacturer sells the automobile, there's no guarantee it won't be used to commit a crime."

Control Data Corp.'s vice president Roger G. Wheeler, speaking for that company, concedes the responsibility of a manufacturer, especially a manufacturer of computers of awesome capacity. CDC, alone among American mainframe vendors, has a corporate policy governing the sale of its machines.

"Our own sense of responsibility," says Wheeler, "would not permit us to provide a computer system for any purpose that abridges human rights and dignity."

Asked whether IBM has a similar policy, Dan Udell, an IBM public relations officer, said that "IBM's official policy is to act in accordance with U.S. national policy in dealing with all countries."

IBM has substantial interests in Latin America. In Brazil, for example, IBM's factory in Sao Paulo makes System 370s. In Argentina, IBM builds high-speed line printers. In Uruguay, IBM has an enormous service bureau and data center. In Chile, IBM has no plants but does have a data center in Santiago.

It is in Santiago that the DINA, Chile's secret police, is headquartered. In the old offices of the Pan American Bank, an eight-story building, the DNA directors oversee their work. Sources say that there are computers in this building, computers of American manufacture, which may well be linked to other DINA offices and police organizations by Chile's sophisticated telecommunications complex.

Communications links in Chile include a modern ITT telephone system said to be as good as any in the United States, an extensive microwave network for long distance communications, satellite links and government radio channels.

These facilities enable the DINA to keep in touch with its more specialized offices.

On José Arietta street, on the outskirts of the Chilean capital, is a building officially known as Villa Grimaldi, commonly called the Palace of Laughter. It is here that victims of the secret police may be taken for torture. Ultimately, victims are sent to concentration camps or prisons, of which there are many in Chile. Villa Grimaldi, according to United Nations sources, has extensive communications equipment.

The use of computers by the secret police in Chile was first brought to public attention by the National Council of Churches. Reports received by the council indicated that an American computer was destined to become a tool of the DINA.

NCC representatives went to an IBM shareholders' meeting on April 28, 1975, with the hope that they could halt IBM's planned installation of a 370/145 at the University of Chile in Santiago. They claimed that the system would be used by the police agencies of that country, not the university.

"The Chileans did purchase a 145," IBM's Burnham explains, "and they told us they weren't doing it for intelligence purposes," IBM decided to trust the Chileans.

"If I was the Chilean military junta, I wouldn't put my computer in the University of Chile," reasons Burnham. However, he says, he does "understand the generals have taken over the university."

The National Council of Churches is more definite on this issue than any IBM spokesman. William Wipfler, the Latin-American director of NCC, feels that IBM does indeed have a responsibility in this matter.

"We called the attention of IBM to the repeated violations of human rights in Chile and asked them to reconsider their plans to install the 145."

The National Council of Churches backed their pleas with proxies totalling 200,000 shares of IBM stock.

"The question is not whether they would sell computers to Hitler," says Wipfler, "but whether they would sell gas chambers to Hitler. Either way you're giving him weapons. When you know who Hitler is, you can't pretend you don't know what he's doing with your equipment."

Frank Cary, IBM chairman, spoke at the 1975 meeting in response to the church group's protest.

"We don't think the installation of a computer on the campus of the University of Chile has any sinister implications at all."

Sinister, according to Washington journalist Tom Mechling, is hardly the word. "The University of Chile would be a real Machiavellian place to put the thing. On the basis of what I've learned from extremely reliable sources, I'm very much convinced that that computer is being used for name, rank and serial number. These people who say they don't know what it's being used for suffer from the Eichmann syndrome. They claim they're only carrying out orders."

But IBM did send Dan Udell down to Santiago.

"We checked it out in detail. It's used for payroll, for processing student aptitude tests, for enrollment statistics and applications to college. To the best of our knowledge there are no other applications."

Perhaps the 145 at the University of Chile is not used by the secret police. But there is another, more direct link between the university and the Chilean secret police, a link typical of those that connect various Chilean institutions.

The leading computer service bureau in Chile is ECOM (for Empressa Nacional de Computacion), an organization that provides extensive computer support to the government. This relationship is a long-standing one, according to a Chilean refugee now living in England. But, our source indicates, that relationship now includes computer support for DINA operations.

The president of ECOM is René Peralta, a former official of the Chilean Navy. He is also the former head of computation at the University of Chile, the very organization now training people in the use of a 370/145. The chairman of ECOM is an active general in the Chilean Army.

Our source claims that the systems at ECOM include modern powerful American computers. The services provided by ECOM include teleprocessing; the software there is capable of running database applications.

On May 20, 1975, General Pinochet, head of Chile's military junta, dedicated a 370/145 at the Technical University. This computer has been linked to other campuses by telex lines, according to Chilean sources.

The Technical University system is one of several shared by the Chilean Association of University Computing Centers. Among the members of this association are the University of Chile, Catholic University, University of Concepcion and ECOM.

Today, the Technical University is headed by Army Colonel Reyes. Commenting on this, an informed exile said "interrelationships between the universities and the military are natural" in Chile.

In addition to Peralta, there is another figure whose name comes up whenever computers and repression in Chile is discussed. He is Patricio Léniz, a former civil engineer who, according to informed sources, was a key software man on the computer projects of the DINA.

Patricio Léniz is the brother of Fernando Léniz, former minister of the military junta ruling Chile, Fernando Léniz is also the former chairman of *El Mercurio*, Chile's right-wing newspaper.

Further substantiation of the DINA's use of computers comes from refugees' accounts of mass arrests in Chile. Those rounded up surrender their identification cards which are quickly processed. Suspects are separated from the detainees and ID cards are soon returned to those freed. The rapid checking of names against police files requires an on-line computer facility. Other stories from individuals detained by police corroborate the rapid checking of dossiers.

IBM is not the only American manufacturer that sells computers to Chile. Burroughs also sells machines there. Neil Jackson, Burroughs director of communications, said that the Chileans have one older machine which Burroughs sold them in 1970. This, he points out, was three governments ago.

Jackson's statement conflicts with a report that there are Burroughs mainframes at the Technical University, the Catholic University and at the government's service bureau, ECOM.

Jackson stated that "Burroughs's official policy is that we never comment on the political affairs of any of the 120 countries with which we do business, including our own."

Suppose a B3500 is now used for police purposes? "Obviously we hope it's not," said Jackson. "We're not aware of any use by any of our customers for any purposes that violate human rights."

Refugees from other Latin-American police states also tell of the use of computer printouts during interrogations to cross-check data provided by detainees. According to these exiles, dossiers are shared among the police forces of Argentina, Chile, Uruguay and Brazil.

The most detailed report of the use of computer-generated information during a police interrogation comes from a clergyman. He entered Uruguay and was picked up by the police there for questioning. During the ordeal the police tried to get him to talk about a Catholic priest they were investigating.

When detained for questioning, the clergyman was presented with a computer printout describing the details of the career of his colleague. On the printouts were all the addresses at which the sought-after priest had lived, his salary at each point in his career, his telephone numbers and his relations with other Catholics in Uruguay.

The interrogated clergyman said that the most incredible thing about the questioning was that, as far as he could tell, the man the police sought had never been in Uruguay.

This printout, a church spokesman claims, could not have been stolen from the personnel files of the Catholic church, it must have come from some police computer system. Police in Latin America, he said, keep close tabs on many priests.

The idea of using computing equipment to support police activities in Latin America has been promoted by the United States government. During the early years of this decade the Agency for International Development (AID) provided South American police forces with weapons training and data processing equipment under its "public safety" programs.

In an AID document describing U.S. assistance to the government of Venezuela,

contract 529–11–710–022, U.S. officials report that "the technical groundwork has been laid for the country's public safety agencies, through electronic data processing and related processes, to pool their identification and intelligence data in a central location for more efficient coordination and rapid distribution of relevant facts and leads."

AID's Office of Public Safety, in a report on its assistance to Brazilian authorities, specifically lists IBM systems among police equipment shipped to that country.

Is this practice continuing? An AID official said that that agency no longer provides police equipment to Latin states. But AID does "provide computers to Chile."

The computers are included with moneys earmarked for activities other than "public safety." An AID official said that a recent grant for agriculture included a "computer component." He added that there is no practical way for AID personnel in Washington to check on the ultimate use to which such a computer is put. Informed sources state that the Chilean Institute of Agriculture building in Calle Belgrado, Santiago, is a center of communications for the DINA.

Evidence that Latin American authorities use computers for repression is abundant. Yet there seems to be no way for either computer manufacturers or humane governments to halt this activity.

What little hope there is for a change in these practices may lie with the United Nations, a body limited to persuasive power.

The United Nations has been concerned about the possible use of computers as an aid to police in dictatorships. The proposed United Nations code of ethics states:

"It would seem imperative for computer experts to have some training in human rights concepts and in certain aspects of the law.

"In computer-based decisionmaking, the computer user should bear in mind the need to protect and promote the rights of the individual."

Can the United Nations actually halt the use of computers by police states? Can it prevent automation of "the final solution?"

"The U.N. has no methods of enforcing its principles," says Leonore Hooley, a United Nations human rights officer.

"We operate on the principle of nonintervention in the internal affairs of countries."

Meanwhile, the Chilean government published a booklet last year. It is entitled "Universities and Development" and is written by Sergio Maldonado. In that booklet is a statement about a familiar figure:

"Hitler, a politician of the highest rank, knew how to majestically interpret the aspirations of the German people at a propitious moment. In a short time, he was able to raise them up so they could regain their place among world powers."

THE UNITED NATIONS FINDINGS

In the movie *Casablanca*, Rick (Humphrey Bogart) is standing over a corpse with a smoking gun is his hand. The French police inspector calls into headquarters.

"Major Strassler has been shot," he says. "Round up the usual suspects."

That scene is a daily occurrence in countries like Chile.

On October 8, 1976, the United Nations published a report developed by its Economic and Social Council entitled "Protection of Human Rights in Chile." The report details some activities of the DINA, Chile's secret police. Here are excerpts from that report:

The DINA is the organization which allegedly has assumed responsibility for selective repression. Its functions, according to the preambular provisions of decree-law No. 521, which established it, consist in giving the government of Chile "immediate and permanent assistance . . . to provide it with the systematic and duly processed information it may need to do justice to its decisions in the field of national security and development."

Villa Grimaldi, or "the palace of laughter," as this center is known to many persons, houses most of the DINA's organization and a communications center. The communications center includes antennae and equipment for high frequency communication, which makes it possible to communicate with people throughout the world, as well as VHF antennae and equipment which makes possible rapid communication between the center and the President of the Republic, and with vehicles and operating groups in action. It is the DINA's largest torture center and at times has allegedly held between 120 and 150 political prisoners.

The outstanding features of the detention area of Villa Grimaldi are the following: a prisoner's area, a workroom, accommodation for staff, a *parrilla* area, guardhouses and bathrooms, tiny cubicles smaller than telephone booths where prisoners are locked up with their hands and feet tied, the tower for special tortures and punishment, and the pool, which is used for torture. The following methods of torture are being frequently applied during interrogation:

The *submarino* (submarine). The detainee is bound hand and foot and lowered into a drum of nauseating liquid (urine, sewage water, petroleum), thereby provoking temporary asphyxiation. This method is said to have been applied in Villa Grimaldi utilizing a swimming pool attached to this center;

The *patoma* (pigeon), which consists of tying the prisoner's hands behind him, then hanging him up by them; his feet are often also tied. Then the prisoner is beaten or given electric shocks. This method is also used with the prisoner suspended in a tub or in the pool at Villa Grimaldi, and electric current is applied to the water;

Driving vehicles over the hands and feet of prisoners, causing multiple fractures, or over other parts of the body, causing death;

Programmed beating in one part of the body to cause insanity: constant beating of the head, armpits, bare feet, groin;

Sexual outrages, including rape and the use of animals specially trained for sexual depravation;

Pau deArara. This consists of tying the hands and feet together and hanging the prisoner from a stick with his calves tightly bound to it. The prisoner is turned and electric shocks and blowtorch flame are applied to genitals, mouth, head, etc., and blows to all parts of the body;

Applying alcohol and electric shocks to torture or gunshot wounds;

Breaking bones of the fingers, feet, arms and legs with blows or "levers;"

Acid burns on the eyes, testicles, vagina or other parts;

Forced ingestion of vomit;

Electric shocks in a chair. This method is allegedly commonly used because it is quick and easily applied. Prisoner's homes and places of work are often used.

Special booths which are smaller than a telephone booth and barely large enough to hold a seated person. The prisoner, in chains, is left in the booth for an indefinite period of time and taken out for interrogation or further torture;

Cold-blooded extraction of teeth;

Pulling the nails from fingers and toes, and burning the most sensitive organs of the body with cigarettes or directly by fire;

Simulated hanging or firing squads;

Psychological pressure, such as arresting and torturing the prisoner's immediate relatives, in particular his wife and children. The children are sometimes later placed in Carabinero orphanaques.

In Colonia Dignidad prisoners have allegedly been subject to different "experiments" without any interrogation to dogs trained to commit sexual aggressions and destroy sexual organs of both sexes; to "tests" on the limits of resistance to different methods of torture (resistance to beating, electricity, hanging, etc.); to experiments designed to drive detainees insane through administration of drugs to prolonged periods of isolation and other inhuman conditions. It is noteworthy that in this camp prisoners allegedly hear nothing from their captors other than the orders for torture. In Colonia Dignidad there appears to be a torture center of a particular kind in a specially equipped place underground: there are small, completely soundproof, hermetically sealed cells for prisoners. Leather hoods are placed over the prisoners' heads and stuck to their faces with chemical adhesives. In these cells torturers allegedly carry out interrogation over a closed-circuit radio system, with the detainees naked and tied to their berths while electric shocks are applied.

GERMAN SYSTEM PROTECTS PEOPLE

The most designed police information system in the world is Berlin's criminal police information network. This recently-installed system uses special hardware and software to protect the rights of citizens while it speeds police and court work.

When an arrest is made, the arresting officer is required to enter relevant data on a workstation terminal at his local precinct house. But before he can log on the system, the officer must insert his machine-readable identification card into a reader. Only when complete and correct data is presented at the terminal will it be forwarded to a central system which again checks for errors and creates or updates a file which automatically produces documents for the police force. Later, reports are generated for prosecutors and jurists should court action be necessary.

A detective making an inquiry about a suspect must follow a similar procedure. The officer's identification card is checked against records to assure that the action is within the officer's jurisdiction.

Any illegal action is detected by the system which also produces summary reports of proper as well as improper activities for review by police authorities. Further, data can be made available to defense attorneys and other appropriate parties during the preparation of a legal case or during an actual trial. No party can receive data beyond that mandated by law.

The terminals, which have hardwired programs, were built by Nixdorf Computer. They contain a special processor, printers, identification card readers and communications hardware. The mainframe that guards the data base is a Siemens system. Training for all users is performed by police personnel.

There are currently 79 of the Nixdorf terminals online, and many more can be accommodated as needed. The mainframe can be altered, too, because the terminal is intelligent enough to match any new protocols that might be established.

While the system was installed to cut the amount of paperwork officers must complete in the course of dealing with routine crimes, the approach taken by the police of Berlin demonstrates that an effective criminal information system can also be designed to insure justice, security and accuracy. It is expected that the Berlin system will be adopted by other police forces in Germany and in other countries as well.

STATEMENTS SUBMITTED BY REQUEST

(By request of Mr. STEVENS for Mr. GOLDWATER, the following statements and the material attached thereto are printed in today's RECORD:)

DOES THE PRESIDENT HAVE THE POWER TO GRANT AMNESTY?

Mr. GOLDWATER. Last month, when the Senate had under consideration the Allen Resolution, expressing the sense of the Senate in opposition to a general Presidential pardon of Vietnam-era draft evaders, I expressed my hope that sometime during the debate we ought to clear up the question of whether or not the President has the power to grant amnesty.

Not being a lawyer, but as a student of history and the Constitution, I think the question should be aired as to whether or not the Constitution gives the President the right to grant a pardon and not the right to give amnesty. After all, the Constitution nowhere uses the word "amnesty".

Although the power of amnesty has been asserted before, it has been a subject of controversy since it first appeared in our legal terminology. The word "amnesty" was not even used until the Civil War. Presidents Lincoln and Johnson were the first to use the term amnesty in their proclamations, and to be accurate they referred to both the Constitution and to an Act of Congress as the basis of their authority. Thus, an argument can be made that any power of amnesty exercised by these Presidents was pursuant to Congressional grants of authority and do not represent strong precedents for an independent amnesty power of the President.

Two broad questions appear to have been raised by legal scholars about the amnesty power. Some question has been raised that amnesty may be an *exclusive* power of the legislature. A stronger contention has been put forward that amnesty is a power shared concurrently by the President and the Congress.

Critics of Presidential amnesty argue that it is no mere chance that the Constitution does not use the word "amnesty." They say that this was not an oversight by the Framers, but intentional.

The argument goes that the Framers were well-versed in English law and knew that there was a clear distinction between "pardon" and "amnesty" in England. The King could grant a pardon, but only Parliament could award amnesty.

Since English rules and English conceptions are accepted by our courts as being authoritative in construing the pardon clause of the Constitution, this view holds that amnesty is an exclusive power of Congress.

The proponents of the view that Congress *shares* the amnesty power concurrently with the President base their theory largely on a Supreme Court decision. The case which they cite, *Brown* v. *Walker* (16 U.S. 191) stated that the Executive power of pardon had never been held to take from Congress the power to grant laws of general amnesty. This case upheld the validity of an Act of Congress providing immunity to witnesses from prosecution in certain cases, which the Court observed was virtually an act of general amnesty.

Scholars have had difficulty in distinguishing between amnesty and pardon. Many persons consider amnesty to be a grant of immunity from legal prosecution and punishment to entire classes of unnamed individuals who have been guilty of a crime. Pardon is thought of as a release from prosecution and punishment of a crime only for the individual specified in the pardon. In other words, amnesty may be considered to be a type of "general pardon."

Others suggest that amnesty has no application in the case of persons who have already been convicted and sentenced for crimes. It overlooks the offense, while pardon cancels punishment already handed down.

Another distinction that arose during the Civil War and its aftermath is that only the power of amnesty can restore political rights, such as entitlement to vote and to hold political office, lost by law-breakers. This view holds that even if the President can offer a general pardon to large numbers of unnamed individuals, and thereby grant to them immunity from punishment, he cannot confer the right of suffrage or other forfeited rights of citizenship to the individuals who have been pardoned.

In order to encourage some thinking about a subject which I had hoped would be aired during our debate on the Allen Resolution, I attach a Law Review article on amnesty which openly professes to be a minority opinion, but nevertheless may generate some fuel for thought on this important issue.

[From the Mississippi Law Journal, Vol. 16, p. 127 (1944)]

"DOES THE PRESIDENT STILL HAVE AMNESTYING POWER?"

(By William A. Russ, Jr.)*

W. Y. Elliot in his article, Amnesty, says that both President and Congress have the prerogative of amnesty, and he cites certain court decisions to that effect.[1] It is the thesis of this paper that Congress alone has amnestying power—a power which lies dormant during usual times but which, during and after wars and rebellions, may become extremely important. A discussion of the question at the present time is not entirely academic. It is devoutly to be hoped that no rebellion will occur against the United States during this war; and yet the recent coal strikes and the attitude of John L. Lewis force the subject of amnesty upon the attention of lawyers, if upon no one else.

According to a United Press despatch of May 17, 1943 the War Labor Board "accused John L. Lewis of virtual treason for his continued defiance of its efforts to settle the coal dispute". The Board is quoted as saying that "this defiance challenges the sovereignty of the United States in time of war and gives aid and comfort to our enemies". Giving aid and comfort to the enemies of the United States is one of the definitions of treason in the Constitution. Others have discussed Lewis and the miners in like terms. Suppose the 500,000 miners should strike against the Government while the mines are under public operation, and suppose the United States declared the workers to be in a state of rebellion. It is questionable whether even Lewis or the miners would go so far as to force the Government to such an extreme; but if it did happen and if we still won the war, a demand would arise, after peace had been won, that these half million men be amnestied. The question as to who—Congress or the President—had the authority to issue amnesty to them would become a vital one.

In answering this question the first requisite, under ordinary circumstances, would be to discover just what the term, "amnesty", means. This is a difficult task, for even the authorities differ on the precise line between pardon on the one hand, and amnesty on the other.[2] Elliott,[3] in differentiating between the two terms, is inconsistent himself. He says that the courts have refused to isolate pardon from amnesty, and yet a few paragraphs farther on he states: "To be sure, American courts recognize a distinction between the two . . ." To prove his first assertion he cites *Brown v. Walker*,[4] which declares, "The distinction between amnesty and pardon is of no practical importance". Elliott also cites *Knote v. U.S.*,[5] which says the difference is merely philological: "All the benefits which can result from both pardon and amnesty, would equally have accrued . . . if the term 'pardon' alone had been used in the Proclamation of the President".[6] But the Court's dictum simply does not accord with the procedure that was worked out during reconstruction, when pardon and amnesty were not alike at all. There is a vast difference between what the Court, after reconstruction was over, said should be true, and what actually happened during reconstruction.

It seems to the present writer that if a study is made of the reconstruction era these inconsistencies and confusions disappear. For, while radical politicians may not have evolved definitions of pardon and amnesty from the authoritative sources, they did produce a practical differentiation which, having become the accepted theory during reconstruction, must now be taken as precedent in the United States at least. What was the practical distinction which radicals educated, merely because the party purpose demanded the creation of some kind of formula which would justify their acts?

In the first place, pardon is an executive function which is limited by the Constitution to the President. It may be used to save a common criminal, like a counterfeiter, from all or part of the punishment imposed by a court after conviction. Or it may free a group of political criminals (like rebels or insurrectionists) from the possibility of future judicial punishment. This is done by proclamation.[7] Offered to groups of rebels or insurrectionists, it restores their civil rights (owning property, for instance), but does not reinstate their political privileges (like voting and office holding).

Amnesty, on the other hand, is a legislative function which Congress was strong enough to arrogate to itself during reconstruction. The Constitution does not mention the term. It does not apply to common criminals but to political criminals, usually in groups, although not always. After their civil rights have been returned to them by a Presidential pardon, their political privileges may be restored to them by a Congressional amnesty, and by that alone.

The fundamental difference between the two powers is that, in cases dealing with rebellion and treason, amnesty enfranchises while pardon does not.[8] To comprehend how radical statesmen arrived at this neat conclusion, some facts regarding the history of the reconstruction controversy are necessary.

II

Although there had been instances of Presidential pardons to rebels and insurrectionists before the Civil War, it was during and after this conflict that the problem became an acute, that is to say, a political one. The reason was that there developed a disagreement between President Lincoln and Congressional radicals over the way in which the southern states should be restored to the union. Congress, in the confiscation[9] law of July 17, 1862, had granted to the President the right to "pardon and amnesty" rebels at will. Some questions arose, at the time, as to whether Congress could grant to the Chief Executive the power of pardon, a power which he already had by constitutional authority, but it was not until after the war that his problem became a real bone of contention between Congress and the President. Lincoln made a few objections to other clauses in the bill, but seemed to have none against section thirteen which gave him power of pardon and amnesty.[10] On December 8, 1863, the President issued his famous

Footnotes at end of article.

one-tenth plan which offered (so far as the Executive could) to recognize new state governments provided ten per cent of the voters as of the election of 1860 took the oath of amnesty which he included in his proclamation. It later became a much debated question whether Lincoln issued this offer on the basis of his constitutional power of pardon, or on the basis of the right of pardon and amnesty as granted to him by Congress in the law of July 17, 1862. Some authorities say the first; others say the second.[11] The truth is that he referred to both grants of power[12]—a fact that does not help much in solving the problem. At various times, during the rest of the war, radical statesmen said that the President did not have amnestying power,[13] and the Wade-Davis bill[14] was passed by Congress upon this theory. Congress refused to admit members from the state governments that Lincoln had restored, and in so doing seemed to be repudiating the power of amnesty it had already granted to the President.

The problem became of keen party interest when President Johnson proceeded to follow Lincoln's lenient policy of restoration by issuing several proclamations (the first on May 29, 1865)[15] offering amnesty to thousands of rebels—the great ones applying to him in person, the lesser ones merely appearing before the proper court official. On the basis of this kind of clemency, Johnson restored the southern states by allowing pardoned Confederates to vote, to elect constitutional conventions, to form state governments, and to send senators and representatives to the session of Congress which opened in December, 1865.

By that time the radicals were aroused. They perceived that Presidential pardon and amnesty might place the government in the hands of northern cooperheads and pardoned rebels from the south.[16] After refusing to admit the members from the Presidentially reconstructed states, the radicals hurried frantically to concoct some kind of formula which would nullify Johnson's claim to the power of amnesty (that is, to enfranchise). Dozens of speeches, which declared the President was overstepping his powers in amnestying, could be cited, but the radicals were tied by law which Congress itself had passed. That was the confiscation act which had given to the President the power to pardon and to amnesty. It became clear that this grant must be negatived. The repeal[17] went through on January 7, 1867, and yet the President continued to amnesty, not only by proclamation to groups, but also by releases to individuals.[18] After the military laws of March, 1867 (which disfranchised thousands at the order of Congress), many southerners said that, having been pardoned, they could not be deprived of the privilege of voting and officeholding. Every move to test the constitutionality of the laws was evaded by the Supreme Court[19] When registration of those who could take the proper oath proceeded under the reconstruction laws, hundreds of pardoned rebels demanded the right of registering on the basis of their pardons. They were always refused.[20] To make certainty doubly certain, Congress, in the third reconstruction act[21] of July 19, 1867, inserted a clause expressly stating that a pardon did not enfranchise.

The crisis arrived in September, 1867 when Johnson played his last card, namely, a proclamation which pardoned all remaining rebels except about 300. His conservative friends said that he intended to use the army to reopen the registration books and to force the insertion of pardoned southerners therein.[22] In fact he received many appeals calling upon him so to do.[23] Radicals prepared for an armed clash if the President should use force to justify his contention that a pardon enfranchised the recipient. Johnson's organ, the Washington *National Intelligencer*, declared that the President had no idea of using force, but was trying to get the case before the courts.[24] Many rebels, upon being refused the privilege of registering, did sue the registrars in the courts.[25] It was during the fall of 1867, therefore, that the precedent was being finally set and when much of the discussion regarding the difference between pardon and amnesty took place. With this historical background, an analysis of the problem is now possible.

III

Both radicals and conservatives agreed that pardon rested with the President by constitutional authority;[26] they disagreed upon whether pardon included amnesty and upon whether pardon restored both civil and political rights. Radical theory demanded that it restores only civil rights, although Congressman John A. Bingham of Ohio, who was somewhat of a student of constitutional law, had said, regarding the civil rights bill, that political and civil rights, according to Blackstone, were synonymous.[27] But such a doctrine was heresy in the eyes of radicals, for, if a pardon restored the political rights to hold office and to vote, radical control in the country would be endangered. As a matter of fact, radical comment always took the slant that the Presidential pardon did not enfranchise. The Albany *Evening Journal* said the President could not grant amnesty (that is, could not enfranchise) because he had no power to pardon before conviction and because he could not pardon communities as a mass.[28] Similarly the New Orleans *Tribune*: "The President can pardon rebels, but he cannot confer the right of suffrage on them".[29] An unsigned article in the *Atlantic Monthly* called the attempt to enfranchise secessionists "The Conspiracy at Washington"; and argued that there was a difference between

"... the abuse of this power to pardon criminals after conviction, and the assumption of power to restore to whole classes of traitors and public enemies their forfeited rights of citizenship. By the pardon of murderers and counterfeiters, the President cannot much increase the number of his political supporters; by the pardon of traitors and public enemies, he may build up a party to support him in his struggle against the legislative department of the government... everybody knows he pardons traitors and public enemies in order to gain their influence and votes. A public enemy himself, and leagued with public enemies, he has the impudence to claim that he is constitutionally capable of perverting his power to pardon into a power to gain political support in his schemes against the loyal nation."[30]

This statement, probably by Lowell, the editor, shows clearly the party purpose of the radicals in refusing to admit the President's claim to the power of amnesty.

So also, Horace Greeley of the New York *Tribune*, while in favor of his pet scheme of impartial suffrage for both races, criticized the proclamation because he believed pardon and amnesty were not the same. Pardon, said he, was an act of grace exempting the applicant from penalties for a crime, while amnesty was the act of the sovereign power in effacing a crime entirely: "Amnesty is abolition of the offense. Pardon is remission of the penalty. The sovereign power of this nation is not the President but the people. The representative of the people is not Andrew Johnson, but the National Congress".[31]

The conservative and Democratic editors took, largely, the opposite view. The New York *World* fought the New York *Times*[32] and *Tribune*, both of which believed the President did not have amnestying power. The *World* said that the the recent repeal of the Presidential amnestying power was "of no consequence except as signifying the will of Congress that he (Johnson) shall not exercise one of his constitutional prerogatives. But what right has Congress to say that the President shall *not* do, what the Constitution says he *may* do?"[33] It added that Lincoln had threatened to veto the confiscation act, one of the reasons being that it presumed to give him pardoning power which he already had; and that he had issued his proclamation of December 8, 1863 on the basis of his constitutional prerogative and not by virtue of the grant made him by Congress.[34] The conservative Charleston *Mercury* placed the radical position succinctly as follows: "The Radicals contend, that although the President can pardon *individuals*, he cannot pardon *numbers* of them in classes. The distinction is without force; because the *numbers*, consist of the *individuals;* and if you can pardon *one man* for an act of insurrection in resisting a government either by counsels or by force of arms—you may pardon at the same time, *all* who were engaged with him in the same resistance".[35] The dignified New Orleans *Crescent* argued:

"It is clear that, if the President possesses authority to exempt any class of offenders from penalty—and his plenary pardoning power under the Constitution is not denied—he possesses authority to exempt from disfranchisement, if that be a penalty, those classes whom Congress declares to have forfeited their right to vote and to hold office by the offense of rebellion against the United States. But it is also clear that the President cannot execute all the provisions of the reconstruction law without nullifying one of the important significations of his pardon to late rebels, and that which he seems in his second amnesty proclamation, to be anxious to make prominent. Radical journals, in anticipation of this last document have been disputing the President's right to override Congressional disfranchisement, on account of rebellion, by an executive pardon. For practical purposes it is useless to discuss the question as one of right. The struggle between Congress and the President, on this as on every other question, must be determined by preponderance of moral and physical force."[36]

Among other comments that might be made about the above statement by the *Crescent* the following should be noted: (1) the suggestion that the President's executive pardon might be used to nullify the act of Congress in disfranchising certain persons is reminiscent of the attempt of Charels II of England, by means of his Declaration of Indulgence in 1672, to suspend an act of Parliament which placed certain religious tests upon Catholics and others: and (2) if the practical wisdom, which characterized the analysis by the *Crescent*, had been true also of other conservatives, much bitterness and heartburning would have been obviated, North and South. The St. Louis *Missouri Republican*, an administration paper, was almost as practical when it concluded that the recent proclamation was not amnesty, but pardon; that it had nothing to do with suffrage, for that was a state matter; and that if the pardoned individual had voted before the war he ought to be able to vote now because a pardon did not change his status in that respect.[37] The Columbus (Ga.) *Enquirer* was also sensible:

"An impression has somehow been produced that those pardoned . . . are thereby enfranchised though proscribed by the acts of Congress. This, as we have said, might be the *legal* effect—indeed it may be questioned whether Congress has the Constitutional right to disfranchise any man until

Footnotes at end of article.

convicted of crime, and then only as an elector of Federal offices. But the work of reconstruction has been taken from the hands of the President. Congress, in selecting persons for disfranchisement paid no regard to the exceptions made by the President in his former proclamation of pardon; and in its very latest Reconstruction act it expressly provided that no amnesty of the President should affect in any manner the qualifications of voters proscribed by that act." [38]

From the standpoint of cold-blooded realism, little more could be said on the subject than what the *Enquirer* had said: The President might claim that his pardon enfranchised; the Supreme Court might, indirectly, as in the Garland decision, support him; but Congress had the power, and Congress had legislated otherwise. That was that.

IV

Granted that Congress had budgeoned the President into accepting its way, what was the law on the question? Constitutionally, who was correct, the President or Congress? It is hard to answer with certainty, for some of the best minds of the times were on both sides of the controversy. The radicals quoted Bouvier's *Law Dictionary* to prove that amnesty was legislative, while the Chicago *Times* quoted the same source to prove that amnesty was executive.[39]

If the problem be taken to is source, the Constitution, there is little more certainty, because amnesty *per se* is not mentioned. Defenders of the executive prerogative referred for support to that document, and yet it merely states that the President is empowered "to grant reprieves and pardons for offenses against the United States, except in cases of impeachment".[40] Inasmuch as reprieves and impeachment are not in question, does the grant of "pardon" mean amnesty also? Is amnesty something the Fathers never though of? Does the President have amnestying power because he has a related one, that of pardoning? Senator George F. Edmunds in his report of February 17, 1869, denouncing Johnson for issuing his final pardon of December 25, 1868 (which freed the rest of the rebels), said that the Fathers of the Constitution knew all these terms, and so deliberately omitted the grant of amnesty from those powers given to the Presidency. He quoted Blackstone and Bouvier to show that a pardon "did not look backward, but only forward; it did not restore what was lost, but only remitted what was yet to be suffered." He showed that the English king did not have the power to pardon generally—that is, to amnesty—because from 1535 on, this right had been exercised by Parliament. Amnesty, he concluded, was an act of oblivion for past offenses granted by the sovereign power to "whole classes of offenders"; and that "sovereign power" in the United States was Congress and not the President.[41] Greeley had made the same point as early as September, 1867.

What had the President to say? In his defense submitted to Congress at the request of the Senate on January 5, 1869 he justified his action on the basis of precedents set in the past. He quoted Washington's proclamation of July 10, 1795 to the whiskey rebels, Adam's proclamation to the Pennsylvania insurgents on May 21, 1800, Madison to the Louisiana freebooters on February 6, 1815, Lincoln on December 8, 1863 and on March 26, 1864, and his own proclamations of May 29, 1865, September 7, 1867, and July 4, 1868.[42] With all these precedents Edmunds, for the Senate Committee, disagreed, saying they were not valid; that Lincoln's right of amnesty had been granted by Congress on July 17, 1862 which had then taken it away on January 7, 1867.

Footnotes at end of article.

Omitting the precedents set by his own proclamations (to quote which was somewhat disingenuous on Johnson's part), one must look to the earlier ones, especially that of Washington, for precedent. For, as the Atlanta *Daily Intelligencer* said, Washington had pardoned the whisky rebels. "Was Washington a usurper?" [43] But had these earlier proclamations been amnesties in the sense of the term used by the radicals, or were they merely pardons? Did they restore the franchise? Washington offered "a general pardon" to the whisky rebels.[44] Adams granted "a full, free and absolute pardon" to the Pennsylvania insurrectionists.[45] Madison published "a free and full pardon" to the roughs on Barrataria Island, provided they swore that they had helped defend New Orleans during the recent British invasion.[46] Whether these early pardons restored full political privileges is uncertain, although, inasmuch as at that time suffrage was almost entirely controlled by the states, it is hard to see how they had anything to do with the vote or with office-holding.[47] When Washington pardoned the whisky rebels, they were freed from punishment by the United States. Pennsylvania had the final disposition of the question whether they could vote or hold office. Undoubtedly the state permitted them to exercise their political privileges, but the decision rested with the state and not with the federal government.[48] Then too there was no party situation as in 1867 to question such a pardoned individual's desire to vote or hold office. At all events, the precedents are shadowy and inconclusive.

Although the Constitution and earlier proclamations are in this connection rather indecisive, some information may possibly be gained from other early sources. Madison's *Journal* shows that, when pardon was being discussed in the Constitutional Convention, Randolph wished to give to the President no authority to pardon treason whatever because he thought it would provide the Executive with too much influence; and besides, the President himself might be guilty. Wilson wanted to make pardon an executive function; Morris wanted to make it legislative. King thought a legislature was too fickle, hence unsuited to the task. Madison admitted the weakness of legislatures, but opposed giving the power of pardoning treason to the President, preferring to grant it to both the Senate and to the President. But Mason and Randolph thought the Senate had received too much authority already. In the end the Chief Magistrate was empowered to reprieve and pardon.[49] Obviously, this does not help much because not a word was said of amnesty.[50]

Hamilton drew the assignment of discussing the pardoning power in the *Federalist* and did not add much to Madison's statement. He repeated that there had been fear of granting to an unstable legislature such a duty in times of passion when one man's mind was better than many. The best reason for lodging it with the President was that during a rebellion "a well-timed offer of pardon to the insurgents or rebels may restore the tranquility of the commonwealth". Clearly a well-timed offer might not be possible when the question was thrown open for debate by many members. Hamilton says nothing of amnesty, unless that be included in the definition of pardon.[51]

V

Thus the question could hardly be settled by any reference to the Constitution or to past precedents unless the radicals were willing to agree that pardon and amnesty were the same thing—which they refused to do. The problem became a political one, tied up with the continued control of the radical party and with the attempt of the conservatives to gain office. If Johnson could amnesty and return the franchise to thousands of rebels, he might well secure enough votes to overturn the radicals, who feared they might lose the victory which had been so hard to win in the Civil War. Hence the radicals, too maintain their majority, perceived it was the better part of wisdom to interpret amnesty as one thing, pardon as another; and Johnson found it to his advantage to say that he had both and that they were one and the same thing. It happened, however, that those who supported the Presidential theory were in the minority; hence all the opinions which might support Johnson were uttered by those whose voices were merely an opposition group: they did not establish policy. Thus the minority of the reconstruction committee backed the Johnson attitude fully, but the committee minority had no power except that of protest:

"The several proclamations of amnesty issued by Mr. Lincoln and his successor under the authority of Congress are also inconsistent with the idea that the parties included therein are not to be held, in the future, restored to all rights belonging to them as citizens of their respective States. A power to pardon is a power to restore the offender to the condition in which he was before the date of the offence pardoned . . .

"It is now settled that a pardon removes not only the punishment, but *all* the legal disabilities consequent on the crime . . . The amnesties so declared would be but false pretences if they were, as now held, to leave the parties in the condition they would have been in if they had rejected them. Such a result, it is submitted, would be a foul blot on the good name of the nation." [52]

But the minority "submitted"; it did not set present policy. The majority of the committee said exactly the opposite. Each party took the position which seemed to promise for it the most advantage. The legislature of New Jersey, in withdrawing its assent to the Fourteenth Amendment, gave as one reason that "it lodges with the Legislative branch of the Government the power of pardon, which properly belongs, by our system, to the Executive." [53] But this was again on the minority side; and Congress refused either to listen to the states resolution of rejection or to allow it to appear on the pages of the *Globe* because the radicals said the legislature's action was "scandalous." When the Governor returned the Amendment to the state legislature, which rejected it again, both were acting out of partisanship rather than out of concern for the merits of the case.

When one turns to the statements of the majority group, he finds attitudes taken to bolster up the cause, rather than any facts to aid him in arriving at a clear conclusion. Thus, when the Chicago *Tribune* said that the President "may by his pardoning power restore offenders against the United States to natural and civil rights, *but not to political rights;* he has no power to re-invest them with political privileges," [54] it was again a partisan organ saying what would be of advantage to the party. The same partisanship is evident in a speech in the House by George S. Boutwell: "But while I occupy a place on this floor, *never,* with my consent, *shall the pardon of the President* be a certificate on which a felon enters into the sacred tribunals of the land, and assists in the administration of the laws." [55] Of the pamphlets issued at the time on one side or the other, the same can be said.[56]

The Presidential theory, much as it was defended and explained, never came into force, because it was not to the interest of the dominant radical group that it should. Hence all the radical southern elections, all the conventions, and all the constitutions, were based upon the theory that Congress alone could restore the franchise to rebels. Thus a committee in the Georgia radical

constitutional convention of 1868 said: "Perhaps half of the members of this Convention, as well as that of 1865, are held by the United States to have been guilty of treason. It is true that they have been pardoned, but we greatly doubt if the pardon is at all necessary to make them eligible." [57] In short, the doctrine that Presidential pardon did not enfranchise became bone and blood of the new political system that grew out of the war—not so much because it had already been accepted as legal, but because the radicals saw the advantage to be gained by making it so. If it had been to their interest to decree otherwise, or if the Johnson group had secured control, the opposite would have been true, and the Presidential claim to the power of amnestying (enfranchising) would have been maintained.

After all, however, it must be said that the question was a twilight one and neither contestant had a sure case—a case which could be proved either by the Constitution or by precedent. The Fathers, Senator Edmunds to the contrary notwithstanding, seem never to have thought of amnesty, or if they did, they embalmed it in pardon, which opened the term wide to any kind of interpretation, depending upon party advantage. Radical party advantage demanded the radical theory. The action of Congress took amnesty out of the President's authority, and at least one of Johnson's party recognized the fact. Secretary of the Navy Gideon Welles, writing in his diary about the Presidential proclamation of September 7, 1867, accepted this restriction upon the Executive when he said, "The President has the power by the Constitution to grant pardons, but not amnesty". In England, he continued, Parliament had the power of amnesty; lawyers in Congress, imitating Parliament, arrogated to Congress the same prerogative. Welles thus unwillingly admitted that the President had lost whatever rights to amnesty he may have had; but the Secretary added that amnesty ought not to enter the American system of government, because the United States had neither attainders nor successions to the crown.[58]

VI

Congress had imbedded the radical theory into the law by a series of statutes, as follows: (1) the mistaken grant of pardon and amnesty to the President in the confiscation act of July 17, 1862 had been repealed in January, 1867; (2) in the two military reconstruction laws of March, 1867 Congress had itself disfranchised thousands of rebels; (3) in the third military reconstruction law of July 19, 1867 Congress had specifically stated that a pardon did not enfranchise. All these measures had been possible because the radicals had the necessary two-thirds to override Johnson's vetoes.

But the radicals were not willing to subside with the passage of mere legislation. Lest a future President might try, as Johnson had, to use his pardon to restore those who had been disfranchised, they took one more step: they implanted part of the radical theory into the Constitution. In the third section of the Fourteenth Amendment, all those who, having taken an oath as officeholders to the United States, might later enter a rebellion, were disfranchised from holding state or federal office.[59] Such disabled persons could be restored only by means of a two-thirds vote of Congress. Thus did the legislative department arrogate to itself the power to amnesty; and not a word was said about the President.

The third section not only decreased executive power, but state power as well. Those who, having taken an oath as officeholders, might later enter a rebellion, were disfranchised from the state office as well as from federal. To that extent the people of a state were estopped from choosing whom they wished as officers until two-thirds of Congress acted.

Thus, by law and amendment, which indicated the rising domination of Congress at the expense of the state and of the Presidency, significant changes had been effected. This serious reduction in the prestige and authority of the President was, of course, unfortunate for the Presidency and for the thousands of hapless individuals who had been taught since December 8, 1863 to look to the Executive for restoration of their status as voters and officeholders. During the reconstruction period the office of Chief Magistrate suffered numerous restrictions in power,[60] of which the limitation upon the pardon is not the least important. This reduction was a piece with the other acts of the radical party which were dedicated to the purpose of deflating the President, in the words of the Boston *Traveler*, "to the feebleness of a Venetian Doge",[61] and even of changing the fundamental character of the federal government. Johnson's lament in his farewell address on March 4, 1869 is a partisan and yet an eloquent commentary upon what had been achieved by the radicals:

"They have robbed the Executive of pardon (amnesty), rendered null and void acts of clemency granted to thousands of persons under the provisions of the Constitution, and committed gross usurpation by legislative attempts to exercise this power in favor of party adherents." [62]

[16] One of the charges brought by Ashley against the President in his resolutions of impeachment on Jan. 7, 1867, was the corrupt use of the pardoning power. MCPHERSON, A HAND-BOOK OF POLITICS FOR 1868 (Washington, 1868) p. 188.

[17] Globe (39 Cong. 2 Sess.) p. 180.

[18] Democrats, conservatives, and southerners argued that the repeal was useless. The New York World, Jan. 5, 1867, said that "in point of law, it will make no difference." The confiscation act, it continued, conferred no power on the President which he did not have and the repeal took none away. It was a move to catch the President in an impeachable offense. The New York Herald, Jan. 6, 1867, thought likewise.

[19] The Supreme Court had fomented untold radical wrath in its 5–4 decision in *Ex parte* Garland, 4 Wall, 333, 339 (U. S. 1867) in which it had nullified test-oaths for lawyers. One of its chief arguments was that Garland had received a Presidential pardon. The Court said further, "This power of the President is not subject to legislative control. Congress can neither limit the effect of his pardon nor exclude from its exercise any class of offenders. The benign prerogative of mercy reposed in him cannot be fettered by any legislative restriction . . . a pardon reaches both the punishment prescribed for the offense and the guilt of the offender, and when the pardon is full it releases the punishment and blots out of existence his guilt, so that in the eye of the law the offender is as innocent as if he had never committed the offense . . . and restores him to all his civil rights. It makes him as it were a new man, and gives him a new credit and capacity. It is not within the constitutional power of Congress thus to inflict punishment beyond the reach of executive clemency." The angry radicals construed this decision narrowly by saying it referred only to civil rights, such as practicing law without having to take an oath of loyalty, and not to political privileges, such as voting and officeholding. In their defense it must be said that the Court mentioned only civil rights. The radicals always differentiated between civil rights and political privileges. See Russ, *The Lawyer's Test Oath during Reconstruction* (1937) 10 Miss. L. J. 154.

[20] See for instance, Ass't. Adjutant-Gen. S. T. Chalfin to W. G. Chase, June 12, 1867, in which he says, "I am directed by the Major General Commanding to say that having received a pardon does not affect a person's status." Letter Book, First Military District, I, 247. Also, Acting Assistant Adjutant-General William Ennis to C. K. Mallory of Hampton, Va., who had appealed against the board of registration which had refused to register him even though he presented his pardon. *Ibid,* p. 401. Finally, see a decision, *Ibid,* p. 415, which read, ". . . while the President's pardon restores civil, it does not restore political rights." The records of the five military disticts are housed in the National Archives, Washington, D.C.

[21] Third Reconstruction Act.

[22] For example, Boston Post, Sept. 30, 1867; Richmond Enquirer and Examiner, Sept. 17, 1867; Cincinnati Enquirer, Sept. 20, 1867; and Vicksburg Herald, Sept. 11 and 22, 1867.

[23] James Lyons of Richmond pleaded as follows, ". . . proclaim the law by which your pardon restores to the pardoned, all the rights and franchises of which by unconstitutional laws they were deprived, and among them the

right of Suffrage." Andrew Johnson Papers, CXXII, 17445, Library of Congress.

[24] Sept. 11, 12, 1867.

[25] For instance, Gen. John D. Imboden of Virginia, Chicago Times, Oct. 20, 1867; and Judge Rice of Montgomery, Ala., Augusta, Ga., Constitutionalist, Sept. 26, 1867.

[26] Even Senator Charles Sumner admitted, "Congress, I know can not control the pardoning power; but it may express its opinion with regard to it; it may express its desire." Globe, July 3, 1867, p. 467.

[27] Quoted by WILSON, HISTORY OF THE RECONSTRUCTION MEASURES OF THE THIRTY-NINTH AND FORTIETH CONGRESS, 1865–68. Hartford, 1868) p. 136.

[28] Clipped by Charleston Courier, Sept. 14, 1867. It is not difficult to see why the radicals maintained the point that pardon could not be applied until after conviction. If they made good this interpretation, they need fear little from Presidential activity in pardoning, even granting that it enfranchised, because to convict thousands of rebels individually would be humanly impossible. And how get a jury in the South? The radical attitude had the backing of John Marshall, who, in Wilson V. United States, 7 PET. 150, 160 (U.S. 1833), said that a pardon was the "private, though official act of the executive magistrate, delivered to the *individual* for whose benefit it is intended." (italics not in the original)

[29] Clipped by the New Orleans Times, Sept. 11, 1867.

[30] 20 Atlantic Monthly (1867) 633.

[31] New York Tribune, Sept. 5, 1867. The Louisville Journal, Sept. 11, 1867, defined the disputed terms as follows, "Pardon may be granted either before or after conviction. Pardon after conviction is pardon proper, and pardon before is amnesty. This is all the real difference that there is between them."

[32] For example, on Sept. 9, 1867, the Times in a blazing editorial said that the Constitution, no matter how elastically interpreted, did not justify enfranchisement by Presidential fiat because the "common-sense version of the constitutional provision limits it to individual cases . . . it is a deliberate defiance of Congress and its authority, a repudiation of its enacted laws, and an assertion of the President's determination to take the work of reconstruction into his own hands . . . What more flagrant form could Executive usurpation take short of dictatorship?" Exactly opposite was the attitude of the Cincinnati Enquirer of Sept. 10, 1867, "The President's power in this respect is more plenary than that of Congress, and his Amnesty Proclamation will compel the Registrars to register tens of thousands of Southern citizens, that the Reconstruction Laws of Congress say shall not be voters."

[33] Sept. 10, 1867.

[34] This is not accurate. President Lincoln referred to both the Constitution and to the law of July 17, 1862 in his proclamation; and he did not intend to veto the confiscation act because of the grant of amnesty, but because of a technicality which Congress removed. He then approved the law.

[62] THE AMERICAN ANNUAL CYCLOPAEDIA (New York, 1869) *op. cit. supra* note 53 at 591. The reader is warned that, so far as the writer knows, there is not an authority in the land who would agree with the gravamen of this paper, namely, that amnesty alone enfranchises and that the President has lost, if he ever had, the power of amnesty. For instance, Orth and Cushman, AMERICAN NATIONAL GOVERNMENT (New York, 1943) pp. 295, say that both President and Congress may amnesty; so also, Ogg and Ray, INTRODUCTION TO AMERICAN GOVERNMENT, (7TH ed. New York, 1942) p. 368. The writer suggests that they study the reconstruction period.

WHAT IF OUR COUNTRY SHOULD CEASE TO EXIST?

Mr. GOLDWATER. Few Americans I am sure, have ever faced the possibility that their country could simply cease to exist. Many years of abundance and strength have encased all of us in a feeling of security which could someday disappear. Many nations richer and more powerful in their day than we are in ours have been sabotaged and defeated. I believe it is well for us to remember that other civilizations have grown and prospered and finally disappeared and we have the Warner and Swasey Company of Cleveland, Ohio to thank for a timely reminder of our mortality as a nation. I have attached a recent advertisement sponsored by this company.

[Attachment]

HAVE YOU EVER FACED THE POSSIBILITY THAT YOUR COUNTRY COULD CEASE TO EXIST?

Nations richer and more powerful in their day than we are in this, have been sabotaged, defeated, enslaved.

Babylon was the largest and richest nation of its time, but its lust for luxury made it an easy mark for the Medes and Persians who overran it, and divided its land and enslaved people between them.

Rome was a greater military power than we ever were, but when free bread and circuses became more important to the people than hard work and patriotism, Rome was invaded and looted by the tougher Vandals.

The Incas were the most civilized, richest people in the Americas, but ruthless, better-armed invaders destroyed them as a nation, and looted everything they owned and had spent generations in creating.

In every case it was the self-indulgent weakness of the victim which made the victory of the invader easy.

How strong is a nation which allows foreign competitors to capture the world leadership from one after another of its most vital industries?

How wise is a nation which gives away so much of its substance abroad and at home that it can no longer afford to keep up its own strength and protection?

How intelligent is a nation more careful to protect the criminal than his victim?

How weak is a nation which allows bureaucracy and a socialist philosophy to run riot and squander billions?

Undoubtedly there were Babylonians, Romans, Incas who warned against overindulgence and weakness, who warned that each *citizen* is responsible for his nation, and that that responsibility cannot be shrugged off onto officials. But to those who warned of impending trouble there was then as now the smug sneer, "It can't happen here."

But it did.

BILLIE HART AND THE FIFTH QUARTER

Mr. GOLDWATER. If anyone in this Chamber would like to know all there is to know about the by-products of the beef industry, I suggest they consult an attractive Kingman, Arizona housewife named Billie Hart. In recent years this energetic young woman has become perhaps the most fully informed person in the nation on this subject. Her favorite topic is "A Steer Is Not All Steak!" and she is attempting to educate the entire nation on the subject of beef by-products and their importance. To dramatize her argument, Mrs. Hart has arranged an exhibit called "The Fifth Quarter" and has displayed it in many parts of the country. In fact, people in the Washington area will have an opportunity to view this exhibit at the American Consumer's meetings at the Capital Hilton from February 6th through the 13th. To further inform the member, I have attached a recent article about this interesting woman and her fascinating subject. The article appeared in the August, 1976 issue of the magazine called "Render."

[Attachment]

BILLIE HART AND THE FIFTH QUARTER: ARIZONA HOUSEWIFE PLUGS THE BEEF BYPRODUCT STORY

Billie Hart, an attractive, dark haired housewife from Kingman, Ariz., doesn't raise

cattle. None of the family income comes from the beef industry. She isn't a renderer and doesn't work for a renderer. Yet, in all probability, she may well be one of the nation's most fully informed persons on the subject of animal byproducts where the beef steer is concerned.

In fact, in recent years she has come to be a sought-after speaker on her favorite subject—"The Fifth Quarter"—and her 4–H exhibit "A Steer Is Not All Steak" has been seen not only in her home state but in neighboring California, Oklahoma, Montana, Nevada and North Dakota. In fact, not too long ago Republican presidential hopeful Ronald Reagan based one of his "viewpoints", "The Beef Industry", largely on seeing Billie's exhibit in Arizona.

Billie rapidly is becoming one of the most important and certainly one of the most informed and articulate spokesman (or should we say spokesperson?) on the subject. A mother of three girls, Billie got involved with cattle through a daughter, Sandy. Sandy undertook a 4-H club "fat beef" project. As is often the case, a parent becomes more involved with one of these projects than the youngster. Billie became involved, in spades.

"There is nothing as challenging or as tough to do," she recalls, "than to take on one of these wild critters and try to sell yourself to him. It takes a great deal of patience to get this animal to trust you and the only way you can bring it about is to offer a lot of tender, loving care. Once you win him over, he becomes part of the family and parting with him becomes a real trauma."

That trauma is really what got Billie involved with the subject of byproducts. Each year, she says, it became harder to face the time when the youngsters had to part with their steer. She wanted to provide her charges—she now is a 4–H Beef Leader with 13 youngsters to watch out for—with something that would put more meaning into what they were giving up than just the fact the animal would make a lot of tasty steaks.

"One morning," she says, "I woke up and could not get back to sleep. I picked up a book, "Beef Cattle Science", sent to me by a former member of my club who now was a college student. Actually, the book fell open to byproducts. Up until that time I had never heard of them. It was a new subject and as it turned out an engrossing one."

Billie learned how beef tallow is used for fatty acids which, in turn, are used in the manufacturing of high grade steel, ball-bearings, tires, photographic film, confections, paints, inks, plastic, cosmetics and—to Billie the most important—pharmaceuticals.

"That was my cue," she recalls, "life saving medicines—now I had something to tell my youngsters. I could say 'your steer will live forever' in terms of helping to relieve the pain and suffering in the world."

Billie admits she wasn't quite sure how her somewhat dramatic approach would work. It didn't necessarily eliminate the tears when, as she puts it: "a youngster leads his own steer onto the truck that takes it to the Swift Fresh Meat plant at Tolleson but the tears turn to tears of pride, adult tears."

As Billie delved deeper into the subject, it became more than just a means to give her own 4–H charges a better understanding. She became more and more convinced that an important facet of education was lacking. She broadened her own understanding; visited slaughter houses and packing plants always digging deeper for more information. Soon she began speaking publicly on the subject; at first just locally and later throughout the southwest. Her exhibit—or more correctly, the exhibit of the Herdmasters 4–H Club of Kingman—came next. Today, taking the message of the "Fifth Quarter" to the public has become almost a full-time activity for Billie. She looks at it this way:

"I personally feel there is a great need to educate the student and the consumer through whatever means it will take. I further feel this is a subject of its own and certainly merits a place in our educational system beginning with the lower elementary grades. Too long we have taken for granted the comforts and the advancement of science without giving credit to where credit is due—to these cattlemen, the feedlot operations, the meat packing industry and to the renderer. To me this is what being an American is all about, working together for the betterment of mankind."

Cecil Hellsbusch of "The Record Stockman" has this to say about Billie, her 4–H group and her activities:

"Little did Billie realize how much public relations value there would be to the demonstration exhibit when she selected the subject of cattle by-products. Billie and her club members actually didn't know how important the manufactured products from such things as glands, hides, livers and all the other offal, were in treating the many ailments, diabetes among them.

"The demonstration also shows how much higher the price of beef would be if these by-products were not used to the fullest.

"The Kingman 4–H Club demonstration is a practical example of what can be done in promoting the beef industry by using the ideas and materials at hand. It really doesn't always take the Madison Avenue approach to promotion to make it work and be successful.

"Consumer groups, women's clubs and hundreds of other groups who at one time or another get on their 'high horses' and criticize the cattle industry for one reason or another, should have the opportunity to see the display and become exposed to Billie's salesmanship.

"It is a lead pipe cinch they would come away with more tolerance, appreciation and understanding of the value of the cattle industry to the peoples of the world."

(EDITOR'S NOTE.—Following is the text of a handout used in connection with Billie Hart's presentation and the exhibit of the Herdmasters 4–H club. We think it speaks eloquently to the subject.)

"A STEER IS NOT ALL STEAK"

If "54% of the live weight of cattle is beef", what happens to the other 46%?

Listed below are some of the important commodities manufactured from the cattle by-products, giving the answer.

In the dawn of history when the early man hunted wild animals for meat and first saved the hides for clothing, the bones for tools and weapons, the by-products of the meat packing industry was born.

Up until 1882 a lot of meat animal material was wasted. It was buried in trenches, dumped into rivers or streams, getting rid of it was a nuisance. The meat packing industry developed a system for using every part of the animal. Some experimental laboratories were established, and bacteriologists, chemists, and other scientists were employed to expand the profitable outlets for by-products. Today, scientists and chemists feel they have only scratched the surface in the development of useful things from the meat animal in addition to food. If it were not for this utilization of waste materials into saleable form, the price of meat would be higher.

Bone: For bone china, crochet needles, dice, teething rings, glue, case hardening steel, refining sugar, bone meal, gelatin, feed and fertilizer.

Horn and bone: Buttons and carving-set handles.

Hides: For all kinds of leather goods, such as clothes, baseball mitts, purses and shoes.

Rennet: Is a mild enzyme added to the infants diet to aid milk digestion. It is also used in the cheese making industry.

Gelatin: For making marshmallows, photographic film, cigarette paper and printers' rollers.

Stearin: For making chewing gum and candies.

Glycerin: For explosives, cosmetics and medicines.

Hair: For artist's brushes (often called Camel's Hair, comes from the hair in the inner ear of cattle). Binder in asphalt paving, binders in plaster, felt upholstery. Insulation material, textiles, brushes.

Bone charcoal: For high-grade steel such as ball bearings. Is used in refining of sugar.

Special glues: For marine plywood, paper matches, window shades, china.

Leather: There are three kinds; Latigo, suede and tooling, for covering fine furniture and clothes, many other items.

Chemicals: For detergents, pesticides, flotation agents and plasticizers. Also the foam for use at airport runways, industrial oils, drum heads, lubrication, for tires, to keep them running cool.

Hides: Are the most valuable of all by-products. Fats are the next in value. Products rendered from fats are used in the manufacture of oleomargarine, soaps, animal feeds, lubricants, leather dressings, candles, fertilizer and the tallow of tanning.

Blood: Is used in making blood sausage, stock feeds, shoe polish, and blood from an unborn calf is used in cancer research and cultermedia.

Glands: Are used in the manufacture of numerous pharmaceutical preparations, such as Insulin, ACTH, Adrenalin and Vitamins, Heparin, Thyroid tablets and hormones, epinephrine, trypsin, chymotrypsin, Alpha Chymar, beneficial in cataract operations, thrombin and bone marrow concentrates used in the treatment of various blood disorders. It takes pancreas glands from 60,000 cattle to make one pound of pure dry insulin, or 1,500 pancreas glands to make one precious ounce of insulin, there are no synthetics for insulin therefore the pancreas gland is the only source.

As you can see, "A Steer Is Not All Steak". We sincerely hope we have enlightened you to a more all around value of this animal to the welfare of the world.

THE HERDMASTERS,
Kingman, Arizona.

OBSERVATIONS BY JOHN W. KEELER

Mr. GOLDWATER. In recent days many veterans of the Vietnam War have been expressing their frustrations and disgust at President Carter's order pardoning all Vietnam draft evaders. Indeed these heartfelt sentiments have been pouring in from all parts of the nation and some veterans have even been moved to return the decorations they received for honorable service to their country in Southeast Asia. Recently Mr. President, the thoughts of many of these veterans were put into eloquent words by a former Air Force officer, Colonel John W. Keeler, who published an open letter to President Carter in his newspaper, the Rocket-Courier of Wyalusing, Pennsylvania. Among other things Colonel Keeler said that he felt pretty stupid having spent a lot of time in Southeast Asia only to find out that he didn't really have to go if he didn't want to—thanks to President Carter.

It is highly unlikely that President Carter reads the Rocket-Courier, so I have attached Colonel Keeler's letter in the hope that it might come to White House attention.

[Attachment]

OBSERVATIONS

(By John W. Keeler)

An open letter to Mr. James Earl Carter, President of the United States of America, 1600 Pennsylvania Avenue, Washington, D.C. 20500:

DEAR MR. PRESIDENT: Congratulations on the new job! You sure didn't lose any time getting into the harness and getting things moving. That's good, but I want to speak to you about that first pull on the plow.

There are a lot of us who are feeling pretty stupid right now. We're the ones who spent that year or more in Southeast Asia during the recent unpleasantness over there. And last Friday I learned that we didn't really have to go if we hadn't wanted to.

I don't know whether you've ever been in that part of the world or not, Mr. President, but it's not an area that the run-of-the-mill American would pick to go to just to take a year off work or to skip school. Oh, I admired the people—those that we went over there to help, and I was ashamed of the way your predecessors pulled the rug out from under them. But a lot of us could have found a safer place to go if we had had the courage at the time that some of our contemporaries did. I mean those who skipped out of the country and just didn't go when they were called.

Most of us who went to Southeast Asia returned unscathed, a little older, a little wiser, but unhurt. We took a certain amount of pride in what we did over there even if we did lose the war.

A lot of our friends were not as lucky as we. In fact, more than 56,000 of them came back in plastic bags for burial. There were another 153,000 who were hurt. And then there are those who gave up five, six, seven and eight years of their lives in places like the "Hanoi Hilton" and other communist prison camps. There are still a thousand or more over there that haven't been accounted for.

Now, maybe it isn't going to bother you, Mr. President, to look me in the eye after this decision of yours; this pardon of all those who ran away rather than do their part. After all, I'm just one of those who went over there, did my thing and came home in one piece, as did my son and my son-in-law.

But your test of courage is coming, Mr. President, when you make your next visit to a Veterans Hospital; when you have to look into the face of that man who has no legs because he stepped on a land mine outside Hue, or when you reach out to shake the hand of that man paralyzed from the neck down by a sniper's bullet at An Khe.

What can you say to them, Mr. President? How do you explain to them that they didn't really have to wind up here in a hospital for the rest of their lives, that they didn't really have to go to Vietnam?

What do you tell one of those brave men who spent thirty months in solitary confinement rather than cooperate with his captors, when he asks you 'why'?

How do you rationalize to the parents of the boy with the white marker for a headstone or the wife of the man still missing, your decision to belittle and degrade what their loved ones did?

Mr. President, you were dead wrong in your decision to pardon those who refused to serve this country when they were called!

Yes, you've made a lot of us look pretty stupid, and being human that pricks the vindictive. There is eleven generations of Yankee cussedness in me, and right now I'd be delighted to learn that a ghost army of our 56,000 Vietnam dead was marching through Georgia, from Atlanta to the sea (via Plains) and trampling every damn peanut there into the mud!

Sincerely,

JOHN W. KEELER.

A CRITIQUE OF THE HUMPHREY-HAWKINS BILL

Mr. GOLDWATER. We have heard a lot about the so-called Humphrey-Hawkins bill over the last several Congresses, and we have also heard President Carter indicate his approval of this for the solution of some of our economic problems. I have never in my life as a businessman or a Senator felt that this kind of an approach would accomplish anything but add to the problems they are seeking to solve. Dr. Raymond Saulnier of Barnard College of Columbia University, has put together a critique of this bill in about as succinct a way I have seen, and I have attached this critique, appearing in *Business Horizons*, so that my colleagues may have a better understanding of why I have to oppose this type of legislation.

[Attachment]

A CRITIQUE OF THE HUMPHREY-HAWKINS BILL

(By Raymond J. Saulnier)

To their credit, those responsible for preparing successive drafts of the Humphrey-Hawkins bill are not impervious to criticism. But what they have not yet seen is that a bill based from the beginning on fundamentally wrong premises and inspired by faulty philosophy of economic policy making cannot be made into a good bill by modifying or adding a few provisions. To cite the primary failures: an essentially inflationary bill is not corrected by adding a provision saying that inflation will not be allowed to accelerate—indeed, it would make matters worse; it is not meaningful to say that there is no intention to extend government intervention in business when the logic of the bill points to deeper involvement. In short, the bill's faults remain as they were.

First, its approach to unemployment reduction is still to put people in public jobs at market rates of pay, but with nothing done to promote private, self-supporting employment. No less than earlier versions, the present draft would almost certainly increase the number of persons to be assisted, exert immense inflationary pressure on the economy and in the end yield no real answer to the problem it seeks to solve.

Second, the determination of its authors to launch the federal government into comprehensive national economic planning remains undiminished. And since there is no change in what the bill proposes to spend, and no change in its insistence on ruling out monetary restraint, the strictures introduced in the latest version against allowing inflation to accelerate are a virtual guarantee that the planning would involve early recourse to direct controls.

Third, it is still true that enactment of the bill would preempt the opportunity to attack structural unemployment constructively.

DETERRENT TO PRIVATE JOBS

Undoubtedly, the bill's draftsmen would concede no part of the above, and against the first of the complaints would probably argue, through without merit, that doing something to create private self-supporting employment is not the business of this particular bill. But it is the business of Congress and the executive branch, and if it is not done—if there is no private job to which a person aided under S. 50 can eventually transfer—the S. 50 approach will inevitably fail.

The availability of private jobs depends on market demand, sufficient capital to equip and support workers, and a readiness to put the necessary capital at risk. Outlays under the bill would increase market demand, ultimately in some multiple of their amount, but experience has shown that federal spending is an awkward, hard to manage and typically procyclical way of increasing demand, and cannot be carried out in volume without unwanted structural effects on the economy.

At the same time, the bill would do nothing to correct policies of government, principally those governing taxes and industrial regulation, that are obstacles to the accumulation and investment of capital. In addition, its central planning provisions, which hold out what is virtually a promise of increased intervention in business by government, would surely reduce the willingness to put funds at risk. The effect of the bill, in other words, would be to deter creation of the private, self-supporting jobs that are essential to its success.

The compensation provisions have been modified to call for pay to assisted individuals equal only to what is paid for similar work by the same employer, rather than by the market generally. Nevertheless, it is predictable that the provisions would amplify the problem the bill is designed to solve by drawing larger numbers into the labor force and causing many persons employed privately to seek publicly supported jobs. Thus, its effect would be not to eliminate unemployment but to lodge it in a variety of federal or federally assisted work projects.

As indicated, the bill's latest version shows noticeably more concern than previous ones over the inflation it might create, but there is a certain emptiness in this. Its money-spending features, on which its inflation impact would depend, remain unchanged. It is still uncertain how fully and on what timetable its direct job-supplying provisions would be carried out, but they are sure to attract enormous demand and ultimately to require immense outlays. There were 5.3 million persons age twenty and over counted as unemployed in October 1976, with the unemployment rate at 6.06%. The bill would require reduction of this rate to 3% in less than four years. Let us assume the size of the unemployed segment of the labor force remains unchanged and that it costs $18,000 to put one person to work for one year (net of what would be obviated in welfare and unemployment insurance expenditures but inclusive of overhead and the cost of necessary nonlabor resources). Under these circumstances, the startup cost, so to speak, would be close to $48 billion, and continuing annual costs could be half that amount.

In addition, the bill still authorizes programs only indirectly related to job provision, a fact that could add enormously to its total cost. Among others are programs to stockpile food and other critical materials to meet emergencies and "maintain price stability [and] adequate farm income" and grants for the "stabilization and needed growth of state and local budgets." New York City has given a fair demonstration recently of what the later could cost, and we have had all the experience we need with what it takes to assure "adequate" farm income.

In short, if the bill's programs are actually to be implemented, as we must assume, its potential cost is simply "out of sight." And, incidentally, they could never be accommodated within overall budget spending limitations such as Congress has incorporated in recent resolutions on the budget.

Inflationism is implicit also in two concepts apparently basic to the thinking of the bill's authors—"full purchasing power" and the "full employment budget." The former is a revival of economic thinking of the twenties and thirties, calling for increases in income payments and thus in aggregate demand to the point where full employment is achieved, regardless of price increases. The latter is a more sophisticated fallacy of later years, maintaining that budget deficits in-

curred short of full employment have no inflationary or other negative effect, regardless of size, so long as they derive from expenditure and tax policies that produce balance at full employment.

Experience here and elsewhere in the world has shown both concepts to be dangerously wrong. Any thought that the monetary authorities would be free to exercise restraint to check the inflationary consequences of policies based on them can be put aside as in no way contemplated by the draftsmen of this bill. It is made quite clear that in pursuing full employment via federal spending, which is still the bill's method, no interference from the Federal Reserve authorities will be tolerated.

THE PROBLEM OF CONTROLS

Next among the bill's major faults is the potentially deadly effect it would have on our market oriented enterprise system through the quantitative goal-setting procedure to which it is committed and the direct controls system this would almost certainly engender. There is an old rule in politics that it is unwise to put too much in writing, least of all in numbers, but in S.50's proposed world everthing would be in numbers. The central number would be the annual goal of unemployment reduction, from which all others would devolve. And it would be the business of policy, as the saying goes, to make these numbers come true.

It may have been unwitting, but there was a certain flexibility in earlier versions in that an upward pressure on prices of increases in federal spending, as the authorities sought to achieve their predetermined numerical goals, could be reflected in a higher inflation rate. If the present draft is to be interpreted literally, this flexibility has been eliminated; there are provisions in it that would prohibit increases in inflation over whatever rate was prevailing when the bill was enacted.

Considering what would be spent under the bill and the limitations it would place on the exercise of monetary restraint, the logic of this new requirement is that the President would have to implement fairly early the anti-inflation program he is directed to have ready in the wings. I would interpret the "administrative and legislative actions to promote reasonable price stability" called for in the President's program as a virtual promise of early recourse to direct wage, salary, profit, dividend and price controls. And it is a safe guess that, this time, controls would include arrangements for government allocation of credit and capital in a system of regulated interest rates.

In short, the logic of the bill and the "comprehensive planning framework" it calls for, with "automatic triggers" phasing programs in and out, points directly to deeper and deeper intervention by government in business. However engaging this may be to social engineers, or to those who see the future as a collaboration between technocrats in government and in business, we know from experience that it is bad economics; what we would be destined to learn from new experience is that it is also bad political science. The syndicalism it implies for social structure and political action is simple not consistent with the operation of democratic institutions, including the institution of free collective bargaining.

A CONSTRUCTIVE APPROACH

My final complaint against Humphrey-Hawkins—that its enactment would preempt the opportunity to deal constructively with unemployment—implies that there is a better approach, and of course there is, though it is impossible to describe more than its major elements in a paragraph. First of all, it must be built on a foundation of noninflationary fiscal and monetary policies designed to promote sustainable growth, the features of which can be spelled out adequately enough. There is, of course, a prominent place in it for public service jobs, but not as a virtually exclusive reliance; what is done must be coordinated side-by-side with measures to promote private jobs and to facilitate the transfer of assisted persons to them.

To this end, reforms are needed in federal, state and local laws that deter capital accumulation and investment, a difficult but surely not impossible task. Rationalization is long overdue of federal and state laws and regulations that set minimum pay scales at levels that for many persons are actually a block to employment.

And the same is apparently true of aspects of unemployment insurance and welfare delivery systems. A thorough overhaul and improvement are needed, and have been for years, of existing systems of vocational training, guidance and placement. Finally, there may be a place in a better program for tax abatements aimed at promoting private jobs of specified characteristics, though only under conditions that would prevent their abuse.

Considering how basic the bill's faults are, the reasonable course for Congress is to abandon it as a false start and direct the President to construct an alternative. The new administration is obviously in a favorable stance for seeking such an opportunity, perhaps choosing to proceed, if Congress approves, with the aid of a presidential commission.

Structural unemployment is sufficiently serious and the problems it presents are sufficiently urgent that unless an alternative and constructive program is formulated soon, the field will be preempted by the enactment of something in the nature of S. 50. This would be more than just a mistake; it could well be an irreversible mistake.

SUMMARY OF REVISED HUMPHREY-HAWKINS BILL

A revised version of the Humphrey-Hawkins bill was introduced into Congress on September 17, 1976 (Congressional Record, same date) with the following major provisions.

(1) The act would:

Make job opportunities at fair pay a right of all Americans sixteen and over

Specify that jobs provided under the act results in a "net increase in employment through work that would not otherwise be done" and that wages paid be not less than received for equal work from the same employer, and in no case less than the minimum wage.

Recognize inflation as a national problem

Abjure government control of production, employment or allocation of resources, except as otherwise authorized

Give priority in expanding jobs to conventional private employment first, federally assisted private employment second, conventional public employment third and, as a last resort, provide jobs from reservoirs of public and private nonprofit employment projects.

(2) Projects from the reservoir of public works would:

Not be initiated sooner than two years after enactment

Not involve work to which Bacon-Davis applies, nor draw workers from private employment

Provide jobs mainly in the "lower ranges of skills and pay."

(3) Under the act, the President would be required to:

Set annual numerical goals for employment, production and purchasing power

Send Congress each year a Full Employment and Balanced Growth Plan (hereafter, Plan) designed to—

Achieve the annual numerical goals.

Be consistent with a longer-term goal (specified in the act) of reducing unemployment to 3% in not more than four years for all Americans twenty and over who are able and desiring work.

Prevent inflation from rising above its rate at time of enactment and ultimately achieve reasonable price stability.

Propose to Congress a comprehensive countercyclical program (relating to periods of high unemployment but to be pursued "regardless of the stage of the business cycle") designed to close the gap between employment achieved by aggregate monetary and fiscal policy and the employment goals established under the act, including public service jobs, accelerated public works, countercyclical grants for "stabilization and needed growth" of state and local budgets, skill training, levels and duration of unemployment insurance, community development.

Develop a "comprehensive regional and structural employment proposal" to reduce underutilization of resources in depressed areas and in groups of the labor force, including legislation for an "institutional means" to encourage investment in depressed areas and inner cities and "provide an alternative source of capital funds for local and state governments to finance public facilities".

Develop a proposal to integrate income maintenance with the employment proposals of the act.

Devise and transmit to Congress an anti-inflation program, including a comprehensive information system to monitor and analyze inflation trends, monetary and fiscal policies "geared to full employment", ways to increase supply in tight markets, stockpiles, voluntary labor/management arrangements to increase productivity, stronger antitrust laws and enforcement, recommendations for "administrative and legislative actions to promote reasonable price stability, if situations develop that seriously threaten national price stability."

(4) The act would establish a Full Employment Office in the Department of Labor to assist the Secretary of Labor in administering the last-resort employment program, and, a Division of Full Employment and Balanced Growth in the Congressional Budget Office to assist the Joint Economic Committee and Congress in their review of the President's Plan.

(5) The Joint Economic Committee would review the Plan and prepare a statement for congressional committees on the budget, indicating acceptance, disapproval, or modification of the Plan, or giving an alternative to it, to be incorporated in a concurrent resolution which, upon adoption, would serve as a guide to legislation relevant to "goals, priorities, policies and programs" recommended in the Plan.

(6) Federal expenditure and tax policies set forth in the President's Economic Report and Budget would be expected to be consistent with the Plan, as would monetary policies proposed annually to Congress in an independent statement by the Federal Reserve Board. Should the President find that the Federal Reserve's proposed policies are inconsistent with the Plan, he is directed to recommend actions to the Board and to Congress to insure conformity.

THE EDITORS.

(By request of Mr. STEVENS for Mr. MCCLURE, the following statement is printed in today's RECORD:)

MARY BROOKS, THE 28TH DIRECTOR OF THE U.S. MINT

Mr. MCCLURE. There are many Idahoans occupying high positions in the Federal Government, but none has been more respected

than Mary Brooks, the 28th Director of the U.S. Mint.

It is said that the people of my State cling to the pioneer spirit of the Old West more than any of their fellow countrymen. If this is true, then Mary Brooks, more than anyone else I can think of, symbolizes those qualities which we identify with the West—self-reliance, perserverance, and fortitude.

She is the daughter of the late U.S. Senator from Idaho, John Thomas, and the wife of the late Senator C. Wayland Brooks of Illinois. Her lifelong association with politics led her to the job of Assistant Chairman of the Republican National Committee. But it is as the Director of the Mint that Mary Brooks carved her niche in American history.

On January 11, 1977, Secretary of the Treasury William Simon presented the Alexander Hamilton Award, the Treasury Department's highest honor award, to Mrs. Mary Brooks, Director of the Mint, on January 11, 1977.

Mrs. Brooks is the first woman chosen by a Secretary of the Treasury to receive the Alexander Hamilton Award established in 1955 to give recognition for outstanding and unusual leadership in the work of the Department of the Treasury.

There are no nominations for this award which are conferred solely by personal selection of the Secretary of the Treasury. At the recent presentation ceremonies, Secretary Simon presented Mrs. Brooks with the Alexander Hamilton Award 14k gold medal and signed certificate. The citation to Mrs. Brooks reads:

"Mary T. Brooks, twenty-eighth Director of the Bureau of the Mint and only the third woman to fill this responsible position, has provided imaginative and innovative leadership for the Mint's diverse operations, conducted in seven field installations.

"During her two terms as Director, the production of the United States coinage virtually doubled, rising from seven billion coins in 1969 to over thirteen billion coins in 1975. When the public began withdrawing pennies from circulation in 1974, thus threatening to overburden Mint production facilities, she improvised a public relations program designed to elicit the return of hoarded pennies to monetary uses.

"Mrs. Brooks ably presided over all phases of the unique Bicentennial coinage and medals programs, from design selection through demand forecasting to automated public sales, and established for the first time a progressive system of audits of the nation's gold stocks in her charge at the Fort Knox Depository. Under her guidance, major numismatic programs multiplied in number, reaching deliveries of over four million sets of coins and medals annually."

(This concludes Additional Statements Submitted by Senators.)

CONCLUSION OF MORNING BUSINESS

Mr. STEVENS. Mr. President, is there any time remaining in the morning hour?

The PRESIDING OFFICER. There are 11 minutes.

Mr. STEVENS. Mr. President, I ask unanimous consent that the remaining time be vacated.

The PRESIDING OFFICER. Without objection, it is so ordered.

QUORUM CALL

Mr. STEVENS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll. The assistant legislative clerk proceeded to call the roll.

Mr. MAGNUSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

FISHERY CONSERVATION AND MANAGEMENT ACT OF 1976

Mr. MAGNUSON. Mr. President, I ask unanimous consent that the Senate immediately proceed to the consideration of H.J. Res. 240, to give congressional approval to certain governing international fishery agreements negotiated in accordance with the Fishery Conservation and Management Act of 1976, and for other purposes, and that no nongermane amendments be in order during its consideration.

Mr. STEVENSON. Or reconsideration.

Mr. MAGNUSON. Or reconsideration.

Mr. JAVITS. What is the question?

The PRESIDING OFFICER. Is there objection to the request of the Senator from Washington?

Mr. JAVITS. No objection.

There being no objection, the Senate proceeded to consider the joint resolution, which was read twice by its title.

Mr. MAGNUSON. Mr. President, I join Senator CLAIRBORNE PELL of the Senate Foreign Relations Committee in requesting that House Joint Resolution 240 be held at the desk and not referred to committee, and that the Senate proceed to its immediate consideration.

I realize that this is an extraordinary procedure, but I believe it is necessary to assure that the United States is prepared to enforce the provisions of our 200-mile fishing limit on March 1. I do not believe that this procedure will ever again be necessary because of the transitional nature of this problem. We have been requested by the Carter administration to expedite action on this bill as soon as possible.

There are three purposes to this bill. First, under the terms of the Fishery Conservation Act of 1976, no governing international fishery agreement signed between the United States and any foreign nation becomes effective until it has lain before Congress for 60 days. In addition no foreign fishing can take place until any such agreement takes effect as to the country involved. Because of the transition between Congresses and Administrations, and the length of time it took to negotiate these agreements, they have only recently come to Congress. Others are yet to be signed and formally transmitted—Japan, Spain, Korea, and the European Economic Community. Therefore, unless affirmative action is taken, simple procedural roadblocks will prevent us from making an orderly transition from a 12-mile limit to a 200-mile limit on March 1.

The first part of the House Joint Resolution 240 solves this problem by specifically approving those agreements which have been signed and transmitted to Congress. Both the Senate Commerce Committee and the Senate Foreign Relations Committee have conducted hearings on this very question. And the House has already acted on the resolution.

Second, the Fishery Act requires there to be individual permits for each foreign fishing vessel allowed to operate within our 200-mile limit. After governing international fishery agreements become effective, these permits may be applied for and reviewed according to processes spelled out in detail in the act. In particular, the Regional Fishery Management Councils created by this new law are given 45 days in which to review and comment on the permit applications. These councils are the frontline managers of our fisheries. But here again, the tightness of time between approval of the international agreements and March 1 forces us to limit the review time to 7 days. Since all the Councils long ago were alerted to this problem, and in fact have adopted resolutions supporting the actions to be taken in House Joint Resolution 240, a reduction in review time poses no serious problems in this transitional period.

Third, under the law, each foreign fishing vessel must have its permit physically onboard on March 1. Again, time limits will prevent this, and the resolution waives this requirement if the permits are approved until a later date.

Finally, to receive permits for its vessels, each nation must pay a license fee in advance under the law. But since the amount of the fee to be paid by each nation will not be known until allocation of catch is made to each fishing nation, we face the same procedural hangup. The resolution would therefore waive this requirement, on a one-time basis only, and make the payment of fees a condition subsequent to fishing rather than a condition precedent. Fees will be paid in a reasonable period of time after March 1. If they are not paid, fishing must cease.

In summary, Mr. President, this resolution must be approved as soon so that we do not receive pressure to delay the effective date of the 200-mile-limit law. These changes made by the resolution are one-time only and are procedural in nature. I urge my colleagues to vote favorably on House Joint Resolution 240.

Mr. PELL. Mr. President, normally, House Joint Resolution 240 would be jointly referred to the Foreign Relations Committee and the Commerce Committee. However, in view of the urgency expressed by the administration, both committees have waived their rights to a referral. It should be noted that this action should not be taken as a precedent for similar legislation, nor should it be interpreted as a diminishing of the Foreign Relations Committee's jurisdiction in the area of international oceans affairs or the Commerce Committee's jurisdiction in oceans policy. It is merely a recognition by the both committees of a need on the part of the administration for quick congressional relief.

As many Senators know, the enforcement provisions of the Fishery Conservation and Management Act (P.L. 94–265) will go into effect on March 1, 1977. This act will create a 200-mile fishery conservation zone within which the United States will exercise exclusive management authority over various fisheries.

In accordance with Public Law 94–265, the Department of State has reviewed all existing fishery agreements and initiated negotiations to revise those provisions inconsistent with the act.

To date, international agreements have been negotiated with the Soviet Union, Poland, Romania, Bulgaria, the Republic of China, Korea, and East Germany. Six of these have been submitted to the Congress. However, the 60-day entry into force period provided for in the act will not elapse for any of these agreements prior to the March 1 enforcement date.

The administration, at a hearing I chaired last Thursday—February 3—before the Subcommittee on Oceans and International Environment, urgently requested the Congress to approve these agreements by an affirmative action in a joint resolution so that they may enter into force before the March 1 enforcement date. It is necessary that these agreements enter into force before the permits for foreign fishing can be granted.

The resolution we are considering today gives congressional approval to these six agreements.

In addition to approving the agreements, House Joint Resolution 240 will: First, reduce the time in which the eight Regional Fishery Management Councils created by Public Law 94–265 may comment on foreign permit applications submitted pursuant to the above agreements from 45 days to 7 days; second, provide that the provisions of the Federal Advisory Committee Act shall not apply to the actions of any Council in preparing such comments; third, exempt until May 1, 1977, foreign vessels fishing pursuant to the above agreements from the provisions of Public Law 94–265 requiring them to have U.S. permits physically on board; fourth, exempts until May 1, 1977, foreign vessels fishing pursuant to the above agreements from the provisions of Public Law 94–265 requiring the payment of fees before foreign fishing permits are issued; and fifth, repeals the implementing legislation for the International Convention on Northwest Atlantic Fisheries.

The American fishing industry does have difficulties with a number of the provisions in some of the agreements. Specifically, the industry is concerned about such things as: First, the granting of port privileges; second, the continuation of joint Claims Boards; and third, the establishment of multilateral scientific fishery organizations which might have an input in the determination of optimum yield in various American fisheries.

In view of these concerns, the industry has urged the State Department to work closely with the American fishermen in order to develop amendments which address their concerns. They have also urged the Department to submit such amendments at the earliest possible review date to the various foreign governments with which we have concluded fishery agreements.

However, despite these problems the industry is more concerned that the Fisheries Management and Conservation Act enter into force on March 1, 1977. Therefore, industry has expressed in private consultation and in public testimony support for this resolution.

I urge the Senate to vote in favor of House Joint Resolution 240 and thereby expedite the implementation of the Fisheries Management and Conservation Act.

The PRESIDING OFFICER. The question is on the third reading and passage of the joint resolution.

The joint resolution (H.J. Res. 240) was ordered to a third reading, was read the third time, and passed.

The preamble was agreed to.

Mr. STEVENS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STEVENS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR INCLUSION OF CERTAIN MATTER IN THE RECORD

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Senators may have until the hour of 5 p.m. today to include their statements, bills, resolutions, petitions, and memorials in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS TO 1 P.M. TOMORROW

Mr. ANDERSON. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until 1 p.m. tomorrow.

The motion was agreed to; and at 4:02 p.m., the Senate recessed until tomorrow, Friday, February 11, 1977, at 1 p.m.

NOMINATIONS

Executive nominations received by the Senate after the adjournment of the Senate on February 7, 1977, pursuant to the order of February 7th:

DEPARTMENT OF STATE

Warren M. Christopher, of California, to be Deputy Secretary of State, vice Charles W. Robinson, resigned.

DEPARTMENT OF TRANSPORTATION

Alan A. Butchman, of the District of Columbia, to be Deputy Secretary of Transportation, vice John W. Barnum, resigned.

Terrence L. Bracey, of Virginia, to be an Assistant Secretary of Transportation, vice Roger W. Hooker, Jr., resigned.

Chester Davenport, of Maryland, to be an Assistant Secretary of Transportation, vice Robert H. Binder.

Linda Kamm, of the District of Columbia, to be General Counsel of the Department of Transportation, vice John Hart Ely, resigned.

OFFICE OF DRUG ABUSE POLICY

Lee I. Dogoloff, of Maryland, to be Deputy Director of the Office of Drug Abuse Policy. (New position)

Peter G. Bourne, of the District of Columbia, to be Director of the Office of Drug Abuse Policy. (New position)

DEPARTMENT OF THE TREASURY

C. Fred Bergsten, of New York, to be a Deputy Under Secretary of the Treasury, vice Gerald L. Parsky, resigned.

DEPARTMENT OF DEFENSE

W. Graham Claytor, of the District of Columbia, to be Secretary of the Navy, vice J. William Middendorf II, resigned.

IN THE NAVY

The following-named captains of the line of the Navy for temporary promotion to the grade of rear admiral, subject to qualification therefor as provided by law:

Karl J. Christoph, Jr.	Thomas M. Hopkins
James H. Webber	James W. Lisanby
William G. Sizemore	Grover M. Yowell
Warren C. Hamm, Jr.	Edwin Barrineau
Robert W. Carius	Jack F. O'Hara
James A. Winnefeld	Crawford A. Easterling
Paul A. Lautermilch, Jr.	Thomas M. Ward, Jr.
	Daniel G. McCormick, III
Thomas R. Kinnebrew	
Henry J. Davis, Jr.	Frederick G. Fellowes, Jr.
Alexander M. Sinclair	
Huntington Hardisty	Milton P. Alexich
Floyd H. Miller, Jr.	Curtis B. Shellman, Jr.
Albert J. Baciocco, Jr.	David S. Cruden
Arthur S. Moreau, Jr.	Clyde R. Bell
Charles O. Prindle	Bernard M. Kauderer
Lowell F. Eggert	Frederick C. Johnson
Samuel W. Hubbard, Jr.	Conrad J. Rorie

The following-named officers of the Naval Reserve for temporary promotion to the grade of rear admiral, subject to qualification therefor as provided by law:

LINE

Joseph Louis Loughran
Herbert Marvin Bridge
Samuel Amspoker Cummins
Martin Joseph Andrew

MEDICAL CORPS

Matthias Henry Backer, Jr.

SUPPLY CORPS

William Alvin Armstrong

CIVIL ENGINEER CORPS

Peter Ross Brown

DENTAL CORPS

William James Hughey Vaughn

Executive nomination received by the Senate on February 8, 1977, pursuant to the order of February 7:

AMBASSADOR

Paul C. Warnke, of the District of Columbia, for the rank of Ambassador during his tenure of service as Director of the United States Arms Control and Disarmament

Agency, to which position he was nominated February 4, 1977.

Executive nomination received by the Senate on February 9, 1977, pursuant to the order of February 7:

AMBASSADOR

Evan S. Dobelle, of Massachusetts, for the rank of Ambassador during his tenure of service as Chief of Protocol for the White House.

Executive nominations received by the Senate on February 10, 1977, during the adjournment of the Senate, pursuant to the order of February 7:

CENTRAL INTELLIGENCE

Admiral Stansfield Turner, United States Navy, to be Director of Central Intelligence, and to have the grade of Admiral while so serving, vice George Bush, resigned.

IN THE MARINE CORPS

The following-named officers of the Marine Corps for temporary appointment to the grade of brigadier general:

Alexander P. McMilland	George B. Crist
Vincente T. Blaz	Dwayne Gray
David B. Barker	Albert E. Brewster, Jr.
William A. Scott, Jr.	Richard A. Kuci
Lawrence R. Seamon	Ernest C. Cheatham, Jr.
Thomas R. Morgan	John V. Cox

CONFIRMATIONS

Executive nominations confirmed by the Senate February 10, 1977:

DEPARTMENT OF TRANSPORTATION

Alan A. Butchman, of the District of Columbia, to be Deputy Secretary of Transportation.

Terrence L. Bracy, of Virginia, to be an Assistant Secretary of Transportation.

Chester Davenport, of Maryland, to be an Assistant Secretary of Transportation.

Linda Kamm, of the District of Columbia, to be General Counsel of the Department of Transportation.

DEPARTMENT OF STATE

Richard B. Parker, of Kansas, a Foreign Service Officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Lebanon.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

EXTENSIONS OF REMARKS

LAWS OF THE 94TH CONGRESS AFFECTING ADVISORY COMMITTEES

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 10, 1977

Mr. METCALF. Mr. President, the 94th Congress passed no fewer than 55 laws establishing, continuing, authorizing, or otherwise affecting Federal advisory committees, commissions, councils, boards, panels, and other advisory bodies—the same number the 93d Congress passed.

Considering that more than 750 bills affecting advisory bodies were introduced in the House and Senate during the first 7 months of the session, the output of the 94th Congress involving these bodies may seem somewhat restrained. While that output may have been lower than it might have been, it was no doubt higher than it should have been.

The yardstick to be applied is the declaration of the 92d Congress in enacting the Federal Advisory Committee Act that—

New advisory committees should be established only when they are determined to be essential and their number should be kept to the minimum necessary.

At the end of 1975 there were 1,267 Federal advisory committees. As of mid-1976, there were an estimated 1,249. The inventory of committees as of December 31, now being taken for the fifth annual report of Federal advisory committees, covering calendar 1976, which the President will send to Congress by March 31, could show as many as 1,300.

Whether the number rises or falls from the total a year ago, or holds constant, which could happen if a committee was terminated in 1976 for each new one created, the crucial question is whether each of these committees is truly necessary.

Advisory committees are created by the Congress, by the President, and by agency heads, so the question may properly be put to each of them. Congress has been mandating more advisory committees, and the annual report is expected to disclose that about a third of all new committees established in 1976 were created by statute.

As chairman of the Subcommittee on Reports, Accounting, and Management, which oversees the Federal Advisory Committee Act, I would like to remind Members of the House and Senate that section 5(b) of that law—Public Law 92-463—says the following about the responsibilities of congressional committees:

In considering legislation establishing, or authorizing the establishment of any advisory committee, each standing committee of the Senate and of the House of Representatives shall determine, and report such determination to the Senate or to the House of Representatives, as the case may be, whether the functions of the proposed advisory committee are being or could be performed by one or more agencies or by an advisory committee already in existence, or by enlarging the mandate of an existing advisory committee. Any such legislation shall—

(1) contain a clearly defined purpose for the advisory committee;

(2) require the membership of the advisory committee to be fairly balanced in terms of the points of view represented and the functions to be performed by the advisory committee;

(3) contain appropriate provisions to assure that the advice and recommendations of the advisory committee will not be inappropriately influenced by the appointing authority or by any special interest, but will instead be the result of the advisory committee's independent judgment;

(4) contain provisions dealing with authorization of appropriations, the date for submission of reports (if any), the duration of the advisory committee, and the publication of reports and other materials, to the extent that the standing committee determines the provisions of section 10 of this Act to be inadequate; and

(5) contain provisions which will assure that the advisory committee will have adequate staff (either supplied by an agency or employed by it), will be provided adequate quarters, and will have funds available to meet its other necessary expenses.

All too often, I am afraid, the 94th Congress did not follow these guidelines. I call attention to these guidelines at the outset of the 95th Congress in the hope and expectation that it will not lose sight of them.

The list below was compiled with the assistance of the American Law Division of the Congressional Research Service, which uses "advisory bodies" as a bucket term embracing certain groups not subject to the Federal Advisory Committee Act—for example, operational groups and committees composed wholly of full-time officers or employees of the Federal Government.

From the list I have excluded such clearly operational bodies established by the 94th Congress as the U.S. Parole Commission, Foreign Service Grievance Board, Japan-United States Friendship Commission, U.S. Metric Board, and the National Museum Services Board. Also excluded are committees which do not have at least one non-Federal member, such as the National Occupational Information Coordinating Committee, the Federal Council on Educational Research and Development, and the Committee To Make Recommendations to the Administrator of the Environmental Protection Agency under the Toxic Substances Control Act.

Also excluded are committees that advise the District of Columbia government or State or local governments, such as the State advisory councils on vocational education mandated by the 94th Congress.

At the same time, I have included a couple of "advisory bodies" which do not or may not come under the Federal Advisory Committee Act, either because of their interest or because the question of their coverage is still an open one.

COMPARING THE 94TH AND THE 93D

Mr. President, the 93d Congress exempted several advisory committees from all or part of the Federal Advisory Committee Act. For example, the advisory committee established by Public Law 93-406 to serve the Pension Benefit Guaranty Corp., was wholly exempted from the act, meaning that none of its automatic termination, open meeting or other provisions apply.

Apparently the 94th Congress wholly exempted only one advisory committee, the existing Advisory Council on Historic Preservation, and did so only after converting it into an "independent agency." However, on several occasions the 94th Congress exempted advisory committees from the act's automatic termination requirement that committees expire in 2 years unless they are formally renewed

or enjoy a longer duration specified by law.

Whenever Congress suspends the automatic termination provision of the act with respect to a committee instead of giving it a specific termination date, it is creating that panel in perpetuity. The danger is that the programs or activities these committees are set up to monitor will change or wither away over time, leaving these monitors behind like so much bureaucratic bric-a-brac.

The last Congress laid down some special requirements for certain advisory committees.

For instance, Public Law 94-278 declares that all appointments to advisory committees established to assist in implementing the Public Health Service Act, the Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963, and the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment, and Rehabilitation Act of 1970, "shall be made without regard to political affiliation."

For another, Public Law 94-471 instructs the director of the National Science Foundation to "improve the representation of minorities, women, and handicapped individuals on advisory committees, review panels, and all other mechanisms by which the scientific community provides assistance to the Foundation."

For yet another, Public Law 94-163 applies the tough open-meeting requirements of section 17 of the Federal Energy Administration Act of 1974 to advisory committees helping achieve the purposes of the international energy program with respect to international allocation of petroleum products. Ironically, 94-163 allows the President to suspend the application of these requirements, and meetings of these committees have been consistently closed.

In Public Law 94-409, the Government in the Sunshine Act, Congress laid down a special requirement for all advisory committees—or at least all those that have invoked exemption 5 of the Freedom of Information Act, which shields inter- or intra-agency memorandums and letters, to close advisory committee meetings to the public.

The Government in the Sunshine Act amends the Federal Advisory Committee Act, effective in March, to switch the grounds for closing a meeting from the 9 exemptions of the FOIA to the 10 exemptions of the Sunshine Act. The new set of exemptions has nothing comparable to old exemption 5.

Mr. President, no doubt some of the unfinished business of the 94th Congress will be revived in the 95th—for example, S. 3799, to establish an Antitrust Review and Revision Commission, which passed the Senate in September, and H.R. 11743, to establish a National Agricultural Research Policy Advisory Board, which passed the House in July.

The only way that Congress can prevent the statutory proliferation of advisory committees, whether it is considering old proposals or new ones, is to insist that its standing committees follow the guidelines contained in section 5(b) of the Federal Advisory Committee Act. If Congress does not show restraint in the establishment of Federal advisory committees, it can hardly expect the President and agency heads to do so.

I ask unanimous consent that this list of 55 laws of the 94th Congress affecting advisory bodies be printed in the RECORD

There being no objection, the list was ordered to be printed in the RECORD, as follows:

LAWS OF THE 94TH CONGRESS AFFECTING ADVISORY COMMITTEES

Public law, section and provision affecting advisory bodies:

94-25, 9, abolishes Financial Investment Advisory Panel that was set up to advise directors of the National Railroad Passenger Corp.

94-29, 7, directs Securities and Exchange Commission to establish National Market Advisory Board.

94-43, 3, extends life of National Advisory Council on Equality of Educational Opportunity.

94-63,[1] 231, 401, 603, 604, 605, directs Secretary of Health, Education and Welfare to appoint advisory committee to advise him on operation of the National Center for the Prevention and Control of Rape; to appoint and organize a National Advisory Council on Migrant Health; to appoint a Committee on Mental Health and Illness of the Elderly; to establish a temporary Commission for the Control of Epilepsy and Its Consequences; and to establish a temporary Commission for the Control of Huntington's Disease and Its Consequences.

94-69, 1st. Sec. 2, to increase and extend the appropriation authorized for the National Advisory Committee on Oceans and Atmosphere and expand its responsibilities.

94-70, 4, directs United States Commissioners on the International Commission for the Conservation of Atlantic Tunas to appoint an advisory committee.

94-72, 1st. Sec. , extends life of National Commission on Supplies and Shortages.

94-80, 2, authorizes American Indian Policy Review Commission to set annual or daily pay rates for member of its statutory task forces.

94-103,[2] 126, establishes National Advisory Council on Services and Facilities for the Developmentally Disabled.

94-105, 14, directs HEW secretary to convene advisory committee on the health benefits of the special supplemental food program for women, infants and young children, and establishes a National Advisory Council on Maternal, Infant, and Fetal Nutrition.

94-136, 401, authorizes executive director of National Center for Productivity and Quality of Working Life to establish one or more task forces.

94-140, 7, requires administrator of Environmental Protection Agency to submit notices of intent and proposed and final regulations under the Federal Insecticide, Fungicide, and Rodenticide Act to a Scientific Advisory Panel for comment as to the impact on health and the environment of the action proposed in them.

94-152, 3, amends Defense Production Act to authorize President to establish advisory committees with respect to voluntary agreements covering petroleum products, and to authorize administrator of the Federal Energy Administration to establish international petroleum allocation advisory committees.

94-161, 312, directs President to establish a permanent Board for International Food and Agricultural Development.

94-163, 253, authorizes FEA administrator to establish international energy program advisory committees.

Footnotes at end of article.

94-167, 4, directs National Commission on the Observance of International Women's Year, 1975, to establish advisory and technical committees as necessary to assist and advise the National Women's Conference.

94-168, 7, authorizes United States Metric Board to establish an Executive Committee and such other committees as it deems desirable.

94-176, 1st Sec., extends life of National Commission for the Review of Federal and State Laws Relating to Wiretapping and Electronic Surveillance.

94-200, 201, extends life of National Commission on Electronic Fund Transfers.

94-210, 906, establishes Minority Resource Center Advisory Committee relating to maintenance, rehabilitation, restructuring, improvement and revitalization of the Nation's railroads.

94-239, 3/3, directs Federal Reserve System Board of Governors to establish Consumer Advisory Council.

94-241, Art. V, declares President will appoint Commission on Federal Laws to make recommendations to Congress as to which laws of the United States should and should not apply to the Northern Mariana Islands.

94-261, 1st Sec., changes membership and extends life of National Study Commission on Records and Documents of Federal Officials.

94-265, 302, establishes eight Regional Fishery Management Councils and authorizes them to establish advisory panels.

94-278, 103, 301, 1101, renames existing committee the National Heart, Lung, and Blood Advisory Council; directs President's Biomedical Research Panel and the National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research to study implication of the disclosure of research information; and declares that all appointments to advisory committees established to assist in implementing Public Health Service Act, Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963, and the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment, and Rehabilitation Act of 1970, "shall be made without regard to political affiliation."

94-280, 154, 209, establishes National Transportation Policy Study Commission, and changes method of selection of chairman of National Highway Safety Advisory Committee.

94-282, 205, 301, directs National Science Foundation director to establish an Intergovernmental Science, Engineering, and Technology Advisory Panel, and directs President to establish a President's Committee on Science and Technology.

94-284, 19, designates industry sectors from which persons representing manufacturers shall be appointed to Flammable Fabrics Act Advisory Committee.

94-293, 5, provides that if ACTION establishes a National Advisory Council on its own initiative and authority after Jan. 1, 1976, then council will be governed by same requirements as to membership, functions and annual reporting which applied to the statutory council that was terminated Dec. 30, 1975.

94-294, 8, provides for Agriculture secretary to establish and appoint Beef Board of not more than 68 cattle producers, which in turn may appoint an executive committee of from seven to 11 members.

94-295,[4] 513, 514, 515, 520, directs HEW secretary to establish medical devices classification panels, performance standards panels, pre-market review committees, and an advisory committee on good manufacturing practice requirements.

94-304, 1st Sec., establishes Commission on Security and Cooperation in Europe.

94-305, 204, authorizes the Chief Counsel for Advocacy within Small Business Administration to utilize services of existing Na-

tional Advisory Council and to "appoint such other advisory boards or committees as is reasonably appropriate and necessary to carry out the provisions of this title."

94–314, 1st Sec., extends authorization of appropriations for National Commission on New Technological Uses of Copyrighted Works.

94–398, 1st Sec., 2, changes size and composition of Canaveral National Seashore Advisory Commission.

94–409, 5, amends the Federal Advisory Committee Act to change the grounds for closing an advisory committee meeting from the nine exemptions-from-mandatory-public disclosure of the Freedom of Information Act, to the 10 exemptions of the Government in the Sunshine Act.

94–421, 7, establishes Commission on Postal Service, to report to President and to each House of Congress by March 15, 1977.

94–422, 201, converts existing Advisory Council on Historic Preservation into independent agency and exempts it from Federal Advisory Committee Act.

94–444, 13, establishes National Commission on Employment and Unemployment Statistics.

94–458, 9, establishes National Park System Advisory Board to exist until 1990.

94–460, 303, extends by one year reporting date involving recommendations of the Committee on Mental Health and Illness of the Elderly established by Public Law 94–63.

94–461, 209, establishes Sea Grant Review Panel to supersede existing sea grant advisory panel.

94–462, 103, 203, provides that members of the National Council on the Arts and National Council on the Humanities shall be appointed by the President by and with the advice and consent of the Senate, and establishes an Institute of Museum Services consisting of a director and a National Museum Services Board.

94–471, 5, 7, establishes one or more review panels for evaluating applications for an experimental "Science for Citizens Program," and instructs NSF director to "improve the representation of minorities, women, and handicapped individuals on advisory committees, review panels, and all other mechanisms by which the scientific community provides assistance to the Foundation."

94–482, 127, 202, 403, 411, establishes Committee on the Process of Determining Student Loan Special Allowances; continues National Advisory Council on Vocational Education; instructs director of the National Institute of Education to establish a Panel for the Review of Laboratory and Center Operations; and amends General Education Provisions Act to provide that members of presidential advisory councils shall continue to serve—despite any limitation on their terms—until the President appoints other members to fill their positions.

94–484,[2] 5, 202, 407, changes the composition of the National Advisory Council on Health Professions Education, and establishes National Advisory Council on the National Health Service Corps to succeed National Advisory Council on Health Manpower Shortage Areas.

94–487, 204, directs President to establish Advisory Committee to the White House Conference on Balanced National Growth and Economic Development.

94–518, 404, establishes Kalaupapa National Historical Park Advisory Commission.

94–534, 2, declares Commission on Security and Cooperation in Europe established by Public Law 92–304 shall be deemed a standing committee of Congress for purposes of section 502(b) of the Mutual Security Act of 1954.

94–549, 5, changes size and composition of Indiana Dunes National Lakeshore Advisory Commission.

94–562, 103, 201, 301, 302, directs HEW secretary to establish National Arthritis Advisory Board, National Diabetes Advisory Board, National Commission on Digestive Diseases, and Coordinating Committee for Digestive Diseases, whose sole non-Federal member will be the head (or designated representative) of the Institute of Medicine of the National Academy of Sciences.

94–566, 411, establishes National Commission on Unemployment Compensation.

94–573, 17, 18, 19, extends life of National Commission on Arthritis and Related Musculoskeletal Diseases and of National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research; and provides that grants under Sec. 311 of the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment, and Rehabilitation Act of 1970 may be awarded only if recommended for approval by the National Advisory Council on Alcohol Abuse and Alcoholism.

94–579, 309, 403, 601, authorizes Interior secretary to establish advisory councils of persons representative of various major citizens' interests concerning land use planning or management of public lands; directs secretaries of Interior and Agriculture to establish advisory boards upon petition of majority of livestock lessees under jurisdiction of Bureau of Land Management district office or national forest headquarters office; and directs Interior secretary to establish California Desert Conservation Area Advisory Committee.

94–588, 6, 11, 17, directs Agriculture secretary to appoint committee of scientists who are not officers or employees of the Forest Service to provide technical advice and counsel on proposed guidelines for development of forest system land management plans; directs secretary in providing for public participation in planning for and management of national forest system to "establish and consult such advisory boards as he deems necessary to secure full information and advice on the execution of his responsibilities"; and abolishes the National Forest Reservation Commission.

FOOTNOTES

[1] National Advisory Council on Migrant Health exempted by this statute from Federal Advisory Committee Act requirement that committees terminate in two years unless formally renewed.

[2] Exempted by this statute from FACA requirement that committees terminate in two years unless formally renewed.

[3] FACA exempts the Federal Reserve System, the Central Intelligence Agency and the Advisory Commission on Intergovernmental Relations from its coverage.

[4] Panels established pursuant to sections 513 and 520 are exempted by this statute from FACA requirement that committees terminate in two years unless formally renewed.

[5] Conferees expressed intent that "sufficient advisory committees be established" for National Advisory Council on Health Professions Education to assure timely evaluation of grant applications, specifying separate committees to represent (1) medicine and osteopathy, (2) dentistry, and (3) veterinary medicine, optometry, pharmacy, podiatry and public health. Conferees added they "feel strongly that review of grants by experts in the discipline which is the subject of the grant application is necessary if sufficient technical expertise is to be available to insure that each application receives thorough review by qualified persons."

SEABED MINERALS AND THE U.S. ECONOMY

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 10, 1977

Mr. METCALF. Mr. President, the interminable U.N. Law of the Sea Conference ran aground last summer during what was touted as its concluding discussion on the Revised Single Negotiating Text of a treaty. The sandbar which snared these marathon verbosities was the issue of ocean mining.

Clearly, the primary undoing of the conference is the irreconcilable conflict between a small minority of developed nations, led by the United States, which have the technology needed for recovering ferromanganese nodules from the deep seabed, and a large majority of developing nations who lack either the capacity for or the interest in ocean mining.

While it may be too early to predict the demise of the conference—a new round of formal talks is due to begin in May—it is nonetheless apparent that the Carter administration must make a new assessment of the national interest in this case. Congress will soon consider legislation to encourage establishment of an interim regime for the ocean floor under which exploration and recovery of manganese nodules can proceed in an orderly fashion.

As a contribution to the coming debate in the Senate, I submit and request unanimous consent for reprinting in the RECORD, an article appearing in the MTS Journal for June 1976, entitled "Seabed Minerals and the U.S. Economy; A Second Look." The author is Richard C. Raymond, formerly assistant director, ocean policy project, Johns Hopkins School of Advanced International Studies, now with the Office of Technology Assessment.

This paper examines the assumption that the United States has a vital economic interest in rapid development of seabed mineral resources. Six criteria for assessing strategic economic vulnerability to producer action in a given raw material are discussed. These materials criteria are then applied to the U.S. position in the four major minerals found in manganese nodules. Implications for the Law of the Sea Conference are also discussed briefly.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEABED MINERALS AND THE U.S. ECONOMY: A SECOND LOOK

(By Richard C. Raymond)

INTRODUCTION

The debate over seabed mining focuses on one of the most contentious of ocean issues. In the international arena, the impasse over the nature and powers of the International Seabed Resource Authority has stalled the entire Law of the Sea Conference, and do-

mestically, legislation which would promote seabed mining by U.S. firms prior to an international treaty has provoked clashes between those who favor international control of seabed development and those who feel that unilateral action is both just and necessary. Unfortunately, the debate has been clouded, internationally and especially domestically, by a tendency to oversimplify the nature of international trade in raw materials and to exaggerate the perils to the U.S. economy which stem from the American import position in relation to the minerals found in manganese nodules. The purpose of this paper is to briefly review the criteria for assessing strategic economic vulnerability to producer action in the area of any given raw material and to apply those criteria to the U.S. position with regard to the four major nodule minerals.

MATERIALS CRITERIA

The most common oversimplification in the seabed mining debate (which taints broader materials policy discussions as well) is the conclusion that import dependence leads *a priori* to a serious danger to the national economy. The underlying fear is of produced cartels formed by developing countries which export raw materials to the United States and other industrial countries. This fear has been inflamed by the 1973 destination embargo imposed by the Arab members of OPEC, the concomitant fourfold increase in oil prices adopted by OPEC as a whole, and suggestions by a number of writers that a threat exists for other raw materials as well.[1] Proponents of this view have found ample evidence in various United Nations resolutions concerning the "New international Economic Order" (NIEO), which explicitly affirm the right of primary commodity producers to form cartels in order to maximize their revenues.[2] The politics of NIEO rhetoric may prove, however, to be somewhat removed from the economic realities of international commodity markets.

Proper assessment of the U.S. position regarding raw materials must be conducted on a material-by-material basis and should analyze the following criteria:

(1) the importance of the mineral or other material to the national economy;

(2) the percentage of U.S. consumption which is covered by imports;

(3) which countries are our major suppliers;

(4) the availability of substitutes for the given material;

(5) the levels of U.S. government stockpiles, and the distribution of reserves and resources in the U.S. and in the rest of the world; and

(6) the feasibility of cartel action by producer countries.

A brief word or two is in order on each of these six criteria.

Importance to the economy

This is a necessary but difficult criterion to apply. Some minerals are clearly of greater economic significance than others, but the standards for identifying which minerals are important and which are not, have yet to be well developed. Despite the crudeness of such a criterion, a rough assessment of a given material's overall economic importance is necessary—e.g., a shortage of commercial gold would presumably be somewhat less catastrophic than a shortage of iron ore. One common guideline is intensity of use—an objective standard which expresses the ratio of tons of material per unit of national income—usually billion dollars of Gross Domestic Product (GDP). Another guideline is the dollar value of the mineral consumed. These standards fail to identify, however, materials which though limited in volume or dollar value, may be vital to a patricular industry or have a special defense application. Evaluation of a mineral's importance, therefore, should include both quantitative and qualitative standards to arrive at a balanced assessment.

Imports as a percentage of consumption

This is the "early warning" indicator of potential vulnerability. The less a country imports of a given mineral, the more it is insulated from the actions of other actors in the international market for that mineral. The country can remain insulated as long as its reserve position remains strong and domestic production covers a high percentage of consumption.

Major suppliers

Even if a country is dependent upon imports for a large proportion of its consumption of a critical raw material, it does not follow that economic Armageddon is imminent. It is naive, as well as unfair, to assume that all foreign countries are unreliable sources of supply. A number of developed countries are important sources of U.S. mineral imports, and even the broad label of "Third World" encompasses a number of countries who have proven to be extremely reliable trading partners. This is not to say that there are not countries in the world which, for political or short-term economic reasons, might wish to influence supply. Suppliers of raw materials to the U.S. however, should be evaluated on an individual basis rather than on blanket assumptions.

Substitutes

Another criterion is the availability of substitutes for the material or materials in question. A number of minerals are not unique to the applications in which they are used, and can be replaced by other minerals (e.g., vanadium for columbium in various alloying uses, or aluminum for copper in certain electrical applications). Assessment of vulnerability in a given material, therefore, requires examination of substitutes for the material for its various applications, including an analysis of the substitute's monetary or technical performance cost. The last area, the question of the disruption which would be caused by switching to substitutes, is one in which a great deal of research needs to be done. For our present purposes, the best we can do is to provide an indication as to whether substitutes exist for a mineral in its major application and give a rough idea as to the effect of such substitutes on cost and performance.

Stockpiles, reserves and resources

A fifth criterion to consider is a country's domestic stock of a given mineral, i.e., its stockpiles, reserves and resources. The U.S. government stockpiles a number of minerals to provide a cushion in the event of national emergencies or unexpected shortages. A reserve is a positively identified deposit of a particular mineral which is exploitable using current technology and under current economic conditions. A resource is a deposit which would be exploitable with improvements in extraction or processing technology or with a change in market conditions. Releases from stockpiles provide the most rapid response to a shortage, with additional development of reserves, substitutes, and resource development requiring longer lead times. A country may currently be self-sufficient in a given mineral, but if it has limited reserves and resources it may be forced to increase imports in the future. (For a long-term analysis, reserve and resource distribution for the rest of the world should also be considered, since that distribution has obvious implications for future patterns of supply.)

Feasibility of cartel action

Even if a country is dependent upon imports for a large proportion of its consumption of a particular material, those imports come from suppliers of doubtful reliability, and there are no reasonable substitutes for the material, it still does not follow automatically that an effective producer cartel will be formed which can apply great economic pressure to the consuming country. There are four major conditions which a cartel must meet if it is to exercise sustained influence over international trade for a given material:

The concentration of exports among a few countries;

Inelastic demand for the material;

Inelastic supply of the material (or of close substitutes) from sources outside the cartel; and

Policy cohesion and export discipline among members to keep supply limited enough to maintain high prices (or, possibly, to achieve other goals as well). As Fried (1976) has pointed out, to meet this last condition, members of the cartel must be strong enough financially to accumulate stocks and forego current export earnings when surpluses develop.[4]

These are stringent conditions, which very few international materials markets meet. One should note that a number of producer associations have been formed in recent years (e.g., in copper, tin, mercury, and others) but, with the exception of oil (and, to a lesser extent, bauxite) producers have been unable to maintain artificially high prices.

THE NODULE MINERALS

Manganese nodules contain a number of minerals, but the four of commercial interest are nickel, copper, cobalt and manganese. From the standpoint of the national economy, the degree of urgency of seabed mining depends on the U.S. position in these four minerals. In this section the materials criteria described above are applied to nickel, copper, cobalt and manganese in order to evaluate current U.S. vulnerability in minerals which might be obtained from seabed mining.

Cobalt

(1) *Importance to the economy.* The U.S. economy does not use cobalt in great quantities—the 1974 intensity of use figure for cobalt was 6.77 short tons per billion dollars of GDP.[5] However, cobalt is of strategic and commercial importance. Its major applications are in high temperature alloys, permanent magnets and tool steels, with more limited applications as a pigment in paints and, in radioactive (Co^{60}) form, in medical uses.

(2) *Percentage of consumption imported.* Imports net of exports declined from 60 percent of reported consumption in 1974 to 15 percent in 1975, according to 1974 data and 1975 estimates from the Bureau of Mines.[6] Sales from government stockpiles, however, were a large factor, and as excess stocks are drawn down, imports can be expected to increase to more traditional levels.

(3) *Major suppliers.* The major supplier of cobalt to the United States is Zaire. From 1971–74, Zaire supplied 76 percent of U.S. cobalt imports, either directly (47 percent) or through Belgium-Luxembourg (29 percent).[7]

(4) *Substitutes.* Nickel may be substituted for cobalt (and vice versa), depending upon the economics of the particular application. Potential substitutes (involving higher costs and/or altered technical performance) include nickel, platinum and iron in magnets; nickel in jet engines and catalysts; and copper, chromium and manganese in paints.[8]

(5) *Stockpiles, reserves and resources.*[9] The total U.S. stockpile inventory of cobalt stood at 23,448 short tons as of November 30, 1975. U.S. reserves are virtually non-existent. Identified resources in the U.S. are more than 840,000 tons, located mainly in the Midwest and Far West. World reserves are 2,700,000 short tons, located chiefly in Zaire, New Cale-

Footnotes at end of article.

donia and Australia, Zambia and Canada. World identified resources of cobalt are nearly 5,000,000 tons, mainly in tropical regions.[10]

(6) *Feasibility of cartel action.* In light of the above criteria, there is some short term possibility for producer influence over the cobalt market. Zaire, with about 60 percent of world production, is in a position to restrict supply in the short term.[11] Recent transport problems with the Benguela railroad (the traditional route of Zaire's cobalt export shipments) caused world cobalt shortages in the spring of 1976, demonstrating the short-term impact Zaire might have if it restricted supplies. However, in the long run, producer action would probably be ineffective. Most cobalt on the world market is a byproduct of mining sulfide ores of associated metals (especially copper, nickel and iron) which are found in abundance throughout the world. Furthermore, the existence of substitutes for cobalt, especially nickel, would limit the impact of cartel action.

Copper

(1) *Importance to the economy.* Copper is a major raw material of great commercial importance. The 1974 intensity of use figure for copper was 1,560 short tons per billion dollars GDP.[12] Over 50 percent of copper consumed in the United States goes to electrical applications, with other uses in construction, industrial machinery, transportation and ordnance.

(2) *Percentage of consumption imported.* Net imports of unmanufactured and refined copper as a percentage of consumption of refined material declined from 27.3 percent in 1974 to a net *export* position of 3.7 percent in 1975, according to 1974 data and 1975 estimates from the Bureau of Mines.[13] Copper has been an extremely volatile commodity in the past two years (consumption in the United States declined 32 percent from 1974 to 1975); thus it is probably unrealistic to expect the U.S. to remain a net exporter of copper. In the 1970–73 period, net imports as a percentage of consumption averaged 15 percent; [14] this figure seems more reliable for present purposes. In addition, it is interesting to note that the United States is by far the world's largest copper producer.

(3) *Major suppliers.* Canada, Peru and Chile are the major suppliers of United States copper imports. From 1971–74, Canada supplied 33 percent of United States imports, Peru 22 percent, and Chile 17 percent.[15]

(4) *Substitutes.* A number of substitutes exist for copper, depending upon application. Aluminum can be substituted in certain electrical applications, steel can be used in shell cases, and plastics can be substituted for copper in plumbing.[16]

(5) *Stockpiles, reserves and resources.*[17] The national stockpile objective for copper is zero, and the total inventory is 489 tons of refined copper. The United States has 90 million short tons of copper reserves, located primarily in the Southwest and West Central states. In addition, the U.S. has some 320 million short tons of copper in identified and unidentified resources, according to Bureau of Mines estimates. World reserves are 450 million short tons of copper, with the United States, Chile, Canada and the Soviet Union (in that order) being the major holders of copper reserves. World hypothetical resources are estimated to amount to a further 480 million short tons, generally located near known deposits.

(6) *Feasibility of cartel action.* Developing country copper producers have formed CIPEC (Counseil Intergouvernemental de Pays Exportateurs de Cuivre), a producer organization aimed at promoting the economic interests of member states through action in the copper market. To date, however, CIPEC has been unsuccessful in its primary goal of a high stable price for copper. Although the average London Metal Exchange (LME) price for copper rose from 48.5 cents per pound in 1972 to 93.1 cents per pound in 1974, the LME price dropped some 40 percent to an average of 56.3 cents in 1975.[18] The prospects for effective CIPEC action are likely to remain quite limited. Copper is of major importance to the U.S. economy, but the United States does not import a large share of its copper. Of the copper that it does import, the U.S. receives a substantial share from a major ally (Canada). Substitutes exist for copper in some of its major applications, and the United States has the world's largest reserves and considerable resources as well.

Manganese

(1) *Importance to the economy.* Manganese is of vital commercial and strategic importance, for it is essential to the manufacture of steel. The intensity of use of manganese in 1974 was 800.7 short tons (of ferromanganese, the semi-processed form) per billion dollars of GDP.[19] In steel production, manganese is used as: (a) a scavenger in molten steel, combining with sulfur and oxygen (which make steel brittle) and removing them as part of the slag; and (b) an alloy, making steel resistant to shock or abrasion.[20] For every ton of steel produced, 13 to 20 pounds of manganese are consumed. Although 90 percent of U.S. manganese consumption goes to steel, manganese also has applications in the chemical industry and, in dioxide form, in dry batteries.

(2) *Percentage of consumption imported.* In 1975, net imports of manganese ore and ferromanganese amounted to 93.1 percent of U.S. consumption of these materials. There was no mine production of manganese in the United States in 1975; the remaining share of consumption came from shipments from government stockpile excesses.[21]

(3) *Major suppliers.* From 1971–74, U.S. imports of manganese ore came primarily from Brazil (35 percent), Gabon (31 percent), Australia (9 percent) and South Africa (8 percent). Imports of ferromanganese came mainly from France (39 percent), South Africa (36 percent), and India (8 percent).

(4) *Substitutes.* There are no substitutes for manganese in its major applications.

(5) *Stockpiles, reserves and resources.*[22] As of November 30, 1975, government stockpiles contained a total inventory of 3,608 thousand short tons of manganese ore and 629 thousand tons of ferromanganese. The United States has no reserves of manganese ore. The U.S. has some resources, but they can be expected to be available only at higher prices or with reserves are 6 billion short tons of ore, or 2,012 million short tons of contained manganese.[24] Major reserve countries are South Africa, Gabon, Brazil and Australia. Accurate resource figures are difficult to obtain—known land-based resources of manganese are very large and irregularly distributed throughout the world—and reserves alone are considered adequate to meet the expected growth in world demand for manganese through the year 2000.

(6) *Feasibility of cartel action.* The vulnerability of the United States to cartel action in manganese requires particularly careful assessment. On the negative side, the U.S. is almost wholly dependent on imports for manganese supplies, there are no reserves in the U.S. and manganese has no substitutes in its major applications. On the positive side, however, Brazil has proven to be a reliable trading partner, and effective cartel action in manganese would require South African participation, which seems politically unlikely.[25] Furthermore, Australia has the world's second largest reserves (after South Africa) and seems unlikely to be a future cartel participant. On balance, therefore, the United States should continue to have access to manganese supplies at market prices.

Nickel

(1) *Importance to the economy.* Nickel is vital to the economic welfare and security of the United States. In 1974, the nickel intensity of use was 149.67 short tons of metal per billion dollars of GDP.[26] Nickel is used most extensively as an alloy stainless and other steel alloys account for some 46 percent of nickel consumption, and alloys with other metals account for another 34 percent. Electroplating is the other major nickel application, accounting for 12 percent of consumption.[27]

(2) *Percentage of consumption imported.* Preliminary figures for 1975 indicate that imports of nickel accounted for 83.7 percent of total U.S. nickel consumption.[28] This figure is roughly equivalent to figures for the past three years, and since no exogenous factors (such as government stockpile sales) are involved in the U.S. nickel market, the 80 percent range for import dependence can be viewed as reliable.

(3) *Major suppliers.* Canada is the dominant supplier of nickel to the United States. From 1971–74, the U.S. obtained 76 percent of its nickel imports from Canada, either directly (68 percent) or via processing in Norway (8 percent). New Caledonia and the Dominican Republic supplied small amounts (6 percent and 5 percent, respectively).[29]

(4) *Substitutes.* A number of potential substitutes exist for nickel in its major applications, but most involve increased cost of altered technical performance. "Potential nickel substitutes include aluminum, coated steel and plastics in the construction and transportation industries; nickel-free steels in power, petrochemical and petroleum industries; titanium and plastics in severe corrosion service applications; cobalt as an underplate for chromium in decorative plating; platinum, cobalt and copper in some catalytic uses." [30]

(5) *Stockpiles, reserves and resources.*[31] Nickel is not currently a government stockpile item. The United States has 200,000 short ton (metal content) of nickel reserves. U.S. resources are 14 million tons of nickel in low grade (0.2 percent nickel) sulfide deposits. World reserves currently total 59.5 million short tons located primarily in New Caledonia (26 million), Canada (9.6 million), and Australia (5.5 million). World resources averaging 1 percent nickel are estimated to total 70 million tons of metal.

(6) *Feasibility of cartel action.* The United States imports an overwhelming proportion of its nickel needs and does not have a very strong reserve position. Yet the feasibility of cartel action must be rated as low, since the overwhelming source of these imports is Canada, a major ally and trading partner. The Canadian oil/natural gas cutbacks, and the Saskatchewan potash situation have clouded the image of Canadian reliability. Yet, security of supply from Canada is best viewed in the light of the adequacy of the Canadian reserve and resource position for anticipated Canadian demand. As Canadian nickel supply seems more than adequate, the likelihood of Canada's limiting nickel exports to the U.S. is quite low. The availability of substitutes (although at some economic cost) and the possibility of additional production from diverse sources should further increase the likelihood that market conditions will prevail in nickel.

SUMMARY AND CONCLUSIONS

The table below summarizes the application of materials vulnerability criteria to the U.S. position in the nodule minerals.

From these figures stem the following conclusions:

Footnotes at end of article.

Cobalt

Although not used in great quantities in the U.S. economy, cobalt is an important mineral, and the United States is dependent upon imports for a significant proportion of its consumption. The U.S receives a majority of its imports from a single country and has no reserves of its own. Yet the national stockpile contains enough cobalt for 2.5 years of consumption at the 1974 level (4.3 years at the 1973 level) and substitutes for cobalt exist. It would appear that there is some possibility of cartel action, but only in the short term, and even then with only a limited impact on the U.S.

Copper

Copper has the largest intensity of use of the four nodule minerals and is a strategic raw material. The U.S. receives a significant proportion of its imports from CIPEC countries and has negligible amounts of copper in the national stockpile. But imports account for only 15 percent of consumption, substitutes exist, and the U.S. has the world's largest copper reserves. Effective cartel action thus appears infeasible.

Manganese

Manganese is widely used in steel production and has no substitutes. It must therefore be considered a strategic mineral. The United States imports upwards of 90 percent of its manganese consumption and has no reserves. Yet major suppliers to the U.S. have proven to be reliable, and the national stockpile contains 1.9 years worth of manganese ore and 8.4 months of ferromanganese (1975 levels of consumption). The U.S. does not appear to be in a vulnerable position in manganese.

Nickel

Although it has a lower intensity of use than copper or manganese, nickel is nevertheless a major industrial raw material. The United States imports most of its nickel and has limited reserves and no stockpile, but its major source of supply is secure and substitutes for nickel exist. Nickel does not appear to be a problem mineral for the U.S. economy.

It can be seen that, of the four major nodule minerals, effective producer pressure is plausible only in cobalt. For reasons outlined above, even that amount of pressure would only cause minimal disruption. Otherwise, the existence of diverse producers, the elasticities of demand for and supply of the four minerals, and the implausibility of export discipline and policy cohesion among producers argue strongly against the possibility of sustained influence over the international market in any of the major minerals found in manganese nodules.

TABLE 1.—U.S. VULNERABILITY IN THE MAJOR NODULE MINERALS

	Cobalt	Copper	Manganese	Nickel
1. Importance to economy:				
(a) Intensity of use, 1974 (short tons per $1,000,000,000 GDP)	7	1,560	801	150.
(b) Commercial or strategic importance (yes or no)	Yes	Yes	Yes	Yes.
2. Percentage of 1975 consumption imported	61 percent[1]	15 percent[2]	93 percent	84 percent.
3. Major suppliers (large, some, or no problem)	Some	Some	No	No.
4. Substitutes (yes, with higher cost, no)	With higher cost	Yes	No	With higher cost.
5. Domestic stock (thousand short tons):				
(a) U.S. reserves/resources	0/840	90,000/320,000	0/minimal	200/14,000.
(b) U.S. stockpile	23.5	Negligible	3,608 manganese ore, 659 ferromanganese	None.
6. Feasibility of cartel action	Short term	No	No	No.

[1] The 1974 figure, for reasons described elsewhere.

[2] 1970–73 average, for reasons explained elsewhere.

The implications for seabed mining are clear: the United States has no immediate strategic economic interest in mining the deep seabed. Our trade with land-based producers of cobalt, copper, manganese and nickel has proved largely satisfactory in recent years, and is likely to so remain. In an era of increasing economic nationalism, it is perhaps useful to recall that the gains from international trade remain very real indeed.

This is not to say that the U.S. should ignore seabed mining. On the contrary, seabed production can provide a further diversification of source and limit the price increases in nodule minerals which, although market-induced, have been substantial over the past four years.[32] These are not inconsiderable benefits, and should be weighed accordingly. Industry, Congressional, and Administration officials, however, who speak of the urgent U.S. need for rapid development of seabed resources are overstating the case. Whereas some exaggeration is an inevitable and understandable negotiating tactic in the Law of the Sea Conference, the intensity of recent statements threatens to obscure the true nature of the interests involved. It has been suggested that the debate in Committee One at the LOS Conference (discussing the regime for the deep seabed) is more symbolic than substantive.[33] In this view, the real concern is whether developing countries will have the major role in the future management of seabed resources. This role would be without precedent in the history of global resource development, and would have considerable implications for the New International Economic Order. If this is the case, then the debate should be handled directly in terms of these symbolic issues rather than obscured by reference to immediate economic interests which, upon close inspection, prove to be less than urgent. Such obfuscation can only harm the prospects for peaceful and orderly development of seabed resources, other U.S. ocean interests and this country's long term economic interests in the increasingly interdependent world market in raw materials.

MEYNER OPPOSES BACK-DOOR PAY INCREASE

HON. HELEN S. MEYNER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1977

Mrs. MEYNER. Mr. Speaker, since becoming a Member of Congress, I have consistently opposed any increase in our salaries. Twice in the last 2 years, we were asked to vote on whether to accept cost-of-living increases; twice, I voted no. Now before us is the issue of whether to give ourselves the 28.9 percent increase recommended by President Ford's Pay Commission. Once again, I would vote no.

During the past 2 years, economic conditions in the Nation, the State of New Jersey, and my congressional district were such that, expecting others to exercise prudence and to deny themselves, I thought we should not ask for more. Even a few percentage points more.

Mr. Speaker, can any of us sincerely claim that economic conditions on this day in February 1977 are any better? On the contrary. The hardships of this bitterly cold winter have underscored in graphic terms our problems with unemployment and inflation. People in my district cannot even afford to pay their heating bills. Can I ask them to pay me $12,900 more? When people of modest means across the whole Nation are in trouble, can we, in good conscience, talk of a 28.9 percent pay raise?

Yes, once again, I would vote no on any pay raise proposal. The irony is that procedural devices have been called upon to spare us our convictions, and we would not vote at all. Many of us ran tough election races last fall, and daily we were called upon to speak our minds, to tell people where we stand. I just cannot imagine that we would now skittishly shy way from a straight "up-or-down" vote on this pay raise.

Mr. Speaker, I am sorry that the issue has come to this. As keepers of the Nation's purse, we in Congress have a duty to set an example of openness and prudence in spending. And given the way this pay raise proposal has been handled, I do not think we have set that example.

SENATE—*Friday, February 11, 1977*

(Legislative day of Tuesday, February 1, 1977)

The Senate met at 1 p.m., on the expiration of the recess, and was called to order by the Deputy President pro tempore (Mr. HUMPHREY).

The DEPUTY PRESIDENT pro tempore. Today the prayer will be offered by the Reverend JOHN C. DANFORTH, the junior Senator from Missouri.

PRAYER

The Reverend JOHN C. DANFORTH, a Senator from the State of Missouri, offered the following prayer:

Ever creating and redeeming God, You have never left us to our own devices, but have visited us each day with Your Holy Spirit. We have turned to You in prayer and obedience, and You have heard us and assured us of Your love. We have turned from You in forgetfulness and vanity, and You have pursued us and brought us back to do Your will. You have fashioned us with Your hand, and You have never lost Your grip on us. We have struggled. You have never let us go. Now strengthen our sense of Your constant care and presence, teach us of Your abiding providence. Grant that we may willingly be Your servants, gladly receive Your presence, humbly accept our many blessings, and freely do Your will, so that by Your grace and through our lives and actions Your kingdom, established in heaven, may be advanced here on Earth. Amen.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of yesterday, February 10, 1977, be approved.

The DEPUTY PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all committees may be authorized to meet during the session of the Senate today.

The DEPUTY PRESIDENT pro tempore. The Chair hearing no objection, it is so ordered.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider two nominations on the executive calendar.

The DEPUTY PRESIDENT pro tempore. Without objection, it is so ordered. The clerk will state the nominations.

DEPARTMENT OF DEFENSE

The second assistant legislative clerk read the nomination of W. Graham Claytor, of the District of Columbia, to be Secretary of the Navy.

Mr. BAKER. Mr. President, reserving the right to object, and I will not object, I only wish to say briefly that I think this is an extraordinarily good appointment. I commend President Carter for making it, and I look forward to great service from this man. There is certainly no objection from this side.

The DEPUTY PRESIDENT pro tempore. Without objection, the nomination is confirmed.

The second assistant legislative clerk read the nomination of Clifford L. Alexander, Jr., of the District of Columbia, to be Secretary of the Army.

Mr. KENNEDY. Mr. President, I simply want to add my voice in strong support of the nomination of Clifford L. Alexander, Jr., to be Secretary of the Army.

As a Senator, I have had the privilege to know Mr. Alexander as an able and concerned public servant, a highly intelligent lawyer, and a thoughtful and involved citizen.

I can think of few individuals who add as much to the new administration as Cliff Alexander. I have no doubt that the approval of the Senate Armed Services Committee and the confirmation of his appointment by the Senate will be amply justified by his record as Secretary of the Army.

The DEPUTY PRESIDENT pro tempore. Without objection, the nomination is confirmed.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The DEPUTY PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to legislative session.

The DEPUTY PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, for the time being I reserve the remainder of my time under the standing order.

The DEPUTY PRESIDENT pro tempore. Does the Senator from Tennessee seek recognition?

Mr. BAKER. Mr. President, I thank the Chair. I have two brief matters I would like to bring to the attention of the Senate as we commence this legislative day.

SENATOR JOHN C. DANFORTH

Mr. BAKER. First, I wish to commend our colleague the distinguished junior Senator from Missouri for many things, including his eloquent and inspirational prayer this morning. I am sure all of us are aware that Senator DANFORTH has many talents. He has much qualification and great competence in many fields, but some may not know that in addition to being a distinguished lawyer and having served as attorney general of his State, he is also an ordained Episcopal minister.

I have known JACK DANFORTH for a long time, and I have never had greater admiration for him than I do today.

THE PENDING NOMINATION OF PAUL WARNKE

Mr. BAKER. Mr. President, it is my hope that the President's nomination of Mr. Warnke will be examined carefully by the Senate. The Committee on Foreign Relations has concluded its hearings, I understand, and I am also informed that in some manner the Armed Services Committee of the Senate intends to conduct further hearings or further inquiry into that nomination and the controversy which has increasingly grown around it.

I am not now rising to state my position with respect to the nominations of Mr. Warnke to the two jobs to which he has been nominated by the President, but rather to say that I observe a growing concern and to urge that the Senate and the Armed Services Committee, in particular, give careful attention to the nomination, and that we not proceed hastily to its confirmation.

Mr. President, I reserve the remainder of my time under the standing order.

ORDER FOR JOINT REFERRAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent—and this has been cleared all around—that S. 570 be referred jointly to the Committees on Small Business, Agriculture, Nutrition, and Forestry, and Environment and Public Works.

The DEPUTY PRESIDENT pro tempore. Is there objection?

Mr. BAKER. Mr. President, there is no objection on our side.

The DEPUTY PRESIDENT pro tempore. Without objection, it is so ordered.

THE 27TH ANNUAL REPORT OF THE COMMITTEE ON SMALL BUSINESS

Mr. ROBERT C. BYRD. Mr. President, on behalf of the Senator from Wisconsin (Mr. NELSON), I ask unanimous consent that the Committee on Small Business may submit to the Senate during the February nonlegislative period its 27th annual report, covering the committee's activities during 1976.

I understand that this has been cleared with the minority.

The DEPUTY PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, how much time do I have remaining of my allotment under the standing order?

The DEPUTY PRESIDENT pro tempore. The Senator, I am informed, has 5 minutes.

Mr. ROBERT C. BYRD. I yield my 5 minutes to the distinguished Senator from Kentucky (Mr. FORD).

Mr. FORD. I appreciate that, Mr. President, and will try to complete my remarks during that 5-minute period.

REPERCUSSIONS OF THE NATURAL GAS SHORTAGES

Mr. FORD. Mr. President, like every other Member of this body I am concerned and troubled about the still-to-be-measured repercussions of the severe natural gas shortages this winter on the people of our land.

This much already is certain.

Millions of workers have been laid off their jobs.

Factories and schools are closed all across the Southeast and Midwest, and some may be unable to reopen until April.

Early estimates are that the full impact of the severe weather and ensuing gas shortages on our economy could be as great as $10 billion in extra fuel bills, lost wages, and decreased production.

The toll indeed is a heavy one, and last week as the Congress worked to enact emergency legislation to cope with the immediate problems, many different opinions were aired as to why and how our country had managed to find itself in such a precarious and dangerous position.

Congress was accused, and in some instances rightfully so, of failing to heed the warning signs of years ago that natural gas supplies were not keeping pace with increasing demand. The inability of this body to come forth with a comprehensive and long-range energy policy is a matter of record, and no further delays in developing and enacting such a policy can be tolerated.

Charges and countercharges involving the natural gas industry have been hurled, one side accusing the industry of contriving these shortages through the withholding of supplies, the industry vigorously denying such charges.

I do not pretend to have the answers to these questions, but I hope that the investigations now underway will ascertain once and for all the true extent of our natural gas reserves, as well as expected production capacities in the years ahead, so that we can take whatever steps necessary to protect the American people from experiencing such a crisis again.

As we probe into the real cause of our predicament, no stone can be left unturned, and that most certainly must include an examination of the roles of Federal agencies, both administrative and regulatory, in relation to the shortages of natural gas which now are said to exist.

Quite frankly, I have been astounded to discover that more than two dozen applications to sell or transport interstate natural gas have been pending before the Federal Power Commission for more than a year. Collectively, these applications involve the potential distribution of untold billions of cubic feet of natural gas for eventual public consumption.

Some of these applications were initially filed as long ago as 1974, including one by Ashland Oil of Kentucky. Ashland along with several other companies, is seeking a certificate of public convenience and necessity to market the natural gas reserves in three blocks of the South Marsh Island off the coast of Louisiana. The estimated proable reserves of these 11,150 acres is 1.2 trillion cubic feet. The gas to be developed from these reserves would be sold to the Truckline, Southern, and United Interstate Pipeline Cos. These pipelines serve some of our hardest hit areas.

Let me summarize the chronological steps of this one company's involvement.

The Federal Power Commission held hearings on the Ashland application from May 19, 1975, through June 19, 1975. On November 25, 1975, the presiding administrative law judge at the hearing recommended that a certificate of public convenience and necessity be granted immediately so that Ashland could begin production.

On June 11, 1976, company officials were advised by the FPC that a decision "will be forthcoming in the near future."

Mr. President, that decision still has not been handed down. Fifteen Months.

It has been suggested that one of the reasons final action has been so long in coming is because Congress did not act on President Ford's nomination for the fifth Commissioner. Thus, leaving a hypothetical 2–2 philosophical split on the Commission.

But in light of the emergency situation, long ago predicted and since become reality, those arguments garner no sympathy from me.

The Federal Power Commission's handling of this application raises many questions in my mind—questions to which I am determined to find answers.

Today, I am recommending that the Senate Committee on Energy and Natural Resources immediately initiate oversight hearings on the procedures the Federal Power Commission has established in the handling and processing of applications to transmit or sell natural gas.

Some of the questions that demand to be pursued include:

What are the agency's priorities in determining the timetable for the processing of the many applications which come before it?

How many other natural gas applications are now pending in limbo before the Commission, and for what reasons or purpose has final action been delayed?

Is either the public or industry best served when it takes more than 2 years to process and render a determination on these applications which are required by law?

Was the Commission aware that shortages of natural gas have been predicted since as far back as 1969?

Or did the Commission truly not begin to get worried until November of last year about the possibility of severe natural gas shortages as the Chairman of the Commission admitted in the February 2, 1977, Washington Post?

I am both puzzled and troubled by the inferences which can be made from these questions, and now is the time for the record to be set straight.

If the Commission can demonstrate that inadequacies in existing law have impaired its ability to execute its duties and responsibilities in a timely manner, then our committee should work to determine and enact the appropriate legislative remedies.

But if it is determined that the Commission is guilty of sheer indifference or the simple inability to carry out its functions in accord with the public interest, then we should be prepared to recommend to the President that he re-

quest the resignation of the Commission members.

Let the record show that I clearly recognize the procedures which this regulatory body must follow are indeed time consuming and complex. Yet at the same time millions of Americans are now suffering the extreme and very real hardships of a natural gas crisis.

Every aspect of the events leading to this crisis must be examined in depth, and if Government has been an accessory, then we owe it to ourselves and the people we represent to take whatever action necessary to insure that the problems of this winter cannot and do not occur again.

I thank the Chair.

[Disturbance in the visitors galleries.]

The DEPUTY PRESIDENT pro tempore. There will be no demonstration in the galleries. I can well understand how the Senator's remarks are appreciated.

APPOINTMENTS BY THE VICE PRESIDENT

The DEPUTY PRESIDENT pro tempore. The Chair, on behalf of the Vice President, pursuant to the order of the Senate of January 24, 1901, as modified February 4, 1977, appoints the Senator from California (Mr. HAYAKAWA) to read Washington's Farewell Address on Monday, February 21, 1977.

The Chair, on behalf of the Vice President, in accordance with Senate Resolution 281, 90th Congress, as amended and supplemented, appoints the Senator from Vermont (Mr. LEAHY) and the Senator from Nebraska (Mr. ZORINSKY) to the Select Committee on Nutrition and Human Needs.

The Chair, on behalf of the Vice President, in accordance with Public Law 79–585, appoints the Senator from Washington (Mr. JACKSON) as vice chairman of the Joint Committee on Atomic Energy.

The Chair, on behalf of the Vice President, in accordance with Senate Resolution 4, 95th Congress, appoints the following Senators to the Select Committee on Indian Affairs: the Senator from South Dakota (Mr. ABOUREZK), chairman; the Senator from Ohio (Mr. METZENBAUM); and the Senator from Montana (Mr. MELCHER).

The Chair, on behalf of the President pro tempore, in accordance with provisions of Senate Resolution 400, 94th Congress, and Senate Resolution 4, 95th Congress, appoints the Senator from New York (Mr. MOYNIHAN) as an at-large member of the Select Committee on Intelligence, for a term expiring at the end of the 97th Congress.

UNANIMOUS-CONSENT REQUEST

The DEPUTY PRESIDENT pro tempore. The Senator from West Virginia is recognized.

Mr. ROBERT C. BYRD. Mr. President, I am about to submit a resolution which sets forth a number of Senators to be appointed to the standing committees of the Senate.

I ask unanimous consent that no nongermane amendment be in order during the consideration of the resolution or the reconsideration thereof.

The DEPUTY PRESIDENT pro tempore. Is there objection?

Mr. ALLEN. Reserving the right to object, and it is not my purpose to object, on yesterday the Senator from Alabama had 15 minutes set aside during which he might address the Senate. He was not able to use that time because of conflict with the work of the Democratic Conference. I would like to ask unanimous consent that I have that 15 minutes at this time, in which I might state further the basis for my reservation of my objection.

Mr. ROBERT C. BYRD. Mr. President, I have no objection.

I wonder if the Senator would yield to the Senator from Montana.

The DEPUTY PRESIDENT pro tempore. Will the Senator from West Virginia clarify that? Is there an objection to the request of the Senator from Alabama?

Mr. ROBERT C. BYRD. No, no objection.

Mr. METCALF. Mr. President, I do not propose to object to the request. I would be delighted to hear the Senator from Alabama and take up the problem I want afterward.

Mr. ALLEN. I am delighted to yield to the Senator.

The DEPUTY PRESIDENT pro tempore. The Senator from Montana is recognized.

ELECTION OF COMMITTEE CHAIRMEN AND MEMBERS

Mr. METCALF. Mr. President, when these resolutions have been brought forth under rule XXIV, it has been my practice to propound some parliamentary inquiries.

In the first place, it has been my position that one of the best and one of the most democratic rules that we have is the fact that the entire Senate elects the chairmen of committees by a majority vote, and the entire Senate elects members of committees by pluralities. For that purpose, may I propound a parliamentary inquiry?

The DEPUTY PRESIDENT pro tempore. The Senator will state it.

Mr. METCALF. Are these resolutions which are being brought up open to amendment for changes in chairmen or changes in membership to committees?

The DEPUTY PRESIDENT pro tempore. The resolutions, as presented, are amendable, subject to change if so desired.

Mr. METCALF. As I understand it, any Member of the Senate can offer as an amendment a suggestion for another Member of the Senate—or himself, if he wishes—to be on any committee, as an amendment to such resolution?

The DEPUTY PRESIDENT pro tempore. The Senator is correct.

Mr. METCALF. As I understand it, any Member of the Senate, despite what has happened in the conferences or caucuses, can bring up and move or suggest an amendment that anybody be chairman of a committee.

The DEPUTY PRESIDENT pro tempore. The Senator is correct. The caucus is but a recommendation.

Mr. METCALF. I appreciate that.

Mr. ALLEN. Will the Senator yield?

Mr. METCALF. The Senator yielded to me, but I yield back.

Mr. ALLEN. The Senator is making the point, then, that the Senate itself elects the chairmen and not the respective caucuses, is that right?

Mr. METCALF. Yes. The point I am making is that we have the most democratic rule that I can imagine, that the Senate, when it organizes every Congress, the Senate itself, elects the chairmen, and the newest representative on the minority side, if he can get the votes, could be a chairman, I believe. The Senate also, by a plurality vote, elects members to the committee.

Mr. ALLEN. So the Senate is the final arbiter of who shall be the chairmen and who shall make up the committees.

Mr. METCALF. I ask the Presiding Officer if that is correct.

The DEPUTY PRESIDENT pro tempore. To the question as posed, the answer is in the affirmative. The Senate is the ultimate arbiter as to members of committees. The recommendations are brought in by the majority and the minority leaders. The Senate works its will.

Mr. METCALF. I am delighted that the new Presiding Officer has made such an erudite judgment, a Portia come to life.

The DEPUTY PRESIDENT pro tempore. This is a recycled Presiding Officer.

Mr. ALLEN. Mr. President, I ask unanimous consent that the time used by the Senator from Montana not be charged against my 15 minutes.

The DEPUTY PRESIDENT pro tempore. Without objection, the Senator from Alabama is recognized for 15 minutes.

THE PROPOSED PAY RAISE

Mr. ALLEN. Mr. President, I, along with some 12 other Members of the Senate, have tried very hard indeed to bring to a vote of the Senate the matter of the pay raise proposed, first, by the President's Pay Commission, and then by President Ford. We have not been able to get the issue to a vote. First, Mr. President, Senate Resolution No. 39 was introduced. I ask unanimous consent that at this time, a copy of Senate Resolution 39 be printed in the RECORD.

There being no objection, the Senate resolution was ordered to be printed in the RECORD, as follows:

S. RES. 39

Resolved, That the Senate disapproves all of the recommendations of the President with respect to rates of pay which were transmitted to the Congress pursuant to section 225(h) of the Federal Salary Act of 1967 on January 17, 1977.

Mr. ALLEN. One way of getting quick action on a resolution is to ask unanimous consent for its immediate consideration at the time of introduction. If objection is made, it goes on a portion of the printed calendar and is brought over under the rule, so that on the next legislative day, the Senate, after the

completion of the morning business and in the morning hour, consisting of 2 hours, does have a right to consider matters brought over under the rule. But it takes an adjournment of the Senate to create a morning hour. We did not have any adjournment of the Senate for a period of some 2 weeks. Inasmuch as we were unable to get action on that resolution, another resolution, Senate Resolution No. 50, was introduced by the same cosponsors.

I ask unanimous consent to have it printed at this point in the RECORD

There being no objection the resolution was ordered to be printed in the RECORD, as follows:

S. RES. 50

Resolved, That the Senate disapproves all of the recommendations of the President with respect to rates of pay which were transmitted to the Congress pursuant to section 225(h) of the Federal Salary Act of 1967 on January 17, 1977.

Mr. ALLEN. That resolution went to the Committee on Post Office and Civil Service. It has remained buried there until the present time.

Inasmuch as we were unable to get a vote on those resolutions, the same sponsors introduced amendment No. 24 to Senate Resolution 4, the committee reorganization resolution. The rule does not require germaneness, the sponsors of this amendment felt sure the amendment would come to a vote, either on a procedural vote or an up-or-down vote.

I ask unanimous consent that amendment No. 24, star print, with sponsors names shown be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 24 (STAR PRINT) TO S. RES. 4

TITLE —

Be it further resolved that the Senate disapproves all the recommendations of the President with respect to rates of pay which were transmitted to the Congress pursuant to section 225(h) of the Federal Salary Act of 1967 (81 Stat. 644), on January 17, 1977.

Mr. ALLEN. This amendment No. 24 would have disapproved of the pay increase if it had been adopted. But the amendment was tabled by a 56-to-42 vote. I might say parenthetically, Mr. President, that I object very strongly to the 1967 act. Here on the floor, in concert with other Senators, we have tried to repeal that Presidential Pay Commission Act, which allows the Members of Congress to obtain raises for themselves and allows the top people in the other branches of Government to obtain raises in their compensation without actually voting those raises.

How in the world could that remarkable set of facts come about? The law provides that the Presidential Pay Commission makes recommendations to the President as to the pay schedule. Mr. Peterson, former Secretary of Commerce, and now managing partner, I believe, of Lehman Brothers in New York, where $200,000 a year salaries are quite commonplace, headed this Commission that recommended these pay increases for people in the top echelon of Government. Then the President, then President Gerald Ford, had a right to modify those recommendations and submit them to Congress. Then, under this law, one House of Congress must disapprove or modify or change in some respect the President's recommendations based on the Presidential Pay Commission's recommendations. They must be disapproved within 30 days, or else they go into effect without a vote by Congress. That is the reason we have been trying to get a vote.

It is apparent that the House has no intention of voting. I had been hopeful that we would have a vote here in the Senate, but this is the last day of this period during which disapproval must take place if it is to take place. So, if something is not done today, then the pay raises will go into effect.

The resolutions before us have to do with the committee structure and the naming of the committees. It is quite obvious that if an amendment were sought to be added to these it would never come to a vote today, because I have in mind we are not going to be in session very long. So I am not going to raise any objection to the request that amendments must be germane. But I do want to stress the point that I believe that issue should have come up for a vote; we should have had an up and down vote here, in the Senate, on this important issue. I do not feel that Congress, by hiding from this issue, should allow these raises to go into effect.

Now, the Presidential Pay Commission recommended, as a part of these pay increases, that both Houses of Congress adopt strict rules of ethics or conduct by the various Members. I think that is very fine, and certainly, I approve of that. But I think it is a shame that we even have to have a code of ethics. I think every Member of the House and every Member of the Senate ought to have lofty concepts about his duties and responsibilities and his conduct.

It is a sad state of affairs when men who make the Nation's laws have to set up standards of conduct they must go by.

But I am hopeful that on this raise, which is almost certain to go into effect, Congress will not fall down on the other half of the recommendations of the Presidential Pay Commission that a strong standard of conduct for both Houses be set up.

I am, indeed, glad that the distinguished majority leader and the distinguished minority leader introduced a joint resolution setting up an ad hoc committee to formulate in the form of legislation a code of ethics for the Senate. That committee is headed by the very able senior Senator from Wisconsin (Mr. NELSON). I believe it is mandated to report back, possibly by the 1st of March, soon after the end of the recess, at any rate, and the legislation they report back will be the pending business in the Senate.

I am hopeful we will establish a strong standard of conduct for the Members of the Senate—and both Houses are going at it separately. Whether that is done that way, or by a single standard, is not too important.

I hope our standards here will be even higher and stricter than are the House provisions which seem to be in the making.

In this connection, Mr. President, this morning I received a letter from Mrs. Adeline F. Kahn, acting coordinator, Congressional District 6, of Common Cause, urging that I make a strong statement in behalf of the establishment of a strong code of conduct for Congress. Certainly, I am delighted to make that statement.

My views in this connection have had wide circulation already. I file annually a financial statement. I accept no honoraria or expense money of any sort. I have no outside income from personal services, and I hope that we will have a strong ban on outside income. I hope that honoraria will be banned altogether.

I believe the House is providing for some 15 percent of the regular salary as a limit on outside personal services income. I think that is too high. It ought to be eliminated altogether.

But I do favor provision for full disclosure of personal financial holdings. I do favor a ban or strict limit on outside personal income, and I hope for an absolute ban rather than a strict limit, a ban on gifts from lobbyists, a ban on unofficial office accounts, and a ban on privately financed materials being sent by frank.

Mr. President, I ask unanimous consent that a copy of the letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMMON CAUSE—ALABAMA,
Birmingham, Ala.

HON. JAMES ALLEN,
New Senate Office Building,
Washington, D.C.

DEAR MR. ALLEN: This letter is being written to urge that you again make a public statement showing your whole-hearted support and commitment to a strong code of conduct for Congress. Such a statement should be made prior to the new pay raise which will go into effect on February 17 despite your valiant attempt to do away with it.

We urge that in such a statement by you you spell out areas where legislation is especially needed such as: provisions for full disclosure of personal financial holdings; a ban or strict limit on outside earned income; a ban on gifts from lobbyists; a ban on unofficial office accounts and a ban on privately-financed materials being sent by the frank.

The Pay Commission, former President Ford and President Carter have all urged that a strong code of conduct be made part of any decision to grant a pay raise. Too many people do not know that the Pay Commission recommended tying salary increases to a code of conduct.

Thank you for your interest. I hope this year is a productive one in Congress.

Sincerely,

ADELINE F. KAHN,
Acting Coordinator,
Congressional District 6.

Mr. ALLEN. Mr. President, I do not always agree with the initiatives of Common Cause, but I believe they are absolutely correct in this instance in seeking a strong code of conduct for Congress and seeking disclosure and a ban on outside income.

I am very happy to support the ad hoc committee. I am hopeful they will come out with a very strong code of ethics

which will be strengthened even further here on the floor.

Mr. President, the significance of the request by the distinguished majority leader that there be no nongermane amendments added to these housekeeping resolutions is, of course, that they not be burdened down with a futile effort—and I am convinced that it is a futile effort—to veto or to disapprove the pay increases. Inasmuch as the amendment could not come to a vote, and even the resolution might be withdrawn, and the committees not set up until after the recess. It is for that reason that, looking at it realistically, this is not the proper vehicle nor is there sufficient time to force a vote in the Senate on this important issue.

I still point out, however, that the legislative vehicles are available at any time that the Members of the Senate are willing to take the stand on this issue.

So I withdraw my reservation to the distinguished majority leader's request.

Mr. President, I ask unanimous consent that certain newspaper clippings be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the St. Petersburg (Fla.) Times, Feb. 3, 1977]

COUPON POLL VOTE: 1,816 TO 35; READERS OPPOSE CONGRESS PAY RAISE

(By Stan Witwer)

It hardly comes as a surprise that in a time of economic recession, high prices, $100-plus monthly utility bills and high unemployment, readers of The St. Petersburg Times want no part of a proposed $118.5 million increase in salaries for members of Congress and more than 20,000 other high-level government employes.

Answering a Jan. 26 editorial page coupon poll, which asked for their opinions on the increases, 1,816 readers shouted "No" with the finality of a thunderclap.

Only 35 argued in favor of the increases, proposed by President Ford before he left office, and many of these qualified their votes, saying they would favor the raises only if they were accompanied by a strict code of ethics and conduct for both houses of Congress.

The reaction was the largest for a Times coupon poll since July 10, 1974, when 3,275 readers (of 3,361 responding) voted against a rate increase for Florida Power Corporation. The highest total of replies to any coupon poll occurred Oct. 23, 1973 wehn a majority of 4,572 respondents said then President Nixon should resign or be impeached.

The present issue involves Ford's recommendation that the pay of members of Congress be increased 28 per cent to $57,500 a year; the vice president, Supreme Court justices and the House Speaker to get $75,000 a year; majority and minority leaders on Congress be raised to $65,000, while percentage increases would go to 20,400 other Civil Service career employees.

The recommendation does not require congressional approval. It could, however, be vetoed by Congress. That is now unlikely since the Senate voted Wednesday to kill a resolution that would have blocked the pay increase.

Feb. 20 is the deadline for Congress to take action. If none is taken by then, the raise will be effective in March 1 pay checks.

Sen. James B. Allen, D-Ala., Sen. Pete Domenici, R.-N.M. and Rep. Larry Pressler, R-S.D., oppose the recomemndation and have introduced resolutions to negate it. Allen's resolution was voted down Wednesday.

The reactions of Times readers range from calm disagreement to angry charges of "crookedness, conflicts of interest, payoffs and taxpayer-paid junketing" by congressmen.

Many think the lawmakers' should set an example for the nation by taking a pay cut. Some said that if a pay raise is granted, it should not be larger than 6 per cent. Others said the question should be decided by a vote of the people.

As mentioned, several favoring the raise do so with the proviso that a code of ethics be included. Some said that to get "qualified people" in government, salaries should be kept high. Comparisons of salaries paid sports and entertainment stars and private business and industrial leaders were quoted by some as "much greater" than for Congress. A high salary minimizes the temptation to take kickbacks and payoffs, others said.

THE PROPONENTS

In order to obtain competent people in federal government, they must be compensated adequately. Otherwise, we can expect only the mediocre or ultra rich willing to serve.

A. R. BONART.

RAISE IS LONG OVERDUE

The raise is long overdue, but so is a firm demand for the highest ethical conduct.

ST. PETERSBURG BEACH. RENE E. CLARK.

You get what you pay for. We should be willing to pay the highest for the best men and women to serve us.

G. NUSSEY.

I vote yes, but only if it includes all in government service, that is, Civil Service and Civil Service retirees. We all feel the bite of high cost of living.

CAROLINE RABE.

We need adequate pay to attract quality, and remove officials from the temptations of kickbacks and payoffs.

D. CURTIS.

If football, basketball, baseball players make $80,000 to $100,000 and more, certainly with the rise in prices many federal salaries should increase.

CLEARWATER. Mrs. R. M. BRIGGS.

GOOD PEOPLE, GOOD PAY

Salaries and income for high level positions in industry and the professions are many times higher. How can the best people be attracted to government without competitive salaries?

LARGO. J. WARES.

After a heavy tax bite, they don't have enough left to support a life style required by their jobs. Besides there would be less temptation to accept bribes.

GULFPORT. HAROLD STEELE.

All the emphasis is focused on Congress, but it is the 2,500 or more officials who desperately need the raise.

HAZEL TRUESDALE.

Federal judges are in desperate need of a raise. I've no objection to Congress' salaries raised if the ethics code is adopted.

BELLEAIRE. Mrs. S. D. MULLINS.

CONSIDER INFLATION

Probably all non-political workers received wage increases for one cause only: Inflation. So why should government people be exempt?

PORT RICHEY. JOSEPH A. PECK.

I feel it would decrease temptations to take political "payoffs."

STEPHEN F. DODD.

I sincerely believe that congressmen should receive even more pay in order to interest quality members.

EDWARD J. FLEMING.

SOUTH PASADENA.

OPPONENTS: PRESENT PAY, BENEFITS ARE ADEQUATE

I would like to see our representatives receive high-level salaries but raises at this time are impractical.

CLEARWATER. HOWARD T. STRONG.

Somewhere, sometime we will have to cut down expenditures. Why not start at the top level.

Mr. and Mrs. G. C. WEYGANDT.

CLEARWATER.

SET AN EXAMPLE

With the economy the way it is, I feel that the government should set an example, and if anything, take a cut. They have done nothing to earn a raise.

Can you name one company, or corporation which has given its employes a raise in the area of 22 per cent to 47 per cent during this recession period?

CLEARWATER. MAX B. SWATOSH.

When people have to get by on a $240 a month Social Security check, members of Congress and other top officials should hang their heads in shame to ask for a raise.

Mr. and Mrs. JOSEPH ANTONUCCIO.

No governing body should be allowed to raise its own salaries. The citizens of this nation should decide.

DAVID MILLMAN.

I think it is time for them to forget personal gain at any cost and represent the taxpayers, instead of big business.

WILLIAM H. HARPER.

CARTER'S MOTTO

President Carter's motto is "economy" so let's start with Congress.

Mr. and Mrs. LEONARD SHREAD.

NEW PORT RICHEY.

I must live on $216 a month. How about them trying it.

ANNA GUTTRIDGE.

Before they get any increase, make them pass the bill where a person on Social Security can get a job and work for a livable salary, not $3,000 a year.

G. and M. GERRETS.

How far will they go to stuff their pockets? What about the retirees who make an extra dollar and have to give half of it back? Do they consider them?

Mr. and Mrs. FERNANDO DAVID.

CLEARWATER.

Why should we who have to live on less have to pay taxes so that they can squander more money?

Mrs. G. L. BLADHOLM.

OVERPAID ALREADY

They are overpaid already. If they are not satisfied with present pay, they should look for a job elsewhere. Very few are worthy of what they are getting now, with all their shenanigans.

L. NELSON.

TREASURE ISLAND.

This is no way to lick inflation. Instead, they shoud take a voluntary reduction. Their present salaries and benefits are more than adequate.

Mrs. LILLIAN VALDES.

ST. PETERSBURG BEACH.

If they can get more pay anywhere else, let them go.

ALLEN HARROP.

SCATTERING GOOD MONEY

Ask not for more from your tax-supporting public, rather produce more sensible

ways of solving our great problems than scattering good money after bad.

HERBERT E. LEE.

OZONA.

Why doesn't the Congress be fair to all and vote 6.04 per cent raise, like they voted for all receiving Social Security?

ARLAND CHRISTIAN.

For a part-time job—never!

Mr. and Mrs. CARL H. ALLEN.

TREASURE ISLAND.

Their salaries and benefits are, for the most part, completely out of line with the value of their services.

GENE C. PORTS.

Considering their fringe benefits, salaries should be reduced.

WILLIAM J. SMERKER.

NEW PORT RICHEY.

WHY NOT A REDUCTION

If Congress is serious about curbing inflation, all government expenditures, especially unneeded and excessive salary increases, should not be increased but reduced.

LEON W. NOEL.

If they can't make it on their salaries, plus all the other benefits, how do they think other people can exist?

Mrs. H. A. SHIELDS.

It robs Peter to pay Paul. Let them try food stamps and welfare once.

CHARLES HOLMES.

Why not balance the budget first?

MARGARET CURTIS.

With thousands of Americans with little food, no heat, no. Let congressmen live a little more frugally, it won't hurt them.

ALICE M. STEWART.

CONTRIBUTE TO INFLATION

Federal salary increases will contribute to inflation. If congressmen can't get along on their present salaries, they sure aren't intelligent enough to run the country.

FERN CARR.

No one anywhere, especially in Washington, is worth a 28 per cent raise. Use those millions of dollars to improve the postal system, police departments, schools, even welfare.

V. MOYER.

LARGO.

Editor: There are too many people out of work. Use the money to provide jobs. The congressmen can wait without suffering.

Mr. and Mrs. M. PETROW.

LARGO.

UNNECESSARY RIP OFF!

This is an unnecessary, unjustified ripoff. We who live on low, fixed incomes have to manage with no cost-of-living increase.

RALPH H. LANGE.

BELLEAIR BLUFFS.

If they take a 28 per cent increase, how can they put a lid on other demands?

MARION M. COHEN.

Ford opposed Social Security raises, while he has more than enough retirement pay. He just wants to be a good fellow at taxpayers' expense.

Mr. and Mrs. D. MCCLOUGHAN.

This is ridiculous especially with President Carter trying to cut wasteful spending. I intend to vote against my congressmen who vote yes.

T. C. DEBNAM.

THE FRINGE BENEFITS

A raise is not necessary with the country so deeply in debt. With all the fringe benefits they should set an example and take a cut. We live on less than $5,000.

Mr. and Mrs. R. FORTUNE.

[Advertisement from the Washington Post, February 11, 1977]

TAXPAYERS SACRIFICE CONGRESS TAKES VACATION PLUS 29% PAY BOOST!

Congress has just left town for another of its lengthy vacations. How much attention is Congress paying to the President's call for "sacrifice" by the American taxpayers?

High unemployment, inflation and fuel shortages must all be solved by the "sacrifice" of common people.

Meanwhile, our so-called public servants on Capitol Hill are about to grasp a $13,000 a year automatic pay-raise. The raise for Congressmen is about the same amount an average, working family of four earns in a year—before taxes!

Your Congressman's salary will jump 29% from $44,600 to $57,500 annually and will go into effect automatically on February 20. The only way the automatic pay-raise can be stopped is for Congress to vote against it. That's like asking Jack the Ripper to turn himself in!

The Washington Post said it well in a recent editorial:

"No Congressman is going to be required to vote himself 29% more pay and take the heat from his constituents . . if members of both houses play this game carefully, the right time for an honest yes-or-no vote will never be found."

"DON'T EXPECT CONGRESS TO SACRIFICE!

The National Conservative Political Action Committee opposes the $13,000 Congressional pay-raise in this time of national "sacrifice." Congress should tighten its belt and set an example for the nation.

The National Conservative Political Action Committee believes the automatic triggering device that awards the pay boost without an honest yes-or-no vote is illegal. Our Congressmen are taking our money under the cover of a legal fog they created for themselves.

The National Conservative Political Action Committee is acting . . . and you can help!

We have sent a questionnaire on the pay-raise issue to every Member of Congress. Few have even bothered to answer. We will publicize the results, including the names of those without the courage to respond.

We will continue to press for a roll-call vote in Congress, so that people can know which Congressmen really agree with this raid on the treasury.

We will continue to alert the public to future Congressional rip-offs. For instance, when the raise is safely in pocket, will Congress really give itself the tough, new ethics code it has promised?

If necessary, we will turn to the court system to test the legality of the automatic pay-raise.

Everyone who is outraged by the automatic pay-raise must join forces. We must organize and fight this insidious, backdoor politics. We must make sure it doesn't happen again. If our Congressmen need a raise, they owe us the honesty of voting for it, openly and on the record!

To help us oppose the automatic congressional pay raise, write: National Conservative POLITICAL Action Committee, 1500 Wilson Boulevard, Suite 513, Arlington, Virginia 22209.

(Paid for by the National Conservative Political Action Committee, Charles Black, Chairman.)

[From the St. Petersburg (Fla.) Times, Feb. 3, 1977]

SENATE VOTES FOR FEDERAL PAY HIKE

(By John H. Averill)

WASHINGTON.—The Senate cleared the way on Wednesday for a hefty pay increase for members of Congress, federal judges and top-level officials.

By a vote of 56 to 42, the Senate tabled and thus killed a resolution that would have vetoed government pay raises recommended last month by former president Gerald R. Ford and endorsed by President Carter.

The increases will be effective Feb. 20 unless vetoed by either house of Congress and Wednesday's Senate action appeared to have eliminated that possibility.

Sen. James B. Allen, D-Ala., sponsor of the veto resolution, said he will make no further effort to block the pay increases unless several senators agree to change their votes.

"I don't see anything to be gained by beating your head against a stone wall," Allen told a reporter.

In the House, a resolution to veto the increases was referred to a Post Office and Civil Service subcommittee, which reportedly plans to take no action on it.

For Members of Congress, the increase would amount to 29 per cent and would be their first raise since 1969 with the exception of a 5 per cent cost-of-living increase two years ago. Congressional salaries would go up from $44,600 to $57,500 a year.

Some officials would get even more. Salaries of the vice president, the chief justice, the Speaker of the House and the president pro tempore of the Senate would go from $65,600 to $75,000. Members of the cabinet and associate justices of the Supreme Court would go from $63,000 to $66,000, appeals court judges from $44,600 to $57,500 and district court judges from $42,000 to $57,500.

Salaries for top level posts in the executive branch, which now range between $37,000 and $39,900, would rise to $47,500 and $50,000.

Mr. ROBERT C. BYRD. Mr. President.

The DEPUTY PRESIDENT pro tempore. The Senator is recognized.

Mr. ROBERT C. BYRD. Mr. President, the distinguished Senator from Alabama has stated the parliamentary situation precisely. It was for the reason, as he stated, that I did not want any nongermane amendments attached to these resolutions dealing with committee assignments that I made the request.

There are many Members of this body who would be willing to vote up or down on a pay raise. I am one of those. I am in favor of a pay raise. I have so stated it. I have given my reasons, and it was I who moved to table the amendment—by a vote of 56 to 42—that was offered by the distinguished Senator from Alabama and other cosponsors a few days ago which would have rejected the pay proposal by Mr. Ford, supported by Mr. Carter, recommended by the Commission on Executive, Judicial and Legislative Salaries, and supported by the joint leadership in both bodies.

I have no fear to state where I stand. I say parenthetically, however, two things. A good many Senators who voted with the Senator from Alabama against tabling his amendment had told me privately and in advance of the vote that they needed a pay increase, that they were in difficult financial circumstances,

having to maintain two residences, one back home, one here, with all of the additional costs that go with serving in public office, but that they would be forced from a political standpoint to vote against tabling the amendment by the distinguished Senator from Alabama rejecting the pay raise.

So I am sure that a good many Senators among those who voted with Mr. ALLEN against tabling really wanted to see his amendment tabled, but because of possible political repercussions in their own States, they did not feel they could vote to table his amendment.

The second thing I say is this: any Senator or any House Member who does not want to accept the pay raise can return it every month in a check to the Treasurer of the United States. No Member of Congress is forced to accept the increase. I think that ought to be on the record.

I repeat: any Member of the Congress who in his own good conscience does not feel that he is worth the pay raise or for some other reason does not feel he ought to retain the pay increase, all he has to do is simply to write a letter to the Treasurer of the United States each month, enclosing a check and return the money.

This is my 25th year in Congress, and I have never voted for a congressional pay increase during that quarter of a century. When I first came to Congress, the salary for Members was $15,000 a year. The present salary of a Member of Congress is $44,600—which represents a 5-percent pay increase during the past 8 years. In 1969, the salary for Members of Congress was raised to $42,500. This is to say that, during the period of 8 years, dating back to 1969, the salary of Members of Congress has been increased 5 percent, while the cost of living has increased 61 percent. During that period, the pay of general schedule Federal employees has increased 66 percent; and the compensation for nonfarm employees in private industry has gone up 70 percent.

Now, I realize that to the average American, the present salary of a Member of Congress, being $44,600, appears to be, and is, a high salary. And, of course, every American has read the stories about all of the so-called perquisites that Members of Congress are supposed to enjoy. The people are told that Members of Congress have stationery accounts from which they can pocket the money that remains unused at the end of the year. Members of the Senate know that this is not so. No Member of the Senate can pocket any leftover funds from his stationery account at the end of the year. The American people are constantly reminded that Members of Congress have travel and telegraph allowances and that they have a certain number of paid trips back to their home districts or home States annually, and the impression is left with the average citizen that such allowances are for the personal benefit of the Members of Congress themselves. The opposite is true. Telephone and telegraph and travel allowances are for the purpose of service to the constituents of Members of Congress.

Each Senator receives a single allowance, which includes stationery, telephone, telegraph, and travel. At the end of the year, the unexpended moneys automatically revert back to the U.S. Treasury, and no Member of the Senate can pocket any of this allowance.

Much is also said about the franking privilege of Members of Congress, and there is no doubt but that the privilege has, in some instances, been abused. Congress has been moving and is continuing to move, to eliminate the abuses of the franking privilege that have occurred from time to time. However, here again, a Member of Congress cannot benefit financially from the use of the frank. Without the franking privilege, Members of Congress could not respond to the correspondence and to the needs of their constituents. That is what the franking privilege is intended to serve—the needs of the people whom we represent.

Then, much is said about all of the clerk-hire and the office space available to Members of Congress, and the impression is left with the people that Members of Congress benefit financially therefrom. Nothing is further from the truth. When I came to Congress 25 years ago, my correspondence workload was small compared to what it is today. As the population has grown, the needs of the population have grown, and there is a much increased requirement for communications with, and on behalf of, our constituents. Obviously, Members of Congress cannot afford to pay out of their own pockets for the staff personnel required to serve the people whom we represent. I represent a State with a little under 2 million people. Even my mail is heavy, but it is nothing as compared with the mail that comes to Senators representing States with much larger populations.

Staff members require office space and office equipment in order to respond to constituent mail and to make agency and departmental inquiries on behalf of constituents; and the money required for such staff personnel, staff operations, and staff equipment does not inure to the financial benefit of Members of Congress.

Much more could be said about some of the impressions that do not accurately present all sides of this subject, but which do leave the American people under the false belief that a Member of Congress is paid not only $44,600 as a salary, but that he is the recipient of, and can financially benefit from the hundreds of thousands of dollars annually required to operate his office, meet the needs of his constituents, and stay in contact and communication with the people he represents.

Then, there are the so-called free haircuts available to Senators and Members of the House of Representatives. I think most, if not all, Senators give very liberal tips for these services. For instance, I have never paid less than 50 cents for a shoeshine, and I have tipped as much as a dollar or even a dollar and a quarter for a shoeshine. Nonetheless, the so-called free haircuts constitute a very visible target for the cynics and the critics, so the Senate Democratic leadership is taking steps to eliminate this object of criticism, and to establish a system whereby all Senators will have to pay the going fare for haircuts and shoeshines in the future. There is also some grousing in the media with respect to the limited number of parking spaces available at airports for Members of Congress. Quite often, I have found these parking spaces filled by foreign diplomats and other Members of the House or Senate, and I have had to go elsewhere for parking. In any event, why should there not be free parking spaces for Members of Congress? Ninety-nine percent of the time I use a parking space at an airport it is for the simple reason that I am going to my home State to visit with my constituents and to participate in some program or event to which they have invited me. I would not be using the free parking space if it were not for the purpose of enabling me to fulfill my responsibilities to the people who sent me here. The same can be said for other Members of Congress.

Let us talk for a moment about the $44,600 which each Member receives in salary. He pays, on the average, around $300 a month into his retirement—which comes to roughly $3,600 a year. He pays approximately $1,000 annually for health and life insurance. He pays Federal and State income taxes. Many Members have to maintain two residential properties—one in the home State and one in the Washington area. For those Members who do maintain residential properties in their home States—and I do not—the upkeep on the property at home—the cost of fire insurance, property taxes, utilities and repair bills—is a constant cost, in addition to the cost of maintaining a home or apartment in the Washington area, where real estate costs and real estate taxes are exorbitantly high.

While we are talking about some of the financial sacrifices that have to be made by Members of Congress, I should point out that when I return to my State of West Virginia for a speaking engagement, while I can recoup the cost of my airline tickets, I cannot recoup the cost of motel or hotel bills. These are out-of-pocket expenses. I was in each of 53 of the 55 counties of West Virginia at least once last year. I was in each of the 55 counties at least once the year before last—and in many of those counties a number of times—which means that I had to spend many nights in motels during these visits. I am sure that everyone knows that motel bills are high. But the payment of those motel bills came out of my own pocket. There is no provision in the law for reimbursement. I think it is well to make mention of this, because I am sure that many of our constituents feel that we are reimbursed for such expenses.

The cost of living in Washington is higher generally than the cost of living in many of the areas represented by Members of the House and Senate, and, in addition, there are many financial burdens that go with serving in the Federal Legislature. For example, when constituents come to Washington, Members of the House and Senate are often expected to entertain those constituents, and Members of both Houses receive many requests for financial contributions to worthy causes. Such worthy contributions cost me, on the average, about $5,000 annually, which comes out of my income; and I am sure that there are

many other Senators who contribute much more than do I.

Fortunately, my wife and I were able to put our two daughters through school a good many years ago when the costs of tuition, books, and so on were much less than they are today. Younger Members of the House and Senate are not quite so fortunate in this regard.

I mention all of these things just in an attempt to more accurately portray a clearer overall picture of what is really involved here. Many Members of Congress find it difficult to cast a vote which, either directly or indirectly, supports a pay increase for themselves.

It would be easier for me to vote against a pay increase for Members of Congress or to vote against a motion to table any resolution rejecting the President's recommended pay increase. But the time has come for us to face the facts. This problem is not going to go away. I have cast such a vote many times.

Let there be no illusions. While a minority of us may be either fairly wealthy or, like myself, can live frugally and have no children in school or college, most Members are in the position that, if the President's recommended salary increase is rejected, they will have to increasingly go on the speaking circuit to earn honoraria with which to supplement the $44,600 they now receive in salary. This will mean that while they may be voting down the President's recommendation for a pay increase, they will, by the same token, be increasing the need for earned income from honoraria and other outside sources. Most speaking engagements—unless they are in the District of Columbia area—require Members to be away from home, and often away from committee meetings and Senate floor activities, thus infringing to that extent upon their services to the Senate and to the people they represent.

The second thing I want to say about the matter before us today is that it involves branches of government other than the legislative branch. In all, 2,496 people in the Federal Government at high policymaking levels will be affected directly. Indirectly, 20,365 additional upper grade Government personnel, whose pay is tied to congressional salary levels, will be affected.

Because of the salary lag, the Federal Government is losing some of its best people. In the last 3 years, 4 of the 11 Institute directorships at the National Institutes of Health have become, and remain, vacant; 85 out of 87 outside candidates have refused the positions due to the low pay. The Directorship of the Institute of Cancer Research, for example, is vacant and was vacated because the then Director could not maintain his family on the low pay. So he left the position in order to take a position that would pay more.

The Social Security Administration lost 9 out of 19 of its most senior civil service employees at one time last year, and was unable to fill the position of Chief Actuary for more than a year, with 30 candidates refusing the job because of the low pay.

The legislative branch continuously loses some of its most able support personnel because of higher salaries available to them in the business community.

So, we want to keep in mind that President Ford's pay increase proposal does not affect the salaries of Members of Congress alone; it cuts across all three of the equal and coordinate branches of the Government.

It was difficult for each of us to vote for a motion to table the amendment by Mr. ALLEN. But somebody had to face up to the situation. This is a crisis in Government that will continue to grow. It will not go away; and, more and more, only the wealthy will be able to make the financial sacrifice necessary to render Government service in the Nation's Capital.

This is the first time, in my recollection, that the leadership—the joint leadership in the House; the joint leadership in the Senate; the leadership of the Federal judicial branch; the former President of the United States, Mr. Ford, and the current President of the United States—Mr. Carter—have all come down on all fours in support of a general pay increase for executive, judicial, and legislative personnel.

After all, the people get just what they pay for, as a general rule, and I believe that it is in the best interests of the people that this pay increase go into effect.

President Ford coupled his pay increase proposal with a code of conduct proposal, also based upon the recommendation of the Peterson Commission. A few days ago, the minority leader and I appointed a temporary special committee to be known as the Special Committee on Official Conduct, composed of 15 Members of the Senate—8 Democrats and 7 Republicans—to propose a code of conduct for Members, officers, and employees of the Senate in the performance of their official duties. I designated Senator NELSON to be the chairman of the select committee, and the other Democrats on the committee are as follows: Mr. RIBICOFF, Mr. INOUYE, Mr. EAGLETON, Mr. NUNN, Mr. GLENN, Mr. CLARK, and Mr. MELCHER. That committee, under the chairmanship of the distinguished Senator from Wisconsin (Mr. NELSON), is holding hearings, and the resolution creating the committee mandates the committee to report legislation by March 1 establishing a code of conduct.

That legislation will immediately become the pending business before the Senate under a time agreement limiting debate thereon.

Your leadership, therefore, is not only committed to the pay increase but also to the enactment of a code of conduct for the Senate. The House of Representatives is already moving toward the enactment of a code of conduct for that body. But whether or not a pay increase goes into effect, the Senate will act on a code of conduct for the Senate.

In closing, I think we should call a spade a spade. There are many Members of Congress who decry the fact that they are not being given an opportunity to vote up or down on the President's proposed salary increase. Yet, in their hearts, many of those same Members of Congress are just as happy that the pay increase will go into effect without their ever having to vote up or down. Even though many of them know in their hearts that a pay increase is justifiable, the simple fact of the matter is that they realize such a vote is not popular back home because the people really do not understand what the true facts are. It is for this reason that I have tried to set the facts straight. I believe that when the people really see through some of the fiction that they have been reading and hearing in the media, they will have a better understanding of the need for this pay increase. The news media have concentrated on the congressional aspect of the pay increase, while, in fact, the far greater portion of the salary increase goes to the other branches of Government. I ask unanimous consent to include in the RECORD at this point a table showing how the pay cost affects each of the three branches of Government.

There being no objection, the table was ordered to be printed in the RECORD as follows:

Costs of President's proposed pay increase

	Million
Executive	9.6
Legislative Branch	7.8
Judicial Branch	14.8
Total	32.2
Cost of relieving compression on GS15, GS16, GS17, and GS18 salaries	86.4
Total cost for salaries and fringe benefits	118.6

Mr. ROBERT C. BYRD. Now, Mr. President, was my request agreed to with respect to nongermane amendments?

The DEPUTY PRESIDENT pro tempore. Without objection, it is so ordered.

SENATE RESOLUTION 82—DESIGNATION OF NUMBER OF SENATORS ON CERTAIN STANDING COMMITTEES

Mr. ROBERT C. BYRD. Mr. President, I send a resolution to the desk with the understanding that no nongermane amendments be in order in connection with the consideration and reconsideration of that resolution, and I ask for its immediate consideration.

The DEPUTY PRESIDENT pro tempore. Without objection, it is so ordered.

The clerk will state the resolution.

Mr. BAKER. Mr. President, reserving the right to object, is this the resolution to appoint committees?

Mr. ROBERT C. BYRD. This is the resolution that enunciates the numbers of members on the various committees.

Mr. BAKER. Mr. President, I suggest the absence of a quorum.

The DEPUTY PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The DEPUTY PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Mr. JACKSON may speak out of order for not to exceed 10 minutes.

The DEPUTY PRESIDENT pro tempore. The Senator from Washington is recognized.

INTERNATIONALLY RECOGNIZED HUMAN RIGHTS

Mr. JACKSON. Mr. President, in the past week world attention has been focused on the renewed efforts of the Soviet Government to silence—and to imprison—an extraordinary group of human rights activists. The human rights movement in the U.S.S.R. is not only the conscience of that unhappy country, it is also one of the best hopes that the Soviet Union can be brought to respect internationally recognized standards of conduct. It is for these reasons that the Senate of the United States should address the recent developments in the Soviet Union and recognize their great importance. For the issue of human rights is fundamental—and certainly central to our foreign policy.

When I first entered the Congress in 1941 the world was already in the midst of World War II—a conflict to determine whether Western civilization and its values would survive. The real horror of modern totalitarianism became fully apparent only after the conclusion of the war when we learned the whole and terrible history of the Nazi regime. I visited Buchenwald just after its liberation, and was profoundly moved. I believe the world inherited an obligation to insure that such barbarous crimes are never again repeated.

Americans learned more slowly perhaps but no less surely of Soviet totalitarianism, of mass executions and deportation, of the "Gulag Archipelago." In 1968 I talked to Robert Conquest, the British author, and read his classic book "The Great Terror." That monumental work definitively describes the dreadful authoritarian excesses in the Soviet Union that still haunt the world. The bloody massacres, the suppression of whole peoples, the persecution of racial and religious minorities, the mass imprisonment of individuals for their political views—all these are sources of international instability and turmoil. Indeed, we have learned that governments that engage in wholesale violations of human rights are, more often than not, threats to the peace.

The fact that modern society can be a mask for ancient brutalities explains, I think, the strong interest of the American people in human rights on a worldwide basis. In 1948, with the spirited leadership of Eleanor Roosevelt, the United States pressed for the adoption of the Universal Declaration of Human Rights. We did so precisely because we had learned that those deprived of their basic rights in any one country needed the protection of international law even against their own governments. The declaration—unanimously adopted by the U.N. General Assembly—sets forth standards of individual liberty in a splendid, pioneering "Bill of Rights" for the world.

The declaration affirms the right to freedom from torture and freedom from arbitrary arrest, detention or exile; it affirms the right to leave any country, including one's own; it affirms the right to freedom of peaceful assembly and association; it affirms the right to freedom of opinion and expression; and it emphasizes freedom of thought, conscience and religion, and freedom—either alone or in community with others and in public or private—to manifest one's religion or belief in teaching, practice, worship, and observance.

Subsequently this U.N. Declaration was affirmed in the International Convention on the Elimination of all Forms of Racial Discrimination of 1965 and the International Covenant on Civil and Political Rights of 1966, each of which was ratified by the Soviet Union.

Most recently, in the final act of the Helsinki Conference—33 European countries including the Soviet Union, together with Canada and the United States—have agreed to act in conformity with the Universal Declaration of Human Rights. While the Helsinki Accords dealing with specific rights are often imprecise and hedged, they nevertheless constitute an official commitment by the governments that—

> In the field of human rights and fundamental freedoms, the participating States will act in conformity with the purposes and principles of the Charter of the United Nations and with the Universal Declaration of Human Rights. They will also fulfill their obligations as set forth in the international declarations and agreements in this field, including inter alia the International Covenants on Human Rights, by which they may be bound.

So, in the struggle for human rights and fundamental freedoms the peoples of the world have international law on their side. Their governments have made individual rights and free contacts matters of legitimate international concern—indeed of international responsibility.

Mr. President, the bright promise of these international accords has not been realized. Abuses of human rights constitute a continuing chronicle of suffering and injustice.

Ours is not only a humanitarian concern for our fellow men and women—although I personally believe that alone would justify efforts on their behalf. There is also the matter of contributing to the achievement of a more civilized world, the only kind of world where peace can flourish. For real peace must be based on international trust and openness, measured in part by increased respect for the standards which the Universal Declaration of Human Rights enshrined in the body of international law.

We must be willing to use our human rights concerns in the bargaining process with other nations. Nations seek our grain, our arms, our technology. Why should we not seek greater protection for internationally recognized human rights?

That is the essence of our effort in Congress to place America's economic power behind the basic right to emigrate. Of all the individual liberties contained in the U.N. Declaration of Human Rights, none is more fundamental than that in article 13—the right to free emigration. The Congress has particularly emphasized that right, because it is the touchstone of all human rights. The right to emigrate is critical for oppressed minorities, dissident intellectuals, and divided families. It has been the traditional, vital lifeline for victims of religious and racial persecution throughout the world, many of whom found relief in the United States and helped to establish the freedoms we take for granted in our own country.

Virtually all of us owe our American citizenship to the right to emigrate. There is a famous story about Franklin D. Roosevelt once causing a great stir by addressing an audience of the DAR as "My fellow immigrants * * *." But the fact is, as I often remind American audiences, we are a Nation of immigrants—and that gives us a special responsibility for the right to emigrate.

The Jackson-Vanik amendment on East-West trade and freedom of emigration is supported by an impressive coalition of groups representing diverse religious and ethnic backgrounds. It became part of the law of the land in the Trade Act of 1974. It states, in essence, that if the Soviets and other Eastern bloc countries want U.S. trade concessions and special subsidies, they will have to moderate their restrictive policies on the emigration of their citizens. The amendment applies to Jews and Gentiles, without discrimination on the basis of race, religion, or national origin.

Also, the amendment does not affect normal trade on a pay-as-you-go basis. It simply withholds special trade concessions and unlimited U.S. credit until the trading partner moves substantially to respect the obligations on freer emigration which it has already subscribed to in solemn international agreements. The Jackson amendment, far from being an intrusion into anyone's internal affairs, is one small step along the road to an international community based on law.

Tens of thousands of people—Jews and non-Jews alike—have escaped from captivity, because of the Jackson-Vanik amendment on freer emigration. It was only after Henry Kissinger pledged that the Ford administration would try to destroy the amendment that the Kremlin tightened the screws once again. If the Soviets want some of the trade benefits from the United States that other countries enjoy—let them at least honor the right to emigrate.

Mr. President, it is of profound importance that our country—as the leader of the free nations and the most influential voice in Western public opinion—use the opportunities we have to promote greater respect for internationally recognized human rights. While the United States can and must deal with nations whose systems of government may be anathema to us, there should be no doubt that the United States stands opposed to flagrant violations of human rights and fundamental freedoms.

So I applauded the State Department's move this week in standing up for the Russian poet Alexander I. Ginzburg in the name of internationally accepted human rights.

It has often been the case that senior officials in the Department of State—who tend, naturally perhaps, to value a superficial cordiality—shy away from speaking out on behalf of human rights, where doing so may be regarded as an irritant in our relations with authoritarian governments.

But is not the best path to our silence on these issues a change in Soviet practice on human rights?

So I commended President Carter for saying at his first press conference this week that he intends to speak out strongly and forcefully on behalf of human rights, expressing at the same time his deep regret at the incarceration of Alexander I. Ginzburg.

Today—in the presence of my Senate colleagues—I want to protest the arbitrary arrest in the last few days of Alexander I. Ginzburg, Yuri Orlov, and Mykola Rudenko.

Alexander I. Ginzburg is a distinguished human rights leader—an inmate of the Gulag Archipelago with Alexandr Solzhenitsyn—and is the administrator of the fund established by Solzhenitsyn to sustain political prisoners and their families.

Physicist Yuri Orlov, a long-time member of the Moscow human rights movement, is a founder of the unofficial U.S.S.R. group monitoring compliance with the humanitarian provisions of the Helsinki final act.

Mykola Rudenko, Ukrainian writer and member of Amnesty International, is head of the Ukrainian committee monitoring implementation of the Helsinki agreement.

There is some talk that the arrest of these three human rights leaders is a deliberate test of the will and staying power of President Carter. This may be so; and, if it is, the President made a good start in his press conference response this week. The President's determined followup will be of central importance.

There is also the fact that the Soviet Union is seeking to throttle the Soviet citizens who are trying to promote the observance of the humanitarian articles of the Helsinki Agreement. June 15—the date for the opening of the Belgrade session of the CSCE—is approaching. These human rights defenders have been exercising their internationally affirmed right to freedom of opinion and expression, informing the government signatories to the Helsinki Agreement, as well as the public at large, of cases of flagrant violation of the human rights articles. The Soviet authorities hear this criticism and comment, and they hope to have it silenced before the Belgrade meeting gives the truth a world audience.

The U.S.S.R. has bound itself to respect the exercise of the right to freedom of opinion and expression for its citizens by becoming a party to the Universal Declaration of Human Rights, the International Covenants on Human Rights which it ratified, and by the Helsinki Accords, which reaffirm these earlier international undertakings.

Indeed, Secretary Brezhnev himself said, less than 1 month ago in a speech at Tula:

> Standing now in the center of European politics is the task of fully implementing the accords reached by 35 states a year and a half ago in Helsinki. We regard the Final Act of the European Conference as a code of international obligations aimed at ensuring lasting peace. Of course, all its provisions should be fulfilled and that is our daily concern.

It is precisely in the name of these freely accepted international obligations that I call upon Secretary Brezhnev to release these three heroic human rights leaders and permit them and their colleagues to exercise their simple, elementary rights.

(Mr. DECONCINI assumed the chair.)

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. JACKSON. I yield to the distinguished Senator.

Mr. HUMPHREY. Mr. President, I rise to join with the distinguished and courageous Senator from Washington in his remarks today. I do so because I think a number of voices in the Senate should be heard.

What has happened here is a gross violation of human rights on the part of the Soviet Union. What has happened here is a violation of internationally accepted and agreed upon codes of conduct and, as the Senator from Washington has pointed out, the Soviet Union is a signatory to the U.N. Declaration of Human Rights. It was the central force for the so-called Helsinki Agreement. It affixed its signature and its so-called honor to that agreement. And it behooves the people of the United States and their duly elected representatives in Government from the President to the Congress of the United States to make it manifestly clear that we expect that these covenants will be obeyed and that these covenants will be respected.

Mr. President, there is no greater force that the United States has for international peace and for international good than to stand firm on the issue of human rights. We cannot remake the government of other countries. That we know. But we can at least let peoples around the world and their leaders know that we do not in any way modify our commitment or weaken our dedication to the principle of human dignity and human rights.

We celebrated our 200th anniversary as a nation and as a free independent country. The whole theme of the Declaration of Independence is the message of God-given rights of life, liberty, and the pursuit of happiness.

The message of that declaration is that governments were established among men to secure these rights. For the United States in any way to deviate from those principles would be to weaken ourselves and to deceive others.

So I say to the Senator from Washington that the message that he has given here today speaks for me. I believe that it speaks for an overwhelming majority of the Senate. I hope it speaks for every Member of Congress, and I think it does. I commend President Carter on his stand on this great issue of human rights. I see a new day in American foreign policy on this issue.

The best thing that our neighbors in the Soviet Union can do—and I say neighbors in the world sense—is to rethink what they have done, and for Secretary Brezhnev and his associates to understand that the release of these prisoners and the cessation of this harassment of their fellow citizens is the one best way to secure the easing of tensions and to find the path to peace. I hope and pray that it will be done, and I do not say that in anger or rancor. I say it in a plea for sensitivity to social justice, and I hope that the sensitivity is there in the minds and the hearts of the Soviet leaders.

They have their opportunity now. The message has been given, and I thank the Senator from Washington.

Mr. JACKSON. Mr. President, it goes without saying that no one in this body has been more effective in speaking out on the subject of international human rights than the distinguished senior Senator from Minnesota. I think he would agree with me that we have had very fine bipartisan support for our effort to make known the views of the Members of this body in connection with a series of violations, may I say, Mr. President, of international law.

Some people sometimes argue that we are trying to interfere in the affairs of another country. That is nonsense. All we are asking, Mr. President, is that a nation adhere to the standards of conduct established in international accords and conventions to which they are a party and which they have juridically accepted as a part of international law.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. JACKSON. I salute the Senator from Minnesota for his able remarks.

Mr. NUNN. Mr. President, may I be recognized for 1 minute by unanimous consent?

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NUNN. I commend the Senator from Washington for his statement and the Senator from Minnesota for his praise of that statement. I would also like to join in the comments of the Senators concerning the position of leadership that President Carter has taken in this regard. I believe he is off to a good start in this area of human rights.

Mr. JACKSON. I thank the Senator from Georgia. Since he has come to the Senate, he has participated effectively in a number of our efforts to speak out in behalf of individuals in the Soviet Union and elsewhere who have been deprived of the human rights and basic freedoms to which they are entitled under international law.

RECESS

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate stand in recess for 10 minutes.

The motion was agreed to, and at 2:14 p.m. the Senate took a recess for 10 minutes.

The Senate reassembled at 2:24 p.m., when called to order by the Presiding Officer (Mr. DECONCINI).

SENATE RESOLUTION 82—DESIGNATION OF NUMBER OF SENATORS ON CERTAIN STANDING COMMITTEES

The Senate continued with the consideration of the resolution (S. Res. 82) to designate the number of Senators on certain standing committees.

The PRESIDING OFFICER. The resolution will be stated by title.

The legislative clerk read as follows:

A resolution (S. Res. 82) amending paragraph 2 of rule XXV of the Standing Rules of the Senate.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 82) was agreed to, as follows:

S. RES. 82

Resolved, That paragraph 2 of Rule XXV of the Standing Rules of the Senate is modified to read as follows:

"2. Except as otherwise provided by paragraph 6 of this rule, each of the following standing committees shall consist of the number of Senators set forth in the following table on the line on which the name of that committee appears:

"Committee	Members
"Agriculture, Nutrition, and Forestry	18
Appropriations	25
Armed Services	18
Banking, Housing and Urban Affairs	15
Commerce, Science, and Transportation	18
Energy and Natural Resources	18
Environment and Public Works	15
Finance	18
Foreign Relations	16
Governmental Affairs	17
Human Resources	15
Judiciary	17.".

SENATE RESOLUTION 83—DESIGNATION OF NUMBER OF SENATORS ON COMMITTEE ON THE BUDGET, COMMITTEE ON RULES AND ADMINISTRATION, AND COMMITTEE ON VETERANS' AFFAIRS

Mr. ROBERT C. BYRD. Mr. President, I have a resolution which I send to the desk, which states the numbers of members of the committees on the Budget, Rules, and Administration, and Veterans' Affairs.

I ask unanimous consent that no nongermane amendment be in order during the consideration or the reconsideration of this resolution, and I ask for its immediate consideration.

The PRESIDING OFFICER. Without objection, it is so ordered.

The resolution will be stated by title.

The legislative clerk read as follows:

A resolution (S. Res. 83) amending paragraph 3 of rule XXV of the Standing Rules of the Senate.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 83) was agreed to, as follows:

S. RES. 83

Resolved, That paragraph 3 of Rule XXV of the Standing Rules of the Senate is modified to read as follows:

"3. Except as otherwise provided by paragraph 6 of this rule, each of the following standing committees shall consist of the number of Senators set forth in the following table on the line on which the name of that committee appears:

"Committee	Members
"Budget	16
"Rules and Administration	9
"Veterans' Affairs	9.".

SENATE RESOLUTION 84—DESIGNATION OF DEMOCRATIC COMMITTEE MEMBERSHIP AND CHAIRMEN OF STANDING COMMITTEES, SELECT COMMITTEE ON SMALL BUSINESS, AND SPECIAL COMMITTEE ON AGING

Mr. ROBERT C. BYRD. Mr. President, I have a resolution which I shall send to the desk, appointing the majority membership on the standing committees, the Select Committee on Small Business, and the Special Committee on Aging for the 95th Congress, and I ask unanimous consent that no nongermane amendments be in order during the consideration or reconsideration of the resolution.

The PRESIDING OFFICER. Without objection, it is so ordered.

The resolution will be stated by title.

The legislative clerk read as follows:

A resolution (S. Res. 84) appointing majority membership on the standing committees, the Select Committee on Small Business, and the Special Committee on Aging for the 95th Congress.

Mr. BAKER. Mr. President, I would interrupt only long enough to say that, as the majority leader knows, it will not be possible to submit a similar resolution on behalf of the minority today, and that the minority fully concurs in this action being suggested by the majority leader.

I want to say that we will have a similar resolution for introduction shortly after our return from the Lincoln Day period.

Mr. ROBERT C. BYRD. I thank the distinguished minority leader.

Mr. President, before acting on this resolution, I will read paragraph 1 of rule XXIV of the Standing Rules of the Senate:

1. In the appointment of the standing committees, the Senate, unless otherwise ordered, shall proceed by ballot to appoint severally the chairman of each committee, and then, by one ballot, the other members necessary to complete the same. A majority of the whole number of votes given shall be necessary to the choice of a chairman of a standing committee, but a plurality of votes shall elect the other members thereof. All other committees shall be appointed by ballot, unless otherwise ordered, and a plurality of votes shall appoint.

Mr. President, with respect to the naming of the chairman of each committee, according to the rule, unless otherwise ordered, the Senate will vote by ballot, which means by rollcall vote in this instance, I believe, on each chairman.

Mr. President, I ask unanimous consent that, with the exception of the chairmanship of Mr. LONG, the Senate vote by voice on each chairman of each standing committee.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. ROBERT C. BYRD. When we get down to the point of voting on Mr. LONG, I will state my reasons.

The PRESIDING OFFICER. The clerk will state the chairman of the first committee.

The legislative clerk read as follows:

The Committee on Agriculture, Nutrition, and Forestry, Mr. TALMADGE, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. TALMADGE's appointment as chairman is agreed to.

The clerk will state the chairman of the next committee.

The legislative clerk read as follows:

The Committee on Appropriations, Mr. MCCLELLAN, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. MCCLELLAN's appointment as chairman is agreed to.

The clerk will state the chairman of the next committee.

The legislative clerk read as follows:

The Committee on Armed Services, Mr. STENNIS, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. STENNIS' appointment as chairman is agreed to.

The clerk will state the chairman of the next committee.

The legislative clerk read as follows:

The Committee on Banking, Housing and Urban Affairs, Mr. PROXMIRE, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. PROXMIRE's appointment as chairman is agreed to.

The clerk will state the chairman of the next committee.

The legislative clerk read as follows:

The Committee on Commerce, Science, and Transportation, Mr. MAGNUSON, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. MAGNUSON's appointment as chairman is agreed to.

The clerk will state the chairman of the next committee.

The legislative clerk read as follows:

The Committee on Energy and Natural Resources, Mr. JACKSON, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. JACKSON's appointment as chairman is agreed to.

The clerk will state the chairman of the next committee.

The legislative clerk read as follows:

The Committee on Environment and Public Works, Mr. RANDOLPH, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. RANDOLPH's appointment as chairman is agreed to.

The clerk will state the chairman of the next committee.

The legislative clerk read as follows:

The Committee on Foreign Relations, Mr. SPARKMAN, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. SPARKMAN's appointment as chairman is agreed to.

The clerk will state the chairman of the next committee.

The legislative clerk read as follows:

The Committee on Governmental Affairs, Mr. RIBICOFF, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. RIBICOFF's appointment as chairman is agreed to.

The clerk will state the chairman of the next committee.

The legislative clerk read as follows:

The Committee on Human Resources, Mr. WILLIAMS, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. WILLIAMS' appointment as chairman is agreed to.

The clerk will state the chairman of the next committee.

The legislative clerk read as follows:

The Committee on the Judiciary, Mr. EASTLAND, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. EASTLAND's appointment as chairman is agreed to.

The clerk will state the chairman of the next committee.

The legislative clerk read as follows:

The Committee on Rules and Administration, Mr. CANNON, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. CANNON's appointment as chairman is agreed to.

The clerk will state the chairman of the next committee.

The Committee on the Budget, Mr. MUSKIE, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. MUSKIE's appointment as chairman is agreed to.

The clerk will state the chairman of the next committee.

The legislative clerk read as follows:

The Committee on Veterans' Affairs, Mr. CRANSTON, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. CRANSTON's appointment as chairman is agreed to.

The clerk will state the chairman of the next committee.

The legislative clerk read as follows:

The Select Committee on Small Business, Mr. NELSON, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. NELSON's appointment as chairman is agreed to.

The clerk will state the chairman of the next committee.

The legislative clerk read as follows:

The Special Committee on Aging, Mr. CHURCH, chairman.

The PRESIDING OFFICER. The question is on the chairmanship as stated. As many as favor the appointment will say "aye"; opposed, "no."

The ayes have it. Mr. CHURCH's appointment as chairman is agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move that the votes by which the various chairmen were agreed to be reconsidered en bloc.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Now, Mr. President, we have one chairman remaining, I believe.

The PRESIDING OFFICER. The clerk will state the chairman of the Committee on Finance.

The legislative clerk read as follows:

The Committee on Finance, Mr. LONG, chairman.

Mr. ROBERT C. BYRD. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays were ordered.

Mr. ROBERT C. BYRD. Mr. President, Mr. METCALF, earlier today, propounded a parliamentary inquiry which laid upon the record the facts with respect to rule XXIV. I commend him for doing that. I think that he has made it a practice to do this at the beginning of every Congress. I think that the people of this country need to know that there is a standing rule of the Senate that provides for a separate rollcall vote, on each of the chairmen of standing committees, and that that rollcall vote can be waived only by unanimous consent or motion.

The rule also provides that the other members of each committee are to be selected by one ballot, meaning one rollcall vote, unless otherwise ordered, which means that, by unanimous consent or by motion, that rule can be waived.

As Mr. METCALF brought out in his parliamentary inquiry today, any Member of the Senate may move to amend the resolution, may move to substitute the name of any other Member of the Senate to be the chairman of any committee, and may move to substitute the name of any other Senator for any Member assigned to any committee by that resolution, and can get a vote by rollcall on any such amendment. I think it ought to be clearly shown that it is not the Democratic steering committee that elects Democratic members of committees. It is not the Democratic steering committee that selects the Democratic chairman. The steering committee only presents to the Democratic conference, its recommendations as to the Democratic membership on committees and the Democratic chairmen. The Democratic caucus, since 1969, has had the opportunity to ratify or to reject any recommendations made by the Democratic steering committee as to chairmen or as to members of committees.

Prior to 1969, the recommendations of the steering committee went directly to the Senate and bypassed the Democratic conference.

I want it made clear again that the Democratic conference does not elect Democratic chairmen or Democratic members of committees.

The Democratic conference only has the prerogative of ratifying or rejecting the recommendations of the Steering Committee with respect to its proposals anent chairman and members of committees. In the final analysis, only the Senate—only the Senate—may appoint the chairmen of committees and the members necessary to complete the same.

I wanted a rollcall vote on one chairman today, at least one, so that the RECORD will clearly show again that there is now a rule and that there has long been a standing rule, rule XXIV, which provides for a vote by rollcall on any and every chairman of the standing committees of the Senate, and a vote by rollcall on the makeup of those memberships of those committees, unless otherwise ordered and that every Senator has his rights, under the rules, to propose amendments regarding the same. I chose Mr. LONG because of stories that have been appearing in the press about him. I read just excerpts from today's Washington Star.

The headline says "Long Again Beats Back Leadership Challenge; Loses Only Six Panel Votes."

For the second time in a week, Sen. Russell B. Long has crushed a challenge to his leadership of the taxwriting Senate Finance Committee.

In the first-ever secret balloting by Senate Democrats on committee chairmen, only six of his colleagues voted against giving the Louisiana Democrat a sixth full term as committee chairman. Common Cause, the citizens lobby—

I emphasize the words, "the citizens lobby"—

had waged an active lobbying effort against Long, protesting what it contended were undemocratic leadership practices.

Mr. President, the practices of the Senate, as written into rule XXIV of the standing rules of the Senate, are not undemocratic. They are democratic. They are very democratic in that every Member of the Senate has the right under the rules to move to amend the resolution on Democratic and Republican

members, Democratic chairmen and Republican ranking members, and any Senator may move to substitute in lieu of any name among the members or among the chairmen of any committees that of any Senator whom he wishes to submit in lieu thereof. He can also get a rollcall vote on his amendment.

I wanted also to underscore the fact that it is not the Steering Committee, and that it is not the Democratic conference that makes the final selection. It is not the Steering Committee, it is not the Democratic conference that makes the final appointment. It is the Senate of the United States, made up of 100 Senators—at the present time, 62 Democrats and 38 Republicans. So the action is not complete until the Senate, itself, acts and if any ballot is requested, as I am requesting on Mr. LONG and as the Senate has already ordered, not only will the 62 Democrats vote on Mr. LONG, but the 38 Republican Members of the Senate also have the same right to vote to support Mr. LONG or to reject him.

The record is clear, now and for all time, that that is the way we proceed and that is the way we are going to proceed in each Congress unless rule XXIV is amended or repealed by the Senate. We will have a separate vote. We will follow rule XXIV, and if we can do it by voice vote, fine, but if any Member wants a rollcall vote, he can get it. But I think it ought to be clear that the Steering Committee and the caucus are not the alpha and the omega of the appointment process. They merely do the recommending. It is the Senate—all 100 Senators, Democrat and Republican—that appoints and puts its stamp of approval on the final choice of committee chairmen, ranking members, and committee memberships—Democrat or Republican.

Mr. BAKER. Mr. President, I commend the distinguished majority leader for his observations and for this motion, this proceeding. I do not intend to make extended remarks. I just want a brief moment to point out what all of us, I am sure, know.

The two-party system, even with the Republican and Democratic Parties in today's format, is a fairly recent innovation and nothing in the crystallization of two-party competition as we now know it is truly codified in the Rules of the Senate.

The Senate is a body. The Senate, as a whole, must act. In the past, there have been many examples. The majority party that existed in the early days of the two-party system did not elect uniformly all of their chairmen. I happen to feel that the two-party system is a great advantage of the American concept of a democratic or republican form of government. I happen to feel it pretty well suits the American political personality and I happen to feel, as well, that it must always recognize, however, that it is the Senate, constitutionally, which is the final arbiter.

I intend to participate fully in the rollcall vote. I intend to cast my vote as a Member of the Senate first, as a Republican second.

I commend the majority leader for reminding us of the verities and fundamentals of the roll of the Senate in relation to its internal structure.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished Republican leader.

It is my intention to support Mr. LONG.

He has worked for many years on the Committee on Finance. He has proved himself to be a very able chairman of that committee and has always been fair. He has been reasonable in his approach. He has given everybody a chance to be heard, whether he agreed with them or whether he disagreed with them on whatever position they took.

It is my understanding he has always allowed proponents and opponents of any measure or any amendment or any motion to have adequate hearings and to state their views.

So I intend to support his reelection to the chairmanship of the Finance Committee.

Mr. CURTIS. Will the Senator yield?

Mr. ROBERT C. BYRD. I yield the floor.

The PRESIDING OFFICER. The Senator from Nebraska.

Mr. CURTIS. Mr. President, I approve of the procedure that has been suggested here will be followed, but I rise for the purpose of urging the Senate to vote for Senator LONG for chairman of the Finance Committee. I say that because I have worked with him through the years on the Senate Finance Committee.

Senator LONG is a very able chairman. He is knowledgeable concerning the tax code, the social security law, trade legislation, sugar legislation, trade agreements, and the other matters that come before the committee.

His years on that committee have enabled him to accumulate a vast storehouse of knowledge that is beneficial to our Republic. To cast him aside would be wasting talent.

Senator LONG makes a very valuable contribution to the legislative process because of his knowledge of the subject matter that comes under the jurisdiction of the Committee on Finance.

I further support Senator LONG because of the manner in which he has conducted the committee as a chairman. I believe that if a chairman carelessly or otherwise is not fair to his members that the first people to notice that will be the party of opposition.

We are always outnumbered on the Finance Committee, yet every member's rights are fully protected by Senator LONG.

I will give an illustration of how Senator LONG proceeds. We have all had unhappy experiences in committee hearings where some member will arrive at the committee on time, wait half a day, he never gets his turn to ask a question because others dash in, claim their seniority, ask a few questions and go out, and the waiting Senator waits.

Senator LONG follows a procedure in public hearings where he has a list made of when the Senators arrive, and the first Senator there on each of the two sides is called upon first to ask his questions.

A small matter, yes. I mention it because it illustrates not only the fairness of Senator LONG, but his skill in making a distinct contribution to the legislative process.

Mr. President, Senator LONG is fair to all the people that make up our voting population, or nonvoters, either one. He is fair to the people of our country. There is not an idea or a viewpoint that is suppressed by him when it comes to consideration of these important programs coming under the jurisdiction of the Committee on Finance.

He is eminently fair to all the members of the committee, and none of the outside groups have the door slammed in their faces.

He not only serves the committee well and is fair to his colleagues, but also he conducts it in fairness and honesty for the entire country.

I anticipate that the vote will be unanimous. I hope it will be, because it is in the best interests of the Senate that we make it unanimous.

Mr. President, I yield the floor.

Mr. HANSEN. Mr. President, I wish to extend my compliments to my distinguished colleague, the majority leader from West Virginia, on his judgment in confirming a long-established principle that the U.S. Senate, in full body, Republicans and Democrats, selects the respective committee chairmen and decides membership in the committees.

The vote in selecting the chairman of the Senate Finance Committee, the distinguished Senator from Louisiana, RUSSELL LONG, affirms this long-established principle. Senator LONG was elected to this distinguished body in November 1948 and was named chairman of the Senate Finance Committee on January 14, 1966. This committee, under his guidance, has been a forum for the full and complete exchange of ideas, theories, and issues. I became a member of this committee following the untimely death of Senator Everett Dirksen and immediately upon my appointment to the committee, RUSSELL LONG went out of his way to offer help and assistance and to share his considerable body of knowledge with me as a freshman member. He is eminently fair. Over the years, his chairmanship has been characterized by allowing any and all witnesses to testify, granting requests for hearings, allowing full and complete hearings, and a full gamut of views to be presented and represented. It is a standing rule of the committee, at his insistence, that any motion can be called up for reconsideration at any time. The staff is truly a full committee staff, serving majority and minority members equally and I have noticed, as a member of the minority party, that information is available to all members on an equal basis. Senator LONG has been a protector of rights and the all-important rights of the minority.

It is my privilege to rise in support to defend the principle that my distinguished colleague from West Virginia has, through his leadership, enforced today and also to support the selection by the Senate in a rollcall vote the selection of RUSSELL LONG as chairman of the Senate Finance Committee.

Mr. METCALF. Mr. President, it has been my policy at the opening of every session of Congress after the passage of the Legislative Reorganization Act of 1970 to point out what the Senator from West Virginia has underscored, that the most democratic rule that we could write for the election of chairmen or the election of members of the committee is that

the Senate as a body elects those members and those chairmen.

I am delighted that today both of our leaders, the majority leader and the minority leader, have, as I say, underscored and emphasized the material that I tried to point out in previous sessions, that these resolutions that come from the respective Republican and Democratic conference are only resolutions to be considered on the floor of the Senate. They are open for amendment. Anybody that can get enough votes to change them has an opportunity to do so.

I applaud the demonstration of democracy on the rule that has been brought up here today.

I do not know how they picked out the person, except from the newspaper accounts, but I am sure it will demonstrate that we have an opportunity to vote on every single chairman, whether he is a Republican or a Democrat, we can elect anybody chairman of a committee and we can elect anybody a member of a committee if we can get enough votes on the Senate floor.

Mr. ROBERT C. BYRD. Mr. President, I thank the Senator.

Mr. President, I ask unanimous consent to have the newspaper article to which I have referred printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LONG AGAIN BEATS BACK LEADERSHIP CHALLENGE

(By Walter Taylor)

For the second time in a week, Sen. Russell B. Long has crushed a challenge to his leadership of the taxwriting Senate Finance Committee.

In the first-ever secret balloting by Senate Democrats on committee chairmen, only six of his colleagues voted against giving the Louisiana Democrat a sixth full term as committee chairman. Common Cause, the citizens lobby, had waged an active lobbying effort against Long, protesting what it contended were undemocratic leadership practices.

The vote to retain Long as finance chairman by the caucus of all Senate Democrats was 42–6. The caucus also voted to renominate the incumbent chairman of all other committees of the chamber.

Ratification by the full Senate of the chairmen and of the other Democratic and Republican members of the committee, action that is considered pro forma, was expected today.

The only surprise in yesterday's Democratic caucus, held behind closed doors, was the ease with which Long won renomination. Although Common Cause lobbyists had professed no hope of unseating Long, they had expressed hope for a "protest" vote large enough to force him to accept some of its recommendations for reform.

"I thought Common Cause had more influence than that, frankly," a smiling Long told reporters as he left the caucus meeting.

For Long, it was his second political victory of the past eight days. Last week, he easily fought off an effort by a handful of liberals on the Senate floor aimed at diluting his authority as chairman. In order to stave off that challenge, however, Long was pressured to agree to permit subcommittees of his panel to have legislative jurisdiction for the first time.

Some Long critics have said privately that that concession—a major demand by Common Cause—was part of a determined effort by Long to avoid a potentially embarrassing challenge to his leadership in yesterday's caucus.

As the Senate neared completion of its committee organization for the current Congress, there were these other developments:

Senate conservatives apparently seized control of the important Judiciary Committee, which is expected to be deeply involved in such controversial issues as divestiture by the oil companies, electoral reform, revision of the nation's criminal statutes and general antitrust action. Many of these questions traditionally have divided the committee and the full Senate along ideological lines.

Senate Republicans, who also caucused yesterday, placed three of their most conservative members—Sens. Paul Laxalt of Nevada, Orrin Hatch of Utah and Malcomb Wallop of Wyoming—on the panel. In addition, they quietly turned aside a behind-the-scenes challenge by Sen. Charles McC. Mathias, a moderate, and elected conservative Strom Thurmond of South Carolina to be the senior Republican member of the panel.

Meanwhile, the Democrats added a conservative of their own, Sen. James Allen of Alabama, perhaps the most effective parliamentary tactician in the chamber, to the committee.

After failing to block Allen's appointment, as they had done in past years, Democratic liberals were successful in adding another liberal, Sen. John Culver of Iowa, to the committee.

The ideological tilt of the 17-member panel seemed again to be to the conservative side, however, on the questions likely to be before the committee during the current Congress.

Some liberals suggested that the conservative coup had somehow been engineered by the lobby for the major oil companies out of fear that the committee might recommend a divestiture measure. They acknowledged, however, that they had no evidence of any outside influence on the decisions by the two party caucuses.

Long, who actively led the fight in the Democratic caucus to seat Allen on the committee, said he "didn't hear a word about that" from representatives of oil interests.

Asked about possible pressure from the oil industry to pack the committee with conservatives, Arkansas Democrat John McClellan, the second-ranking Democrat on the panel, told a reporter that the suggestion was "complete bologna . . . oil didn't have any more to do with it than you did."

The PRESIDING OFFICER (Mr. MATSUNAGA). The question is on agreeing to the designation of Senator LONG as chairman of the Committee on Finance.

Mr. ROBERT C. BYRD. Mr. President, a vote "aye" is in support of Mr. LONG, and a vote "nay" is to reject the appointment of Mr. LONG.

The PRESIDING OFFICER. The Senator is correct.

On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Texas (Mr. BENTSEN), the Senator from North Dakota (Mr. BURDICK), the Senator from Nevada (Mr. CANNON), the Senator from Florida (Mr. CHILES), the Senator from Iowa (Mr. CULVER), the Senator from Alaska (Mr. GRAVEL), the Senator from Colorado (Mr. HASKELL), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Massachusetts (Mr. KENNEDY), the Senator from South Dakota (Mr. MCGOVERN), the Senator from New Hampshire (Mr. MCINTYRE), the Senator from North Carolina (Mr. MORGAN), the Senator from New York (Mr. MOYNIHAN), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Michigan (Mr. RIEGLE), the Senator from Mississippi (Mr. STENNIS), the Senator from Florida (Mr. STONE), and the Senator from Georgia (Mr. TALMADGE) are necessarily absent.

I further announce that, if present and voting, the Senator from Texas (Mr. BENTSEN), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Iowa (Mr. CULVER), the Senator from Colorado (Mr. HASKELL), the Senator from Alaska (Mr. GRAVEL), the Senator from Georgia (Mr. TALMADGE), the Senator from North Carolina (Mr. MORGAN), the Senator from New York (Mr. MOYNIHAN), the Senator from Florida (Mr. STONE), and the Senator from North Dakota (Mr. BURDICK) would each vote "yea."

Mr. BAKER. I announce that the Senator from Oklahoma (Mr. BELLMON), the Senator from Utah (Mr. GARN), the Senator from Arizona (Mr. GOLDWATER), the Senator from Michigan (Mr. GRIFFIN), the Senator from Utah (Mr. HATCH), the Senator from Oregon (Mr. HATFIELD), the Senator from Pennsylvania (Mr. HEINZ), the Senator from North Carolina (Mr. HELMS), the Senator from New York (Mr. JAVITS), the Senator from Nevada (Mr. LAXALT), the Senator from Maryland (Mr. MATHIAS), the Senator from Idaho (Mr. MCCLURE), the Senator from Oregon (Mr. PACKWOOD), the Senator from Illinois (Mr. PERCY), the Senator from Delaware (Mr. ROTH), the Senator from New Mexico (Mr. SCHMITT), the Senator from Virginia (Mr. SCOTT), the Senator from Alaska (Mr. STEVENS), the Senator from Texas (Mr. TOWER), and the Senator from Wyoming (Mr. WALLOP) are necessarily absent.

I further announce that the Senator from Oklahoma (Mr. BARTLETT) is absent due to illness.

I further announce that, if present and voting, the Senator from Utah (Mr. GARN), the Senator from Oregon (Mr. HATFIELD), the Senator from Nevada (Mr. LAXALT), the Senator from Oregon (Mr. PACKWOOD), the Senator from Alaska (Mr. STEVENS), and the Senator from Wyoming (Mr. WALLOP) would each vote "yea."

The result was announced—yeas 60, nays 0, as follows:

[Rollcall Vote No. 37 Leg.]

YEAS—60

Allen	Eagleton	Metzenbaum
Anderson	Eastland	Muskie
Baker	Ford	Nelson

Heinz	Packwood	Wallop
Helms	Percy	
Hollings	Ribicoff	

The PRESIDING OFFICER. The appointment of the Senator from Louisiana (Mr. LONG) as chairman of the Committee on Finance is agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move that the vote by which Mr. LONG was elected chairman of the Committee on Finance be reconsidered.

Mr. CURTIS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Now, Mr. President, I ask unanimous consent that the votes on the membership of the respective committees be by voice vote.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will report the first committee.

The assistant legislative clerk read as follows:

The Committee on Agriculture, Nutrition, and Forestry, Messrs. EASTLAND, MCGOVERN, ALLEN, HUMPHREY, HUDDLESTON, CLARK, STONE, LEAHY, ZORINSKY, and MELCHER.

The PRESIDING OFFICER. The question is on the membership as stated. All in favor say "aye"; opposed, "no."

The ayes have it. The membership appointments are agreed to.

The clerk will report the next committee.

The assistant legislative clerk read as follows:

The Committee on Appropriations, Messrs. MAGNUSON, STENNIS, ROBERT C. BYRD, PROXMIRE, INOUYE, HOLLINGS, BAYH, EAGLETON, CHILES, JOHNSTON, HUDDLESTON, BURDICK, LEAHY, SASSER, and DECONCINI.

The PRESIDING OFFICER. The question is on the membership as stated. All in favor say "aye"; opposed, "no."

The ayes have it. The membership appointments are agreed to.

The clerk will report the next committee.

The assistant legislative clerk read as follows:

The Committee on Armed Services, Messrs. JACKSON, CANNON, MCINTYRE, HARRY F. BYRD, Jr., NUNN, CULVER, HART, BUMPERS, MORGAN, and ANDERSON.

The PRESIDING OFFICER. The question is on the membership as stated. All in favor say "aye"; opposed, "no."

The ayes have it. The membership appointments are agreed to.

The clerk will report the next committee.

The assistant legislative clerk read as follows:

The Committee on Banking, Housing and Urban Affairs, Messrs. SPARKMAN, WILLIAMS, MCINTYRE, CRANSTON, STEVENSON, MORGAN, RIEGLE, and SARBANES.

The PRESIDING OFFICER. The question is on the membership as stated. All in favor say "aye"; opposed, "I.o."

The ayes have it. The membership appointments are agreed to.

The clerk will report the next committee.

The assistant legislative clerk read as follows:

Committee on Commerce, Science, and Transportation, Messrs. CANNON, LONG, HOLLINGS, INOUYE, STEVENSON, FORD, DURKIN, ZORINSKY, RIEGLE, and MELCHER.

The PRESIDING OFFICER. The question is on the membership as stated. All in favor say "aye"; opposed, "no."

The ayes have it. The membership appointments are agreed to.

The clerk will report the next membership.

The assistant legislative clerk read as follows:

Committee on Energy and Natural Resources, Messrs. CHURCH, METCALF, JOHNSTON, ABOUREZK, HASKELL, BUMPERS, FORD, DURKIN, METZENBAUM, and MATSUNAGA.

The PRESIDING OFFICER. The question is on the membership as stated. All in favor will say "aye"; opposed, "no."

The ayes have it. The membership appointments are agreed to.

The clerk will read the next committee membership.

The assistant legislative clerk read as follows:

Committee on Environment and Public Works, Messrs. MUSKIE, GRAVEL, BENTSEN, BURDICK, CULVER, HART, ANDERSON, and MOYNIHAN.

The PRESIDING OFFICER. The question is on the membership as stated. All in favor will say "aye"; opposed, "no."

The ayes have it. The membership appointments are agreed to.

Accordingly, the clerk will report the next committee membership.

The assistant legislative clerk read as follows:

The Committee on Finance, Messrs. TALMADGE, RIBICOFF, HARRY F. BYRD, Jr., NELSON, GRAVEL, BENTSEN, HATHAWAY, HASKELL, MATSUNAGA, and MOYNIHAN.

Mr. ROBERT C. BYRD. Mr. President, parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state his parliamentary inquiry.

Mr. ROBERT C. BYRD. Mr. President, is it in order for any Senator to move to amend the committee membership by striking the name of one Senator and inserting in lieu thereof the name of another at this point?

The PRESIDING OFFICER. It is so in order.

Mr. ROBERT C. BYRD. I thank the Chair.

The PRESIDING OFFICER. The question is on the membership as stated. All in favor will say "aye"; opposed, "no."

The ayes have it. The membership appointments are agreed to.

The clerk will report the next committee membership.

The assistant legislative clerk read as follows:

The Committee on Foreign Relations, Messrs. CHURCH, PELL, MCGOVERN, HUMPHREY, CLARK, BIDEN, GLENN, STONE, and SARBANES.

The PRESIDING OFFICER. The question is on the membership as stated. All in favor will say "aye"; opposed, "no."

The ayes have it. The membership appointments are agreed to.

Mr. ROBERT C. BYRD. Mr. President, may we have order in the Senate?

The PRESIDING OFFICER. The Senate will be in order. Members will take their seats. The clerk will report the next committee membership.

The assistant legislative clerk read as follows:

Committee on Governmental Affairs, Messrs. MCCLELLAN, JACKSON, MUSKIE, METCALF, EAGLETON, CHILES, NUNN, GLENN, and SASSER.

The PRESIDING OFFICER. The question is on the membership as stated. All in favor will say "aye"; opposed, "no."

The ayes have it. The membership appointments are agreed to.

The PRESIDING OFFICER. The clerk will state the next committee membership.

The assistant legislative clerk read as follows:

Committee on Human Resources: Messrs. RANDOLPH, PELL, KENNEDY, NELSON, EAGLETON, CRANSTON, HATHAWAY, and RIEGLE.

The PRESIDING OFFICER. The question is on the committee membership as stated. All in favor will say "aye"; opposed, "no."

The ayes have it. The membership appointments are agreed to.

The clerk will state the next committee membership.

The assistant legislative clerk read as follows:

Committee on the Judiciary: Messrs. MCCLELLAN, KENNEDY, BAYH, BYRD of West Virginia, ABOUREZK, ALLEN, BIDEN, CULVER, METZENBAUM, and DECONCINI.

The PRESIDING OFFICER. The question is on the committee membership as stated. All in favor will say "aye"; opposed, "no."

The membership appointments are agreed to.

The PRESIDING OFFICER. The clerk will state the next committee membership.

The assistant legislative clerk read as follows:

Committee on Rules and Administration: Messrs. PELL, BYRD of West Virginia, ALLEN WILLIAMS, and CLARK.

The PRESIDING OFFICER. The question is on the committee membership as stated. All in favor will say "aye"; opposed, "no."

The ayes have it. The membership appointments are agreed to.

The clerk will state the next committee membership.

The assistant legislative clerk read as follows:

The Committee on the Budget: Messrs. MAGNUSON, HOLLINGS, CRANSTON, CHILES, ABOUREZK, BIDEN, JOHNSTON, ANDERSON, and SASSER.

The PRESIDING OFFICER. The question is on the committee membership as stated. All in favor will say "aye"; opposed, "no".

The ayes have it. The membership appointments are agreed to.

The clerk will state the next committee membership.

The assistant legislative clerk read as follows:

The Committee on Veterans' Affairs: Messrs. TALMADGE, RANDOLPH, STONE, DURKIN, and MATSUNAGA.

The PRESIDING OFFICER. The

question is on the committee membership as stated. All in favor will say "aye"; opposed, "no."

The ayes have it. The membership appointments are agreed to.

The clerk will state the next committee membership.

The assistant legislative clerk read as follows:

Select Committee on Small Business: Messrs. McINTYRE, NUNN, HATHAWAY, HASKELL, and CULVER.

The PRESIDING OFFICER. The question is on the committee membership as stated. All in favor will say "aye"; opposed, "no."

The ayes have it. The membership appointments are agreed to.

The clerk will state the final committee membership.

The assistant legislative clerk read as follows:

Special Committee on Aging: Messrs. MUSKIE, CHILES, GLENN, MELCHER, and DECONCINI.

The PRESIDING OFFICER. The question is on the committee membership as stated. All in favor will say "aye"; opposed, "no."

The ayes have it. The membership appointments are agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move that the votes by which the several committee memberships were adopted be reconsidered en bloc.

Mr. MAGNUSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, does that complete action on the resolution?

The PRESIDING OFFICER. The question now is on the resolution.

Mr. ROBERT C. BYRD. Mr. President, before adopting this resolution, I shall make a statement in behalf of Mr. CANNON, who would be here today instead of in Nevada were it not for his mother's illness, and he is at home with her.

Senator CANNON is opposed to making any exceptions to the provisions of Senate Resolution 4 in adopting this resolution to make committee assignments, and were he here, he would make a fight here on the floor to get the Senate to live by the provisions of Senate Resolution 4 which was agreed to only last week, and when he returns after the recess he expects to make a statement to the Senate in opposition to this action we are proposing to take today.

I too regret the fact that we are having to make these exceptions to the provisions of Senate Resolution 4; and I expect to make a fight against any further actions by the Senate that would do violence to these reforms in the committee system which were agreed to only last week. I would not have conceded to the proposed changes in the pending resolution were it not for the extenuating circumstances to meet a temporary situation. We must take our recent reform seriously and guard against any proposal to refute what we have just done in reorganizing the committee system; we cannot take lightly proposed changes to march back down the hill.

Mr. President, does that complete action on the resolution?

The PRESIDING OFFICER. The question now is on agreeing to the resolution.

The resolution was agreed to as follows:

S. RES. 84

Resolved, That the following shall constitute the majority party's membership on the standing committees, the Select Committee on Small Business, and the Special Committee on Aging of the Senate for the Ninety-fifth Congress:

Committee on Agriculture, Nutrition, and Forestry: Mr. Talmadge (Chairman), Mr. Eastland, Mr. McGovern, Mr. Allen, Mr. Humphrey, Mr. Huddleston, Mr. Clark, Mr. Stone, Mr. Leahy, Mr. Zorinsky, Mr. Melcher.

Committee on Appropriations: Mr. McClellan (Chairman), Mr. Magnuson, Mr. Stennis, Mr. Byrd of West Virginia, Mr. Proxmire, Mr. Inouye, Mr. Hollings, Mr. Bayh, Mr. Eagleton, Mr. Chiles, Mr. Johnston, Mr. Huddleston, Mr. Burdick, Mr. Leahy, Mr. Sasser, Mr. DeConcini.

Committee on Armed Services: Mr. Stennis (Chairman), Mr. Jackson, Mr. Cannon, Mr. McIntyre, Mr. Byrd of Virginia, Mr. Nunn, Mr. Culver, Mr. Hart, Mr. Bumpers, Mr. Morgan, Mr. Anderson.

Committee on Banking, Housing and Urban Affairs: Mr. Proxmire (Chairman), Mr. Sparkman, Mr. Williams, Mr. McIntyre, Mr. Cranston, Mr. Stevenson, Mr. Morgan, Mr. Riegle, Mr. Sarbanes.

Committee on Commerce, Science, and Transportation: Mr. Magnuson (Chairman), Mr. Cannon, Mr. Long, Mr. Hollings, Mr. Inouye, Mr. Stevenson, Mr. Ford, Mr. Durkin, Mr. Zorinsky, Mr. Riegle, Mr. Melcher.

Committee on Energy and Natural Resources: Mr. Jackson (Chairman), Mr. Church, Mr. Metcalf, Mr. Johnston, Mr. Abourezk, Mr. Haskell, Mr. Bumpers, Mr. Ford, Mr. Durkin, Mr. Metzenbaum, Mr. Matsunaga.

Committee on Environment and Public Works: Mr. Randolph (Chairman), Mr. Muskie, Mr. Gravel, Mr. Bentsen, Mr. Burdick, Mr. Culver, Mr. Hart, Mr. Anderson, Mr. Moynihan.

Committee on Finance: Mr. Long (Chairman), Mr. Talmadge, Mr. Ribicoff, Mr. Byrd of Virginia, Mr. Nelson, Mr. Gravel, Mr. Bentsen, Mr. Hathaway, Mr. Haskell, Mr. Matsunaga, Mr. Moynihan.

Committee on Foreign Relations: Mr. Sparkman (Chairman), Mr. Church, Mr. Pell, Mr. McGovern, Mr. Humphrey, Mr. Clark, Mr. Biden, Mr. Glenn, Mr. Stone, Mr. Sarbanes.

Committee on Government Affairs: Mr. Ribicoff (Chairman), Mr. McClellan, Mr. Jackson, Mr. Muskie, Mr. Metcalf, Mr. Eagleton, Mr. Chiles, Mr. Nunn, Mr. Glenn, Mr. Sasser.

Committee on Human Resources: Mr. Williams (Chairman), Mr. Randolph, Mr. Pell, Mr. Kennedy, Mr. Nelson, Mr. Eagleton, Mr. Cranston, Mr. Hathaway, Mr. Riegle.

Committee on the Judiciary: Mr. Eastland (Chairman), Mr. McClellan, Mr. Kennedy, Mr. Bayh, Mr. Byrd of West Virginia, Mr. Abourezk, Mr. Allen, Mr. Biden, Mr. Culver, Mr. Metzenbaum, Mr. DeConcini.

Committee on Rules and Administration: Mr. Cannon (Chairman), Mr. Pell, Mr. Byrd of West Virginia, Mr. Allen, Mr. Williams, Mr. Clark.

Committee on the Budget: Mr. Muskie (Chairman), Mr. Magnuson, Mr. Hollings, Mr. Cranston, Mr. Chiles, Mr. Abourezk, Mr. Biden, Mr. Johnston, Mr. Anderson, Mr. Sasser.

Committee on Veterans Affairs: Mr. Cranston (Chairman), Mr. Talmadge, Mr. Randolph, Mr. Stone, Mr. Durkin, Mr. Matsunaga.

Select Committee on Small Business: Mr. Nelson (Chairman), Mr. McIntyre, Mr. Nunn, Mr. Hathaway, Mr. Haskell, Mr. Culver.

Special Committee on Aging: Mr. Church (Chairman), Mr. Muskie, Mr. Chiles, Mr. Glenn, Mr. Melcher, Mr. DeConcini.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. MAGNUSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STEVENSON. Mr. President, the Senate has completed its committee assignment process for the 95th Congress, and has moved reorganization a step backwards, diluting its impact and undermining its intent. Rules providing limitations on assignments of Senators to committees have been violated on both sides of the aisle.

For membership on the Budget Committee, three rules of Senate Resolution 4 on assignments, ratified by the Senate by an 89–1 vote only 1 week ago, have been violated. On the Democratic side, three Senators were given new assignments to the Budget Committee as a "third," or paragraph 3(a), committee, in addition to two other paragraph 2 assignments. This contradicts section 201 (g) of Senate Resolution 4. Two Senators on the Democratic side have been allowed to keep both the Budget Committee and another paragraph 3 committee assignment, in addition to two other major committees. One additional Democratic Senator has been allowed to retain four standing committees: two in paragraph 2, Budget, and a fourth standing committee in paragraph 3.

These are all violations of section 201 (a) of Senate Resolution 4. Republicans followed suit with two such violations involving the Budget Committee. In other words, Mr. President, eight Senators on the Budget Committee alone have been placed on more committees than Senate Resolution 4 permits.

These are not the only instances where Senate rules on committee assignments, as set out in Senate Resolution 4, have been breached. Four additional Senators, two majority and two minority, have been given three, paragraph 2, or major committee, assignments, in violation of section 201(a) of the resolution, now part of rule XXV of the Standing Rules of the Senate. In addition to two other major standing committees, these Senators have been allowed to serve on such committees as Commerce, Science, and Transportation, Energy and Natural Resources, and Judiciary. These are not grandfathers, Mr. President. In every one of these four cases, and in the case of five of the eight Senators on the Budget Committee, these violations involve new assignments, some to freshmen, others to continuing Senators.

Last but not least, Mr. President, the Senate virtually ignored the sizes of committees specified in section 101, paragraph 2 of Senate Resolution 4. As I understand it, no fewer than 9 of the 12 major committees listed in paragraph 2 will have sizes different than those specified in the resolution as passed by the Senate.

Transition to a new committee system is difficult, Mr. President. This is the first time around, and we have to anticipate and accept some type of adjustment. But violations of the letter and the intent

of Senate Resolution 4 of this magnitude should not occur. Each of the violations is to last for the 95th Congress only. These violations must remain temporary, and they should not be considered as precedents by any Member of the Senate. In future Congresses, if the Senate does not wish to revert to the same situation that precipitated the move for reform, the rules must be followed. These kinds of violations must not be permitted to occur again, and I intend to oppose them.

SENATE RESOLUTION 85—AUTHORIZATION TO APPOINT SPECIAL DELEGATION TO BRITISH-AMERICAN PARLIAMENTARY CONFERENCE

Mr. ROBERT C. BYRD. Mr. President, I am about to offer a resolution authorizing the appointment of a special delegation to attend the British-American Parliamentary Conference. I ask unanimous consent that no nongermane amendment be in order during the consideration or reconsideration of this resolution.

The PRESIDING OFFICER. Without objection, it is so ordered.

The resolution will be stated by title.

The assistant legislative clerk read as follows:

A resolution (S. Res. 85) authorization to appoint a special delegation to attend the British-American Parliamentary Conference.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection the resolution (S. Res. 85) was considered and agreed to as follows:

S. RES. 85

Resolved, that the President of the Senate is authorized to appoint a special delegation of eight members of the Senate, of which not less than two shall be members of the Senate Foreign Relations Committee, to attend the British-American Parliamentary Conference in Bermuda from February 16–21, 1977.

SEC. 2. (a) The expenses of the delegation, including staff members designated by the chairman to assist said delegation, shall not exceed $10,000 and shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of said delegation.

(b) The expenses of the delegation shall include such special expenses as the chairman may deem appropriate, including reimbursements to any agency of the Government for (1) expenses incurred on behalf of the delegation, (2) compensation (including overtime) of employees officially detailed to the delegation, and (3) expenses incurred in connection with providing appropriate hospitality.

(c) The Secretary of the Senate is authorized to advance funds to the chairman of the delegation in the same manner provided for committees of the Senate under the authority of P.L. 118, 81st Congress, approved June 22, 1949.

SENATE RESOLUTION 78—AUTHORIZED FOR ADDITIONAL EXPENDITURES BY COMMITTEES FOR INQUIRIES AND INVESTIGATIONS DURING TRANSITION PERIOD

Mr. ROBERT C. BYRD. Mr. President, I am about to ask unanimous consent—I do not at this moment—that the Senate proceed to the consideration of Senate Resolution 78, authorizing additional expenditures by committees of the Senate for inquiries and investigations during the transition period.

I ask unanimous consent that if this resolution is called up before the Senate no nongermane amendments be in order during the consideration or reconsideration of the resolution.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Senate Resolution 78.

The PRESIDING OFFICER. The resolution will be stated by title.

The legislative clerk read as follows:

A resolution (S. Res. 78) authorizing additional expenditures by committees of the Senate for inquiries and investigations during the transition period.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

UP AMENDMENT NO. 48

Mr. EAGLETON. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk proceeded to read the amendment.

Mr. EAGLETON. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the resolution insert the following new section:

SEC. 6. An individual who on February 10, 1977, was a member of the staff of the Committee on the District of Columbia, or of a subcommittee thereof, and had served continuously (except for any period of four days or less) since October 1, 1976, as a member of the staff of that committee, or a subcommittee thereof, of another committee of the Senate, or a subcommittee thereof, or of a Senator, shall be an eligible staff member for purposes of title VII of Senate Resolution 4, Ninety-fifth Congress.

Mr. EAGLETON. Mr. President, this resolution is sponsored by Senator MATHIAS and myself.

I ask unanimous consent that Senator RIBICOFF and Senator PERCY be added as sponsors.

The PRESIDING OFFICER. Is there objection?

Mr. BAKER. Mr. President, reserving the right to object, are we talking about Calendar Order No. 24, an amendment thereto?

Mr. ROBERT C. BYRD. The Senator is correct.

Mr. EAGLETON. Yes.

Mr. BAKER. I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. EAGLETON. This amendment has also been cleared by Senator STEVENS of Alaska.

Mr. ROBERT C. BYRD. What is the explanation of the amendment?

Mr. EAGLETON. Mr. President, the explanation of the amendment is as follows:

My amendment is designed to take care of two specific situations which were not envisioned when Senate Resolution 4 passed. In providing for money for transition and the payment of staff between the termination date of the old committee and June 30, 1977, it was provided that such staff had to be employed by the committee on October 1, 1976. Unfortunately, the ranking minority member of the D.C. Committee hired new people for the committee staff and reassigned other staff to the committee on October 4, 1976, or thereafter. Under the terms of Senate Resolution 4, none of these people may be paid starting today. The additional funds requested by the amendment are to fund the continued services for the minority of these individuals, and since the ranking member of the committee has exercised his right to assignment to the Government Affairs Committee and indicated his willingness to serve as ranking member on the D.C. Subcommittee, I am confident that these individuals will be used as they have been in the past on District of Columbia matters.

Mr. President, I move the adoption of the amendment.

The amendment was agreed to.

The resolution, as amended, was agreed to.

The resolution, as amended, is as follows:

S. RES. 78

Resolved, That, (a) in holding hearings, reporting such hearings, and making investigations as authorized by sections 134(a) and 136 of the Legislative Reorganization Act of 1946, as amended, in accordance with their jurisdiction under rule XXV of the Standing Rules of the Senate, the following standing committees are authorized from March 1, 1977, through June 30, 1977, in their discretion (1) to employ personnel, (2) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency, and (3) to make expenditures from the contingent fund of the Senate, as follows:

(A) Committee on Agriculture, Nutrition, and Forestry, not to exceed $120,000, of which amount not to exceed $4,000 may be expended for the procurement of services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(B) Committee on Armed Services, not to exceed $220,000, of which amount not to exceed $7,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(C) Committee on Banking, Housing and Urban Affairs, not to exceed $314,000.

(D) Committee on the Budget, not to exceed $706,000, of which amount not to exceed $22,750 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(E) Committee on Energy and Natural Resources, not to exceed $240,000, of which amount not to exceed $14,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(F) Committee on Environment and Public Works, not to exceed $339,000, of which

amount not to exceed $1,750 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(G) Committee on Finance, not to exceed $131,000, of which amount not to exceed $5,250 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(H) Committee on Foreign Relations, not to exceed $420,000, of which amount not to exceed $21,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(I) Committee on Human Resources, not to exceed $712,000, of which amount not to exceed $25,700 may be expended for the procurement of the services of individual consultants or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(J) Committee on the Judiciary, not to exceed $1,533,000, of which amount not to exceed $25,700 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(K) Committee on Rules and Administration, not to exceed $207,000, of which amount not to exceed $35,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(L) Committee on Veterans' Affairs, not to exceed $115,000, of which amount not to exceed $21,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(b) In holding hearings, reporting such hearings, and making investigations as authorized by section 134(a) and 136 of the Legislative Reorganization Act of 1946, as amended, in accordance with their jurisdiction under rule XXV of the Standing Rules of the Senate, the following standing Committees are authorized from February 11, 1977, through June 30, 1977, in their discretion (1) to employ personnel, (2) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency, and (3) to make expenditures from the contingent fund of the Senate as follows:

(A) Committees on Commerce, Science, and Transportation, not to exceed $880,000, of which amount not to exceed $134,500 may be expended for the procurement of services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(B) Committee on Governmental Affairs, not to exceed $1,072,000, of which amount not to exceed $76,500 may be expended for the procurement of services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

SEC. 2. (a) In carrying out its duties and functions under Senate Resolution 58, Eighty-first Congress, agreed to February 20, 1950, the Select Committee on Small Business is authorized from March 1, 1977, through June 30, 1977, in its discretion (1) to make expenditures from the contingent fund of the Senate not to exceed $85,000, of which amount not to exceed $875 may be expended for the procurement of services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended); (2) to employ personnel; (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency; (4) to procure the temporary services (not in excess of one year) or intermittent services of individual consultants, or organizations thereof, in the same manner and under the same conditions as a standing committee of the Senate may procure such services under section 202(i) of the Legislative Reorganization Act of 1946; and (5) to provide assistance for the members of its professional staff in obtaining specialized training, in the same manner and under the same conditions as any such standing committee may provide that assistance under section 202(j) of such Act.

(b) In carrying out its duties and functions under Senate Resolution 400, Ninety-fourth Congress, agreed to May 19, 1976, the Select Committee on Intelligence is authorized from March 1, 1977, through June 30, 1977, to expend from the contingent fund of the Senate not to exceed $491,000, of which amount not to exceed $12,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(c)(1) In carrying out its duties and functions under section 104 of Senate Resolution 4, Ninety-fifth Congress, agreed to February 4, 1977, the Special Committee on Aging is authorized, from March 1, 1977, through June 30, 1977, to expend from the contingent fund of the Senate not to exceed $191,000, of which amount not to exceed $7,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(2) Section 104(a)(2) of Senate Resolution 4, Ninety-fifth Congress, is amended by striking out "and for purposes of sections 133(g), 134, and 202 of the Legislative Reorganization Act of 1946,".

(d) In carrying out its duties and functions under Senate Resolution 281, Ninetieth Congress, agreed to July 30, 1968, the temporary Select Committee on Nutrition and Human Needs (as extended by section 106 of Senate Resolution 4, Ninety-fifth Congress) is authorized, from March 1, 1977, through June 30, 1977, to expend from the contingent fund of the Senate not to exceed $160,000, of which amount not to exceed $8,750 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

(e) In carrying out its duties and functions under Senate Resolution 109, Ninety-fourth Congress, agreed to March 31, 1977, the temporary Select Committee to Study the Senate Committee System is authorized, from March 1, 1977, until its expiration, to expend from the contingent fund of the Senate not to exceed $50,000, of which amount not to exceed $9,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

SEC. 3. (a) The amount made available for each committee under the first section and section 2 of this resolution shall be added to the amount which was made available for such committee by resolution for the year ending February 28, 1977, and which is unexpended at the close of February 28, 1977, and such total amount shall remain available for such committee through June 30, 1977 (or in the case of the temporary Select Committee to Study the Senate Committee System, until its expiration.

(b) Amounts authorized to be expended from the contingent fund of the Senate under this resolution by each committee shall be paid upon vouchers approved by the chairman of such committee, except that vouchers shall not be required for the disbursement of salaries of employees paid at an annual rate.

(c) Of the total amount made available under this resolution for the Committee on Armed Services, the Committee on Banking, Housing and Urban Affairs, the Committee on Commerce, Science, and Transportation, the Committee on Governmental Affairs, the Committee on the Judiciary, and the Committee on Rules and Administration, the chairman of each such committee is authorized to allocate such amounts as he deems appropriate for subcommittees of such committee. Upon making any such allocation, such chairman shall notify the Committee on Rules and Administration and the Secretary of the Senate.

SEC. 4. It is the sense of the Senate that—

(1) each committee, in selecting members of its staff to be retained on the staff of such committee and its subcommittees after June 30, 1977, should, to the greatest extent practicable, retain those members of its staff to whom section 703(d) of Senate Resolution 4, Ninety-fifth Congress, applies rather than retaining or employing individuals who were not members of its staff on February 11, 1977; and

(2) in the event a member of the staff of a committee to whom such section 703(d) applies voluntarily leaves the staff of such committee before June 30, 1977, the vacancy caused thereby shall not be filled unless such committee expects to fund the vacant position from funds made available to it pursuant to section 133(g) of the Legislative Reorganization Act of 1946 for the period beginning on July 1, 1977.

SEC. 5. Subject to the provisions of section 705 of Senate Resolution 4, Ninety-fifth Congress, the amount of any accrued surplus available to any Senator under section 108 of the Legislative Branch Appropriation Act, 1976, at the close of February 28, 1977, shall be available to that Senator during the period beginning on March 1, 1977, and ending on September 30, 1977, for the purpose specified in section 705(a) of such resolution.

SEC. 6. An individual who on February 10, 1977, was a member of the staff of the Committee on the District of Columbia, or of a subcommittee thereof, and had served continuously (except for any period of four days or less) since October 1, 1976, as a member of the staff of that committee, or a subcommittee thereof, of another committee of the Senate, or a subcommittee thereof, or of a Senator, shall be an eligible staff member for purposes of title VII of Senate Resolution 4, Ninety-fifth Congress.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which Senate Resolution 78, as amended, was agreed to.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

CALL OF CERTAIN MEASURES ON THE CALENDAR

Mr. ROBERT C. BYRD. Mr. President, there are various other items on the calendar of general orders that have been cleared on both sides, and they are the following Calendar Order numbers: 15, 16, 18, 19, 20, 21, 22, 23, 25, and 26.

I ask unanimous consent that the Senate proceed to the consideration of the

calendar measures that I have enumerated, as I call them up.

The PRESIDING OFFICER. Without objection, it is so ordered.

GERALD R. FORD BUILDING

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 15, S. 385, with the proviso that no amendment not germane thereto be in order during the consideration or reconsideration thereof.

The PRESIDING OFFICER. Without objection, it is so ordered. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (S. 385) to name a certain Federal building in Grand Rapids, Michigan, the "Gerald R. Ford Building".

The Senate proceeded to consider the bill.

Mr. BAKER. Mr. President, it is my personal pleasure and distinct honor to join my colleagues on the Public Works Committee in support of S. 385, introduced by the distinguished senior Senator from Michigan (Mr. GRIFFIN). This bill would designate a Federal office building in Grand Rapids, Mich., as the "Gerald R. Ford Building."

It is a fitting tribute to pay to the 38th President of the United States. Through unprecedented events in our Nation, Gerald Ford found himself taking on the responsibilities of first the Vice Presidency and then the Presidency. Under some of the most difficult circumstances in our Nation's history Jerry Ford succeeded in restoring public confidence in our Government and in our leadership.

During his 10 months as Vice President and his 2½ years as President, this country saw a continuation of Gerald Ford's honesty and courage that had won the respect of his constituents in Michigan and of his colleagues in the House of Representatives. President Ford devoted over 25 years to serving the people of Michigan in the House of Representatives. That service was characterized by Jerry Ford's good sense and sound judgment. His candor and integrity have long been known to the people of Michigan, and his service to the people in the State of Michigan prepared him well for service to the people of the United States.

I am pleased to join in recognizing the contribution Gerald Ford has made to our Nation and in paying tribute to him by designating this building in his home town of Grand Rapids the "Gerald R. Ford Building."

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Federal building located at 110 Michigan Avenue, Northwest, in Grand Rapids, Michigan, is hereby designated as the "Gerald R. Ford Building". Any reference in any law, regulation, document, record, map, or other paper of the United States to such building shall be considered to be a reference to the Gerald R. Ford Building.

1977 JOINT ECONOMIC REPORT EXTENSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 16, House Joint Resolution 239, with the proviso that no nongermane amendment thereto shall be in order during the consideration or reconsideration thereof.

The PRESIDING OFFICER. Without objection, it is so ordered. The bill will be stated by title.

The assistant legislative clerk read as follows:

A joint resolution (H.J. Res. 239) extending the filing date of the 1977 joint economic report.

The joint resolution was considered, ordered to a third reading, read the third time, and passed.

THE ACCOUNTING ESTABLISHMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 19, Senate Concurrent Resolution 8, with the proviso that no amendment not germane thereto be in order during the consideration or reconsideration thereof.

The PRESIDING OFFICER. Without objection, it is so ordered. The concurrent resolution will be stated.

The assistant legislative clerk read as follows:

A concurrent resolution (S. Con. Res. 8) authorizing the printing of the committee print entitled "The Accounting Establishment" as a Senate Document.

The concurrrent resolution was considered and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That the committee print of the Committee on Government Operations, Ninety-fourth Congress, entitled "The Accounting Establishment," prepared by its Subcommittee on Reports, Accounting, and Management, be printed as a Senate document, and that there be printed two thousand additional copies of such document for the use of that committee.

NATO AND THE NEW SOVIET THREAT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 20, Senate Resolution 53, with the proviso that no amendment not germane thereto be in order during the consideration or reconsideration thereof.

The PRESIDING OFFICER. Without objection, it is so ordered. The resolution will be stated.

The assistant legislative clerk read as follows:

A resolution (S. Res. 53) authorizing the printing of additional copies of the committee print entitled "NATO and the New Soviet Threat."

The resolution was considered and agreed to, as follows:

Resolved, That there be printed for the use of the Committee on Armed Services five thousand additional copies of its committee print of the current Congress entitled "NATO and the New Soviet Threat".

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order Nos. 21, 22, and 23, with the proviso that no nongermane amendments be in order during the consideration or reconsideration of any of the three.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL EXPENDITURES BY THE COMMITTEE ON THE JUDICIARY

The resolution (S. Res. 65) authorizing additional expenditures by the Committee on the Judiciary for routine purposes, was considered and agreed to, as follows:

Resolved, That the Committee on the Judiciary is authorized to expend from the contingent fund of the Senate, during the Ninety-fifth Congress, $40,000 in addition to the amount, and for the same purposes, specified in section 134(a) of the Legislative Reorganization Act of 1946.

ADDITIONAL EXPENDITURES BY THE COMMITTEE ON ARMED SERVICES

The resolution (S. Res. 71) authorizing additional expenditures by the Committee on Armed Services for routine expenses, was considered and agreed to, as follows:

Resolved, That the Committee on Armed Services is authorized to expend from the contingent fund of the Senate, during the Ninety-fifth Congress, $85,000 in addition to the amount, and for the same purposes, specified in section 134(a) of the Legislative Reorganization Act of 1946.

ADDITIONAL EXPENDITURES BY THE COMMITTEE ON ARMED SERVICES

The Senate proceeded to consider the resolution (S. Res. 72) authorizing additional expenditures by the Committee on Armed Services for the procurement of consultants, which had been reported from the Committee on Rules and Administration with an amendment to strike out all after the resolving clause and insert in lieu thereof:

That Senate Resolution 387, Ninety-fourth Congress, agreed to March 1, 1976, is amended as follows:

(1) In section 2, strike out the amount "$20,000" and insert in lieu thereof "$26,000";

(2) In section 3, strike out the amount "$581,000" and insert in lieu thereof "$575,000"; and

(3) In section 5, strike out the amount "$68,000" and insert in lieu thereof "$62,000".

The amendment was agreed to.

The resolution as amended was agreed to.

The title was amended so as to read:

Resolution increasing the limitation on expenditures by the Committee on Armed Services for the procurement of consultants.

REVISION AND PRINTING OF SENATE MANUAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the immediate consideration

of Calendar Order No. 25, Senate Resolution 79, with the proviso that no amendment not germane thereto be in order during the consideration or reconsideration thereof.

The PRESIDING OFFICER. Without objection, it is so ordered.

The resolution will be stated.

The assistant legislative clerk read as follows:

A resolution (S. Res. 79) authorizing the revision and printing of the Senate Manual for use during the Ninety-fifth Congress.

The resolution was considered and agreed to, as follows:

Resolved, That the Committee on Rules and Administration be, and it is hereby, directed to prepare a revised edition of the Senate Rules and Manual for the use of the Ninety-fifth Congress, that said rules and manual shall be printed as a Senate document, and that two thousand additional copies shall be printed and bound, of which one thousand copies shall be for the use of the Senate, five hundred and fifty copies shall be for the use of the Committee on Rules and Administration, and the remaining four hundred and fifty copies shall be bound in full morocco and tagged as to contents and delivered as may be directed by the committee.

SIDNEY AND TILLIE ROSENTHAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 26, Senate Resolution 80, with the proviso that no amendment not germane thereto be in order during the consideration or reconsideration thereof.

The PRESIDING OFFICER. Without objection, it is so ordered. The resolution will be stated by title.

The assistant legislative clerk read as follows:

A resolution (S. Res. 80) to pay a gratuity to Sidney and Tillie Rosenthal.

The resolution was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Sidney Rosenthal, father of Harold W. Rosenthal, and Tillie Rosenthal, mother of Harold W. Rosenthal, an employee of the Senate at the time of his death, a sum to each equal to two months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

WAIVER OF SECTION OF THE CONGRESSIONAL BUDGET ACT WITH RESPECT TO CONSIDERATION OF S. 521

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 18, Senate Resolution 54, with the proviso that no amendment not germane thereto be in order during the consideration or reconsideration thereof.

The PRESIDING OFFICER. Without objection, it is so ordered.

The resolution will be stated.

The assistant legislative clerk read as follows:

A resolution (S. Res. 54) waiving section 402(a) of the Congressional Budget and Impoundment Control Act of 1974 with respect to the consideration of S. 521, a bill to amend the John F. Kennedy Center Act to authorize funds for the repair of leaks.

The resolution was considered and agreed to as follows:

Resolved, That the prohibition of section 402(a) of the Congressional Budget and Impoundment Control Act of 1974 as to the consideration by the Senate of legislation authorizing the enactment of new budget authority for a fiscal year if such legislation is not reported to the Senate on or before May 15 preceding the beginning of such fiscal year be waived with respect to the bill to amend the John F. Kennedy Center Act (S. 521) reported by the Committee on Public Works on January 28, 1977. The waiver is necessary for the Senate to complete action on legislation which provides an authorization of $4,500,000 to the board of the Kennedy Center for repairs to the roof and terrace areas of the Kennedy Center.

The authorization of funds in S. 521 was not taken into consideration in the March 15 report to the Senate Budget Committee by the Public Works Committee because such funding was not anticipated at that time. This reported bill provides for emergency funding for repairs to the roof and other areas at the Kennedy Center which need repair to prevent substantial damage to the interior of the building.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider, en bloc, the votes by which the various resolutions were agreed to and the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, has there been any period for morning business today?

The PRESIDING OFFICER. There has not been any morning business.

Mr. ROBERT C. BYRD. I ask unanimous consent that there now be a period for the transaction of routine morning business, for the purposes only of the introduction of statements, bills, resolutions, petitions, and memorials, and with no resolutions coming over under the rule.

Mr. BAKER. Mr. President, reserving the right to object, and I shall not object, I would inquire of the majority leader, could we have additional time for other Members to insert materials in the RECORD?

Mr. ROBERT C. BYRD. Yes; Mr. President I ask unanimous consent that Senators may have until 5 o'clock p.m. to insert statements, petitions, memorials, bills, and resolutions into the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Are we now in the period for routine morning business?

The PRESIDING OFFICER. The Senator is correct.

THE MIDDLE EAST DELEGATION REPORT

Mr. ROBERT C. BYRD. Mr. President, I would like to call attention to an editorial in today's Washington Post entitled "Congress on the Mideast." The editorial refers to the Senate delegation provided by Senate Resolution 523 led by Senator RIBICOFF and Senator BAKER whose membership was Senators CANNON, EAGLETON, GLENN, FORD, CULVER, and BUMPERS; and Senators PEARSON, GRIFFIN, BELLMON, and LAXALT.

The Post editorial praises the first part of the delegation report, regarding prospects for peace in the Middle East and policy toward Iran; the report was printed in the RECORD February 10.

Mr. President, this delegation has reflected honorably on the Senate. To quote briefly from the editorial, the report "provides reassuring evidence of the quantity and quality of congressional involvement in dealing with the problems of that troubled region * * * This has given the Congress a fair claim to be included as a responsible partner in American Mideast policymaking."

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Feb. 11, 1977]

CONGRESS ON THE MIDEAST

The new Middle East report of Sens. Abraham Ribicoff (D-Conn.) and Howard Baker (R-Tenn.), who led a delegation of 12 senators on a study mission in November, provides reassuring evidence of the quantity and quality of congressional involvement in dealing with the problems of that troubled region. Just since the 1973 war, perhaps 200 legislators have visited the Mideast; there is no comparable record of first-hand congressional familiarization with both sides of any other regional dispute in which the United States has an interest. This has given the Congress a fair claim to be included as a responsible partner in American Mideast policy-making. We would not say Congress has always been wise in its approach to the Mideast, nor has the executive (Who has for that matter?). But by and large, the congressional challenge to the policy-makers downtown has been increasingly subordinated to the requirement for national cooperation. The Ribicoff-Baker report is a case in point.

The report is, if you will, even-handed: Its premise is that the United States needs the confidence of Arabs as well as Israelis to serve its own interests and theirs. It acknowledges both the political complexity and the emotional/psychological twist of the issues dividing the parties. It notes indications that Arab "moderates" are ready to accept the existence of Israel as a sovereign Jewish state. It considers ways in which the Palestinians could be brought into negotiations. Finally, it accepts that American leadership is essential if the region is to move toward peace. If these points seem unexceptionable, then that is a telling comment in itself on how far congressional (and public) opinion has moved in recent years. It was not so very long ago that none of these considerations was widely granted.

Sensibly, the Ribicoff-Baker report does not attempt to lay down specific guidelines for a settlement. In its general observations, however, it takes an independent-minded tack that is likely to give some satisfaction, and some offense, to both sides. It calls for negotiated borders that are, from Israel's viewpoint, "militarily defensible." It seems to sympathize with the Arab desire to substitute American guarantees of Israel for direct Arab ties with Israel. One can argue these and other points, but that is not what is important. The administration is taking its time on the Mideast, as it should. The substance is hard; the local political timetables, particularly Israel's elections in May, can be deplored but not ignored. Secretary of State Vance's reconnaissance trip, which is to start on Monday, is a good way to start.

The report by Sens. Baker and Ribicoff indicates that when the administration is finally ready, the Congress will be, too.

SENATE RESOLUTION 86—APPOINTING THE MAJORITY PARTY MEMBERSHIP ON THE SELECT COMMITTEE ON ETHICS

Mr. CRANSTON. Mr. President, I send to the desk a resolution and ask for its immediate consideration, with a proviso that no nongermane amendments will be in order during its consideration or reconsideration.

The PRESIDING OFFICER. Without objection, it is so ordered.

The resolution will be stated by title.

The assistant legislative clerk read as follows:

A resolution (S. Res. 86) appointing the majority party membership on the Select Committee on Ethics.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 86) was agreed to, as follows:

S. RES. 86

Appointing the Majority Party Membership on the Select Committe on Ethics

Resolved, That the following shall constitute the majority party's membership on the Select Committee on Ethics:

Mr. Stevenson, Chairman.
Mr. Ribicoff.
Mr. Morgan.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. CRANSTON. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

PROCEDURE FOR REFERRAL OF MEASURES

Mr. CRANSTON. Mr. President, under section 802 of Senate Resolution 4, as agreed to by the Senate, "all proposed legislation and nominations referred before the effective date" of the resolution "to standing committees of the Senate shall be re-referred * * * to the appropriate standing committees" effective on February 11, 1977, under section 801 of the resolution.

To save time and considerable expense, the Parliamentarian has recommended, and the minority leader and I agree, that the only measures that should in fact be re-referred are those that would now go to a different committee under the resolution than they were originally referred to. This will be done under a separate section in the RECORD listing all bills so re-referred.

Where a measure has been referred to a committee and that committee retains jurisdiction, even though its name has been changed, the matter will not be reprinted just to reflect the change in committee name. When and if such measures are reported, the new name of the committee will be shown on the reported version of the bill.

Mr. BAKER. Reserving the right to object, Mr. President, does the Senator from California include the proviso that we discussed earlier that, in view of the fact that we will be in recess and many of us not here in Washington, any Senator could lodge his objections to this procedure not later than the close of business on the next succeeding legislative day?

Mr. CRANSTON. Yes. That is understood.

Mr. BAKER. I have no objection, Mr. President.

The PRESIDING OFFICER. Without objection, it so ordered.

EFFECTS OF WEATHER

Mr. ROBERT C. BYRD. Mr. President, I am sure that it was a farmer who first made the wry comment that everybody talks about the weather, but no one does anything about it. Farmers know better than most of us that weather is in the hands of God, not man—and that weather is more important than just the chill you feel today. Weather is food, and profits—or famine and losses.

Two years age the CIA released a report on the "Potential Implications of Trends In World Population, Food Production, and Climate." Last year they declassified a working paper on "Climatological Research As It Pertains to Intelligence Problems," covering many of the same problems and statistics. Both of these papers reported the projections of changes in our world weather by climatologists, and analyzed the probable impact of those changes on our own security and on social, economic, and political stability around the world.

The far-reaching implications of that CIA analysis have been largely ignored, unfortunately. Our immediate problems of energy and jobs have held our attention. Like the early warning signals of several years ago about a possible energy crisis, these warning of an approaching weather problem which could affect our food and fiber production and our international power position were pushed aside.

The severity of this winter has reminded all of us about our long- and short-term energy needs, and both the Congress and the administration have taken action. We are in the process, at last, of developing a national energy policy and a coordinated energy plan for future years.

I believe that it is time for us to put all the diverse information we have available together in order to prepare for what may be a real world food crisis in the years ahead. If the CIA report is correct, that food crisis will arrive even if our weather remains "normal"—that is, essentially the same as it has been for 30 or 40 years. If, however, the climatologists who are predicting a cooling trend for the northern hemisphere at least are correct, then the food crisis may become a food tragedy, with extreme impact on American foreign policy.

Although this is a complex problem, it is possible to make a judgment about its importance by considering several well established facts:

World population has grown 50 percent in the last 40 years. At current rates we will reach nearly 8 billion people by the year 2000. This increase is not evenly distributed, but is largely in less developed countries. Even if drastic changes are made in birth rates in most of those countries, it would take at least 50 years to reach zero growth—unless famine or illness of major proportions raise global death rates.

At the same time, food production in the world has increased and will probably continue to increase in the years ahead. However, per capita production of food in less developed countries has increased very little, and even continued growth in food output of 2 to 3 percent per year would leave the "poor" people of Asia and Africa on the same undernourished level.

The North American Continent is now the food basket of the world. With the exception of Australia and New Zealand, we are the only net exporters of grain. The United States alone supplies nearly three-fourths of all net global exports of grain. But we no longer have the grain reserves which we once had, and almost all of our land reserve is back in production.

If normal weather prevails, if adequate inputs of fertilizers, pesticides, and technology are available, and if prices paid to farmers are adequate incentives to raise output, the CIA report indicates that world grain output can continue to grow adequately to maintain current food levels. However, arable land is being lost to erosion, to salinization, and to industry even without weather change. If the cooling trend predicted occurs over a long period, drought and crop shortfalls will occur. There would be shorter growing season for Canada, Russia, and China. Only the United States and Argentina would escape damage as a grain growing region—and that would be possible because we could shift crop belts toward the south. Many of the hybrid foods and green revolution strains of food developed in recent years would lose their ability to increase yields. Irrigation patterns and major dams would be affected by changes in rainfall patterns.

Clearly the political implications of this kind of weather change would be enormous. Even without weather change, the United States will have increasing power and influence through our role as a food supplier. With the predicted weather change, we would have almost total control over life and death decisions of many nations.

This year we have felt a brief taste of what weather can mean. We have not yet felt the full impact of what winter has done to our agricultural producers, but we are hearing warnings about both price increases and shortages. Temperatures have been as much as 17 degrees below normal in most parts of the country. Rainfall has been far below normal or nonexistant in plains and Western States. The combination of extreme cold and dry weather has resulted in a drying out of the soil and subsoil, a problem which will affect crops for more than this 1 year. Dust-bowl kinds of soil erosion are threatening several States.

The list of food crops in trouble or threatened by either cold or drought is lengthening. The sugarcane crop has been cut early in order to save as much as possible. The Kentucky peach crop appears to be lost. Florida's winter vegetable crop is largely gone. California is facing an expected $1 billion crop loss. Ranchers are thinning herds.

Even more worrisome for farmers, the energy shortage—especially of natural gas—means that the fertilizer production for this year may be down as much as a third. That means shortages and higher prices. Hydroelectric plants in the West depend on water—and already plans are being drawn up to transfer both water and power from one hard-hit area to another.

All of these problems are related to the strange weather patterns of this year. All of them will impact on American farm producers and on American consumers. But they will also make a difference to a world which has come to be more and more dependent on American food and fiber exports.

I believe that the possibilities raised by the CIA analysis of long-range climate predictions become extremely serious when they are considered in light of the facts I have mentioned today. I believe that it is urgent for us to consider these facts in relation to one another—agricultural production, world population growth and food demands, energy production and demands, and the social and economic factors which influence actions we take concerning these problems.

We must develop a food policy which is long range and which encompasses all the possible forces—even the powerful force of weather. We must thoroughly investigate the possibility of long-term weather change. We must not be caught short in the area of agriculture and climate as we have been in the area of energy production and supply. This is demonstrably one world problem which the United States must face squarely and with the full use of our technical and scientific abilities. In this fight we are—and will probably remain—the only possible leader.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Marks, one of his secretaries.

REPORT ON THE CYPRUS DISPUTE—MESSAGE FROM THE PRESIDENT—PM–35

The DEPUTY PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which was referred to the Committee on Foreign Relations:

To the Congress of the United States:

This report on the progress toward a solution to the Cyprus dispute is the first of a series that I will submit pursuant to Public Law 94–104. Through these reports and continuing close consultations with the Congress, I will keep the American people fully informed of developments in the negotiations.

Helping to promote an equitable and lasting solution to the problems of Cyprus is a high priority for my Administration. The work has already begun. At my request, former Defense Secretary Clark M. Clifford will leave on February 15 for a special mission to Greece, Turkey and Cyprus, as my personal emissary. Through consultations in Greece and Turkey, he will seek to improve our bilateral relations with these valued NATO allies. With regard to Cyprus, I have asked for his personal assessment of the situation on the island, prospects for early movement toward a negotiated settlement, and how we might be of assistance in this process. Mr. Clifford will consult with the Congress before he departs and again—with other senior officials—after his return, in an effort to produce policies which are effective and which have the broad support of the American people.

We intend to stay in close touch with our other European friends. Vice President MONDALE raised the subject during his recent trip and received welcome indications that member states of the European Community continue to share our interest in doing what is possible to encourage a negotiated solution.

We will also continue to maintain close contact with the United Nations in its efforts to promote a peaceful solution. Secretary General Waldheim has worked tirelessly to this end since the summer of 1974. He will soon visit Nicosia for discussions with Cypriot leaders. We hope that through his continued efforts the talks between the two communities might resume in the near future.

Recent positive developments offer some prospect of further progress. One such event was the meeting last month between President Makarios and Turkish Cypriot community leader Denktash, the first meeting between the two in thirteen years. I can assure the Congress that the United States will do all it can to build on these positive developments and advance the cause of a negotiated settlement for Cyprus.

JIMMY CARTER.

THE WHITE HOUSE, *February 11, 1977.*

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The PRESIDING OFFICER laid before the Senate the following communications which were referred as indicated:

EC–639. A letter from the Director of the Office of Management and Budget, Executive Office of the President, transmitting, pursuant to law, a cumulative report on rescissions and deferrals for February, 1977 (with an accompanying report); jointly, pursuant to the order of January 30, 1975, to the Committees on Appropriations, the Budget, Commerce, Armed Services, Environment and Public Works, Energy and Natural Resources, Foreign Relations, Banking, Housing and Urban Affairs, the Judiciary, Agriculture and Forestry, Human Resources, Finance, and Government Operations, and ordered to be printed.

EC–640. A letter from the Deputy Assistant Secretary of Agriculture transmitting, pursuant to law, the report of the Federal Crop Insurance Corporation for the 1976 crop year (with an accompanying report); to the Committee on Agriculture and Forestry.

EC–641. A letter from the Secretary of Agriculture transmitting, pursuant to law, the global assessment report as of April 1976 (with an accompanying report); to the Committee on Agriculture and Forestry.

EC–642. A letter from the Secretary of Agriculture transmitting, pursuant to law, the annual report on P.L. 480, Food for Peace, for fiscal year 1975 (with an accompanying report); to the Committee on Agriculture and Forestry.

EC–643. A letter from the Assistant Secretary of Defense reporting, pursuant to law, that no use was made of funds appropriated in the Defense Appropriation Act, 1976 and the Military Construction Appropriation Act, 1976 for the period July 1–September 30, 1976; to the Committee on Appropriations.

EC–644. A letter from the Administrator of the Rural Electrification Administration reporting, pursuant to law, the approval to guarantee a non-REA loan to Tri-State Generation and Transmission Association, Inc., of Thornton, Colorado; to the Committee on Appropriations.

EC–645. A letter from the Administrator of the Rural Electrification Administration reporting, pursuant to law, the approval to guarantee a non-REA loan to Colorado-Ute Electric Association, Inc., of Montrose, Colorado; to the Committee on Appropriations.

EC–646. A letter from the Acting Secretary of the Navy transmitting a draft of proposed legislation to amend chapter 639 of title 10, United States Code, to enable the Secretary of the Navy to change the name of a publication of the Naval Observatory providing data for navigators and astronomers (with accompanying papers); to the Committee on Armed Services.

EC–647. A letter from the Chairman of the National Market Advisory Board transmitting, pursuant to law, a report on the possible need for modifications of the scheme of self-regulation provided for in the Securities Exchange Act of 1934 (with an accompanying report); to the Committee on Banking, Housing and Urban Affairs.

EC–648. A letter from the Secretary of the Interior transmitting, pursuant to law, a report on activities carried on by the Geological Survey during the reporting period January 1 through December 31, 1976; to the Committee on Energy and Natural Resources.

EC–649. A letter from the Secretary of Interior transmitting, pursuant to law, a plan for a Coal Exploration Program (with an accompanying report); to the Committee on Energy and Natural Resources.

EC–650. A letter from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting, pursuant to law, a report on international agreements other than treaties entered into by the United States within the past sixty days (with accompanying papers); to the Committee on Foreign Relations.

EC–651. A letter from the Acting Director of the United States Information Agency transmitting, pursuant to law, the 44th Annual report to Congress from the United States Information Agency (with an accompanying report); to the Committee on Foreign Relations.

EC–652. A letter from the Deputy Director of the Administrative Office of the United States Courts transmitting a draft of proposed legislation to provide for the appointment of additional judgeships for the United States district courts and courts of appeals, and for other purposes (with accompanying papers); to the Committee on the Judiciary.

EC–653. A letter from the Director of the Office of Management and Budget, Executive Office of the President, transmitting, pursuant to law, a report that appropriations being apportioned on a basis which indicates a necessity for supplemental appropriations for the fiscal year 1977 (with an accompanying report); to the Committee on Appropriations.

EC–654. A letter from the Administrator of the Federal Energy Administration transmitting, pursuant to law, the second annual report on the activities of the Federal Energy Administration during the 1975–1976 period (with an accompanying report); to the Committee on Energy and Natural Resources.

EC–655. A letter from the Acting Administrator transmitting, pursuant to law, a report on the results of the 1976 Survey required by the Federal Water Pollution Control Act (with an accompanying report);

to the Committee on Environment and Public Works.

EC–656. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Examination of Financial Operations for Fiscal Year 1975 Shows Need for Improvements in the Guaranteed Student Loan Program" (with an accompanying report); to the Committee on Government Affairs.

EC–657. A letter from the Secretary of the Council of the District of Columbia transmitting, pursuant to law, a copy of Council Act 1–394, "An act to encourage Congress to amend laws pertaining to diplomatic immunity to provide responsibility for parking violations" (with accompanying papers); to the Committee on Government Affairs.

EC–658. A letter from the Chairman of the Council of the District of Columbia transmitting, pursuant to law, Council Act 1–227, "An act to provide policies relating to the provisions of day care services by the Department of Human Resources" (with accompanying papers); to the Committee on Government Affairs.

EC–659. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Status of the CH–53E Helicopter Program" (with an accompanying report); to the Committee on Government Affairs.

EC–660. A letter from the Acting Assistant Secretary for Administration and Management of the Department of the Interior transmitting, pursuant to law, a report of a new system of records, in accordance with the Privacy Act, (with an accompanying report); to the Committee on the Judiciary.

REPORT OF ACTIVITIES OF THE COMMITTEE ON AERONAUTICAL AND SPACE SCIENCES DURING THE 94TH CONGRESS—(REPT. NO. 95–16)

Mr. FORD. Mr. President, as temporary chairman of the Committee on Aeronautical and Space Sciences, I am filing with the Senate this report of the committee's activities during the 94th Congress. This report is required by section 136(b) of the Legislative Reorganization Act of 1946, as amended.

The DEPUTY PRESIDENT pro tempore. The report will be received and printed.

JUVENILE DELINQUENCY ANNUAL REPORT, 1976—(REPT. NO. 95–17)

Mr. BAYH, from the Subcommittee To Investigate Juvenile Delinquency, of the Committee on the Judiciary, submitted a report entitled "Juvenile Deliquency Annual Report, 1976," which was ordered to be printed.

THE FEDERAL JUDICIAL SYSTEM—(REPT. NO. 95–18)

Mr. EASTLAND, from the Committee on the Judiciary, submitted a report entitled "The Federal Judicial System," which was ordered to be printed.

IMMIGRATION AND NATURALIZATION—(REPT. NO. 95–19)

Mr. EASTLAND, from the Committee on the Judiciary, submitted a report entitled "Immigration and Naturalization," which was ordered to be printed.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated.

By Mr. WILLIAMS (for himself, Mr. RANDOLPH, Mr. JAVITS, Mr. ABOUREZK, Mr. ANDERSON, Mr. BAYH, Mr. BROOKE, Mr. CASE, Mr. CHURCH, Mr. CLARK, Mr. CRANSTON, Mr. EAGLETON, Mr. FORD, Mr. STEVENSON, Mr. HUDDLESTON, Mr. HUMPHREY, Mr. KENNEDY, Mr. MAGNUSON, Mr. MCGOVERN, Mr. METCALF, Mr. NELSON, Mr. PELL, Mr. RIEGLE, Mr. SCHWEIKER, Mr. STAFFORD, and Mr. HEINZ):

S. 717. A bill to promote safety and health in the mining industry, to prevent recurring disasters in the mining industry, and for other purposes; to the Committee on Human Resources.

By Mr. STONE:

S. 718. A bill to amend chapter 19 of title 38, United States Code, to require the Administrator of Veterans' Affairs to provide veterans with certain cost information relating to the conversion of Government-supervised insurance to individual life insurance policies; to the Committee on Veterans' Affairs.

By Mr. HART:

S. 719. A bill entitled the "Mobile Source Pollution Control Act of 1977"; to the Committee on Environment and Public Works.

By Mr. HUMPHREY (for himself, Mr. MCGOVERN, Mr. ANDERSON, Mr. PELL, Mr. RANDOLPH, Mr. BAYH, Mr. WILLIAMS, and Mr. RIEGLE):

S. 720. A bill to authorize the Secretary of Agriculture to carry out a program of nutrition information and education as part of food service programs for children conducted under the School Lunch and Child Nutrition Acts; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. GRIFFIN:

S. 721. A bill for the relief of Ewa Winiaraka; to the Committee on the Judiciary.

By Mr. BROOKE:

S. 722. A bill to amend the Emergency Natural Gas Act of 1977 in order to prohibit certain termination of natural gas or electric service during the emergency declared pursuant to such Act; to the Committee on Energy and Natural Resources.

By Mr. GARN (for himself and Mr. SCHMITT):

S. 723. A bill to provide an independent system for the determination of annual rates of pay for Members of Congress, to provide a biennial review of annual rates of pay for certain Federal officials, to provide a procedure by which a Member of Congress may elect not to receive a salary increase, and for other purposes; to the Committee on Governmental Affairs.

By Mr. THURMOND:

S. 724. A bill to provide for the payment of survivor annuities to widows of certain members of the uniformed services who died before the effective date of the survivor benefit plan; to the Committee on Armed Services.

By Mr. RANDOLPH (for himself, Mr. WILLIAMS, Mr. STAFFORD, Mr. JAVITS, Mr. KENNEDY, Mr. PELL, Mr. SCHWEIKER, Mr. MAGNUSON, Mr. HUMPHREY, and Mr. DURKIN):

S. 725. A bill to extend certain programs under the Education of the Handicapped Act; to the Committee on Human Resources.

By Mr. WILLIAMS:

S. 726. A bill to establish a program of Federal assistance to provide relief from energy emergencies and energy crises; to the Committee on Energy and Natural Resources.

By Mr. GRIFFIN:

S. 727. A bill to amend the Federal Meat Inspection Act to permit States to impose inspection, marking, labeling, packaging, and ingredient requirements that are more stringent than Federal standards; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. DURKIN (for himself, Mr. DOLE, and Mr. MCINTYRE):

S. 728. A bill to amend the Internal Revenue Code of 1954 to change the income distribution requirement for certain private operating foundations and to exempt certain private operating foundations from the excise tax on investment income; to the Committee on Finance.

By Mr. DURKIN:

S. 729. A bill to amend the Natural Gas Act with respect to court review of Federal Power Commission orders pursuant to such Act; to the Committee on Environment and Natural Resources.

By Mr. BAKER (for himself, Mr. JAVITS, Mr. DOMENICI, Mr. BELLMON, Mr. CHAFFEE, Mr. CURTIS, Mr. DANFORTH, Mr. GOLDWATER, Mr. GRIFFIN, Mr. HATCH, Mr. HAYAKAWA, Mr. HEINZ, Mr. LUGAR, Mr. MCCLURE, Mr. PERCY, Mr. SCHMITT, Mr. SCHWEIKER, Mr. STAFFORD, Mr. TOWER, and Mr. YOUNG):

S. 730. A bill to amend the Internal Revenue Code of 1954 to provide a permanent reduction in the rates of tax paid by individuals; to the Committee on Finance.

By Mr. BAKER (for himself, Mr. DOLE, Mr. JAVITS, Mr. DOMENICI, Mr. PERCY, Mr. BELLMON, Mr. CHAFFEE, Mr. CURTIS, Mr. DANFORTH, Mr. GRIFFIN, Mr. HAYAKAWA, Mr. HEINZ, Mr. HATCH, Mr. LUGAR, Mr. MCCLURE, Mr. SCHMITT, Mr. SCHWEIKER, Mr. WALLOP, and Mr. YOUNG):

S. 731. A bill to amend the Internal Revenue Code of 1954 to provide a tax credit based upon the creation of new jobs and increased employment in private industry; to the Committee on Finance.

By Mr. BAKER (for himself, Mr. JAVITS, Mr. DOMENICI, Mr. BELLMON, Mr. CHAFEE, Mr. CURTIS, Mr. DANFORTH, Mr. GOLDWATER, Mr. GRIFFIN, Mr. HEINZ, Mr. HATCH, Mr. HAYAKAWA, Mr. LUGAR, Mr. MCCLURE, Mr. PERCY, Mr. SCHMITT, Mr. SCHWEIKER, Mr. STAFFORD, Mr. TOWER, Mr. WALLOP, and Mr. YOUNG):

S. 732. A bill to amend the Internal Revenue Code of 1954 to provide for a permanent reduction in the rate of tax paid by small business corporations; to the Committee on Finance.

By Mr. BAKER (for himself, Mr. JAVITS, Mr. DOMENICI, Mr. BELLMON, Mr. CHAFEE, Mr. CURTIS, Mr. DANFORTH, Mr. GOLDWATER, Mr. GRIFFIN, Mr. HATCH, Mr. HAYAKAWA, Mr. LUGAR, Mr. MCCLURE, Mr. PERCY, Mr. SCHMITT, Mr. SCHWEIKER, Mr. TOWER, Mr. WALLOP, and Mr. YOUNG):

S. 733. A bill to amend the Internal Revenue Code of 1954 to increase the amount of the dividend exclusion; to the Committee on Finance.

By Mr. BAKER (for himself, Mr. JAVITS, Mr. DOMENICI, Mr. BELLMON, Mr. CHAFEE, Mr. CURTIS, Mr. DANFORTH, Mr. GOLDWATER, Mr. GRIFFIN, Mr. HATCH, Mr. HAYAKAWA, Mr. MCCLURE, Mr. PERCY, Mr. SCHMITT, Mr. SCHWEIKER, Mr. TOWER, Mr. WALLOP, and Mr. YOUNG):

S. 734. A bill to amend the Internal Revenue Code of 1954 to provide for the exclusion from taxation of a limited amount of interest on savings; to the Committee on Finance.

By Mr. BAKER (for himself, Mr. JAVITS, Mr. DOMENICI, Mr. PERCY, Mr. BELLMON, Mr. CHAFEE, Mr. CURTIS, Mr. DANFORTH, Mr. GRIFFIN, Mr. HATCH, Mr. HAYAKAWA, Mr. HEINZ, Mr. LUGAR, Mr. MCCLURE, Mr. SCHMITT, Mr.

SCHWEIKER, Mr. WALLOP, and Mr. YOUNG):

S. 735. A bill to amend the Internal Revenue Code of 1954 to permit the accelerated depreciation of property placed in service in areas of high unemployment; to the Committee on Finance.

By Mr. BAKER (for himself, Mr. CURTIS, Mr. JAVITS, Mr. DOMENICI, Mr. BELLMON, Mr. CHAFEE, Mr. DANFORTH, Mr. GOLDWATER, Mr. GRIFFIN, Mr. HATCH, Mr. HAYAKAWA, Mr. HEINZ, Mr. LUGAR, Mr. MCCLURE, Mr. PERCY, Mr. SCHMITT, Mr. SCHWEIKER, Mr. WALLOP, and Mr. YOUNG):

S. 736. A bill to provide American Stock Ownership Plans for those of modest income by allowing deferral of taxes on certain funds invested in common stock; to the Committee on Finance.

By Mr. BAKER (for himself, Mr. PERCY, Mr. JAVITS, Mr. DOMENICI, Mr. BELLMON, Mr. CHAFEE, Mr. CURTIS, Mr. DANFORTH, Mr. GOLDWATER, Mr. GRIFFIN, Mr. HATCH, Mr. HAYAKAWA, Mr. HEINZ, Mr. LUGAR, Mr. MCCLURE, Mr. SCHMITT, Mr. SCHWEIKER, Mr. TOWER, Mr. WALLOP, and Mr. YOUNG):

S. 737. A bill to amend the Internal Revenue Code of 1954 to provide income tax incentives for the conservation of energy used to heat or cool residences; to the Committee on Finance.

By Mr. CRANSTON (for Mr. HASKELL):

S. 738. A bill to provide a uniform system of reimbursement for and reporting of expenses incurred by Senators and employees of the Senate while traveling outside the United States on official business, and for other purposes; to the Committee on Rules and Administration.

By Mr. SPARKMAN:

S. 739. A bill for the relief of Lovina C. Gibbs; to the Committee on the Judiciary.

By Mr. PEARSON:

S. 740. A bill to amend the Internal Revenue Code of 1954 to eliminate the exclusive use requirement for deducting expenses attributable to a personal residence used for certain home industries; to the Committee on Finance.

By Mr. PROXMIRE:

S. 741. A bill to amend section 313 of the National Housing Act to provide authority for emergency home purchase assistance at lower interest rates, and for other purposes; to the Committee on Banking, Housing and Urban Affairs.

By Mr. INOUYE:

S. 742. A bill to authorize the burial of Joseph Yoshio Kiyonag in Arlington National Cemetery; to the Committee on Veterans' Affairs.

By Mr. DURKIN:

S. 743. A bill to provide for the protection of franchised distributors and retailers of motor fuel; to encourage conservation by requiring that information regarding the octane rating of automotive gasoline be disclosed to consumers, and to prevent deterioration of competition in gasoline marketing; to the Committee on Energy and Natural Resources.

By Mr. WILLIAMS:

S.J. Res. 21. A joint resolution to authorize the President to proclaim annually the last Friday of April as "National Arbor Day"; to the Committee on the Judiciary.

By Mr. DURKIN:

S.J. Res. 22. A joint resolution designating the first week of April 1977 as "National Drafting Week"; to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. WILLIAMS (for himself, Mr. RANDOLPH, Mr. JAVITS, Mr. ABOUREZK, Mr. ANDERSON, Mr. BAYH, Mr. BROOKE, Mr. CASE, Mr. CHURCH, Mr. CLARK, Mr. CRANSTON, Mr. EAGLETON, Mr. FORD, Mr. STEVENSON, Mr. HUDDLESTON, Mr. HUMPHREY, Mr. KENNEDY, Mr. MAGNUSON, Mr. MCGOVERN, Mr. METCALF, Mr. NELSON, Mr. PELL, Mr. RIEGLE, Mr. SCHWEIKER, Mr. STAFFORD, and Mr. HEINZ):

S. 717. A bill to promote safety and health in the mining industry, to prevent recurring disasters in the mining industry, and for other purposes; to the Committee on Human Resources.

FEDERAL MINE SAFETY AND HEALTH AMENDMENTS OF 1977

Mr. WILLIAMS. Mr. President, I am today introducing comprehensive, omnibus legislation which is designed to overhaul our Nation's mine safety and health program and establish a Federal mechanism which will effectively and efficiently assure safe and healthy workplaces for our country's most important mining resource, the miners.

The Labor and Public Welfare Committee has been overseeing the metal and nonmetallic mine safety program for more than 10 years and the coal mine health and safety program for more than 6 years. This oversight has included literally weeks of hearings, committee investigation of four major mining disasters, full scale investigations done at the committee's behest by the General Accounting Office, and nearly daily contact between members of the committee and the committee staff on the one hand, and officials of the Interior Department on the other.

This oversight has led us inexorably to the conclusion that our Nation's mine safety and health program is seriously deficient. In some respects, the statutory authority is strong, but the implementation and enforcement is weak. On the whole, this situation has resulted in a dismal national effort to protect the lives and health of our Nation's miners. The mining and energy industry are the losers in this scheme, our Nation's miners are losers in this scheme, and our Nation as a whole is the loser in this scheme.

It is clear that there has been great progress over the last decade in improving safety and health conditions in our mines, when compared to the situation that existed prior to the enactment of our current mine safety laws. But this progress has been far less than we would have expected, given the comprehensiveness of our laws and the vast expenditure of time and effort in improving these conditions. Indeed, in the past year, the rates of deaths and serious injuries were still appallingly high, and according to MESA figures, the number of serious injuries in our Nation's mines is again on the increase.

Mining is a dangerous business, and no one pretends otherwise. In 1974, the last year for which we have comprehensive comparative data, about 1 out of every 1,500 mine workers was killed on the job or died from work related injuries or illnesses, compared with one in 2,800 railroad workers, one in 4,000 construction workers, and one in 12,400 workers in all industries covered by OSHA. On the average, one miner is killed and 66 miners suffer serious injury in our Nation's mines on every working day.

In March of 1976, when the Labor and Public Welfare Committee was preparing for hearings on mine safety legislation, two gas explosions rocked the Scotia Coal Mine in eastern Kentucky and took the lives of 23 miners and three Federal mine inspectors. On September 31, 1976, while the mine safety and health bill was on the Senate's calendar, waiting for consideration by this body, an explosion in a coal mine in France took 16 lives. Only last month, on Thursday, December 30, 1976, a gas explosion occurred in a coal mine in Czechoslovakia. As rescue efforts got underway there, it was feared that the 45 miners trapped in that mine were dead.

Mr. President, I do not think that we can sit by and wait for the next mining disaster to demonstrate to us the deficiencies in our mine safety and health program. It is my intention, Mr. President, to give mine safety and health legislation a high priority within the Labor and Public Welfare Committee. It is my fervent hope that this Congress can enact a mine safety law which will establish a truly meaningful and effective program and that we can do this before the next mining tragedy underscores the great need.

Mr. President, the bill which I am introducing is designed to do just that. As I have said, it is a comprehensive mine safety and health bill, which draws from the best of our current programs and learns from the worst of our current experiences. It is a bill which, if enacted and meaningfully implemented by an administration truly committed to the cause of worker health and safety, should vastly reduce the number of fatalities and injuries in our mines and should make mining disasters the great exception rather than the unnecessary fact of life for our Nation's miners and their long suffering families.

Currently, the protection of the safety and health of our Nation's miners is provided by two separate statutes—the 1966 Metal and Non-Metallic Mine Safety Act and the 1969 Federal Coal Mine Health and Safety Act. Enforcement of both laws has been the responsibility of the Department of the Interior, but the enforcement of both statutes has been sorely lacking in effectiveness. The Metal and Non-Metallic Mine Safety Act is generally a weak law, lacking in real sanctions. The Coal Mine Health and Safety Act, on the other hand, is a more comprehensive and considerably stronger law. Although there have been glaring deficiencies in the enforcement of the Coal Act, the law itself is a good and strong one which, if properly enforced, could result in real improvement in the health and safety of miners. For this reason, my bill repeals the Metal Act altogether, and uses the stronger features of the Coal Act as the foundation for a new and comprehensive mine safety and health law which is applicable to the entire mining industry. In addition, this bill adopts the stronger features of the Occupational Safety and Health Act and incorporates them into a truly efficient mechanism for providing safe and

healthful working conditions and efficient enforcement to the ultimate benefit of all miners.

Mr. President, I believe this bill also provides protection for persons who may not be miners but who may be affected by mining activities, such as the victims of the terrible flood at Buffalo Creek in 1972. Clearly a comprehensive mine safety program must protect such people from hazards associated with mining.

This bill, Mr. President, has three major features. It combines the health and safety programs for all of our Nation's mines into a single, uniform law. It transfers the responsibility for enforcement of that law from the Interior Department to the Labor Department. And it vastly streamlines every aspect of the enforcement mechanism so that the system is truly responsive to the demonstrated safety and health deficiencies in our mines and the needs of our Nation's miners.

Mr. President, this bill provides a uniform procedure by which new standards would be promulgated and a uniform procedure by which the law would be enforced, but it does not contemplate that all standards will apply uniformly to all types of mining. I fully recognize that, where there are fundamental differences in the nature of the ore or raw materials being extracted, the need to promulgate separate standards for one segment of the industry may be indicated. This bill, however, fully contemplates broad application of standards within a given segment of the industry and provides extensive variance procedures for adjustment of standards based on the particular needs of a specific mine.

The bill accommodates this need in a number of ways. It provides that existing mandatory standards promulgated under the Metal and Non-Metallic Mine Safety Act prior to enactment are to be carried over as standards applicable to metal and nonmetallic mines, and standards under the Federal Coal Mine Health and Safety Act are to be carried over as standards applicable to coal mines after enactment. The bill also amends the Coal Mine Health and Safety Act to make applicable to all mines only those interim health standards of title II of that act—such as dust from drilling rock, quartz dust, and noise—which clearly are applicable to noncoal as well as coal mining.

The ultimate goal of this bill is to provide the maximum amount of protection for miners; in cases of doubt, both in enforcement and in standard making, miners should have the benefit of the broadest possible interpretation and application. However, in promulgating standards and in enforcing the law, the Secretary would be encouraged to maintain an essential awareness of the different nature of some segments of the mining industry from other segments of the industry.

On the other hand, it is clear that the mechanism for enforcement should be the same, irrespective of which standards apply and what type of mining operation is being inspected. Miners die in noncoal mines as surely as they die in coal mines. Miners suffer terrible and debilitating injuries in surface mines as regularly as they do in underground mines. If we are to have standards applicable to these mines, we must with regularity and frequency inspect all mines to make sure that these standards are being met. My bill provides for regular and frequent inspection at all mines.

Where violations of the standards are found, our system should provide the same inducement for operator compliance, irrespective of the type of mines. My bill selects the civil penalty as the mechanism for encouraging operator compliance with safety and health standards and mandates the imposition of such civil penalties for violations in all mines.

This bill's mechanism for insuring the safety and health of miners has two approaches, however. Not only is there a civil penalty system by which the operators are to be encouraged to effect lasting compliance with the applicable standards, but the mine safety and health administration could also employ a broad range of closure orders which are intended to identify unusually hazardous conditions and insulate miners from those conditions until they are corrected. This closure order procedure is present in both of the current mine safety laws but is much more highly developed in the Coal Mine Act, and it is the procedure of that law which serves as the basis for the closure order procedure in my bill.

The bill carries forward the imminent danger closure order from both existing mine safety acts and also contains authority to close mines for failure to abate violations, for technological inability to abate, and for unwarrantable failure to comply with the requirements of the act—all sanctions which currently exist in coal mine health and safety legislation.

This bill also provides additional closure order authority not present in current law but which the committee's oversight suggests is clearly necessary to adequately protect miners. The bill provides authority to close a mine altogether, for periods of up to 1 month, where an operator's record of compliance with the act and its requirements is so egregious that it demonstrates gross negligence or willfulness. This civil penalty closure order is clearly intended to be reserved for the most serious of cases. By seeking this civil penalty, which can only be invoked by the independent Mine Safety and Health Review Commission established by this bill, the administrators of the act are demonstrating to the recalcitrant operator that they will not tolerate constant reluctance to comply with the act's requirements while miners remain exposed to serious risks.

This is an extraordinary sanction, Mr. President, and it is reserved only for the most serious of situations. It is to be imposed by the Commission alone and only after an opportunity for a hearing has been afforded the operator. To impose this sanction, the Commission must find that the violations were willful or with gross negligence and that they constituted a serious threat to miners.

This additional sanction is an important weapon in the Secretary's arsenal even though its contemplated use is rare. Past history has clearly demonstrated that the imposition of monetary penalties is simply insufficient to encourage some operators to comply with the act and its requirements.

Another significant new remedy enables the Secretary to petition the Federal courts for an injunctive-type remedy to close mines that have been in habitual and chronic violation. This sanction recognizes that an operator who compiles a record of chronic violation, even minor ones, demonstrates that he has little respect for the requirements of the law and the safety and health of his miners. This sanction, judiciously used, is intended to encourage operator compliance with the spirit as well as the letter of the law.

The committee's investigation of the Scotia mine disasters last year clearly demonstrated the need for such a remedy. What the committee found at that mine was a pattern of violations, which were generally promptly abated when discovered by inspectors. But the fact that similar violations would recur, time after time, clearly suggested that the operator found it easier and perhaps cheaper to continue to operate the mine in violation of the law and correct deficiencies only when discovered. Where such a pattern has been developed, the mine is, more probably than not, routinely being operated in violation of the law when inspectors are not there to cite violations. Such operation unnecessarily exposes miners to dangers which the act did not expect them to have to confront. This is a "pattern and practice" of violations which the agency administering the mine safety laws should take cognizance of and which the courts should be able to remedy. My bill requires the agency to take cognizance of such violation patterns, and provide the means by which the courts can fashion a remedy which is appropriate to secure the health and safety of miners.

The second major feature of my bill is the transfer of all mine safety and health enforcement responsibilities from the Department of the Interior to the Department of Labor. I feel that the transfer of these responsibilities to the Labor Department is absolutely essential if this Nation is to have a meaningful and effective mine safety and health program. Our current program has suffered terribly at the Interior Department. That Department has a basic conflict of missions. On the one hand, it is charged with the duty of maximizing the exploitation of our Nation's mineral and energy reserves. On the other hand, it is charged with the duty of protecting the welfare of the employees engaged in the extraction of these resources. These duties often conflict, and we should not be putting the health and safety of workers in a posture where any administrative agency should have to think twice before it acts to secure the protection of workers. Such a conflict would not be present at the Labor Department. The Labor Department is charged with the responsibility of protecting our Nation's workers, and the administration of the mine safety and health laws by that department would be free of any con-

flict which is apt to jeopardize the welfare of miners.

Still, we must recognize that the safety and health of miners is a field with its own highly developed technology and specific problems. My bill insures that the Mine Safety and Health Administration will maintain its separate and distinct identity within the Labor Department. The administration and enforcement of the law will be assigned to a separate Mine Safety and Health Administration which will be headed by a separate Assistant Secretary. An administrative review commission, separate from the OSHA Commission, is established to review enforcement and mine discrimination cases. The bill provides for complete separation of the mine safety and health and the occupational safety and health programs within the Department of Labor.

The effect of this is, in my view, the best of both worlds. The Mine Safety and Health Administration is permitted to maintain its own identity and its not inconsiderable expertise and technological knowledge. Yet, its overall administration and guidance will come from the Secretary of Labor, whose responsibilities are to secure the rights of workers, not maximum mineral production, and who will not be placed in the position of having to select between alternative and often mutually exclusive responsibilities.

Finally, Mr. President, my bill vastly streamlines nearly every aspect of the enforcement and administration of the mine safety and health program. The committee's long years of overseeing the current programs has led it to understand the weaknesses which are inherent in nearly every phase of the current administration of the mine safety laws. This bill addresses these weaknesses and proposes an overall enforcement system which should be efficient, flexible, and able to effectively respond to demonstrated problems in our mines.

The keystone of any enforcement scheme is the promulgation of standards, and this process, under the current laws, has been a painfully slow and difficult one, often marked by excessive and unconscionable delays. After 91 miners died of carbon monoxide poisoning in a mine fire in the Sunshine Silver mine in Idaho in early 1972, it took 22 months before a standard requiring that miners be provided self-rescuers was promulgated under the Metal and Non-Metallic Mine Safety Act. Forty-five months after the collapse of an impoundment dam at Buffalo Creek, W. Va., a standard dealing with such dams was finally promulgated under the Coal Mine Health and Safety Act. Despite the need for standards dealing with safety training for miners, demonstrated by the 1972 disasters at Sunshine and Blacksville, W. Va., the Interior Department did not propose such a standard until after the Labor Subcommittee's hearings on Scotia in early 1976, which demonstrated that miners at that ill-fated mine were still not receiving even rudimentary training in the use of the self-rescuer device and were being routinely sent below ground without even the most elementary awareness of the very serious hazards associated with their occupation. The Interior Department's hearings on these long awaited safety training regulations were scheduled to be started only this month.

My bill eliminates these inordinate delays in the promulgation of much needed health and safety standards. The sole authority for promulgating standards under my bill rests with the Secretary of Labor, and the bill grants him a broad discretion in determining whether standards are needed and whether they should be promulgated. Once the Secretary decides that a standard should be issued and starts the promulgation procedure, however, each and every step of that procedure comes under a tight "timetable." This procedure gives the Secretary the option of referring the proposal to an advisory committee, which may be especially constituted for the purpose, before the proposal is submitted to the public for general comment. The process provides for the efficient consideration of the views of affected workers, industry groups, and public organizations, but is designed to keep the procedure running to a natural and timely conclusion.

The bill also makes provision for standards to deal with extraordinary circumstances. The bill authorizes the Secretary to issue emergency temporary standards in situations of grave danger to employees, without first going through statutory rule-making procedures. This provision, which is taken from the Occupational Safety and Health Act, is designed to allow the Secretary to react quickly to grave dangers which threaten employees before those dangers manifest themselves in serious or fatal injuries or illnesses.

The bill also permits the Secretary to grant variances from standards in situations which will insure the protection of miners. These variances are possible where an operator is unable to immediately comply with a requirement for technological reasons, where a research project in connection with safety or health matters is being conducted by the operator, or where an operator can demonstrate that he can provide an equal degree of protection to miners while using a different method.

After standards are in place, they must be enforced, and my bill provides for a vastly increased Federal presence in the mines to insure that operators are continually meeting their obligations under the Mine Safety and Health Act. Under this bill, a minimum of four inspections per year is required of all mines, and additional inspections are mandated for particularly hazardous mining operations.

Inspections, under my bill, are intended to insure operator compliance with the requirements of the act, and the bill makes mandatory the imposition of an appropriate civil penalty in each case of violation of the act or standard. This concept is not a new one. Indeed, mandatory civil penalties have been a feature of the enforcement of the Coal Mine Health and Safety Act since 1970, and many of the improvements in mine safety and health which have been noted under that act can be attributed to this scheme of mandatory penalties.

Despite this, certain weaknesses in the administration of the civil penalty system under the Coal Act have manifested themselves, and my bill attempts to correct these weaknesses. To truly encourage compliance with the act's requirements, a civil penalty must be assessed and collected reasonably promptly. The current administration of the Coal Act civil penalty program does not do this. In overseeing the enforcement of the Coal Act, the committee has found that civil penalty assessments are generally too low, and there are long delays between the citation of the violation and the assessment of the penalties. A further complicating factor is the extraordinary difficulty that the Mining Enforcement and Safety Administration has had in collecting these penalties. The need to secure payment by court order, often after a new trial on the facts following a full-blown administrative determination, has left literally millions of dollars of civil penalty assessments uncollected. Other penalties are compromised at pennies on the dollar. This reduction of the penalties combined with the long delays between violation, assessment, and collection has seriously weakened the effectiveness of the civil penalty as an inducement to meaningful compliance with the requirements of the law.

My bill will correct this. The procedure for assessment of penalties is vastly simplified, and the number of criteria upon which the penalty is to be based is reduced. The procedure for determining operator responsibility and liability is assigned to a truly independent Mine Safety and Health Review Commission, and the process is streamlined so that operators are provide with a fair method of contesting liability, but are not encouraged to delay factfinding and the administrative process or to seek duplicative factfinding in other forums. Uncontested citations and assessments under this bill become final orders of the Commission and are entitled to pro forma enforcement in the Federal courts in routine collection actions. Contested citations and assessments move along through the system with efficiency, and the final orders of the Commission are dispositive of the facts involved and subject to enforcement or review in the Federal circuit courts of appeals without the need for additional and duplicative factfindings. The independent Review Commission also has authority to review the propriety of closure orders, and the same standards of review and enforcement prevail.

The intention of this scheme is to provide a fair and prompt administrative determination of the liabilities of the parties, in order to most efficiently turn the enforcement mechanism of the act into an effective inducement to continued and meaningful operator compliance with their responsibilities to their workers.

Mr. President, as the 94th Congress came to a close, a mine safety bill had been passed by the House of Representatives and a similar bill had been reported favorably to the Senate by the Labor and Public Welfare Committee. Unfortunately, the rush of last minute demands

on the Senate made it impossible for this body to consider the legislation. At that time, I noted that the conditions in our Nation's mines warranted this legislation, and I said:

We cannot in good conscience let these conditions go on any longer. When we return in January, it is my my fervent hope that we can make a mine safety and health bill . . . one of our first orders of business and that we will once and for all provide effective and meaningful safety and health for our nation's miners and eradicate unnecessary death and suffering from our nation's mines.

Mr. President, the need is still with us, and the need is still great. The bill which I have introduced today is broad in scope and is the product of years of experience which I and the Labor and Public Welfare Committee have had in overseeing the deficiencies of our current, ineffective program.

Our new President has indicated that he desires an overall and comprehensive energy policy. That policy is going to include the efficient exploitation of our mineral resources; and if our Nation is to set upon this course, we must do so in a manner which will reassure our miners that we have their safety and health uppermost in our minds. Otherwise, there will be nothing to encourage young people to go into an admittedly hazardous occupation, and there will be nothing to encourage existing miners to continue in this hazardous line of work.

The time has come, the time has long since come, when these reforms should be made.

This legislation will promote a fair and efficient national mine safety and health program. When this legislation is enacted and becomes law, our Nation's miners will have won a significant victory, and our Nation will be greater for its commitment to the welfare of its miners.

Mr. President, I ask unanimous consent that a section-by-section analysis of the bill be printed in the RECORD.

There being no objection, the section-by-section analysis was ordered to be printed in the RECORD, as follows:

SECTION-BY-SECTION ANALYSIS

TITLE I—AMENDMENTS TO THE GENERAL PROVISIONS OF THE FEDERAL COAL MINE HEALTH AND SAFETY ACT OF 1969

Section 101—This section amends section 1 of the Federal Coal Mine Health and Safety Act of 1969 such that it is now cited as the "Federal Mine Safety and Health Act of 1977."

Section 102—Definitions and applicability.

Section 102(a)(1)—provides that Section 2 of the Federal Mine Safety and Health Act of 1976 is amended by striking out "coal" wherever it appears.

Section 102(a)(1)—provides that the functions of the Secretary of the Interior in developing and promulgating improved mandatory health and safety standards under Section 2(g)(1) are transferred to the Secretary of Labor.

Section 102(b)(1)—changes the definition of "Secretary" in section 3(a) from Secretary of the Interior to Secretary of Labor.

Section 102(b)(2) clarifies the definition of "operator" to include independent contractors performing services or construction at a mine.

Section 102(b)(3)—enlarges the definition of "mine" in section 3(h) to include those mines previously covered by the Federal Metal and Non-Metallic, Mine Safety Act. This definition is also expended to include facilities for the preparation of coal, except that the Secretary is to give due consideration to the convenience of giving one Assistant Secretary all authority with respect to health and safety of miners employed at one physical establishment.

Section 102(b)(4)—expands the definitions of "operator," "agent," "miner," and "imminent danger" in sections 3 (d), (e), (g), and (j), respectively, to apply to all mines now covered by the Act.

Section 102(b)(5)—amends section 3 to add a new section 3(n) defining "Administration" which means the Mines Safety and Health Administration established under section 302 of this Act and a new section 3(o) defining "Commission" which means the Federal Mine Safety and Health Review Commission which is established in the Act.

Section 102(c)—amends section 4, "Mines Subject to Act," to include in addition to coal mines, mines newly covered by this Act.

Section 102(d)(1)—amends Section 5(c) to conform the wording thereof to the new definition of "Secretary," but the meaning is unchanged.

Section 102(d)(2)—includes operators and miners' representatives of mines newly covered by this Act among those that may ask the Interim Compliance Panel for a public hearing under Section 5(f), and changes the wording of that section to conform to the new section number for "Judicial Review."

TITLE II—MINE SAFETY AND HEALTH STANDARD AMENDMENTS

Amendment to title I

Section 202—This section amends Title I of 1969 so that it includes:

Section 101—Duties.

Section 101(a)—establishes the duty of each mine operator to comply with the health and safety standards, all rules, regulations, and orders promulgated under this Act and to furnish a place of employment free from recognized hazards causing or likely to cause death or physical harm.

Section 101(b)—establishes the duty of each miner to comply with the health and safety standards, all rules, regulations, and orders promulgated under this Act which are applicable to his own conduct.

Section 102—Safety and Health Standards.

Section 101(a)—establishes that the Secretary may promulgate, modify or revoke any health or safety standard by rule in accordance with the provisions of Section 553 of Title 5 of the United States Code (without regard to any reference therein to Sections 556 and 557 of such title) and the following provisions.

Section 102(a)(1)—provides that the Secretary may request the recommendations of an advisory committee appointed under section 103 whenever he determines from information submitted to him in writing or on the basis of his own information that a rule should be promulgated, except that when the recommendation comes from the National Institute for Occupational Safety and Health, the Secretary must within sixty days after receipt thereof either commence rule making or publish in the Federal Register his decision not to do so.

Where an advisory committee is appointed, the Secretary must provide such committee with any proposal of his own or of the Secretary of Health, Education, and Welfare as well as any factual information that has been developed. The advisory committee must submit to the Secretary its recommendations within 90 days from the date of its appointment or a longer or shorter period of time prescribed by the Secretary, but no longer than 180 days after the appointment.

Section 102(a)(2)—requires the Secretary to publish a proposed rule in the Federal Register and afford interested persons a period of 30 days after publication to submit written comments. Where an advisory committee is appointed the Secretary must publish the proposed rule within 60 days after submission of the committee's recommendations or the expiration of the period prescribed by the Secretary for those recommendations, if he decides to publish such recommendations, and if he decides not to publish such recommendations, he shall publish the reason for his determination not to.

Section 102(a)(3)—permits any interested person to file with the Secretary written objections to the proposed rule and request a public hearing before the expiration of the comment period provided for in section 102(a)(2). Within 30 days after the last day for filing such objections, the Secretary shall publish in the Federal Register a notice specifying the standard objected to and the time and place for a hearing.

Any such hearing shall be held promptly, shall be informal in nature, and shall be conducted in accordance with procedural rules or rulings which the Secretary shall make in order to avoid unnecessary costs or delay. A verbatim transcript of all such hearings shall be made, and available to the public.

Section 102(a)(4)—provides that within 60 days after expiration of the comment period under section 102(a)(2) or within 60 days after completion of a hearing under section 102(a)(3), the Secretary shall issue a rule or determine that a rule should not be issued. In order to insure that affected employers and their employees are informed of the existence of the standard and its requirements, an issued rule may contain a provision delaying its effective date for a period determined by the Secretary, but not longer than 90 days.

Section 102(a)(5)(A)—requires the Secretary, in promulgating standards, to set the standard which most adequately assures on the basis of the best available evidence that miners will not suffer impairment of health or functional capacity, even if regularly exposed to the hazards throughout their working lives. Development of standards is to be based on research, demonstration, experiment, and other appropriate information. In addition to the attainment of the highest degree of safety and health protection for the miner, other considerations shall be the latest available scientific data in the field, the feasibility of the standards and experience gained under this and other health and safety statutes. Wherever practicable, the standard should be expressed in terms of objective criteria and performance desired.

Section 109(a)(5)(B)—requires the Secretary of Health, Education, and Welfare to identify toxic materials or harmful physical agents found in mines and to within three years after enactment of these Amendments, and on a continuing basis thereafter, determine whether those substances or agents pose a threat to miners in the concentrations in which they are normally found in a mine. Such determinations, together with appropriate criteria, are to be transmitted to the Secretary, who shall within sixty days after receipt thereof, for all agents or substances not already covered by an appropriate standard, either commence formal standard promulgation procedures under Section 102(a)(1) or 102(a)(2), or shall publish his determination not to do so.

Section 102(a)(6)—provides that any standard promulgated under section 102(a) must prescribe the use of labels or other warnings necessary to ensure that miners are apprised of all hazards to which they are exposed, relevant symptoms and appropriate emergency treatment and proper conditions and precautions of safe use or exposure. A standard, when appropriate, shall prescribe protective equipment, control or technological procedures to be used, and shall provide for monitoring or measuring miners' exposure as may be necessary for the protection of the miners. Where appropriate, such standard shall prescribe the type and frequency of medical examination or tests which the operator shall provide, at his cost,

in order to determine whether the miner exposed to such hazards is adversely affected by such exposure. Such standards shall provide that where a determination is made that a miner may suffer material impairment of health or functional capacity as a result of exposure to a hazard covered by the standard, miners shall be removed from such exposure and reassigned. Any miner transferred due to such exposure shall receive compensation at not less than the rate for miners in the classification he held immediately prior to his transfer.

The medical examination may be furnished at the expense of the Secretary of Health, Education, and Welfare if he determines them to be in the nature of research. The results of such examination or tests shall be furnished only to the Secretary, the Secretary of Health, Education, and Welfare, and at the miners request, to his designated physician.

Section 102(a)(7)—requires that in promulgating or revoking standards or in publishing any rule under Title 1 the Secretary shall not reduce the protection afforded miners below that of any standard previously in effect.

Section 102(b)(1)—provides that where the Secretary determines that miners are exposed to grave danger from exposure to substances or agents determined to be toxic or physically harmful and that an emergency standard is necessary to protect the miners, he may promulgate an emergency standard effective upon publication in the Federal Register without regard to the rulemaking procedures of the Administrative Procedure Act.

Section 102(b)(2)—provides that an emergency temporary standard shall be effective until superseded by a standard promulgated in accordance with the procedures prescribed in section 102(b)(3).

Section 102(b)(3)—requires the Secretary to begin a proceeding for promulgating a standard in accordance with section 102(a) upon publication of the emergency temporary standard. The emergency temporary standard shall serve as the proposed rule in such a proceeding and the Secretary shall promulgate the permanent standard no later than nine months after publication of the emergency temporary standard.

Section 102(c)—authorizes the Secretary to grant a variance if he determines or the Secretary of Health, Education, and Welfare certifies that such a variance is necessary for the operator to participate in an experiment approved by one of the Secretaries designed to improve techniques of safeguarding the health or safety of the workers. Variances under this subsection shall not be granted until the Secretary determines that such a variance will not adversely affect the health and safety of the miners and such miners are notified directly and by publication in the Federal Register.

Section 102(d)(1)—provides that any operator may apply to the Secretary for a temporary order permititng limited noncompliance with a standard or any of its provisions promulgated under section 102. Such a temporary order shall be granted only if the operator's application meets the requirements of paragraph (2) and establishes that (A) he is truly unable to come into compliance with the standard by its effective date, (B) he will guarantee that miners are afforded no less than the same measure of protection they would have been provided by such standard, and (C) he has an effective program for coming into compliance with the standard as quickly as practicable. Any temporary order issued under the above subsection must prescribe the practices the operator must use while the order is in effect and describe his program for coming into compliance with the standard. A temporary order may be granted only after notice to miners and an opportunity for a public hearing but the Secretary may issue one interim order to be effective until a decision is made on the basis of the hearing or for sixty days, whichever is less. A temporary order may be in effect only long enough for an employer to achieve compliance with the standard or 6 months, whichever is shorter, except that the time which an interim order is in effect shall be subtracted from the time any temporary order is in effect. Such an order may be renewed not more than twice if (i) the requirements of this subsection are met and (ii) an application for renewal is filed at least 90 days prior to the expiration date of the order. No interim renewal of an order may remain in effect longer than 180 days.

Section 102(d)(2)—requires that an application for a temporary order contain:

(A) a specification of the standard or portion thereof from which the employer seeks a noncompliance order.

(B) a representation by the operator, supported by qualified persons, that he is unable to comply with the standard or portion thereof and the detailed reasons for such inability to comply.

(C) a statement of steps he has taken and will take to protect employees against the hazard covered by the standard.

(D) a statement of when he expects to be able to comply with the standards, and what steps he has taken and will take to comply with the standard, and

(E) a certification that he has informed his employees of the application and their right to petition the Secretary for a hearing; a description of how miners have been informed shall be contained in the certification.

Section 102(c)—allows operators to apply to the Secretary for a variance from a standard promulgated under Section 102. Affected miners and their representative must be given notice of each such application and an opportunity to participate in a hearing. The Secretary shall issue a variance if he determines on the record, after opportunity for an inspection where appropriate and a public hearing that the operator will provide conditions as safe and healthful as those which would prevail if he complied with the standard. The order of variance shall prescribe the conditions the operator must maintain and the practices he must use to the extent they differ from the standard. Such an order may be modified or revoked upon application by an operator, miners, miners' representative, or by the Secretary in the manner prescribed for its issuance.

Section 102(f) provides that subsections (d) and (e) shall not apply with respect to any coal health standard in effect on the effective date of the Federal Mine Safety and Health Amendments Act of 1977.

Section 102(g) allows persons adversely affected by a standard to challenge its validity, within 60 days of its promulgation. In the appropriate U.S. court of appeals. Unless ordered by the court, such challenge shall not operate as a stay of the standard.

Only objections which are raised during the administrative proceedings shall be considered by the court in reviewing such standards, unless failure to have raised such objections earlier shall be excused by the court due to extraordinary circumstances. The procedures of this Section shall be the exclusive means of challenging the validity of the standards.

Section 103—Advisory Committees.

Section 103(a)—allows the Secretary to appoint advisory committees to assist him in his standard setting functions under section 201(a) and advise him on other health and safety matters. Each committee may include one or more designees of the Secretary of Health, Education, and Welfare, the National Bureau of Standards, Department of Commerce, and the National Science Foundation, operator and miner representatives in equal numbers, one or more representatives of State mine inspection or safety agencies. It may include other members qualified by knowledge and experience who shall not exceed in number the members from Federal and State agencies. Committee meetings must be open to the public and the record thereof must be made available to the public. No committee member, except representatives of the operator and miners, shall have an economic interest in any proposed rule.

Section 103(b)—provides for the compensation for committee members from private life according to the provisions for section 3109 of title 5, United States Code for consultants or experts. The Secretary shall pay to the States the actual costs to them of their representatives' membership on the Committee.

Section 104—Inspections, Investigations, and Recordkeeping.

Section 104(a)—authorizes the Secretary or the Secretary of HEW or the authorized representative of either, upon presenting appropriate credentials to the owner, operator, or agent in charge, (1) to enter without delay any mine subject to the Act and (2) to make inspections and investigations and to consult privately with employers, owners, operators, agents, or miners. With respect to all mines, the Secretary is required to make inspections of the entire mine at least four times a year. No advance notice of inspections shall be given, except that the Secretary of Health, Education and Welfare may give advance notice of inspections conducted in connection with research or technical assistance.

Section 104(b)—allows the Secretary to require the attendance and testimony of witnesses and the production of evidence under oath in connection with investigations of accidents and other occurrences. Witnesses will be paid the same as witnesses in U.S. courts. The appropriate district courts, upon application by the Secretary shall have jurisdiction over witnesses failing to appear and may issue orders requiring such appearance. Failure to obey such an order may be punished as contempt.

Section 104(c)(1)—requires each operator to maintain and make available to the Secretaries such records that the Secretary, in cooperation with the Secretary of Health, Education, and Welfare, prescribes as appropriate for the enforcement of the Act or for developing information regarding the causes and prevention of occupational accidents and illnesses in the mines. Regulations issued pursuant to this paragraph may include provisions requiring operators to conduct periodic inspections.

Section 104(c)(2)—provides that the Secretary, in cooperation with the Secretary of Health, Education, and Welfare, shall require operators to maintain records of and make periodic reports on work-related deaths, injuries, and illness except for minor injuries requiring only first aid treatment.

Section 104(c)(3)—requires the Secretary, in cooperation with the Secretary of Health, Education, and Welfare, to issue regulations requiring operators to maintain records of miner exposures to potentially toxic or harmful physical agents that must be monitored or measured under the Act's health and safety standards. The regulations are to give miners or their representatives an opportunity to observe the monitoring or measuring and to give miners and former miners access to such records of individual exposure. Operators are to notify miners of overexposure and shall inform overexposed miners of the corrective action being taken.

Section 104(c)(4)—provides that all accidents, except some unintentional roof falls, shall be investigated by the operator or his agent to determine the cause and means of preventing recurrence. Records of accidents and investigations shall be maintained and made available to the Secretary and the appropriate State agency. Such records shall be open for inspection by interested persons.

Section 104(d)—requires that information obtained under the Act must be obtained

with a minimum burden upon operators, especially those operating small businesses. Unnecessary duplication of efforts in obtaining information is to be reduced as much as possible.

Section 104(e)—provides that subject to regulations issued by the Secretary a representative of the operators and a representative of the miners shall be given an opportunity to accompany the inspecting official during the inspection of a mine under section 104(a). Where there is no authorized miner representative the inspector shall consult with a reasonable number of miners. If he determines more than one representative from each party would aid the inspection, the inspector may permit each party an equal number of additional representatives. A miner representative who is also employed by the operator shall not lose pay for his participation in the inspection, but only one such miner shall be authorized to be paid pursuant to this subsection. Compliance with this subsection shall not be a jurisdictional prerequisite to the enforcement of any provision of this Act.

Section 104(f)(1)—provides that if any miner or his representative believes that a standard violation exists that threatens physical harm or that an imminent danger exists, he may request an inspection by giving written notice with his signature to the Secretary or his authorized representative of such violation or danger. A copy of such notice shall be provided to the employer or his agent no later than at the time of inspection but, upon request, the name of the person giving such notice and the names of the miners referred to therein shall be deleted.

If the Secretary determines there are reasonable grounds to believe that a violation or danger exists, he shall make a special inspection as soon as practicable. If the Secretary determines there are no reasonable grounds to believe that a violation or danger exists, he shall so notify in writing the miners or their representative.

Section 104(f)(2)—provides that prior to or during any inspection any miners or their representatives may notify the federal inspector, in writing, of any violation of this Act or of any imminent danger they believe exists. The Secretary shall, by regulation, establish informal review procedures for any refusal by an inspector to issue a citation with respect to such alleged violation or order with respect to such danger and shall furnish the miners or their representative requesting such review a written statement of the reasons for his final disposition of the case.

Section 104(g)(1)—authorizes the Secretary and the Secretary of Health, Education, and Welfare to publish information obtained under this section.

Section 104(g)(2)—provides that the Secretary and the Secretary of Health, Education, and Welfare shall each prescribe regulations necessary to carry out their responsibilities under this Act.

Section 104(h)—requires the Secretary to provide a minimum of one spot inspection of all or part of a mine during every 5 working days at irregular intervals, if the mine contains some especially hazardous conditions and provides specifically for inspection once each five days of mines liberating 1,000,000 cubic feet of explosive gases each day; once each ten days of mines liberating 500,000 cubic feet of such gases; and once each 15 days of mines liberating 200,000 cubic feet of such gases.

Section 104(1)—provides that if there is a mine accident, the operator shall notify the Secretary and preserve any evidence that would aid an investigation of the cause. The Secretary may supervise rescue and recovery activity in such mine, if such activity is necessary, and take other appropriate action to preserve life.

Section 104(j)—provides that if there is a mine accident, and the Secretary's representative is present, he may issue appropriate orders to insure the safety of persons in the mine, and the operator must obtain his approval, in consultation with appropriate State representatives, when feasible, of any recovery plan or of any plan to return affected areas to normal operation.

Section 105—Citations and Orders.

Section 105(a)(1)—provides that if, upon inspection or investigation, the Secretary or his representative believes an operator has violated this Act or any standard, rule, order or regulation promulgated pursuant to this Act, he shall with reasonable promptness issue a citation to the operator. The citation shall be written, describe with particularity the nature of the violation, and fix a reasonable time for the violation's abatement.

Section 105(a)(2)—provides that, if a citation is issued under paragraph (1) for a violation the Secretary believes was committed willfully or with gross negligence and which subjected miners to an imminent danger, the citation shall include such charge with a specific description of the danger involved.

Section 105(b)—provides that, if upon any follow-up inspection, the Secretary's representative finds (1) the cited violations have not been totally abated within the original or subsequently extended abatement period, and (2) the abatement period should not be further extended, he shall find the area affected by the violation and promptly issue an order requiring the operator to withdraw from the affected area all persons (until the Secretary's representative determines the violation has been abated), except the following:

(1) Any person whose presence is necessary to eliminate the danger, in the judgment of the operator or the Secretary's representative;

(2) Any public official whose official duties require his presence, or

(3) Any legal or technical consultant or representative, qualified to make mine examinations or accompanied by such a person, and whose presence is necessary for the proper investigation of the conditions described in the order, in the judgment of the operator or the Secretary's representative.

Section 105(c)(1)—provides that, if an inpector finds a standard violation that could significantly contribute to the cause and effect of a mine health or safety hazard and which is caused by an unwarranted failure of the operator to comply with such standard, he shall issue an order withdrawing all persons, except those referred to in section 105(b) from the affected area until the Secretary's representative determines that the violation has been abated.

Section 105(c)(2)—provides that, if a withdrawal order has been issued pursuant to section 105(c)(1), a withdrawal order shall be issued by the Secretary's representative who finds other unwarranted violations. The order shall be effective until an inspection discloses no similar violations. Following such an inspection, the provisions of section 105(c)(1) shall again be applicable to the affected mine.

Section 105(d)—requires that during the abatement period for a violation of the respiratory dust concentration limit, the operation must take samples described in section 202(a) during each production shift. The section also provides that, after a withdrawal order has been issued for failure to abate a violation of the respirable dust concentration limit, the Secretary, upon request of the operator, shall provide technical assistance to aid in reducing such dust concentrations. Those persons sent by the Secretary may require the operator to take actions they deem appropriate to insure the health of persons in the mine.

Section 105(e)(1)—provides that if the Secretary's representative, while on an inspection, finds a miner employed in a mine who has not received requisite safety training in accordance with a safety training plan approved by the Secretary in accordance with the provisions of section 116 of the Federal Mine Safety and Health Act of 1976, such a miner is to be declared a hazard to himself and others, and such miner is required to be immediately withdrawn from the mine until the Secretary can determine that such miner has received the requisite training.

Section 105(e)(2)—provides that miners ordered withdrawn from a mine as a result of not having received such training shall not be discriminated against for such reason, and shall suffer no loss of pay during the period until the Secretary finds that such training has been given to the miner.

Section 105(f)—requires that each citation or order or copy thereof issued under this section must be posted in accordance with section 110 and as prescribed by the Secretary's regulations.

Section 105(g) provides that no citation may be issued under this section after 6 months following any violation.

Section 105(h) provides that any order issued under section 105 (b) or (c) is effective until revoked by the Secretary or modified or vacated by the Commission or the courts pursuant to sections 106(c) or 107(a).

Section 106. Procedures for Enforcement.

Section 106(a)—requires the Secretary to notify within a reasonable time an operator issued a citation or order under section 105 (a)(1) of any penalty to be assessed under section 111(a) and that the operator has 15 working days to notify the Secretary that he wishes to contest the citation or proposed penalty. If the citation contains a charge under section 105(a)(2), the Secretary's notification shall include a proposed civil penalty closure order under section 111(c) in addition to the proposed civil monetary penalty.

If the operator fails to notify the Secretary within the 15 working days that he intends to contest the citation or proposed penalty or penalties and if no notice is filed by any miner or miner representative under subsection (c) within such time, the citation and penalty or penalties as proposed shall be deemed a final order of the Commission and not subject to review by any court or agency.

Section 106(b)—provides that, if the Secretary believes an employer has failed to correct a cited violation within the abatement period (which period shall not end until the entry of a final order by the Commission, in the case of any review proceedings under this section initiated by the operator wherein the Commission orders, after an expedited hearing, the suspension of the abatement requirements of the citation after determining that the operator will suffer irreparable loss or damage from the application of those requirements), the Secretary shall notify the operator of such failure, of the proposed penalty under section 111 of that failure, and that the operator has 15 working days to contest the notification or proposed penalty. If the operator does not so notify the Secretary within the 15 working days, the notification and proposed assessment shall be deemed a final order of the Commission and not subject to review by any court or agency.

Section 106(c)(1) prohibits discharging, discriminating against, or interfering with the exercise of statutory rights by any mine employee or applicant for employment because he filed a complaint or instituted or caused to be instituted any proceeding under or related to this Act, or because such employee is the subject of medical evaluations and potential transfer pursuant to a standard issued under Section 102(a) of this Act, or testified or is about to testify in any such proceeding, or exercised for himself or others any statutory right afforded by this Act.

Section 106(c)(2) authorizes any mine

employee or applicant who believes that he has been discharged or otherwise discriminated against or interfered with by any person in violation of this subsection to, within 30 days after such violation, file a complaint with the Secretary, who shall then make any appropriate investigation. If upon such investigation, the Secretary determines there has been such violation, he shall immediately file a complaint with the Commission proposing on order granting appropriate relief. The Commission shall afford an opportunity for a hearing and, based on findings of fact, issue an order affirming, modifying, or vacating the Secretary's proposed order or directing other appropriate relief. Such order is final 30 days after its issuance. The Commission shall have the authority to order all appropriate relief, including rehiring or reinstatement of the miner to his former position with back pay and interest, and during any hearing, the complaining employee or applicant may present evidence on his behalf.

Section 106(c)(3) requires the Secretary, within 90 days of the receipt of a complaint filed under this subsection, to notify the complainant of his determination whether a violation has occurred. If the Secretary determines there is no violation the complainant may file, within 30 days of such notice, before the Commission charging discrimination under paragraph (1). The Commission shall afford an opportunity for a hearing and thereafter shall issue an order dismissing or sustaining the complainant's charges and, if sustained, granting appropriate relief. Such an order becomes final 30 days after its issuance. When such order sustains the miner's charges, all reasonable expenses (as determined by the Commission) incurred by the miner related to such proceedings shall be assessed against the violator. Proceedings under this section shall be expedited by the Secretary and the Commission. A Commission order under this paragraph shall be subject to judicial review under section 107. Violations of paragraph (1) by any person shall be subject to the provisions of sections 109 and 111(a).

Section 106(d)—provides that if an operator notifies the Secretary that he intends to contest the issuance or modification of an order or a notification, or the reasonableness of an abatement period, or any miner or representative of miners notifies the Secretary that he plans to so contest, the Secretary shall immediately so advise the Commission. The Commission must then provide an opportunity for a hearing and thereafter issue an order affirming, modifying, or vacating the Secretary's citation, order, or proposed penalty or directing other appropriate relief. Such an order becomes final 30 days after its issuance.

The rules of procedure prescribed by the Commission shall provide affected miners or their representatives an opportunity to participate as parties to Commission hearings under this subsection. The Commission shall take whatever action is necessary to expedite proceedings for hearing appeals of orders issued under section 105, but shall not grant temporary relief from the issuance of an order under subsection (c).

Section 107. Judicial Review.

Section 107(a)—permits any person adversely affected or aggrieved by an order of the Commission issued under this Act to obtain review of such order or decision in any appropriate U.S. Court of Appeals by filing a written petition within 30 days of the issuance of the order. The subsection specifies those procedures to be followed after a petition for review is filed, including:

(1) The clerk of the courts transmits a copy of the petition to the Commission and other parties.

(2) The Commission files in court the proceeding record pursuant to 28 United States Code 2112 and the courts shall then have exclusive jurisdiction.

(3) The court is authorized to grant appropriate temporary relief or restraining orders and may enter and enforce a decree affirming, modifying, or setting aside in whole or in part the Commission's order.

(4) Unless ordered by the court, the commencement of proceedings shall not stay the Commission's order.

(5) Objections not urged before the Commission will not be considered by the court unless the failure to urge such objection is excused because of extraordinary circumstances. The Commission's findings of fact shall be conclusive when supported by substantial evidence on the record as a whole.

(6) Any party may apply for leave to adduce additional evidence and if such evidence is material and there were reasonable grounds for not adducing such evidence before the Commission, the court may order the evidence taken before the Commission and made part of the record. The Commission may then modify its findings of fact or make new findings and shall file such findings, which shall be conclusive if supported by substantial evidence on the record as a whole. The Commission may modify or set aside its original order due to such modified or new findings of fact.

(7) The judgment and decree of the court shall be final except subject to review by the Supreme Court of the United States, pursuant to 28 United States Code 1254.

(8) Petitions filed under this subsection shall be heard expeditiously.

Section 107(b)—permits the Secretary to petition an appropriate United States Court of Appeals for review or enforcement of the Commission's final order and, to the extent applicable, the provisions of section 107(a) shall govern such proceedings. If no review petition, pursuant to section 107(a) is filed within 30 days after service of the Commission's order, the Commission's findings of fact and order shall be conclusive in connection with any enforcement petition filed by the Secretary after such 30 day period. In any such case, or in the case of a final order by the Commission under section 106 (a) or (b), the clerk of the court, unless otherwise ordered by the court, shall enter a decree enforcing the order and shall transmit copies to the Secretary and operator. In any contempt proceeding to enforce a court of appeal's decree pursuant to section 107(a) and (b), the court of appeals may assess penalties provided in section 111 and invoke other available remedies.

Section 108. Procedures to Counteract Dangerous Conditions.

Section 108(a)—provides that, if upon any inspection or investigation, the Secretary's representative finds an imminent danger exists, he shall determine the affected area and issue a withdrawal order barring all persons except those referred to in section 105(b) from such area. The issuance of an order under this subsection shall not preclude the issuance of a citation under section 105 or the proposing of a penalty under section 111.

Section 108(b)(1)—provides that, if upon any inspection, the Secretary's representative finds (A) conditions exist which have not resulted in an imminent danger, (B) such conditions cannot be effectively abated with existing technology, and (C) reasonable assurance cannot be provided that continued mining will not result in an imminent danger, he shall determine the affected area and issue a notice to the operator or his agent of such conditions, and file a copy with the Secretary's and miners' representative. Upon receipt of such copy, the Secretary shall make appropriate investigations, including an opportunity for the operator or miners' representative to present information relating to such notice.

Section 108(b)(2)—provides that upon conclusion of such investigation and an opportunity for a public hearing (when requested by an interested party), the Secretary shall make findings of fact and, by decision, either cancel the notice or issue a withdrawal order barring all persons from the affected area except those referred to in section 105(b) until the Secretary, after a public hearing affording all interested persons an opportunity to present their views, determines that such conditions have been abated. Hearings under this paragraph shall be of record and subject to 5 United States Code 554 but without regard to subsection (a)(3) thereof.

Section 108(c) requires findings and orders issued under section 108(a) to contain a detailed description of the conditions which constitute an imminent danger, and all orders issued under this section to contain a description of the area of the mine throughout which persons must be withdrawn.

Section 108(d)—requires that each finding made and order issued under this section be in writing, signed by the person making them, and given promptly to the affected operator. Any order issued pursuant to sections 108 (a) or (b) may be annulled, canceled, or revised by the Secretary's representative. Any order issued under sections 108 (a) or (b) shall remain in effect until annulled by the Secretary or revised or canceled by the Commission or the courts pursuant to sections 107(a) or 108(e).

Section 108(e)(1)—provides that any operator notified of an order under this section or any miner representative notified of the issuance, modification, or termination of such an order, may apply to the Commission within ten days for its annulment or revision. The Commission shall afford an opportunity for a hearing (in accordance with 5 United States Code 554, but without regard to subsection (a)(3) of such section) and thereafter issue an order, based on findings of fact, vacating, affirming, modifying, or terminating the Secretary's order. The Commission may not grant temporary relief from the issuance of any order under subsection 108(a).

Section 108(e)(2)—provides that the Commission shall take appropriate action to expedite proceedings under this subsection.

Section 109. Injunctions.

Section 109(a)(1)—authorizes the Secretary to institute civil action for relief, including a permanent or temporary injunction or any appropriate order, in any appropriate United States district court whenever an operator or his agent (a) violates or does not comply with any order or decision issued under this Act, (b) hinders the Secretary or the Secretary of Health, Education, and Welfare, or their representatives in carrying out the provisions of the Act, (c) refuses to admit such representatives to the mine, (d) refuses to permit the inspection of the mine, or the investigation of an accident or occupational disease related to such mine, (e) refuses to furnish any information or report requested by the Secretary or the Secretary of Health, Education, and Welfare in furtherance of the Act's provisions, or (f) refuses to permit access to and copying of such records as the Secretary of Health, Education, and Welfare determine necessary in carrying out provisions of the Act.

Section 109(a)(2)—authorizes the Secretary to institute civil action for appropriate relief, including injunction or restraining order where he determines that an operator is engaged in a pattern or practice of violation of the standards of the Act, or in a similar course of violative conduct which constitutes a continuing hazard to the health and safety of miners.

Section 109(b)—provides that each such court shall have jurisdiction to provide appropriate relief, to include, in cases under subsection (a)(2), requiring assurance or

affirmative steps by an operator to assure the court that miners shall be afforded the protection of the Act. Temporary restraining orders must be issued in accordance with rule 65 of the Federal Rules of Civil Procedure, as amended, but seven days from the date of entry shall be the time limit when issued without notice. Except as otherwise provided, relief granted by the court to enforce an order under clause (a) of this section is effective until completion of all review proceedings for the order under this title, unless prior thereto, the district court granting such relief sets it aside or modifies it. In any action instituted under this section to enforce an order or decision by the Commission or the Secretary after a public hearing in accordance with 5 United States Code 554, the Commission's or Secretary's findings, if supported by substantial evidence on the record as a whole, shall be conclusive.

Section 110. Postings of Notices, Orders, and Decisions.

Section 110(a)—requires that at each mine there be a mine office and a bulletin board at such office or at or near a conspicuous place near the mine entrance so that notices, orders, citations, or decisions required to be posted thereon and easily seen, and protected against damage by the weather and unauthorized removal. A copy of any notice, order, citation, or decision required to be given to the operator must be delivered to the mine office and immediately posted on the bulletin board, for not less than 30 days.

Section 110(b)—requires the Secretary to mail a copy of any notice, order, citation or decision given to an operator to the affected miners' representative and to the State official or agency that administers State laws relating to health or safety in the affected mine. Such notice, order, citation, or decision shall be available for public inspection.

Section 110(c)—provides that in order to insure prompt compliance, the Secretary's representative may deliver any notice, order, citation, or decision to the operator's agent who shall immediately take appropriate measures to comply.

Section 110(d)—requires the name and address of each mine and each person who controls or operates such mine to be filed with the Secretary. Each operator must designate an official responsible for health and safety at the mine and that official shall receive copies of any notice, order, citation, or decision affecting that mine. The designation of a health and safety official does not make him subject to any penalty under this Act.

Section 111. Penalties.

Section 111(a)—provides that a civil penalty of up to $10,000 shall be assessed for each violation of this Act or of any standard, rule, order, or regulation promulgated pursuant to this Act.

Section 111(b) provides that an operator who fails to correct a violation cited under section 105(a) within the abatement period (which period shall not end until the entry of a final order by the Commission, in the case of any review proceedings under section 106 initiated by the operator wherein the Commission orders, after an expedited hearing, the suspension of the abatement requirements of the citation after determining that the operator will suffer irreparable loss or damage from the application of those requirements, or until the entry of an order of the court, in the case of any review proceeding under section 107 initiated by the operator wherein the court orders the suspension of the abatement requirements of the citation) may be assessed a maximum civil penalty of $1,000 for each day the violation continues.

Section 111(c) provides that, whenever a corporate operator violates any standard, rule, order, or regulation promulgated pursuant to this Act, or provision of this Act, any director, officer, or agent of such corporation who knowingly authorized, ordered, or carried out such violation shall be subject to the same civil penalties, fines, and imprisonment that may be imposed upon a person under subsections (a), (b), (e), (f), or (g).

Section 111(d) provides that any operator who willfully or with gross negligence violates any provision of this Act, or any rule, order or standard promulgated pursuant to the Act and thereby subjects miners to imminent danger, shall be subject to a civil penalty closure order by the Commission which shall:

(i) order the mine closed for a specified period not to exceed 30 working days;

(ii) provide that the mine not be reopened after such period except upon a subsequent order and finding by the Commission that no unabated safety or health violations exist at such mine (except those for which the abatement period has not expired), and

(iii) provide that during the period of closure the operator shall pay the miners at their regular hourly rates, except miners found by the Commission to have willfully or with gross negligence contributed to the violation which gave rise to the closure order.

Section 111(e) provides that any operator who willfully violates this Act or any standard, rule, order, or regulation promulgated pursuant to this Act shall upon conviction be punished by a fine of not more than $25,000 or imprisonment of not more than 1 year, or both. For any subsequent convictions, punishment shall be a fine of not more than $50,000 or imprisonment for not more than 5 years, or both.

Section 111(f) requires that any person convicted of giving advance notice of any inspection shall be punished by a fine of not more than $1,000 or imprisonment for not more than 6 months, or both.

Section 111(g) provides that whoever knowingly makes false statements, representations, or certifications in any document filed or required to be maintained pursuant to his Act shall, upon conviction, be punished by a fine of not more than $10,000 or by imprisonment for not more than 6 months, or both.

Section 111(h) provides that any operator who violates any of the posting requirements under the Act shall be assessed a civil penalty of up to $10,000 for each violation.

Section 111(i) provides that any miner who willfully violates safety standards related to smoking or the carrying of smoking materials shall be subject to a civil penalty of not more than $250 for each violation assessed by the Commission.

Section 111(j) provides that whoever knowingly distributes, sells, offers for sale, introduces, or delivers in commerce any equipment for use in a mine, which is represented as complying with the provisions of this Act, or with any specification or regulation of the Secretary and which does not so comply, shall upon conviction be punished by a fine or not more than $25,000 or by imprisonment for not more than one year, or both.

Section 111(k) authorizes the Commission to assess all civil penalties and to issue all civil penalty closure orders provided in this Act, giving consideration in assessing civil monetary penalties to (a) the gravity of the violation, (b) the good faith of the person charged, (c) the history of previous violations, and (d) the appropriateness of the penalty with respect to the size of business of any operator being charged, provided that, in proposing civil penalties under this Act, the Secretary may rely upon a summary review of the information available to him and shall not be required to make findings of fact concerning the above factors.

Section 111(l) provides that civil penalties owed under this Act shall be paid to the Secretary for deposit into the U.S. Treasury, and shall accrue to the United States.

Section 111(m)—provides that section 111 shall not apply with respect to Title IV of the Federal Mine Safety and Health Act of 1976.

Section 112. Entitlement of Miners.

Section 112—provides that if a mine or an area of a mine is closed by an order issued under section 104, 105, or 108, all miners working during the shift when the order was issued who are idled by such order shall be entitled to full compensation by the operator at their regular rates of pay for the period they are idled, but not more than for the balance of the shift. If the order is not terminated before the next working shift, all miners on that shift shall be entitled to full compensation by the operator at their regular rates of pay for the period they are idled, but not for more than four hours. If the closure results from an order for failure of the operator to comply with a health or safety standard, all miners idled by the order shall be fully compensated by the operator at their regular rates of pay for such time as they remain idled by the closing or for one week, whichever is lesser. When an operator fails to comply with an order issued under section 104, 105 or 108, all miners employed at the affected mine who would, by such order, be barred from such mine or area thereof shall be entitled, after all interested parties are given an opportunity for an expedited public hearing and after a final order issues, to full compensation at their regular rates of pay, in addition to pay received for work performed after the order was issued, for the period beginning when the order was issued and ending when the order is complied with, vacated, or terminated. The Commission shall have authority to order such compensation under this section when a miner or his representative files a complaint and after an opportunity for a hearing subject to a 5 USC 554.

Section 113. Administrative Provisions.

Section 113(a) authorizes and directs the Secretary to administer this Act through the Mine Safety and Health Administration. Acting through the Assistant Secretary for Mine Safety and Health, the Secretary shall have authority to appoint, subject to civil service laws, such officers and employees as he deems necessary for the administration of this Act, and to prescribe powers, duties, and responsibilities of all officers and employees engaged in administering this Act.

Section 113(b) authorizes the Solicitor of Labor to appear for and represent the Secretary in any civil litigation brought under this Act, except as provided in 28 U.S. Code 518(a) relating to litigation before the Supreme Court.

Section 114. The Federal Mine Safety and Health Review Commission.

Section 114(a) establishes the Federal Mine Safety and Health Review Commission composed of five members, who shall be appointed by the President with the advice and consent of the Senate from among those who are qualified to carry out the functions of the Commission under this Act. The President shall designate one of the members to serve as Chairman of the Commission.

Section 114(b) provides that the terms of the members of the Commission shall be six years, except that the first appointees to the Commission shall be appointed for terms of 2, 4, and 6 years; and that if the term of one of these three members shall become vacant, the successor shall be appointed for the balance of that term only. This section further provides the reasons for which a member of the Commission may be removed, namely, inefficiency, neglect of duty, or malfeasance in office.

The section gives the Chairman the responsibility for the administrative operations of the Commission, and enables the Commission to appoint employees necessary for the performance of its functions, and to fix their compensation under the provisions of 5 U.S.

Code Chapter 51 and Chapter 53, subchapter III. Administrative Law Judges currently assigned to mine safety at the Arlington, Va., office of the Department of the Interior Office of Hearings and Appeals are automatically transferred to the Commission on the effective date of the Act, in grade and position and authorizes the Chief Administrative Law Judge to elect to so transfer. The section further provides that Administrative Law Judges associated with mine health and safety assigned to the Western offices of the Office of Hearings and Appeals shall have the option of transferring to the Department of Labor, under the same conditions, or remain with the Department of the Interior. The Commission is further authorized to appoint such Administrative Law Judges as it deems necessary to carry out the functions of the Commission, and the assignment, removal and compensation of the Administrative Law Judges is to be in accordance with 5 U.S. Code, sections 3105, 3344, 5362, and 7521.

Sec. 114(c) provides that the Commission is authorized to delegate to any group of three of its members, any or all of the Commission's powers. Two members shall constitute a quorum of any such designated group.

Section 114(d)(4)(1) enables an Administrative Law Judge of the Commission to hear and make determination on any proceeding instituted before the Commission and any motion in connection therewith which is assigned to such Administrative Law Judge by the Commission, and requires the Administrative Law Judge to make a report of any such determination which constitutes his final determination. The decision of an Administrative Law Judge shall become the final order of the Commission unless directed to be reviewed within 30 days in accordance with the rules promulgated under the provisions of section 114(d)(2) of this Act.

Section 114(d)(2) directs the Commission to prescribe rules of procedures for its review of the Administrative Law Judges' decisions in cases under this Act which shall meet the following standards for review.

(A) Petitions for Discretionary Review (1) Within 30 days of its issuance, any party may file a petition for discretionary review by the Commission of an administrative judge's decision. Such review is not a matter of right but of the Commission's sound discretion.

(ii) Such petitions shall be filed only upon one or more to the following grounds:

(1) A finding or conclusion of material fact is not supported by substantial evidence.

(2) A necessary legal conclusion is erroneous.

(3) The decision is contrary to law, or to the Commission's promulgated rules and decisions.

(4) A substantial question of law, policy, or discretion is involved.

(5) A prejudicial error was committed in the proceedings.

(iii) Indicates some technical requirements of such petitions. Also, except for good cause shows no assignment of error shall rely on questions of fact or law upon which the administrative law judge has not had opportunity to pass. The Commission's review shall be granted by an affirmative vote of two of the Commissioners present and voting. If granted review shall be limited to questions raised by the petitioner.

(B) Review by the Commission at its own Initiative—Within 30 days after the issuance of a decision of an administrative law judge, the Commission, by affirmative vote of two of the Commissioners present and voting, may review such case but only on the grounds that the decision may be contrary to law or Commission policy or that a novel question of policy has been presented. Such grounds shall be specifically stated in the order to review. If a party's petition for discretionary review has been granted, the Commission shall not raise or consider additional issues in such review proceedings except in compliance with this paragraph.

(C) Scope of Review—For purposes of Commission review under paragraphs (A) and (B) of this subsection, the record shall include (1) all matters constituting the record upon which the decision of the administrative law judge was based, (2) rulings upon proposed findings and conclusions, (3) the decision of the administrative law judge, (4) any petition for discretionary review, responses thereto, and the Commission's order for review, and (5) briefs filed on review. No other material shall be considered by the Commission upon review. The administrative law judge's findings and conclusions of fact shall be set aside only if unsupported by substantial evidence of record. The Commission may remand the case to the administrative law judge or affirm, set aside, or modify his decision or order.

Sec. 114(e)—provides that at hearings before the Commission or its Administrative Law Judges, attendance and testimony of witnesses and the production of book and documents may be compelled. The Commission or Administrative Law Judge may also compel testimony to be taken by deposition. Witnesses are to be paid the same fees and mileage that are paid in U.S. courts.

Upon application to the appropriate district court, such court can require a person to appear, testify or produce evidence as ordered by the Commission or the Administrative Law Judge. Any failure to obey such court order is punishable as contempt.

Section 115. Authorization of Appropriations.

Section 115—authorizes appropriations of any moneys in the Treasury not otherwise appropriated that may be necessary to carry out the provisions of this title.

Section 116(a)—requires each operator to have a safety training program which shall be approved by the Secretary, and requires the Secretary, within 180 days of enactment of this Act, to promulgate regulations dealing with the requirements of such training programs, but which require not less than that:

(1) new underground miners are to receive no less than 40 hours of training, including use of the self-rescuer and respiratory devices, hazard recognition, escapeways, walk around training, emergency procedures, basic ventilation and roof control electrical hazards, first aid, and the health and safety aspects of the particular job to which they will be assigned.

(2) new surface miners to receive no less than 24 hours of training to include self-rescue and other respiratory devices, hazard recognition and emergency procedures, electrical hazards, first aid, walk around training, and safety and health hazards of the job to which they will be assigned;

(3) no less than 8 hours of refresher training annually, except that existing miners are to receive this refresher training within 90 days after approval of the operator's safety training program; and

(4) training for any miner who is being reassigned to a new task in the specific safety and health aspects of that task.

Section 116(b) requires that the training given to miners under this section is to be given during normal working hours, and that miners shall be paid at the normal rate of pay for attending such training, and that if the training is to be given away from the normal work place, miners are to be compensated for the expenses attendant to taking such training.

Section 116(c) requires that upon the completion of each training program the operator shall certify that the miner received that training, and that such certification shall be on a form approved by the Secretary, which form shall conspicuously indicate that false certification of training shall be punishable under section 111(g) and (h) of the Act. The section further requires the operator to maintain at the mine, available for inspection, a copy of this certification, and that the operator shall give a copy of the certificate to each miner upon the completion of the training, and when that miner shall leave the operator's employ.

Section 116(d)—requires the Secretary, within 180 days after enactment, to publish regulations providing that mine rescue teams made up of Federal mine inspectors shall be maintained at each district, subdistrict and field office of the Mine Safety and Health Administration, as practicable.

Section 202. Amendments with Respect to Interim Mandatory Health Standards.

Section 202(a)(1)—makes all mines covered by this Act subject to the interim mandatory health standards of section 201(a) of the Federal Mine Safety and Health Act of 1977.

Section 202(a)(2)—applies to all mines subject to this Act the provisions of section 201(b).

Section 202(b)—applies the dust standard of section 205 to all mines covered by the Act.

Section 202(c)—applies the noise standard of section 206 to all mines subject to this Act.

Section 202(d)(1)—amends Section 202(e) of the Federal Coal Mine Health and Safety Act of 1969 to provide that references to respirable dust shall mean average concentrations of respirable dust measured with a device approved by the Secretary and the Secretary of Health, Education and Welfare.

Section 202(d)(2)—amends Section 318 of the Federal Coal Mine Health and Safety Act of 1969 by striking subsection (k) thereof.

Section 203—Amendments with respect to interim mandatory safety standards for underground coal mines

Section 203—amends Section 301 of the Federal Coal Mine Health and Safety Act of 1969 by striking subsections (c) and (d) thereof.

TITLE III—MISCELLANEOUS PROVISIONS

Section 301. Transfer Matters.

Section 301(a)—transfers the functions of the Secretary of the Interior under the Federal Coal Mine Health and Safety Act of 1969 as amended, except in the safety research function and the Federal Metallic and Nonmetallic Mine Safety Act of 1966 to the Secretary of Labor, except those expressly transferred to the Commission by this Act.

Section 301(b)(1)—provides that the mandatory standards relating to mines issued by the Secretary of the Interior under the Federal Metal and Nonmetallic Mine Safety Act of 1966 and standards and regulations under the Federal Coal Mine Health and Safety Act of 1969 which are in effect on the date of enactment of this Act shall remain in effect as mandatory standards applicable to metallic and nonmetallic mines and coal mines respectively under the Federal Mine Safety and Health Act of 1977.

Section 301(b)(2)—provides that within 60 days after the effective date of the Amendments Act of 1976, the Secretary shall establish an advisory Committee under section 103 which shall review the advisory standards promulgated under the 1966 metal Act, and within 180 days recommend to the Secretary which of these standards or any modifications thereof which does not diminish substantially the health and safety of miners shall be promulgated as permanent standards. The Secretary shall publish the recommendations of the Advisory Committee within 60 days, and afford interested persons a period of 25 days to comment. Within 30 days after the close of the comment period,

the Secretary shall publish in the Federal Register the standard he shall adopt, as modified as a result of the comments, or if he decides not to publish such standard, his explanation therefore.

Section 301(b)(3)—provides that all interpretations, regulations, and instructions of the Secretary of the Interior or the Director of the Bureau of Mines, in effect on the date of enactment of this Act and not inconsistent with any provision of this Act or any amendment made by this Act, shall be published in the Federal Register and shall continue in effect until modified or superseded in accordance with the provisions of this Act.

Section 301(c)(1)—transfers to the Department of Labor or the Commission, as appropriate, all personnel, property, records, obligations, unexpended balances of appropriations, and commitments which are used primarily with respect to any transferred function under section 301(a). The transfer of personnel pursuant to this paragraph shall be without reduction in classification or compensation for one year after such transfer, except that the Secretary shall have full authority to assign personnel during such one-year period in order to efficiently carry out functions transferred to him under this Act.

Section 301(c)(2)—provides that all orders, decisions, determinations, rules, regulations, permits, contracts, certificates, licenses, and privileges (A) which have been issued, made, granted, or allowed to become effective in the exercise of functions which are transferred under this section by any department or agency or any functions of which are transferred by this section and (B) which are in effect when this section takes effect, shall continue in effect according to their term until modified, terminated, superseded, set aside, or repealed by the Secretary, the Commission, any court of competent jurisdiction, or operation of law.

Section 301(c)(3)—provides that the provisions of this section shall not affect any proceedings pending at the time this section takes effect before any department cr agency, functions of which are transferred by this section; except that such proceedings as they relate to transferred functions shall be continued before the Secretary or the Commission. Orders shall be issued in such proceedings, appeals shall be taken therefrom, and payments shall be made pursuant to such orders, as if this section had not been enacted, and orders issued in any such proceedings shall continue in effect until modified, terminated, superseded, or repealed by the Secretary, the Commission, a court of competent jurisdiction, or operation of law.

Section 301(c)(4)—provides that the provisions of this section shall not affect suits commenced prior to this section's effective date and in all such suits proceedings shall be had, appeals taken, and judgments rendered, as if this section had not been enacted; except that if before this section's effective date, any department or agency (or officer thereof in his official capacity) is a party to a suit involving functions transferred to the Secretary, then such suit shall be continued by the Secretary. No cause of action, and no suit action, or other proceeding, by or against any department or agency (or officer thereof in his official capacity), functions of which are transferred by this section, shall abate by reason of this section's enactment. Cause of action, suits, actions, or other proceedings may be asserted by or against the United States or the Secretary as appropriate and in any litigation pending when this section takes effect, the court may at any time, on its own motion or that of any party, enter an order which will give effect to the provisions of this paragraph.

Section 301(d)—provides that for purposes of this section, the term "function" includes power and duty, and the transfer of a function of an agency or the head of a department shall also be a transfer of all functions which are exercised by any office or officer of such agency or department.

Section 302. Mine Safety and Health Administration.

Section 302(a)—establishes in the Labor Department, a Mine Safety and Health Administration to be headed by an Assistant Secretary of Labor for Mine Safety and Health appointed by the President, with the Senate's advice and consent. The Secretary is authorized and directed to carry out his functions under the Act through the Administration except as otherwise provided.

Section 302(b)—amends 5 United States Code 5315 by adding "[109] Assistant Secretary of Labor for Mine Safety and Health."

Section 302(c)—provides that the Commission shall maintain its principal offices in Washington, D.C., except that it shall be authorized to conduct proceedings elsewhere if in the convenience of the public or party.

Sec. 302(c)(1)—amends 5 USC 5145 by adding "(64) Chairman, Federal Mine Safety and Health Review Commission."

Sec. 302(c)(2)—amends 5 USC 5315 by adding "(108) Members, Federal Mine Safety and Health Review Commission."

Section 303. Amendments with Respect to Mine Safety and Health Administration.

Section 303(a)(1) applies the research provisions of section 501(a) to all mines covered by this Act.

Section 303(a)(2)—further amends Section 501(a) by establishing authority for the Secretaries of the Interior and Health, Education and Welfare to, upon the specific written request of an operator or authorized representative of miners, determine whether any substance or physical agent found in a mine has potentially harmful effects, and to so inform the operators and miners of such findings as soon as possible.

Section 303(a)(3) amends section 501(b) such that research activities relating to mine health will be carried out by the Secretary of Health, Education, and Welfare through the National Institute for Occupational Safety and Health, and that the research activities relating to safety are extended to all mines now covered by this Act, is to be performed by the Secretary of the Interior in coordination with the Secretary.

Section 303(a)(4) extends to all mines covered by this Act the Secretary of Health, Education, and Welfare's authorization under section 501(d) to conduct studies and research involving the protection of life and prevention of diseases relating to certain nonminers who work with or around mine products.

Sec. 303(a)(5)—amends Section 501 by requiring the Secretary to compile accurate statistics on work injuries and illnesses occurring in mines subject to the Federal Mine Safety and Health Act of 1976.

Section 303(b) extends the training and education provisions of section 502 to all mines now covered by the Act.

Section 303(c)(1) amends section 503(a) to authorize the Secretary in coordination with the Secretary of Health, Education, and Welfare, to make grants to any State in which mining takes place.

Section 303(c)(2) applies to the criteria for approval of State grant applications to all mines now covered by this Act.

Section 303(d)(1) expands the exchange of State and Federal inspection reports provided for in section 503(f) to include inspection reports of all mines covered by this Act.

Section 303(d)(2) extends to any mining State the 80 percent limit on State grants in any fiscal year provided for in section 503(g).

Section 303(e)(1) revises the qualifications for mine inspectors under section 505 to include practical experience in mining in lieu of "practical experience in the mining of coal."

Section 303(e)(2)—amends Section 505 by requiring that mine inspectors, to the extent feasible, be qualified with at least 5 years practical mining experience with consideration in assignment given to previous experience in the particular type of mine to be inspected.

Section 303(f) amends section 506(b) such that any State law or regulation providing for health and safety standards applicable to any mine now covered by this Act and that (1) are more stringent than Federal law, or (2) apply to any area not covered by Federal law, shall not be held to be in conflict with this Act.

Section 303(g)(1) amends section 511(a) such that the Secretary's annual report shall cover health and safety relating to all mines now covered by this Act.

Section 303(g)(2) amends section 511(b) such that the annual report of the Secretary of Health, Education, and Welfare shall cover health matters relating to all mines covered by this Act.

Sec. 303(h)—amends Section 502 by adding the following new section:

(c)(1) The National Mine Health and Safety Academy is to be maintained as an agency of the Interior Department. The Academy is responsible for mine safety and health inspectors' training and technical support personnel training. The Academy is authorized to enter into cooperative educational and training agreements.

(c)(2) provides that the Academy shall use the facilities and personnel of the Interior Department and other personnel as mutually agreed upon by the Secretaries of Labor and Interior. Officers and employees of the Academy shall be appointed by the Secretary of Interior.

(c)(3) provides that the Secretary of Interior shall conduct safety research under Section 501 in coordination with the Secretary of Labor. The Secretaries are authorized to enter into contractual or other agreements for the performance of safety related research.

Section 303(i) amends section 7(b)(5) of the Small Business Act such that appropriate loans are available to small business concerns that operate any mine subject to this Act.

Section 304. Savings Provision.

This section provides that nothing in this Act or the amendments made by the Act shall be construed to reduce the number of inspectors enforcing the Federal Coal Mine Health and Safety Act of 1969 and the Federal Metal and Nonmetallic Mine Safety Act of 1966 as in effect prior to the effective date of this Act or to reduce the number of inspectors enforcing the Occupational Safety and Health Act of 1970.

Section 305. Budget Provision.

This section provides that in the preparation of the Budget message required under section 201 of the Budget and Accounting Act of 1921, the President shall set forth as separate appropriation accounts those amounts required for appropriations for mine health and safety pursuant to this Act and for occupational safety and health pursuant to the Occupational Safety and Health Act of 1970.

Section 306. Repealer.

This section repeals the Federal Metal and Nonmetallic Mine Safety Act of 1966.

Section 307. Effective Date.

This section establishes the effective date of this Act and the amendment made by this Act as July 1, 1978 except that the Secretary is authorized to establish rules and regulations necessary for the efficient transfer of functions provided under this Act.

MINE SAFETY: THE TIME FOR ACTION IS NOW!

Mr. CHURCH. Mr. President, the Federal Mine Safety and Health Amendments of 1977 is a carefully reasoned effort to improve our Nation's mine health and safety programs. This legislation is long overdue and I am pleased to join in its introduction.

This measure is very similar to legislation that I cosponsored last year. Unfortunately, that bill, S. 1302, failed to reach a vote by the full Senate due to time considerations.

The time for action is now. As noted in the report accompanying S. 1302—

Every working day of the year, at least one miner is killed and sixty-five miners suffer disabling injuries in our nation's mines.

The extent and frequency of mining mishaps in the United States is appalling. It is all too apparent that existing laws and enforcement programs are inadequate to provide a level of safety for miners that one would expect from an advanced, industrialized nation.

Many of you, I am sure, will recall the disastrous fire at the Sunshine Silver Mine in 1972 when 91 men perished. Numerous disasters have followed to remind us that all too often, health and safety legislation receives national attention only after terrible loss of life. Do we need witness further mine tragedies before we act to rectify the weaknesses in our mine safety laws?

Mining is an extremely important industry in Idaho. It has played a vital part in the development of our State and is the economic foundation of the communities in Shoshone County. The industry accounts for approximately 5 percent of the total wages paid in the State of Idaho.

But as important as this industry is, our first concern must be for the safety of the miners who work a mile or more beneath the surface. Industry scare talk about reduced production cannot change the fact that needless loss of life continues in our Nation's mines. The need for legislative improvements in our mine safety laws is imperative.

Miners still go into the mines without basic safety training; minimal civil penalties for safety violations discourage the capital investment necessary to improve dangerous working conditions; and the Government is without the power to bring continuing violation to a halt.

In May of 1972, I suggested that the transfer of mine safety responsibility from the Department of Interior to the Department of Labor would be in the best interest of vigorous enforcement of health and safety standards. I am pleased that this bill has adopted that approach, recognizing that the enforcement of these laws by the Department of the Interior involves a basic conflict in its missions. On the one hand, Interior is expected to work in close cooperation with the mining industry to maximize production, while on the other, it is called to interrupt production when necessary for mine safety reasons.

Basically, this transfer contemplates a change in philosophy in the enforcement of mine safety laws. In 1975, enforcement of these laws in underground mines, open pit mines, crushed stone operations, sand and gravel operations, and mills resulted in underground mine operations having the lowest violation to closure ratio—lower than any of the other categories. And this, despite the fact that 36 percent of the fatalities in mines and mills for 1975 occurred in underground mines.

The argument that such a transfer would result in the enforcement of mine safety laws by OSHA is spurious. The bill will allow MESA to maintain its independence within the Department of Labor. Under no circumstances will its functions be submitted by OSHA.

The effectiveness of mine safety enforcement has been further compromised by the existence of two separate laws: the Metal and Nonmetallic Mine Safety Act of 1966 and the Coal Mine Health and Safety Act of 1969. This division means duplication of efforts and results in a diminished enforcement capacity.

The Metal Act, in particular, has proved ineffective in protecting miners from health and safety hazards. There are no "teeth" in it—no civil penalties for violations of the Act's standards. These standards are, for the most part, advisory, and the failure to comply with them does not place the operator in violation of the law. Moreover, the enforcement of the mandatory standards has been haphazard, at best.

In 10 years under the Metal Act, the rate of fatalities and serious injuries has improved only 26 and 12 percent, respectively. In contrast, during the 6 years of the Coal Act's existence, the rate of improvement of fatality and serious injury due to mining operations has been 59 and 28 percent respectively, more than twice as great as that under the Metal Act, indicating that our coal miners are getting far better results. Our hard rock miners deserve the same measure of protection as that received by our coal miners.

Despite all the evidence and the many needless deaths, there are those who maintain that the safety provisions in this bill should not encompass metal mines. They argue that such an approach would preclude "flexibility in the formulation and enforcement of standards." Mr. President, such arguments are specious. Nothing in this bill prohibits needed flexibility in standard making. Indeed, the rulemaking process is designed to produce standards tailored to meet specific hazards. Where safety hazards differ, so shall the standards.

The Metal Act is clearly deficient. It does not refer to the protection of the miner's health; it maintains a laborious, and often interminable, standard-making procedure; inspections of underground mines are required only once a year; and penalties are lacking except for the drastic measure of issuing a closure order in cases of imminent danger or failure to abate serious hazards.

One of the most glaring deficiencies is that no standard requiring a comprehensive safety training program exists. If proper training in self-rescue procedures had been provided to the miners at the Sunshine Mine in 1972, many lives might have been saved.

In testimony before the Senate Labor and Public Welfare Committee during hearings on S. 1302, a representative of the American Mining Congress stated that "most accidents are caused by the unsafe acts of men, not the absence of regulation." Yet it was not the miners who failed to provide an alternative escape route at the Sunshine Mine. The miners did not distribute self-rescuers without instruction in their use.

We should have equal protection for all miners. In 1966, the Senate Labor Committee said that the state of safety in the extractive industry was alarming—it remains so today. Unless we act decisively, we risk the lives of those who work our Nation's mines.

I endorse this legislation's concept of combining protection of all mine workers under a single, comprehensive statutory plan. This bill adopts the best features of existing statutes and transfers administration to the Department of Labor's Mine Safety and Health Administration. It is a good bill. It will benefit many. It is a bill that is needed—now.

By Mr. STONE:

S. 718. A bill to amend chapter 19 of title 38, United States Code, to require the Administrator of Veterans' Affairs to provide veterans with certain cost information relating to the conversion of Government-supervised insurance to individual life insurance policies; to the Committee on Veterans' Affairs.

Mr. STONE. Mr. President, today I am introducing a bill to require that cost information be provided to veterans who desire to convert their temporary veterans group life insurance, VGLI, to a permanent commercial life insurance policy.

Unlike veterans from earlier eras, Vietnam veterans have not been offered an opportunity to purchase inexpensive, Government-administered whole life insurance protection. In fact, prior to the enactment of the Veterans' Insurance Act of 1974, Vietnam veterans were offered low-cost servicemen's group life insurance for only 120 days after being discharged from military service. The Veterans' Insurance Act of 1974 provided for the automatic conversion of a servicemen's group life insurance, SGLI, policy to a nonrenewable 5-year policy known as veterans group life insurance, VGLI. This program allows recently discharged veterans to maintain inexpensive, Government-administered insurance for a 5-year readjustment period. Upon the termination of the 5-year policy, the veteran is permitted to convert his VGLI policy to a private commercial life insurance policy offered by a VA-approved commercial life insurance company.

Given the complex and often confusing nature of life insurance policies, veterans wanting to convert to a commercial life insurance policy need more information than they presently receive to select the best insurance policy for their particular needs. Unfortunately, there are no guidelines nor any comparative data published either by the VA or the commercial life insurance industry to assist these veterans in making an intelligent choice as to which company and policy is best suited for their

needs. Without a low-cost Government insurance program or without adequate information to make an informed decision concerning conversion to a private commercial policy, the Vietnam veteran is clearly in a vulnerable position.

In the time I have served as chairman of the Veterans' Affairs Subcommittee on Housing and Insurance, I have received considerable correspondence from the American Legion and other veterans organizations asking me to introduce legislation creating a separate government-administered life insurance program for Vietnam veterans. I must say that as a strong advocate of private enterprise, I am not inclined to push for such a change. I believe that with the full cooperation of the private commercial life insurance companies, we can avoid the necessity of creating a new government program.

However, if we are going to pursue a policy of providing Vietnam veterans with Government-supervised life insurance for only a limited period of time, following which they must convert to a participating commercial life insurance policy, I believe the Government has a firm obligation to provide these veterans with all information necessary to make a rational and prudent conversion.

As chairman of the Veterans' Affairs Subcommittee on Housing and Insurance, I held comprehensive hearings in December 1975 in order to determine the best method of providing cost-benefit information to veterans. The subcommittee considered the merits of various alternative approaches and determined that the interest-adjusted cost disclosure method is best suited to the objectives of determining accurately the policy cost and benefits and presenting this information in an understandable and usable manner. This method takes into account the value of money spent for life insurance over a period of time. The bill I am introducing today reflects the subcommittee's findings and adopts the interest-adjusted cost disclosure method.

The same method was adopted in the model insurance disclosure bill prepared by the National Association of Insurance Commissioners. It is presently required by the laws of Texas, California, Wisconsin, Arkansas, and Pennsylvania. If the Federal Government were to adopt a different system from the trend among State disclosure regulations, the subcommittee learned that it would become too costly for participating insurance companies. This would likely cause a significant number of withdrawals from the conversion program, especially by smaller companies. The VA and insurance company representatives indicated that they are able and willing to provide veterans with a high level of cost disclosure information at the time of conversion using the interest-adjusted method provided by this bill. No withdrawals from the program are expected if this method is adopted.

Specifically, this bill applies to any veteran eligible to convert from veterans group life insurance to a commercially sold life insurance. It directs participating insurance companies to provide certain cost-benefit information in the form of a comprehensible buyer's guide and policy summary to each eligible veteran who purchases insurance in order to assist veterans in converting to an appropriate insurance policy. The bill specifies a method for presenting simple premium costs and benefits for the first 5 policy years and representative durations thereafter. Prior to the time for conversion, the VA Administrator is required to notify eligible veterans of their right to obtain a buyer's guide and a policy summary from any participating insurance company and briefly explain the purpose and importance of each document.

Mr. President, I have introduced this bill because I believe the Government has an obligation to provide our Vietnam veterans with clear, accurate and adequate information about the cost and value of the commercial life insurance they buy when converting from their Government-administered life insurance policy. The method adopted by the bill will provide the cost disclosure information necessary for veterans to make a prudent choice from among commercial life insurance policies.

By Mr. HART:

S. 719. A bill entitled the "Mobile Source Pollution Control Act of 1977"; to the Committee on Environment and Public Works.

MOBILE SOURCE POLLUTION CONTROL ACT OF 1977

Mr. HART. Mr. President, the Senate Environment and Public Works Committee is once again setting out to draft amendments to the 1970 Clean Air Act.

Since the passage of the Clean Air Act 6 years ago, we have indeed learned a great deal about pollution control. It is appropriate for us to draw on that experience to revise existing law and make it a more workable basis for environmental policy.

We should proceed, however, very cautiously when revising existing standards, especially if those revisions are motivated solely by concern for the general state of our economy. Congress has at its command jobs programs, tax rebates, and other economic tools far more powerful than relaxing pollution standards to achieve that goal. It is imperative that we fully exploit those tools rather than endanger the health of the people of this Nation.

I, for one, have come to the conclusion that instead of relaxing current air pollution control standards, we should look very seriously at alternative public policy tools that can create a more workable program without endangering public health. Supplementing or replacing inflexible regulations with economic incentives and disincentives is one approach which I believe should be given serious consideration by Congress.

Today, I am introducing a measure which would apply this approach to automobile pollution control. This measure would provide industry both the time and the flexibility to produce clean cars without abandoning standards needed to protect public health.

Mr. President, the thrust of my proposal is not to abandon automobile pollution standards. On the contrary, I am proposing a program which will supplement our current regulatory scheme, make it more flexible and, by defusing the confrontation politics of hard deadlines, provide us an alternative to relaxing standards which are necessary for the protection of public health.

I plan to offer my proposal during the Senate Public Works Committee's upcoming deliberations on Clean Air Act amendments. My purpose in presenting this proposal to the whole Senate today is to encourage open debate on an option which is a viable solution to the Nation's air pollution problems.

Mr. President, I ask unanimous consent that a summary of the major provisions of my proposal and the text of the bill be printed in the RECORD.

There being no objection, the bill and summary were ordered to be printed in the RECORD, as follows:

S. 719

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That

SECTION 1. Section 202(b)(1)(A) of the Clean Air Act, as amended, is amended by striking "model year 1977" in the first sentence and inserting "model year 1980" in lieu thereof, and by striking "model years 1975 and 1976" in the second sentence and inserting "model years 1975 through 1978" in lieu thereof.

SEC. 2. Section 202(b)(1)(B) of the Clean Air Act, as amended, is amended by striking "model year 1977" in the fourth sentence and inserting "model years 1977 and 1978" in lieu thereof.

SEC. 3. Section 202(b)(2) of the Clean Air Act, as amended, is amended by striking "paragraph (1)" and inserting "paragraphs (1) and (5)" in lieu thereof.

SEC. 4. Section 202(b)(5) of the Clean Air Act, as amended, is amended to read as follows:

"(5)(A) In addition to the requirements of paragraph (1) of this subsection, the regulations under subsection (a) applicable to emissions of hydrocarbons, carbon monoxide, and oxides of nitrogen from light duty vehicles and engines shall contain standards which provide that such emissions shall not exceed the levels specified in the following table for such vehicles and engines manufactured during the appropriate model year:

	In grams per vehicle mile		
Model year	Hydrocarbons	Carbon monoxide	Oxides of nitrogen
1979	0.41	3.4	2.0
1980	0.41	3.4	1.0
1981	0.41	3.4	1.0
1982 and all subsequent model years	0.41	3.4	0.4

"(B)(i) Subject to subparagraph (C) of this paragraph, the Administrator may issue a certificate of conformity with the regulations prescribed under this section, in accordance with section 206 of this Act, for a new motor vehicle or motor vehicle engine which does not attain the standards specified in subparagraph (A) of this paragraph. In any such case, notwithstanding the provi-

sions of section 205, the manufacturer of such motor vehicles or motor vehicle engines shall be subject to a penalty, to be paid for each motor vehicle or motor vehicle engine before such vehicle or engine can be sold, offered for sale, introduced, or delivered for introduction, into commerce, or imported into the United States, as covered by a certificate of conformity issued under this subparagraph and in compliance with section 203(a) of this Act.

"(ii) Such penalty shall be established by the Administrator at the time such certificate is issued, and based upon his determination of the difference between the cost of attaining the standards specified for the appropriate model year in subparagraph (A) of this paragraph and the cost of attaining the standards specified for such model year in subparagraph (C) of this paragraph, plus 50 per centum of such difference. Such penalty shall be established at a rate per vehicle or engine, and the Administrator may reduce such penalty in an amount proportional to any decreases in the levels to which any such vehicle or engine is certified below those required under subparagraph (C) of this paragraph.

"(iii) In the case of any new motor vehicle or motor vehicle engine which is certified at levels below those required under subparagraph (A) of this paragraph, the Administrator is authorized to provide a rebate or incentive payment to the ultimate purchasers of such vehicles or engines. Such rebate or incentive payment shall be established by the Administrator at a rate proportional to the decreases in levels of emissions below those required under subparagraph (C) of this paragraph and on a basis equivalent to the amount per-unit of emissions of the penalty established under clause (ii) of this subparagraph. Such regate or incentive payment may be paid to the manufacturer to be credited against the purchase price of such vehicle or engine or directly to a purchaser of a vehicle or engine. Payments of such rebates or incentive payments shall be paid out of the proceeds of penalties collected under this subparagraph or out of funds appropriated for such purpose.

"(C) Notwithstanding the provisions of subparagraph (B) of this paragraph, and consistent with the requirements of paragraph (1) of this subsection, the regulations under subsection (a) applicable to emissions of hydrocarbons, carbon monoxide, and oxides of nitrogen from light duty vehicles and engines shall contain standards which provide that in no event shall such emissions exceed the levels specified in the following table for such vehicle and engines manufactured during the appropriate model year:

Model year	In grams per vehicle mile		
	Hydrocarbons	Carbon monoxide	Oxides of nitrogen
1979	1.5	15.0	2.0
1980	0.41	3.4	2.0
1981	0.41	3.4	2.0
1982 and all subsequent model years	0.41	3.4	1.0

"(D) A certificate of conformity issued under section 206 in accordance with the provisions of this paragraph, and the particular levels of emissions to which a new motor vehicle or motor vehicle engine is certified under the authority of this paragraph, shall be deemed to be the certificate, and the regulations on which such vehicle or engine is certified to conform, for all purposes under this title."

SEC. 5. Section 210 of the Clean Air Act, as amended, is amended by adding "(a)" after "Sec. 210." and by adding the following subsection:

"(b) The Administrator is authorized to make grants to States and political subdivisions thereof for the purpose of implementing transportation control plans approved or promulgated under section 110 of this Act. The total amount of such grants in any year shall not exceed the amount collected in penalties under section 202(b)(5) of this Act, less the total amount of any rebates or incentive payments made under such provision. There are authorized to be appropriated such sums as may be necessary to carry out this subsection, not to exceed the amount specified in the preceding sentence."

SEC. 6. Section 209(c) of the Clean Air Act as amended is amended by striking the period and adding a comma and the following:

"or to establish penalties in excess of those established under section 202(b)(5).".

SUMMARY OF MAJOR PROVISIONS

1. The 1977 emission standards—1.5 grams per mile for hydrocarbons, 15 grams per mile for carbon monoxide, and 2 grams per mile for nitrogen oxides—would be extended to 1978. All cars would have to meet these standards.

2. The noncompliance penalty option would begin in 1979. With one major modification, an emission standards timetable similar to that pasesd by the Senate last year would be established. The major difference involves restoring, in 1982, the nitrogen oxide standard of .4 grams per mile that was permanently relaxed to 1 gram per mile in S. 3219.

Manufacturers would be encouraged but not required to make and sell cars meeting this schedule of emission standards. Cars which meet these standards would not be subject to any penalty. Manufacturers would be allowed to produce and sell cars with higher levels of pollution subject to a noncompliance penalty calculated (by the EPA Administrator) on the cost of compliance plus 50 percent. To ensure the protection of public health, a maximum noncompliance pollution standard would limit the pollution levels from noncompliance cars.

The following tables show the emission standards and the maximum noncompliance pollution standard and the emission standards adopted by the Senate in S. 3219.

	No charge emission standards			Maximum noncompliance pollution standards			S. 3219		
							HC	CO	NO_x
1978	1.5	15.0	2.0	1.5	15.0	2	1.5	15.0	2
1979	.41	3.4	2.0	1.5	15.0	2	.41	3.4	[1] 2
							.41	3.4	[2] 1
1980	.41	3.4	1.0	.41	3.4	2	.41	3.4	1
1981	.41	3.4	1.0	.41	3.4	2	.41	3.4	1
1982	.41	3.4	.41	.41	3.4	1	.41	3.4	1

[1] For 90 percent of cars sold in United States.
[2] For 10 percent of cars sold in United States.

3. To encourage manufacturers to produce cars which pollute less than the "no charge" emission standards, the Administrator is authorized to provide a rebate or incentive payment to the purchasers of these cars.

4. The EPA Administrator would be authorized to distribute any net revenue generated by the penalty and rebate program to state and local governments for the purpose of implementing transportation control plans.

5. All states are extended the authority to set fines and rebates over and above those established by the EPA Administrator.

Mr. STAFFORD. Mr. President, I commend the Senator from Colorado (Mr. HART) for his initiative in the development of this legislation. I have long felt that our Nation had an opportunity to utilize marketplace mechanisms as a way to accelerate the national drive toward clean air.

That was why I supported strongly the delayed compliance penalty provisions included in last year's Senate bill and which is now S. 252. That provision will assure that foot-dragging will no longer be rewarded with an economic advantage over a competitor. Or stated another way, companies that move forward to meet emission limits and to install necessary control devices will no longer face an economic disadvantage in comparison with a laggard competitor. Another marketplace mechanism that was included in the language of S. 252 and S. 253 requires EPA to propose a system of penalties on emissions of nitrogen oxide from major stationary sources as a way to encourage cleanup.

I am not convinced that I can support this bill in every detail. For instance, I fear the size of the penalty may be too big—150 percent of the cost of compliance—when a rebate system would double that cost differential. That may be too high to offer the real flexibility to the companies and buyers that I would prefer as an interim approach, which this must be, a transitional approach.

Also, I am not certain but that a straight, penalty-rebate approach would not be more effective and fair, without channeling some of these funds into transportation control programs.

Nevertheless, the basic concept is sound. This approach deserves the most careful attention to see if it, or a modified version, should be incorporated into our Clean Air bill for 1977.

I hope that representatives of both industrial and environmental groups will study this approach with great care, in order to give us their views, together with suggestions on how it might be improved.

Mr. DOMENICI. Mr. President, I should like to take several moments to commend Senator HART on both his foresight and leadership in introducing his bill on automobile pollution charges.

The principal value of his proposal is that it offers a possible solution to the political brinkmanship that has characterized relations between the automobile manufacturers and the Congress over the past 6 years. At the heart of this controversy has been a difference of opinion on what technology is available to clean up automobile pollution and how quickly it can be put on the entire fleet of new cars.

This debate is inherently irreconcilable. It is to the automobile industry's advantage to present a pessimistic view of the availability of technology to clean up cars. On the other hand, the Congress, while suspicious of such pessimistic assessments, does not have the expertise to conclusively rebut the manufacturers. Over time, the debate has degenerated into a test of political wills rather than a rational examination of technological options.

Although it may not be the ultimate solution, Senator HART's proposal at least offers the hope of breaking the logjam. Under his proposal, manufacturers are given the choice of two sets of emission standards. The stringent stand-

ard represents congressional optimism. The weaker standard approaches the pessimistic industry view. If the manufacturer chooses to meet the weaker standard, he must pay. If he meets the strict standard, no fee is levied. Proceeds from the charge are rebated to purchasers of clean cars, and to cities experiencing severe air pollution problems.

Not only does Senator HART's proposal offer the prospect of ending the stalemate between Congress and the automobile industry, but it represents a positive advance in terms of regulatory strategies. Presently, most environmental regulation relies on the promulgation of regulations enforced by the judicial system. Despite its successes, such a system has its drawbacks. In a highly industrialized economy that is approaching $2 trillion a year, the ability of even the most enlightened bureaucrats to formulate sound regulations is limited. Instead, regulatory strategies should seek to capitalize on those economic signals that motivate a capitalistic economy. Senator HART's proposal by substituting charges on noncomplying cars for the present statutory prohibition has made a conceptual advance of some magnitude. A charge system offers the prospect of greater compliance, and less bureaucratic meddling.

Hopefully, Senator HART's proposal will prove the harbinger of a new wave of charge strategies in the environmental area. Such charges offer the prospect of more rapid compliance in an economy that understands costs better than regulatory mandates, with less regulatory interference in our personal and economic lives. I should stress, however, that I do not see charges totally supplanting regulatory strategies. Rather, I see a mix of the two emerging over time with each complementing the other.

Having spoken highly of Senator HART's proposal, several caveats are in order. My concerns are twofold. First, I am not sure that all the objections to the proposal have been met. Most of all, I am worried about the complexities of calculating the cost of compliance. This obviously needs further discussion.

My second concern is related to the first. The Senate Committee on Public Works, in order to provide a set of standards to the industry for its 1978 cars, plans to move rapidly in the next several weeks to report a bill. It remains to be seen whether Senator HART's proposal will receive the careful consideration it deserves. But, regardless of possible drawbacks, Senator HART is to be commended for his efforts.

By Mr. HUMPHREY (for himself, Mr. MCGOVERN, Mr. ANDERSON, Mr. PELL, Mr. RANDOLPH, Mr. WILLIAMS, and Mr. RIEGLE):

S. 720. A bill to authorize the Secretary of Agriculture to carry out a program of nutrition information and education as part of food service programs for children conducted under the School Lunch and Child Nutrition Acts; to the Committee on Agriculture, Nutrition, and Forestry.

NATIONAL CHILD NUTRITION INFORMATION AND EDUCATION ACT

Mr. HUMPHREY. Mr. President, last year I introduced the National Child Nutrition Information and Education Act to authorize the Secretary of Agriculture to carry out a program of nutrition information and education as a part of food service programs for children conducted under the School Lunch and Child Nutrition Acts.

Senator MCGOVERN and the late Senator Philip Hart joined me in sponsoring this legislation. Today I am joined by Senator MCGOVERN, ANDERSON, PELL, RANDOLPH, BAYH, WILLIAMS, and RIEGLE.

We have been learning more in recent years about our dietary patterns and their impact on our health. The Select Committee on Nutrition and Human Needs just recently issued a report, "Dietary Goals for the United States," outlining national nutritional goals to improve health and reduce the incidence of various diseases which are diet related.

In my view, we need to utilize this information to develop a sound nutrition education program, and the obvious focal point to attack the problem should be the school system and the education we provide there in the early years.

Under this proposed legislation a system of grants to State educational agencies would be established for the training of food service and educational personnel in the principles of good nutrition and the development of comprehensive nutrition education programs. These comprehensive nutrition programs will utilize the existing school lunch and child nutrition programs as a learning laboratory.

The benefits and savings resulting from a nutrition education program would be of major significance.

Improved nutrition helps learning and the development of the brain;

Improved nutrition increases the capacity for work and raises the productivity and the motivation of workers;

Improved nutrition results in higher resistance to disease and lowers the severity of disease;

Improved nutrition decreases fetal, infant, child, and even maternal mortality; and

Improved nutrition among poor children would lead to a 10- to 30-percent higher mental achievement.

It has been estimated that eliminating malnutrition among 3.3 million poor children alone could produce a $6.3 to $18.8 billion increase in GNP over the lifetime of these children.

President Carter, in the October issue of the School Food Service Journal, said:

> We must incorporate nutrition education into our child nutrition program. It is not enough just to feed our children today. We must educate them for tomorrow.

Congress through successive legislative acts, has made major changes and additions to broaden and improve the effectiveness of the existing child nutrition programs. Over 47 million children are enrolled in school at present, and the lunch program now is available to nearly 90 percent of those children. Despite this record we have not scratched the surface in using it to build an effective nutrition education effort.

When Congress approved the original National School Lunch Act, it stated:

> It is hereby declared to be the policy of Congress, as a matter of national security, to safeguard the health and well-being of the Nation's children. . . .

We need to reiterate the importance of good health and nutrition as they relate to our national security. I should like to remind my colleagues that the original National School Lunch Act was passed by the House and Senate just 31 years ago in February of 1946.

As considered in both Houses, the original bill included a title II which was designed to provide grants to the States for the purpose of nutrition education directly related to the operation of the school lunch program.

The purpose of title II, as explained by Senator Ellender in the floor debate, was to "work out techniques and procedures for making school lunches education" and to "help school principals integrate the school lunch with health instruction, home economics insrtuction, and so forth." Unfortunately, the House did not include title II in its bill, and it was dropped in the House-Senate conference.

The bill I am presenting today follows the same general principles on nutrition education as were incorporated in title II of the original bill on the school lunch program, although this bill is more comprehensive.

Three decades ago, Senators Russell, Ellender, and Aiken, as well as Congressman Flanagan, who sponsored the House bill, felt strongly that the school lunch program would never be a complete nutrition program until the lunch program became an integral part of the educational program. I have always subscribed to that view and, on several occasions, I have sponsored school lunch and child nutrition legislative proposals directed toward this purpose.

In my opinion, the vital need is to bring together in a working, cooperative relationship, the school lunch personnel, who plan menus, purchase, prepare, and serve food to children with the educational personnel who provide the teaching of nutrition principles in the classroom.

In this way, the theory of good nutrition learned in the classroom can be directly related to the learning and practice of good eating habits in the school cafeteria. I believe that the lessons of good nutrition will carry over as children leave school and build their adult lives.

The bill has three major features:

First. Each State Department of Education, with Federal funding, will establish a child nutrition information and education coordinator responsible for developing a State nutrition education program and coordinating existing child nutrition activities of various other State agencies.

Second. Federal funds at the rate of 50 cents for each child in each State

enrolled in schools and nonprofit child care institutions will be available to State educational agencies for the employment of nutrition education specialists and similar personnel, with supporting staff, at the State level. Such specialists would work with local school systems through workshops and other means to bring together food service and education personnel in planning and training session. Under this procedure, each school system would develop its own nutrition information program.

Third. A food and nutrition information and training resources center would be established within the Agricultural Library of the U.S. Department of Agriculture. Such a center would be responsible for assembling, collecting, maintaining, and disseminating food and nutrition materials, including the results of nutrition research, training methods and procedures, and other materials related to the purposes of this act.

I am very hopeful that this bill will receive favorable consideration in the Congress.

This type of program has been carried out successfully on a limited basis by the bureau of nutrition education and school lunch in the Massachusetts State Department of Education. Nutrition specialists assigned to the school lunch program at the State level work part time in the local school districts to bring together school lunch and education personnel to develop a positive program of nutrition education for the students on the same basis as outlined in my bill.

This proposed legislation would cost in the neighborhood of $30 million, and it represents an important forward step in addressing an urgent national need.

Mr. President, I ask unanimous consent that the text of the bill be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 720

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "National Child Nutrition Information and Education Act of 1977".

FINDINGS AND PURPOSE

SEC. 2. (a) The Congress finds that:

(1) The proper nutrition of the Nation's children is a matter of highest priority.

(2) The lack of understanding of the principles of good nutrition and its relationship to health can lead to the child's rejection of certain highly nutritious foods and consequent plate waste in school food service operations.

(3) Many teachers and school food service operators have not had adequate training in the fundamentals of nutrition.

(4) There is a need for a closer relationship and coordination between information on the principles of good nutrition supplied to children in the classroom and the application of these principles in the school cafeteria.

(b) It is the purpose of this Act to encourage the dissemination of sound nutrition information to children participating or eligible to participate in the school lunch and related child nutrition programs by establishing a system of grants of State educational agencies for the training of food service and educational personnel in the principles of good nutrition and development of comprehensive nutrition education programs. Such comprehensive nutrition education programs shall fully utilize as a learning laboratory the existing school lunch and child nutrition programs.

NUTRITION INFORMATION AND TRAINING

SEC. 3. The Secretary of Agriculture (hereinafter referred to as the "Secretary") is authorized to formulate and carry out a program, through a system of grants to State educational agencies, to provide for (1) the nutritional training of food service and educational personnel; and (2) the conduct of nutrition education activities in schools and child care institutions eligible under the School Lunch and Child Nutrition Acts. Such a program is to be coordinated at the national level with other nutrition activities conducted by education and health agencies. In formulating such a program, the Secretary shall solicit the advice and recommendations of the National Advisory Council on Child Nutrition, State and educational agencies, and other interested groups and individuals concerned with improvement of child nutrition.

APPROPRIATIONS AUTHORIZED

SEC. 4. (a) For the fiscal year 1978 and subsequent fiscal years, grants to the States for the conduct of the nutrition education and information program shall be based on a rate of 50 cents for each child enrolled in schools or children in situations within the State: *Provided, however,* That no State shall receive an amount less than $75,000 per annum. Enrollment data so used will be the latest available as certified by the Office of Education of the Department of Health, Education, and Welfare.

(b) There are hereby authorized to be appropriated such sums as may be necessary to carry out the purposes of this Act.

(c) In addition to the moneys otherwise available under this Act, in the case of States which do not administer the school lunch and child nutrition programs in eligible private schools and child care institutions, the Secretary is authorized to withhold funds from such States for the purpose of carrying out the program authorized under this Act. Such withholding shall be based on the number of children attending private schools and child care institutions in such State.

AGREEMENTS WITH STATE AGENCIES

SEC. 5. The Secretary is authorized to enter into agreements, incorporating the express provisions of this Act, with State educational agencies and develop and issue such regulations as are necessary to implement the programs authorized under this Act.

USE OF FUNDS

SEC. 6. (a) The funds made available under section 4 of this Act may be used by State educational agencies for (1) the planning, development, and conduct of nutrition education programs and workshops for food service and educational personnel; (2) coordinating and promoting nutrition information activities in local school districts using as a learning laboratory existing child nutrition programs, including, but not limited to, the national school lunch program; (3) contracting with public and private educational institutions for the conduct of nutrition education programs relating to the purposes of this Act; and (4) related purposes including the preparation and distribution of visual aids and other informational materials.

(b) Such funds may be used by State educational agencies for the employment of nutrition information specialists, and personnel of similar qualifications, including travel and related personnel costs, to carry out the functions of subsection (a) of this section.

(c) An amount not to exceed 15 per centum of each State's grant may be used for overall administrative and supervisory purposes in connection with the program authorized under this Act.

ACCOUNTS, RECORDS, AND REPORTS

SEC. 7. (a) State educational agencies, participating in programs under this Act, shall keep such accounts and records as may be necessary to enable the Secretary to determine whether there has been compliance under this Act and the regulations thereunder. Such accounts and records shall at all times be available for inspection and audit by representatives of the Secretary and shall be preserved for such period of time, not in excess of three years, as the Secretary determines to be necessary.

(b) State educational agencies shall provide periodic reports on expenditures of Federal funds, program participation, program costs, and so forth, in such form as the Secretary may prescribe.

FOOD AND NUTRITION INFORMATION AND EDUCATION RESOURCES CENTER

SEC. 8. (a) There is hereby established within the National Agricultural Library of the United States Department of Agriculture a Food and Nutrition Information and Education Resources Center. Such Center shall be responsible for—

(1) assembling and collecting food and nutrition education materials, including the results of nutrition research, training methods and procedures, and other materials related to the purposes of this Act; and

(2) maintaining such information and materials in a library and providing for this dissemination on a regular basis to State educational agencies and other interested persons.

(b) Not to exceed $1,500,000 from the funds appropriated to carry out this Act shall be used for the purposes of this section.

MISCELLANEOUS PROVISIONS AND DEFINITIONS

SEC. 9. (a) In carrying out the provisions of this Act, neither the Secretary nor a State shall impose any requirement with respect to teaching personnel, curriculum, instruction, methods of instruction, and materials of instruction in any school.

(b) For purposes of this Act, any term defined in the National School Lunch Act shall have the same meaning when used in this Act.

Mr. WILLIAMS. Mr. President, I am pleased to join in cosponsoring the National Child Nutrition Information Act of 1977, introduced today by the distinguished Senator from Minnesota (Mr. HUMPHREY).

We are a nation that generally considers itself well fed. We certainly grow an abundance of food each year—far more than we can possibly consume ourselves. The average American family in fact throws away more food in one day than many families overseas eat in several days. In addition, our nutritional assistance programs, such as the school lunch program, have done a fine job of making food available to the less fortunate of our society who would otherwise go hungry.

Yet, as scientific and medical experts continually remind us, there is a vast

difference between being well fed and being well nourished. Paradoxically, our people are fortunate to have a wide range of food choices, but too often they choose their food without proper regard for its nutritional value. As a result, a great many diets have become overweighted with foods that offer little more than high calorie content.

The Senate Nutrition Committee recently issued a report entitled "Dietary Goals for the United States," which discusses dietary patterns and their implications. Contained in the report are a number of alarming statistics concerning the makeup of the American diet. Quoting from studies and from testimony before the committee, the report noted for example, that—

Sixty percent of our total calorie intake comes from just two dietary components—fats and sugar.

In the last 70 years, the consumption of refined sugar has climbed 32 percent to over 100 pounds for each man, woman, and child in the United States.

The average American daily ingests double the amount of cholesterol generally recommended by Government agencies and scientific organizations here and abroad.

Such eating patterns have tremendous implications for the health and well-being of our people and our society. In testimony before the Senate Nutrition Committee in the summer of 1976, Dr. D. Mark Hegsted of the Harvard School of Public Health noted that—

> There is a great deal of evidence, and it continues to accumulate, which strongly implicates, and in some instances proves, that the major causes of death and disability in the United States are related to the diet we eat.

He went on to mention such diseases and health problems as heart disease, forms of cancer, hypertension, and diabetes as diet related. Dr. Abraham E. Nizel, professor of Oral Health Services at Tufts University, stated in 1973 that tooth decay "is the most prevalent nutritional disease in the United States today," and it "develops so rapidly that if all the 100,000 dentists in the United States restored decayed teeth day and night, 365 days a year, as many new cavities would have formed at the end of the year as were just restored during the previous year." A poor diet can have special impact on our children, retarding their mental and physical growth, impairing their ability to learn, and reducing their chances of becoming healthy, productive adults.

The economic costs of improper nutrition are also enormous—both in terms of the huge amounts of money spent each year to treat diet-related diseases and health conditions and in terms of the vast productive potential that goes to waste as people fall victim to these diseases and conditions. Of course, we can place no price tag on the amount of human suffering that can result from poor nutrition.

Underlying our crisis in nutritional sufficiency is a crisis in nutritional awareness. Part of the problem may lie in the kind of information to which we are exposed. The largest source of dietary information is the food industry which spent $1.15 billion in 1975 on food advertising. Serious questions have been raised about the educational value of much of this advertising. For example, a study of food advertising on television in the Chicago area, conducted over a 4-week period in 1975, found that of the air time devoted to food advertising, 70 percent of the weekday time and 85 percent of the weekend time, involved the promotion of food that was high-calorie, sugar-laden, and fat-saturated. By contrast, no time at all was devoted to the advertising of fresh vegetables. Of course, the extent to which food advertising is a reflection rather than a cause of people's food tastes and preferences is open to question. As a Washington Post editorial on the subject stated:

> Sweets, junk food, snacks, and fast foods and other low nutrition items are not forcefed to people but presumably are chosen freely.

But whether the cause of our abysmal lack of nutritional awareness is too much of the wrong information, too little of the right information, or a combination of both, it is clear that additional, concerted efforts must be undertaken to bring home to the American people the importance of sound nutrition and a good diet.

Dietary patterns begin to develop early in life, and the logical place to impart a true awareness of the essentials of proper nutrition is in our schools at an early age, and, wherever possible, within the framework of existing child nutrition programs. This concept of early, effective nutrition education as an integral part of a child's total learning experience is one of the central themes of the National Child Nutrition Information Act of 1977.

Recognizing that our existing nutrition education efforts should be enhanced and expanded, the legislation would accomplish this purpose through the establishment of a system of grants to State educational agencies. These grants would be used for the development of comprehensive nutrition education programs in schools and other child care institutions and for the training and employment of qualified personnel to implement these programs. The legislation contemplates that such nutrition education programs would utilize the school lunch program and related child nutrition programs as learning laboratories. An important provision of the legislation assures the States wide latitude in fashioning their own nutrition education programs and in determining the teaching methods and instructional materials to be employed, thus allowing States to tailor their efforts to the special needs of their students.

Under the measure, each State would receive 50 cents for each child enrolled in schools or institutions participating or eligible to participate in the school lunch program and other child nutrition programs. For my own State of New Jersey, nutrition education grants from this legislation could total $750,000 or more.

The cost of this legislation would be about $30 million for the first year. This would be a small expenditure compared to the huge benefits that would be reaped in the form of a more nutritionally educated, and healthier society, whose people are better able to contribute to its progress. Mr. President, this legislation represents an investment in our people and their future, and I am happy to give it my enthusiastic support.

By Mr. THURMOND:

S. 724. A bill to provide for the payment of survivor annuities to widows of certain members of the uniformed services who died before the effective date of the survivor benefit plan; to the Committee on Armed Services.

MILITARY SURVIVOR BENEFIT PLAN

Mr. THURMOND. Mr. President, in the last session of Congress, our former distinguished colleague, Senator Hugh Scott, and I introduced a survivor benefit plan—SBP—for military widows whose husbands passed away before the Congress enacted Public Law 92–425—SBP—in September 1972. It was S. 2108, but this measure was never submitted to the Senate by the Senate Armed Services Committee. I received hundreds of pleading letters from these elderly widows from across the country, many of whom are barely surviving in the minimum income category.

Today, I am reintroducing this measure. It is similar to H.R. 719, which was introduced in the House of Representatives by the Honorable BOB WILSON. It will provide a nominal annuity to widows of certain members of the uniformed services who died before the effective date of the SBP. Although the SBP provided a bare increase for minimum income widows, they were not included to receive any percentage of their husband's retired pay, as provided for future widows. The minimum income category for military widows was first established by Public Law 92–425.

The current SBP creates certain inequities for military career men with more than 20 years service who died prior to the date of enactment, except for a supplemental payment to those widows whose outside income is less than $1,400 a year. Those who fall in this category may apply for supplemental payment in an amount which will bring their income for a single person up to $2,100 a year, or $175 a month. This is below the national poverty level.

There are bills in this session of Congress, including S. 623 which I introduced on February 4, 1977, to increase minimum widow's payments up to $2,340 annually from $2,100. This is still below the poverty level which is a gross injustice to widows whose hardships and contributions to our military service are equal and even greater than those who now, or will in the future, benefit by SBP. Widows of noncommissioned officers who served 20 to 30 years and died before September 1972, are the ones who are suffering the most by this injustice.

Mr. President, at this point, I ask

unanimous consent to have printed certain letters and other background material in the RECORD to help clarify the validity and the objective of my measure. This material will help explain the plight of some of these very elderly citizens whose husbands were officers, although the widows of noncommissioned officers in most cases have been hit the hardest by the inflationary spiral.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

FEBRUARY 1, 1977.

Senator STROM THURMOND,
Russell Senate Office Building,
Washington, D.C.

DEAR SENATOR THURMOND: In the ninety-fourth Congress you and Senator Scott very kindly introduced a bill on behalf of the forgotten widows of the Survivor Benefit Plan, namely S. 2108.

The House has scheduled hearings on H.R. 694 on Tuesday, February 8, 1977. This bill reintroduces the amendments left out when the SBP bill was amended last year; namely, the Retired Serviceman's Family Protection Plan cost-of-living raise and the Social Security offset.

It has been suggested to us that if this bill is passed by the House (and they foresee no problem) that when it gets to the Senate, possibly you would suggest combining this S. 2108 with the House bill. In this way the biggest discrepancy of the Survivor Benefit Plan would be overcome. The really needy widows are not covered by either the RFSPP (too expensive) or the Social Security offset (they are too old to work).

I am enclosing two memorandums which I hope you will read and consider; and please call me if I can be of help in securing passage of such legislation to correct these inequities of the Survivor Benefit Plan.

We widows really appreciate all of your help and consideration.

Respectfully,

JEAN ARTHURS.

MEMORANDUM—I

H.R. 719 (formerly H.R. 1166) has been introduced by Rep. Bob Wilson and provides that the widow of an individual who died on or before September 21, 1972 and who would be entitled to retired or retainer pay when he died, would be entitled to 55 per cent of the late husband's retired pay, based on the pay rates in effect at the time the Survivor Benefit Plan was enacted, September 1972.

In its April 1976 report, the Defense Manpower Commission stated: "As a matter of priority, the proposed Federal Commission Board should investigate and recommend remedial legislation for widows of servicemen who receive little or no benefits. The Nation has acknowledged a debt to these widows through enactment of the Survivor Benefit Plan legislation. It is considered unseemly that the lamentable plight of these fine people should continue to be ignored."

The Survivor Benefit plan provides that the widow of a serviceman who died on active duty, but was eligible for retirement at the time of death, is entitled to benefits under the Survivor Benefit Plan despite the fact that the active duty serviceman had taken no reductions in pay to provide such coverage, as this action is usually taken at time of retirement. This provision takes care of the current widows, but it is discriminatory against the widow who lost her husband before September 21, 1972. No war started on that date—'died on active duty' certainly did not start on that date—but there are many widows, mainly in the older age bracket, who are destitute today because of this discrimination. What is fair for post-21 September 72 widows is fair for pre-21 September 72 widows.

The Defense Department has estimated that there are 24,500 pre-Survivor Benefit Plan widows, and this would be a diminishing number as actuary figures show that most of these widows are in the older age bracket, and the trauma of their lonely life-style tends to shorten their lifespan.

The Survivor Benefit Plan is designed to have a surplus of $1 billion by 1982 and $2 billion by the year 2000. An indication of the sufficiency of the surplus can be found in the fact that Congress has authorized borrowing substantial amounts from it for use in other areas.

If the Survivor Benefit plan is augmented with this H.R. 719 bill, it would correct the inadequacies in many areas now requiring the constant attention of Congress, and would stop the "nickel and diming."

Precedent is not a factor here when you consider the Social Security, the Civil Service Plans, the Vietnamese Integration, the old Contingency Option Act, the DIC program, and many other current programs.

MEMORANDUM—II

A quote from the Washington Post on January 23rd, 1977:

"The war was over long ago and mainly forgotten when the new president issued his pardon proclamation for those who refused to serve in it. It is this loss of memory which seems to rankle the veterans from Vietnam, not the pardon, not the old arguments of whether the war was right or wrong. What aggravates the old scars is this strange notion that they are the only souls around in this great nation with anything left of the war inside them."

"The purpose of their words is not to reopen the old political arguments, the old wounds, but to make a simpler statement: it is a terrible thing, even obscene, that other Americans should forget so easily when something more needs to be done, the problem is nobody has yet figured out how to say to all these veterans the healing words they need to hear."

Certain scars from the war probably lie beyond the healing power of a presidential proclamation, but one that does bear full and fair consideration is the Defense Manpower Commission Report of April 1976 in which it stated: "As a matter of priority, the proposed Federal Commission Board should investigate and recommend remedial legislation for widows of servicemen who receive little or no benefits. The Nation has acknowledged a debt to these widows through enactment of the Survivor Benefit Plan legislation. It is considered unseemly that the lamentable plight of these fine people should continue to be ignored."

It is unseemly that the Survivor Benefit Plan which covers widows of career servicemen who died on active duty is not a completed bill. It covers only these widows who lost their husbands on or after 21 September 1972. How about the widows whose husbands made the supreme sacrifice before that date? The widows of the Thresher, the widows of the lost astronauts, the widows whose husbands served in two and three wars and are destitute today. The Vietnam War did not start on September 21, 1972.

The Defense Department has estimated that there are 24,500 Pre-Survivor Benefit Plan widows; and this is a diminishing number as actuary figures show that most of these widows are in the older age bracket, and the trauma of their lonely life-style tends to shorten their life span.

Survivor Benefit Plan is designed to have a surplus of $1 billion by 1982 and $2 billion by the year 2000. An indication of the sufficiency of the surplus can be found in the fact that Congress has authorized borrowing substantial amounts for use in other areas.

A PLEA FOR AGED RETIREE MILITARY WIDOWS WHOSE HUSBANDS SERVED THROUGH BOTH WORLD WARS

1. Whereas we have never received a pension for the services of our husbands if we have a private income of even poverty levels;

2. Whereas there was neither Social Security nor a Family Protection Plan when they served, private provision for which we are now penalized was the only means of economic protection for their widows;

3. Whereas those provisions, life insurance for the most part, were based upon the economy of the twenties and are no longer adequate in our present economy;

4. Whereas we were forced to lower our standard of living after the death of our husbands we are unable to lower it further;

5. Whereas there is no "Means Test" in Civil Service Survivor benefits;

6. Whereas we are in our seventies and eighties and unable to increase our diminishing private incomes to meet our increasing needs and the demands of the present economy;

7. Whereas ours is a long ignored earned right;

8. Whereas an imputed deduction for retirement was contributed by our husbands for many years in both active and retired status according to the positive statement of Congressman Pike, Chairman of the Subcommittee on Survivor Benefits as made in the inquiry into Survivor Benefits Hearings in the 91st Congress, and estimated in the House computation charts in the Uniformed Services Pay Act of 1965;

9. Whereas Social Security sends a check each month to all pensionless citizens over 72 years of age with no "Means Test" requirement;

10. Whereas length of service and rank are the factors in active retired and survivor benefits computation for government employees we are denied that and treated as a conglomerate in PL 92-425 in violation of our constitutional rights;

11. Whereas discrimination against the aged is inhumane and unworthy of our government;

12. Whereas I am eighty-five years of age, my husband served thirty years in the Army beginning on the Mexican Border in 1916, I have never received a pension for his service, I and others in a similar category have a just claim for correction of this inequity, and earnestly request your attention to its correction by prompt and fair means.

LOUISE PADGETT.

THE CASE OF THE WIDOW OF REAR ADMIRAL CLIFTON

Rear Admiral Joe Clifton was 59 years old at his death, Christmas Eve 1967. He had given his entire adult life to the Navy—33 active years in the Navy Air and 4 years at the Naval Academy. His was Class of 1930. Since 1955, he had been urged to retire and join Litton Industries by one Joe Thomas of Lehman Brothers, New York City and Tex Thornton, Litton. They needed him in their defense division of Litton to open doors in the Pentagon. He was promised much that did not materialize. When he finally retired from the Navy June 30, 1963, he was with Litton only 4 years before his death, not long enough for a pension.

His retirement salary when the Survivors Benefit Program was enacted September 21, 1972 would have been $2,050 a month. The SBP Bill was not made retroactive and Joe was not alive to sign up for it in 1972. As his widow, I only receive $467 from the Veteran's Administration monthly and $138.80 from his social security making $605.80 monthly.

The SBP calls for 55% of the retired pay. Therefore, the annuity of $521.70 would make up the 55% of $1,127.50 to which I should be entitled. I do not receive this annuity.

In October 1954, he had taken out the Contingency Option Plan, later renamed the Retired Serviceman's Family Protection Plan. However, he had to drop it in October 1959 because it was too expensive. Only 15% of the military took it out because of this. Following is an excerpt from a letter from Lieutenant Howard E. Holcomb:

"It should be noted that the Retired Serviceman's Survivor Protection Plan was frequently not explained at all or not adequately explained to personnel who retired in the early '60's. One of my responsibilities as a Senior Petty Officer during these years was to inform and counsel personnel on the positive and negative aspects of RSSPP. I had enough first hand experience to know that many men who were retiring or contemplating retirement did not understand the plan adequately. A requirement existed wherein these individuals had to apply for the "benefits" a minimum of 2 years before their actual retirement date."

To this day much of the military are not kept properly informed as to their rights and benefits. Please note, because only 30.7% of all the services elected participation in the Survivors Benefit Program, Congress extended the date to March 20, 1974 for Pre 21, September 1972 retirees to sign for it.

As a military widow, I severely suffer from the increased cost of living and the decreased availability of health care by Navy doctors at a Navy Hospital or dispensary. I must drive 117 miles round trip to Port Hueneme to the doctors and commissary. I can only see a doctor once every three months! Yet, the services are deluged with civilian doctors at this point who want to become part of the service because of the malpractice problem they are having in civilian life. Medical prescriptions are nearly impossible to obtain. One must return the next day if they are out of stock of the prescription. They will not mail any medicines even at one's own expense. Of course, the law does not permit narcotics or antihistamines to be mailed. The above is very time consuming and costly to me because my car is a 1967 year and must use premium gas! In 1974, because of this very poor service, I spent, out of pocket, over $800 for civilian doctors and medicines. So far this year, 1975, it will be even larger because of a prolonged illness.

Neither the commissaries at this time nor the medical care can possibly be termed fringe benefits under these circumstances.

EXCERPTS

Excerpts from a letter from Mrs. Teresa Alexander, the Founder and first President of the Society of Military widows—a growing, countrywide society for all military widows—to Mrs. Joe Clifton:

"To recapitulate the current status of our Bills in the 93rd Congress which seek to correct what we term gross inequities because the laws administered by the Veterans Administration for widows of military careermen and widows of military men who died in the performance of their assigned duty are discriminatory and, in fact, contrary to the equal justice provision of the 14th Amendment in the U.S. Constitution. In the case of military survivors, the discrimination is based on the husbands' choice of profession. This is just as wrong as discrimination based on race, creed, or national origin!

We maintain that military personnel are paid and administered by the same U.S. Government that pays and administers federal civil service personnel. Further, that military personnel are—in every sense of the word—federal employees and, for this reason, the laws that Congress enacts for federal civil service personnel should serve as criteria for laws that Congress enacts for federal military personnel. This has not been the case and the cover-up has been that military personnel receive more fringe benefits than federal civil service personnel! However, the reverse is true because:

1. Based on prerequisites and responsibilities, military pay is much lower than pay in federal civil service.

2. Civil service personnel have a funded and vested retirement system. Military personnel have an "imputed" retirement program that is unfunded.

3. Civil service personnel have tenure rights until age 70 and are never caused to retire due to age in grade. Retirement is optional until they reach mandatory retirement age. In military service career members are retired for age-in-grade when they are in their mid-40's!

4. In the civil service retirement system vesting begins at 5 years of satisfactory service. In military service vesting begins at 20 years of satisfactory service. Civil Service personnel can withdraw their retirement contributions (7 percent of pay) if they leave federal service before they are eligible for retirement. Military personnel have no withdrawal rights because their 7 percent of salary retirement contributions are "imputed" from any appropriations to meet retirement obligations!

5. Survivor annuity benefits have been available to career civil service personnel since 1948. For military personnel Survivor annuity benefits were not available until 1953 and the cost was three times higher than the cost of the Survivor Protection Program under the civil service retirement system. In view of this high cost, only 15 percent of the military retirees could afford the coverage under the Contingency Option Act, later renamed Retired Serviceman's Family Protection Plan. Under the new military Survivor Benefit Plan, enacted in September 1972, the cost of the premiums is based on the same formula as the formula in the civil service retirement system, but due to early age-in-grade retirements in military service premiums are paid over a greater length of time and survivor benefits are computed on lesser years of service.

Because the new Survivor Benefit Plan makes no provision for the widows of military careermen who died before it became law, except for a supplemental payment to those widows whose outside income is LESS than $1,400 a year, widows in this group may apply for the supplemental payment in an amount to bring their income up to the national poverty level for a single person, namely, $2,100 a year ($176 a month) we have asked Rep. Bob Wilson to introduce H.R. 8610, H.R. 14146, and H.R. 15271 to provide equal survivor benefits for widows of careermen who died before the enactment of the new Survivor Benefit Plan.

The enactment of these bills is necessary because the laws Congress passed for military personnel are inequitable with those it passed for civil service personnel. The premium for survivor protection under the military program was so high that the average retiree could not afford to participate on the one hand; and on the other hand the VA pension for widows is so low that the widow must seek gainful employment to maintain her accustomed living standard. Due to the maximum income limitation of $2,600 for a widow alone and $3,800 for a widow with dependents the pension the law allows based on income is lost whenever the widow earns $50 a week or more if she does not have children, or $74 a week if she has children. Therefore, after 20 to 40 years of service in the armed forces, survivor benefits do not exist on a collectable basis. What one law provides, another takes away!

The 93rd Congress passed an amendment to the Federal Employees Compensation Act which provides 50 percent of the husband's full salary to the widow, and up to 75 percent of full salary if she has two or more children, this if the death of the husband resulted from the performance of assigned duties. Military personnel are excluded from this Act and survivor benefits under the VA's service-connected death program (regardless of cause) are much less than the compensation under FECA. Under FECA the survivor benefits range from a minimum of $249 a month to a maximum of $1,800 a month. Under Dependency and Indemnity Compensation the military survivor benefits range from a minimum of $215 a month to a maximum of $549 a month. Social Security survivor payments do not make up the difference.

The existing discriminations between military and civil service careers in every respect from salary, tenure, retirement, and survivor benefits, are an infringement to the military family's equal rights guaranteed under the 14th Amendment to our Constitution. As a result there are thousands of widows of military careermen who fought in two or three wars that are not now and never have received a dime under the inequitable and unjust laws administered by the Veterans' Administration. On the one hand, premiums under the old Retired Servicemen's Family Protection Plan were too high to be affordable; on the other hand, the VA pension and monetary restrictions are so low that most of the careermen's widows can not qualify. Whether a serviceman served 90 days during a war, or 35 years in two or three wars, the same pension eligibility law and pension formula applies if death occurred after retirement of a non-service connected cause. Military retirees who died after the new Survivor Benefit Plan became law were given a second chance to sign up for family protection at rates they could afford. By contrast, widows whose husbands died before SBP was law are unjustly penalized due to discriminatory laws for members of the armed forces.

In your particular case, the difference between your DIC for a death occurring before September 1972 and the benefits for a widow of a military retiree in Pay Grade 0–8 with 33 years of active service, *but* whose death occurred since September 1972 and had he had an opportunity to sign up for survivor protection under the new SBP program is as follows:

Pay Grade 0–8 retirement pay in 1972—$2,050.00 a month.

SBP Widow's Annuity (55% of retired Pay)—$1,127.50 a month.

From this $1,127.50 a month which the widow receives is deducted the $467 DIC and the social security survivor payments based on the husband's military service. If the widow's Social Security survivor payments are $138.80 a month, this makes the total for DIC and social security $605.80 a month. Therefore, the widow's income would be:

DIC from the Veterans Administration	$467.00
Social Security Survivor Payments	138.80
SBP Widow's Annuity after DIC & SS Offset	521.70
Widow's total monthly income under SBP	1,127.50

From the above you will note that the 55 percent of retired pay is maintained for the widow—if the husband subscribed for survivor protection at the full amount available under the SBP program—but it will come from three sources.

For widows like yourself—the $521.70 a

month Survivor Benefit Program payment represents the inequity because the new survivor law was *not retroactive* to include those widows whose husbands died *before* the new law was enacted, and whose husbands could not afford the premium charged under the old Retired Serviceman's Family Protection Plan program.

Many widows whose husbands were Flag Rank with 33 years of active service are not receiving DIC because the VA rules their husband's death was not service connected. If they are eligible for $150 a month social security survivor payments, the VA counts $135 of it (90%) as included income. If in addition to SS the widow has an income of $100 a month from savings or investments, making her total income $250 a month, she cannot receive a VA pension because her total annual income is more than $2,600 a year . . . the minimum allowed for a widow without dependents. After 33 years of active military service—in two or three wars—who can say that a careerman's death was NOT service connected since he had to be in top health to be acceptable and to remain in the service? This 'test' may be all right for a man that put in 90 days or even five years, and then died at age 65 when most of his life was *outside* military service. The 'test' is *not* all right for a man who spent most of his life in military service. As in the case of your husband, Rear Admiral Clifton, Naval Air, who died at age 59 and gave 33 adult years of active service and 4 Naval Academy years totaling 37 years of his entire adult life. After contributing 7 percent of his pay to an unfunded "imputed" retirement system, it would appear to me that this widow should be entitled to a little better than nothing—which is exactly what most of them are getting, *nothing*!"

Mr. THURMOND. Mr. President, my bill will help correct inequities and injustices for about 24,500 proud and elderly widows who made many sacrifices for our country. Although costs for this measure, which I am introducing today are not available, it is not expected to be excessive. It should be pointed out that most of these 24,500 widows are elderly; consequently the costs will decline, rather than increase, in future years. It is my hope that my colleagues will act favorably and quickly on this vital measure.

Mr. President, I ask unanimous consent that this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 724

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) notwithstanding any other provision of law, any individual who on or before September 21, 1972, was a widow of a person who (1) was entitled at the time of his death to retired or retainer pay because of service in the uniformed services, and (2) had served on active duty in the uniformed services for a period of not less than twenty years, shall be paid an annuity by the Secretary concerned in the amount prescribed in subsection (b) unless such widow is eligible to receive an annuity under subchapter II of chapter 73 of title 10, United States Code.

(b) The amount of the annuity paid to any widow under this Act shall be an amount equal to 55 per centum of the amount of the retired or retainer pay to which her spouse would have been entitled to receive on September 20, 1972, had he lived to that date, reduced by any amount such widow is entitled to receive as an annuity under subchapter I of chapter 73 of title 10, United States Code, death compensation under subchapter III of chapter 11 of title 38, United States Code (or under any prior corresponding provision of law), dependency and indemnity compensation under section 411(a) of such title 38, or pension under subchapter III of chapter 15 of such title 38 or under section 9(b) of the Veterans' Pension Act of 1959.

(c) In no case shall the total amount of benefits payable to any widow as a result of the enactment of this Act be less than the total amount of benefits which would have been payable to such widow had this Act not been enacted.

(d) As used in this Act the term "uniformed services" has the same meaning ascribed to it in section 1072(1) of title 10, United States Code.

(e) No benefits shall be paid to any person for any period prior to the effective date of this Act.

(f) This Act shall become effective on the first day of the second calendar month following the month in which it is enacted.

By Mr. RANDOLPH (for himself, Mr. WILLIAMS, Mr. STAFFORD, Mr. JAVITS, Mr. KENNEDY, Mr. PELL, Mr. SCHWEIKER, Mr. MAGNUSON, Mr. HUMPHREY, and Mr. DURKIN):

S. 725. A bill to extend certain programs under the Education of the Handicapped Act; to the Committee on Human Resources.

EXTENSION OF THE EDUCATION OF THE HANDICAPPED ACT

Mr. RANDOLPH. Mr. President, I am today introducing a bill to extend the Education of the Handicapped Act, Public Law 91–230. Since 1970 this act has had positive impact on the lives of our Nation's handicapped children as well as proving to be economically beneficial, not only to those handicapped children who are, because of improved educational practices, able to contribute to their own and our Nation's fiscal well-being in their adulthood, but also to our society, which is just beginning to reap the fruits of a heretofore largely neglected talent pool.

This bill, which I, Mr. WILLIAMS, Mr. STAFFORD, Mr. JAVITS, Mr. KENNEDY, Mr. PELL, Mr. SCHWEIKER, Mr. MAGNUSON, Mr. DURKIN, and Mr. HUMPHREY introduce today, is basically an extension of the existing act, exclusive of part B—the State grant program, through 1982. As you know, part B of the Education of the Handicapped Act was extended and amended first by Public Law 93–380 and then by the Education for All Handicapped Children Act of 1975, Public Law 94–142. The bill does not affect those changes made to the Education of the Handicapped Act by Public Law 94–142 or Public Law 93–380.

Rather, this extension continues the discretionary Federal legislation aimed at assisting the States in carrying out their responsibilities to provide a free appropriate public education to all handicapped children. In addition, it also continues the Bureau of Education for the Handicapped, the administrative unit in the Office of Education responsible through the Commissioner for implementing mandated programs for handicapped children and for providing national leadership in this critical area.

This extension will provide the resources needed to build the necessary capacity to serve this Nation's 8 million handicapped children. The Federal support provided under the authority of parts C, D, E, and F of the Education of the Handicapped Act impacts positively on handicapped children, particularly deaf-blind children, very young handicapped children, and severely handicapped children. The supportive services provided by the regional resource centers, the development of new and innovative educational techniques and devices, the growth of manpower potential, and the unique benefits of the regional vocation, adult, and postsecondary programs, are vitally important as we work together to meet our commitment to provide a free appropriate public education to all handicapped children.

As mandated by Public Law 94–142, all handicapped children must have available by September 1, 1980, a free appropriate public education. The discretionary programs and resources provided by this extension will assist our Nation to meet its commitment to handicapped children.

These programs of Federal assistance for the education of handicapped children have served our Nation well.

The States estimate that there are 8 million handicapped children, 1 million of whom are of preschool age, who are so severely handicapped as to require special education programs. Our major Federal legislative effort has been to assist the States in providing such programs to enable them to provide each handicapped child with his rightful opportunity to a free appropriate public education. We have done much; yet much more remains to be done.

Reports from State education agencies indicate that special education programing is growing. In the past 10 years, the number of children in educational programs has grown from 2.1 million to over 4.3 million. Despite this positive growth, educational services are still reaching only a little more than half of the estimated 8 million handicapped children.

Without the availability of Federal support, the most cruelly handicapped, the 5,000 deaf-blind children born in our Nation as a result of the 1964–65 rubella epidemic would have had little hope of receiving the comprehensive educational and related services they require. However, with the coordinated use of Federal, State, local, and private resources, more than 4,200 deaf-blind children will receive the diagnostic, prescriptive, and full-time services they need to equip themselves to live productive and independent lives. The goal of serving all of these most severely handicapped children is drawing within reach.

Federal legislation has resulted in the development of many model programs to educate young handicapped children. Since 1968, when the Handicapped Children's Early Education Act, part C, was created, more than 250 models serving thousands of handicapped children and their parents have been established. The wisdom of the law in requiring that these early education projects function to

stimulate States to use their own resources is clearly evident in the growth of the number of these projects over the last few years. Over the last 4 years, the number of these projects has more than tripled. The strategy behind this law has been to build the capacity of State, local, and private nonprofit educational organizations to establish and expand programs that use the best of tested special education practices. It was only several years ago that a mere 15 States had legislation for preschool handicapped children's education.

During the past 5 years, there has been a significant increase in the number of States making available early education programs for these children. At present, 48 States have legal authority to provide educational programs to children 5 years old or younger. Perhaps the true success of this early education program can be measured best by assessing the impact that services to these young handicapped children can have on their educational development. Since these model projects emphasize the placement of the handicapped child in the least restrictive environment as well as utilizing the best of educational practices, thousands of handicapped children have been able to enter regular classrooms and have successful educational experiences.

Another program that continues to demonstrate effective educational and training programs and the long-term benefits of providing services is that for severely handicapped children, now designated as a priority population under Public Law 94–142. States and local governments will be able to meet their mandate under Public Law 94–142 by replicating and adapting practices developed through this program.

Activities under the regional resources center program include development of child appraisal and exemplary education programing practices to meet special educational needs of handicapped children. Another vitally important program is that concerning the development of new curricular materials and technological advancements such as the Kurzwell reading machine for blind persons. Under the media services and captioned films program, specialized educational media and materials are developed to be used by handicapped children. Also, deaf and hearing impaired students will be able to benefit educationally from captioned films and other communication and technological developments.

Perhaps one of the most important programs authorized by the Education of the Handicapped Act is that concerned with training personnel for the education of the handicapped. Sufficient manpower is absolutely essential if the Nation is to meet the mandate of providing a free appropriate public education to all handicapped children aged 3 to 21 by September 1, 1980. There are now about 400 colleges and universities offering the necessary training; more than 300 of them are receiving Federal support. There are an estimated 300,000 special education teachers employed at this time. It is estimated that double that number of special and regular educators, plus an expanded supply of administrators, speech correctionists, paraprofessionals and other special services personnel, such as specialists in physical education and music therapy, will be needed if the Nation is to honor its commitment to 8 million handicapped children by 1980.

The regional vocational and adult programs offer special postsecondary support services for handicapped persons so that they may adapt to and benefit from existing vocational, adult, career and academic programs.

These programs enable our schools across the Nation to fulfill their responsibility to educate handicapped children—to equip these children to live as productive and independent lives as possible. While special education programs may cost more than education programs for nonhandicapped children, the cost to society for failing to provide appropriate educational services is greater. Loss of human potential is always a debit mark; the higher cost of dependency oriented care is yet another debit.

As I have said before, this bill essentially extends existing programs authorized by the Education of the Handicapped Act through fiscal year 1982. Section 604 of part A, however, is not included in this extension.

Section 604 concerns the National Advisory Committee on Handicapped Children. At the time the National Advisory Committee was established, the Bureau of Education for the Handicapped was a new administrative unit, and the Congress felt that the Bureau needed the expertise of a National Advisory Council. However, the Bureau of Education for the Handicapped is now in its 10th year, and we have had reassurance from the administration that the compelling need for an Advisory Committee no longer exists. It is also clear that the funds for the National Advisory Committee could be more effectively used in providing education services to handicapped children or the purchase of consultant services when needed. I am pleased that this is in keeping with President Carter's recommendation to the new Cabinet members that those advisory committees which have served their purpose should be eliminated.

A review of the history of this legislation will confirm that part G, Special Programs for Children with Specific Learning Disabilities, was originally intended to terminate after 3 years from its date of enactment—April 13, 1970. At the time of its enactment, part G was viewed as a vehicle for generating funding to meet an immediate need for services to children with specific learning disabilities. Then the definition of handicapped children did not include children with specific learning disabilities. However, on November 29, 1975 the Education for All Handicapped Children Act, Public Law 94–142, was enacted and does include as part of the definition of handicapped children "children with specific learning disabilities." Children with specific learning disabilities may therefore be served under the State grant program, part B, of the Education of the Handicapped Act. When the Education of the Handicapped Act was extended in 1974, part G was included in the extension since, at that time, specific learning disabled children were not included in the definition of handicapped children. Now these handicapped children are so included, and the need for a separate authority to meet their needs no longer exists.

As chairman of the Subcommittee on the Handicapped, I am committed to the needs of our handicapped children. The dollars that are spent providing educational services to these children are indeed a wise investment. They convert dependence to independence and futility to productivity.

I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 725

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Education of the Handicapped Amendments of 1977".

CENTERS AND SERVICES

SEC. 2. Section 627 of the Education of the Handicapped Act is amended to read as follows:

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 627. There are authorized to be appropriated to carry out the provisions of section 621, $19,000,000 for the fiscal year 1977 and for each of the two succeeding fiscal years, $21,000,000 for fiscal year 1980, $24,000,000 for fiscal year 1981, and $25,000,000 for fiscal year 1982. There are authorized to be appropriated to carry out the provisions of section 622, $20,000,000 for the fiscal year 1977, $22,000,000 for fiscal year 1978, $24,000,000 for fiscal year 1979, $26,000,000 for fiscal year 1980, $29,000,000 for fiscal year 1981, and $32,000,000 for fiscal year 1982. There are authorized to be appropriated to carry out the provisions of section 623, $38,000,000 for the fiscal year 1977, $25,000,000 for fiscal year 1978, and for each of the two succeeding fiscal years, $20,000,000 for fiscal year 1981 and for the succeeding fiscal year. There are authorized to be appropriated to carry out the provisions of section 625, $8,000,000 for the fiscal year 1977, $10,000,000 for the fiscal year 1978, $12,000,000 for the fiscal year 1979, $14,000,000 for the fiscal year 1980, and $16,000,000 for the fiscal year 1981 and for the succeeding fiscal year.".

PERSONNEL TRAINING

SEC. 3. Section 636 of the Education of the Handicapped Act is amended to read as follows:

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 636. There are authorized to be appropriated for carrying out the provisions of this part (other than section 633) $54,000,000 for the fiscal year 1977, $75,000,000 for the fiscal year 1978, $80,000,000 for the fiscal year 1979, $85,000,000 for the fiscal year 1980, $90,000,000 for the fiscal year 1981, and $95,000,000 for the fiscal year 1982. There are authorized to be appropriated to carry out the provisions of section 633, $1,000,000 for the fiscal year 1977, $2,000,000 for the fiscal year 1978 and the succeeding fiscal year, and $2,500,000 for the fiscal year 1980 and each of the two succeeding fiscal years.".

RESEARCH

SEC. 4. Section 644 of the Education of the Handicapped Act is amended to read as follows:

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 644. For the purposes of carrying out this part, there are authorized to be appropriated $20,000,000 for the fiscal year 1977 and the succeeding fiscal year, $22,000,000 for the fiscal year 1979, $24,000,000 for the fiscal year 1980, $26,000,000 for the fiscal year 1981, and $28,000,000 for the fiscal year 1982.".

INSTRUCTIONAL MEDIA

SEC. 5. Section 654 of the Education of the Handicapped Act is amended to read as follows:

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 654. For the purpose of carrying out this part there are authorized to be appropriated not to exceed $22,000,000 for the fiscal year 1977, $24,000,000 for the fiscal year 1978, $25,000,000 for the fiscal year 1979, $27,000,000 for the fiscal year 1980, $29,000,000 for the fiscal year 1981 and for each succeeding fiscal year thereafter.".

By Mr. WILLIAMS:

S. 726. A bill to establish a program of Federal assistance to provide relief from energy emergencies and energy crises; to the Committee on Energy and Natural Resources.

ENERGY CRISIS RELIEF ACT

Mr. WILLIAMS. Mr. President, I was very pleased to see the overwhelming support in Congress for the President's emergency measure to alleviate the shortage of natural gas threatening many areas of our Nation. That legislation can be a significant factor in easing the threatened loss of residential heating supplies and close of schools and factories in the seriously affected portions of the Nation. Already, the individual efforts of consumers to conserve have reduced the shortage significantly.

This Nation has been delayed for too long in developing a comprehensive national energy policy. We desperately need more intensive exploration, rapid development of alternative sources of supply, and stringent energy conservation measures. However, regardless of how ambitious our national energy policy is, a perilous situation will still be confronting our Nation for the rest of this winter and for a few more years to come. In the meanwhile, supplementary emergency plans must be in place to relieve the suffering communities throughout the land which can be hit unexpectedly by bitter and paralyzing cold.

President Carter's Emergency Natural Gas Act is critically needed, but it is only a temporary measure designed to meet only the natural gas crisis before us today. We need a more comprehensive emergency authority in place, and we must make additional provision to relieve the heavy financial burdens many citizens will suffer if an energy emergency should recur.

Therefore, I am introducing permanent legislation today designed to meet any energy emergency situation. A feature of my proposal that is of critical importance is a provision for financial relief for those individuals and families who cannot afford essential energy needs. I am hopeful that this provision will receive immediate attention since financial relief may be essential if we face another unseasonably cold spell this winter.

One of the most disturbing facts we have encountered in the midst of energy shortages and price increases is the disproportionate hardship being placed on our poor and elderly citizens. Their limited incomes make it difficult, and sometimes impossible, to absorb rising energy prices. Some simply do not have an adequate margin between income and expenditures to withstand higher fuel, transportation, and electrical costs. Too often they face the choice of heat or eat. As a group the elderly and other low-income persons typically spend about 14 percent of their income for energy. This is nearly 3½ times the percentage of other Americans. In addition, limited income or failing health may impose severe barriers to being able to make necessary repairs or being in a position to purchase needed insulation that would conserve energy.

In times of an energy emergency or energy crisis the burden imposed on the poor and elderly would be even greater than it is currently. This bill would provide emergency loans to assist those needy victims of an energy emergency whose essential energy needs might otherwise not be met.

The "Energy Crisis Relief Act" would provide Federal assistance whenever State or local efforts to relieve energy emergencies have been unsuccessful. After a request by the Governor of a State the President will determine if an energy emergency or energy crisis exists. Once the President determines there is an energy emergency he may direct the use of Federal personnel, equipment, facilities, and resources to support State and local relief efforts. He is also empowered to redirect energy supplies from other areas, allocate supplies among distributors to users, put energy conservation programs into effect, and provide emergency loans to those who cannot afford essential energy supplies.

I strongly believe this legislation is essential if we are to act effectively on potential future disruptions of our energy supplies. While I hope the authority provided by this bill will not have to be used, energy problems like natural disasters can recur, and we should be prepared to deal with them effectively.

The provision for energy emergency loans to the needy is of urgent importance. I urge my colleagues to consider expediting action on at least that portion of this legislation so the mechanism for financial relief will be ready if it is needed.

Mr. President, I ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 726

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. This Act may be cited as the "Energy Crisis Relief Act".

DEFINITIONS

SEC. 2. As used in this Act—

(1) "energy emergency" means a shortage of or a price of energy supplies which the President or his designated representative determines has caused or is likely to cause an inability to meet essential energy needs in any geographic area;

(2) "energy crisis" means an energy emergency determined by the President to be of such severity and duration as to cause or be likely to cause a threat to the public health or safety in any geographic area; and

(3) "energy supply" means any and all sources of energy used for heating, cooling, lighting, transportation, or the generation of electricity.

PROCEDURE

SEC. 3. A request for a determination that an energy emergency or energy crisis exists in any area shall be made by the Governor of the State in which the affected area is located to the President or to the authority designated by the President for the purpose of this Act. Such a request shall be based upon the Governor's finding that the shortage or price of energy materials is of such severity and magnitude that effective response is beyond the capability of the State and local governments affected. Such a request shall contain such information as the President or the appropriate authority prescribes.

FEDERAL ASSISTANCE

SEC. 4. (a) In the interest of providing maximum delivery of Federal assistance under this Act, the President or appropriate authority shall coordinate the activities of all Federal agencies providing energy emergency or disaster assistance. The President may direct any Federal agency with or without reimbursement to utilize Federal personnel, equipment, supplies, facilities, and other resources including managerial and technical services in support of State and local energy crisis or emergency efforts. The President may prescribe such rules and regulations as may be necessary to carry out the provisions of this Act and he may delegate any authority conferred by this Act to such authority as he may deem to be appropriate.

(b)(1)(A) In the case of an energy emergency determined under section 2(1), the President or the appropriate authority may exercise the authority conferred by section 6 with respect to the affected area for such period of time as the President or that agency head determines but not to exceed a period of ninety days.

(B) In the case of an energy crisis determined under section 2(2), the President may exercise or authorize the exercise of the authority conferred by section 7 for such period as the President determines but not to exceed a period of ninety days.

(2) Prior to the expiration of the ninety-day period referred to in paragraph (1), the Governor of the State in which the affected area is located may request the President or the appropriate authority to issue an order continuing the energy emergency or energy crisis for an additional period not to exceed thirty days. Prior to the expiration of any such thirty-day period, the Governor may request the President or the appropriate authority to issue an order continuing the emergency or crisis for an additional period not to exceed thirty days.

COORDINATION

SEC. 5. (a) Upon a determination of an energy emergency or crisis, the President shall appoint a Federal coordinating officer to operate in the affected area. The Federal coordinating officer, in cooperation with State officials, shall make an initial appraisal of the types of relief most urgently needed, establish such field offices as may be necessary, and take such other action authorized under this Act or any other provision of law as may be necessary to assist State and local officials in obtaining the assistance necessary.

(b) Upon the determination of an energy emergency or crisis, the President or the appropriate agency head shall notify the Gov-

ernor of the determination and request the Governor to designate a State coordinating officer to carry out the provisions of this section.

ENERGY EMERGENCY RELIEF

SEC. 6. (a) During any energy emergency determined in accordance with the provisions of this Act, the President or the appropriate agency head is authorized—

(1) by order, to direct the delivery of energy supplies to the affected area;

(2) by order or regulation, to allocate energy supplies among distributors in the affected area and to establish priorities for allocation of energy supplies to categories of users;

(3) to establish an energy conservation program in the affected area;

(4) to make emergency energy loans to individuals, families, and public or nonprofit organizations performing essential public services to assist them in securing the financial resources to acquire a basic level of energy supplies during the period of the energy emergency or crisis, and to cancel not to exceed 80 per centum of the principal amount of any such loan where necessary to avoid extreme hardship; and

(5) to furnish technical assistance and make loans to reestablish disputed sources of energy supplies in the affected area.

Any loan made under the provisions of clause (4) of the preceding sentence shall be repayable within the one-year period beginning on the date of the loan. Any loan made pursuant to clause (5) of the first sentence of this subsection shall be repayable within the three-year period beginning on the date of the loan.

(b) Any loan made under the provisions of subsection (a) shall bear interest at a rate determined by the Secretary of the Treasury taking into consideration the current average yield on outstanding marketable obligations of the United States as of the last day of the month preceding the making of the loan, except that no interest shall accrue or be paid with respect to any part of the principal of such loan which is canceled. For the purpose of making loans under this section, the head of the appropriate agency may issue to the Secretary of the Treasury obligations in an aggregate amount sufficient to carry out the purposes of this section. Any such obligation shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration the current average yield on outstanding marketable obligations of the United States as of the last day of the month preceding the issuance of the obligation. The Secretary of the Treasury is authorized and directed to purchase any obligation issued under this subsection and for such purpose the Secretary of the Treasury is authorized to use as a public debt transaction the proceeds from the sale of any security issued under the Second Liberty Bond Act, and the purposes for which securities may be issued under the Second Liberty Bond Act are extended to include any purchase of obligations hereunder.

ENERGY CRISIS RELIEF

SEC. 7. (a) During any energy crisis determined in accordance with the provisions of this Act, the President or the appropriate agency head with the approval of the President is authorized—

(1) by order, to direct the head of any Federal agency to terminate any contract for the procurement of energy supplies or to suspend performance under any such contract where such action is necessary in order to provide additional energy supplies in the affected area;

(2) to establish price ceilings at all levels for one or more types of energy supplies; and

(3) to impose compulsory energy conservation programs.

(b) During any energy crisis determined under this Act, the President or the appropriate authority is authorized to enter into and carry out such contracts or other obligations on behalf of the Uniter States as may be necessary.

(c) In addition to the authority conferred by section 6 and this section, during any energy crisis the President may exercise the authority conferred by sections 305, 306, 407, and 408 of the Disaster Relief Act of 1974 in the affected area and for the purpose of the exercise of such authority an energy crisis determined under the provisions of this Act shall be deemed to be a major disaster determined by the President under the Disaster Relief Act of 1974.

AUTHORIZATION OF APPROPRIATIONS

SEC. 8. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

By Mr. GRIFFIN:

S. 727. A bill to amend the Federal Meat Inspection Act to permit States to impose inspection, marking, labeling, packaging, and ingredient requirements that are more stringent than Federal standards; to the Committee on Agriculture, Nutrition, and Forestry.

TOWARD A BETTER HOT DOG

Mr. GRIFFIN. Mr. President, today, I am introducing legislation that would move us a step closer to the goal of safe, wholesome, and nutritional food for the American consumer.

In brief, my bill would make clear that Federal meat standards, which are established for the purpose of protecting consumers, shall not be used to nullify higher State standards that accord more protection to consumers.

Presently, under the Federal Wholesome Meat Act of 1967, so-called minimum meat ingredient standards are established by the Federal Government. Clearly, this act has been an improvement over the situation that existed prior to 1967 when many States had neither meat inspection services nor ingredient standards. For example, one of the results of the act has been the establishment of quality standards for such comminuted meat products as hot dogs, sausages, and luncheon meats.

Regrettably, however, it was not foreseen that enactment of the Federal Wholesome Meat Act would be used to nullify higher standards prevailing under some State laws. For instance, under the Federal act the ingredients of comminuted meats, such as hot dogs, may still include such items as snouts, goat tripe, spleens, hearts, salivary glands, and tongue.

As the State of Michigan found out, when the Sixth Circuit Court of Appeals ruled in 1972 in *Armour & Co.* v. *Ball* (468 F2d 76), State standards providing for more wholesome meat ingredients than the Federal standards were "preempted" by the Federal act. This decision was particularly disturbing in view of the fact that Michigan's higher standards for comminuted meat were established in 1952, 15 years before the Federal act was passed.

Thus, Michigan's high quality meat standards were effectively diluted by allowing the shipment into the State of inferior meat products. No longer could the consumer be assured that the hot dogs he or she ate met Michigan's pure skeletal meat and 12-percent protein requirements, which I might note were sold at no more cost to the consumer than products meeting only the Federal standards. Instead, the consumer is still subject to the general caveat: Let the buyer beware.

In 1973, the Michigan Legislature again tried to protect its higher quality meat standards by requiring retail establishments to post signs if they offered for sale products which did not meet Michigan's standards. Although this did not entirely resolve the dilemma, it did encourage many Michigan retailers to handle only those meat products meeting the Michigan requirements.

Again, however, the Michigan position was attacked in Federal Court, this time by the American Meat Institute which claimed that the Michigan posting law was preempted by the Federal Act and that it unduly burdened interstate commerce.

On November 26, 1976, Federal District Judge Noel Fox ruled that the Michigan law was not preempted by the Federal statute. His opinion stated:

> I find the Michigan legislation to be a legitimate exercise of the state to communicate information to its citizen-consumers.

Although this case is still pending in Federal court, Judge Fox's opinion illustrates the need for revision of the Federal Wholesome Meat Act. It is a sad commentary on a consumer-oriented act when it is an obstacle to the improvement of the quality of meat products, and when it has to be circumvented in order to restore a previously enacted law that had higher quality standards than the more recent Federal act.

In effect, what the Congress has enacted are maximum, rather than minimum, Federal meat ingredient standards.

For those who believe that Federal meat standards are improving, let me draw attention to an April 27, 1976, publication of interim Federal rules to permit the production of mechanically deboned and low-temperature rendered meats. What this proposal would create is a hot dog containing more ground bone and fat. Enforcement of these rules has been enjoined by a September 10, 1976, Federal court order.

The Federal Government has established so-called "minimum" meat standards. That is as it should be in order to make sure the meat our Nation consumes meets certain requirements.

But if, as in the case of Michigan, the Federal standard actually operates to lower the quality of meat products, then in such cases, the Federal Act is counterproductive.

States should not be precluded from establishing meat standards that they feel necessary to protect their citizens.

States like Michigan have had a long history of establishing meat standards for consumers. They should not be suddenly removed from this role because of the inattention of other, less experienced, States which caused enactment of this preemptive Federal legislation in the first place.

I would welcome the support of my colleagues to help enact this State consumer protection measure, and I urge that it receive prompt action by the Senate.

Mr. President, I ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 727

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 408 of the Federal Meat Inspection Act (81 Stat. 600; 21 U.S.C. 678) is amended to read as follows:

"SEC. 408. Requirements within the scope of this Act with respect to premises, facilities, and operations of any establishment at which inspection is provided under title I of this Act, which are less stringent than those made under this Act may not be imposed by any State or territory or the District of Columbia. Marking, labeling, packaging, or ingredient requirements less stringent than those made under this Act may not be imposed by any State or territory or the District of Columbia with respect to articles prepared at any establishment under inspection in accordance with the requirements under title I of this Act, any State or territory or the District of Columbia may exercise concurrent jurisdiction with the Secretary over articles required to be inspected under such title I, for the purpose of preventing the distribution for human food purposes of any such articles which are adulterated or misbranded, or, in the case of imported articles, after their entry into the United States. Nothing in this Act shall be construed to prohibit any State, territory, or the District of Columbia from imposing any requirements with respect to premises, facilities, or operations, or with respect to marking, labeling, packaging, or ingredient requirements, that are more stringent than those imposed under title I of this Act by the Secretary.".

By Mr. DURKIN (for himself, Mr. DOLE, and Mr. MCINTYRE):

S. 728. A bill to amend the Internal Revenue Code of 1954 to change the income distribution requirement for certain private operating foundations and to exempt certain private operating foundations from the excise tax on investment income; to the Committee on Finance.

Mr. DURKIN. Mr. President, under existing tax law, all private operating foundations must pay a 4 percent net investment income tax. This tax was first imposed in 1969 to cover the costs incurred by the IRS when auditing private foundations.

The 4 percent net investment tax is crippling the efforts of private foundations to provide our Nation's elderly with decent living conditions and proper medical attention and treatment. Moreover, the tax is having a serious impact on the ability of libraries and museums to provide their services and facilities openly and freely to the public. The bill that I am introducing today, cosponsored by Senators DOLE and MCINTYRE, will end the misapplication and misdirection of the net investment tax.

During the debates on the Tax Reform Act of 1976, the Senate agreed to an amendment that would have reduced the net investment tax to 2 percent.

Nonetheless, even with this 50 percent reduction, the Senate recognized that the 2 percent tax substantially curtails a private operating foundation's ability to provide adequate and responsive services to the public. In that regard, the Senate Finance Committee proposed a mechanism whereby libraries and museums could elect to avoid the tax by investing 5 percent of their "noncharitable" assets into the services they provide for the public. This amendment passed the Senate on July 30, 1976, by a vote of 76 to 24.

In the same amendment, the Senate also recognized that the present rules requiring private operating foundations to disrtibute two-thirds of their minimum investment return may be burdensome in light of the existing requirements that they distribute all of their income to or for the active conduct of their charitable purposes. Consequently, the Senate, in accord with the Senate Finance Committee's recommendation, reduced the minimum amount that a foundation must distribute in order to be classified as a private operating foundation to 3 percent of its noncharitable assets.

During conference, this section was deleted. The old law still remains. The 4 percent tax still remains, and the crippling effect that this tax has on certain private operating foundations still remains.

There must be a change in the present law. Libraries, museums, and nonprofit homes for the elderly should not be forced to pay a tax that was never meant to be applied to them. Furthermore, they should not be forced to pay a tax that is no longer justifiable. According to a recent Government study, revenues received by the Government under the net investment tax are at least double the costs to the IRS of supervising and auditing these exempt organizations. Our tax policies should not hinder desperately needed public services. And when justification for the tax is no longer viable, a change in the tax law should be made.

There is no need to repeat the reasons why libraries and museums should be exempt from this tax, provided they meet certain criteria. The Senate eloquently demonstrated its understanding of the financial chains placed on these institutions when it overwhelmingly adopted the Senate Finance Committee's recommendation.

But the burden this tax imposed on nonprofit homes for the aging was not brought before either the Senate or the Senate Finance Committee. It is that issue I would like to address here.

Under present law, those homes for the aging with endowments which receive one-third or more of their income from investments are classified as private operating foundations. As such, they must pay the 4-percent tax. The impact of this tax on these nonprofit homes is devastating. For example, in 1975, the New Hampshire Centennial Home for the Aged paid $11,006 in net investment taxes. In 1974, it paid $8,247.

The American Association of Homes for the Aging has supplied me with information which reflects the staggering burden this tax has placed on the services provided to the elderly. During the past tax year, the average net investment tax paid by each home was $10,239. On the other hand, the average cost for the care and maintenance of an elderly person in one of these homes is $4,223.

In other words, the average net investment tax paid by one of these homes is 2½ times greater than the average cost of providing one elderly person with medical care and housing.

To require these homes to pay this tax and thereby substantially curtail their ability to provide much needed services to the old and needy is, in my mind, an unconscionable violation of our often stated commitment to our Nation's elderly.

The bill which we are offering rectifies this situation and corrects a gross abnormality in our tax laws.

Our bill is quite simple and is substantially the same as the one offered by the Senate Finance Committee and adopted by the Senate. The amendment would do the following:

First. Reduce the minimum amount that a foundation must distribute in order to be classified as a private operating foundation from two-thirds of its minimum investment return to 3 percent of its noncharitable assets.

Second. Allow libraries, museums, and nonprofit nursing homes to elect to avoid the imposition of the 4-percent tax by choosing to invest at least 5 percent of their noncharitable assets into their social services.

The amendment will retain the present 4-percent tax which is imposed on operating foundations and it does not apply to profitmaking nursing homes. All profitmaking homes must still pay the 4-percent tax.

What this means is that if a home elects to expend 5 percent of its "noncharitable" assets for the care and maintenance of elderly persons, then it will save itself approximately $10,000 a year. Much can be done with this additional $10,000. The costs for the care and maintenance of the elderly are rising astronomically. The $10,000 saving would enable these homes to provide additional care, hire more personnel, expand their services, establish outside aid programs, and help to meet the rising and staggering costs of medicine.

The bill is closely drawn to rectify a legislative error which should have been long ago corrected. These homes cannot be in the business of having gifts and they cannot be controlled by one individual. They bear none of the characteristics of a private foundation except one: they must share the financial burdens imposed by the tax, and who in the end

bears that burden? The elderly who cannot provide for themselves.

Certainly the Treasury of the United States will not suffer. There are only approximately 100 homes that will benefit as a result of the adoption of this bill. The loss to the Treasury will be only one and a quarter million dollars. But to offset this loss, there will be a dramatic increase in the services provided the elderly. Two hundred and forty-two elderly persons who are presently denied access to homes for the aging, solely because these homes are not able to finance them, would be allowed to live the rest of their lives in dignity and comfort. Services could be expanded so that those living in squalor would be provided decent care and live in comfort.

These homes provide life support functions. They should not be inflicted with the tax that drains their precious and oft depleted financial resources. This bill will end a practice where much needed revenue is taken from foundations that are already financially pressed. It will help to restore dignity and comfort to our elderly.

By Mr. DURKIN:

S. 729. A bill to amend the Natural Gas Act with respect to court review of Federal Power Commission orders pursuant to such act; to the Committee on Environment and Natural Resources.

Mr. DURKIN. Mr. President, section 19(b) of the Natural Gas Act needs to be changed. Currently, it provides for judicial review of Federal Power Commission orders by either the Circuit Court of Appeals for the District of Columbia or by the circuit court of appeals for the circuit wherein a natural gas company to which an order relates is located or has its principal place of business. When petitions are filed in more than one circuit, that circuit in which a petition for review was first filed will have exclusive jurisdiction to review the FPC order. These provisions make inevitable a classic "race to the courthouse."

Numerous such races have taken place over the years following the issuance of important Federal Power Commission orders. Most recently, such a race took place on November 5, 1976, upon the issuance by the Federal Power Commission of its final order tripling the price of natural gas. A graphic description of that unseemly race was published in the Washington Post. I ask unanimous consent that a copy of this article be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. DURKIN. The present section 19(b) demeans the entire judicial process. The question of which court should review a Federal agency order should not be determined by the speed with which a filing is made. Therefore, I am introducing today a bill which will amend section 19(b) by granting exclusive authority to the U.S. Circuit Court of Appeals for the District of Columbia to review Federal Power Commission orders.

The selection of the D.C. Circuit Court of Appeals is not arbitrarily made. It is necessary to prevent similar races in the future. The District of Columbia Circuit Court is also the logical court to review Commission orders. Rarely, if ever, are Natural Gas Act proceedings which will result in an order subject to judicial review held outside of Washington, D.C. Natural gas producers affected by such orders and other interested parties have in the past fully participated in these Washington, D.C., proceedings.

As a result of information indicating the possibility of preferential treatment at the fifth circuit during the November 5, 1976, race, I wrote to Chief Justice Warren Burger asking that he investigate the events surrounding the fifth circuit filings. In his response, the Chief Justice finds that the filings in the fifth circuit were entirely proper. Although I do not have the confidence in the propriety of the fifth circuit filings that the Chief Justice does, I was pleased to learn that the Chief Justice also supports legislation that would end these races to the court houses. I ask unanimous consent that copies of the correspondence between myself and the Chief Justice be printed in the RECORD at the conclusion of my remarks.

The bill I am introducing is a sorely needed technical amendment to the Natural Gas Act, which, when enacted, will bring a semblance of order to judicial review proceedings under the Natural Gas Act.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SUPREME COURT,
OF THE UNITED STATES,
Washington, D.C., December 29, 1976.

Hon. JOHN A. DURKIN,
U.S. Senate,
Washington, D.C.

DEAR SENATOR DURKIN: In further response to your letter of December 3, I am enclosing a copy of a statement prepared for my use by Judge Charles Clark of the Fifth Circuit Court of Appeals detailing the events which occurred in connection with the Federal Power Commission filings in the Fifth Circuit on November 5, 1976.

I am satisfied that no improper or questionable treatment was accorded the power company litigants in this matter. It is clear to me that it was solely the dedication of the staff of the Clerk of the Fifth Circuit to a spirit of personalized service and helpfulness and not in the slightest any efforts such as have been recklessly suggested.

I note that the general counsel for the Federal Power Commission recently described the concurrent filings in the Fifth and District of Columbia Circuits as "a tie" and that the assigned panels of the respective Circuits have agreed that the District of Columbia Circuit should take the lead in reaching a determination of venue. The issue has been argued before the District of Columbia Circuit and is presently under consideration. It therefore would be improper for me to comment further on the matter. The essential problem, however, is with the legislation enacted by Congress which encourages such "races to the courthouse" and which places an unfair burden on the clerks of court to draw what sometimes might be a fine line between what some would argue was "preferential" treatment, and others would consider cooperation with those who come to the court, which is to be encouraged. As I am sure you are aware, the immediate problem created by section 19(b) of the Natural Gas Act is not new, but has long been recognized by the courts. The Fifth Circuit itself recognized in *Shell Oil Company* v. *Federal Power Commission*, 509 F.2d 176 (1975), that forum shopping is inherent in what Congress has provided.

I understand that proposals have been advanced in Congress to amend the Natural Gas Act so as to alleviate these races to the courthouse. I believe the federal judiciary will welcome such steps.

Cordially,

WARREN E. BURGER.

SUPREME COURT
OF THE UNITED STATES,
Washington, D.C., January 10, 1977.

Hon. JOHN A. DURKIN,
U.S. Senate,
Washington, D.C.

DEAR SENATOR DURKIN: Subsequent to my letter of December 29, 1976, the Court of Appeals for the District of Columbia Circuit issued an opinion on December 30 in which it found the petitions of the respective parties to have been filed in the Fifth and District of Columbia Circuits "at exactly the same moment." The Court of Appeals determined that the convenience of the parties and the interest of justice would be better served by retention of the cases in the District of Columbia Circuit. I am enclosing a copy of the opinion for your information.

Although the Court of Appeals' decision may resolve the venue issue in these present cases, I must emphasize that the essential problem in this area is with the legislation which makes this type of time-consuming and unproductive litigation inevitable, and indeed invites it.

Cordially,

WARREN E. BURGER.

EXHIBIT 1

WHEN FPC ACTS ON FUEL, THE RACE TO COURTS IS ON

(By John P. MacKenzie)

Whenever the Federal Power Commission issues an important order affecting the cost of fuel—as it did last Friday in tripling the price of some natural gas—the race to the courthouse is on.

It is a race that involves scores of lawyers and messengers who tie up telephone lines—and occasionally resort to walkie-talkies—relaying the word that an FPC order is out and an appeal must be filed immediately in the friendliest court available.

Consumer interests usually choose the U.S. Court of Appeals in Washington with its "liberal" label and consumer orientation, hoping for a decision that whatever rate increase the FPC grants is too high. Producers, who always contend that the FPC did not raise the rates enough, favor the federal appeals courts in New Orleans, Denver or San Francisco, home territory for their operations.

Unless all the frenzied parties are wildly mistaken, the race may be worth billions of dollars. There was such a contest last Friday—the winner of which is still in doubt—and it involves an increase of $1.5 billion to $1.8 billion, which the FPC said gas companies could charge.

At a hearing yesterday in the court of appeals here, FPC general counsel Drexel D. Journey said the latest race was "a tie" and told Judge Harold Leventhal he wasn't sure where the appeal would finally be lodged. The court is considering a request by consumer groups to make clear now that refunds will be ordered if lower rates prevail.

The race begins at the FPC, where secretary Kenneth F. Plumb releases the commission's rate order to dozens of assembled attorneys and messengers for the contesting parties.

Plumb time-stamps the order, setting off

shouts of "File!" to associates waiting at nearby telephone booths. If competitors have all the telephones occupied, a radio message via walkie-talkie to more distant phones may be tried.

When word reaches a telephone at the chosen court, it triggers another shout of "File!" to an associate at the clerk's office. That clerk also time-stamps the filing in anticipation of the inevitable dispute over who won the race. The case is tried in the court in which it is filed first.

Sometimes the race is won by less than a minute, the outcome depending on whether a court clerk used a clock that measures seconds. Often the dispute turns on whether the clerks have agreed in advance to synchronize their clocks. Producers won a 1974 race by two seconds, a record.

According to documents released yesterday by Rep. John E. Moss (D-Calif.), the race escalated to new heights last week. The papers quoted an observer at the New Orleans court who reported that Lois Jacobini and Glenda Baker, on behalf of a Houston law firm representing four producers, staked out the clerk's office there for 14 consecutive business days last month, poised for a filing on command.

R. Gordon Gooch, a partner in the Washington office of the firm, Baker & Botts, said yesterday that he had hired the "paralegals" but did not station them at the court every day. He said, however, that the courthouse was covered when Jacobini and Baker were not there.

Environmentalists also had the appeals court here staked out but only on days when they thought the FPC would hand down a decision.

Moss, a critic of the gas producers and of the FPC when it approves their rate requests, said it was time to call off the races. His solution—which Gooch promptly opposed—was to amend the Natural Gas Act to provide for review in only one court—the one in Washington.

Gooch would not say whether he had a solution to offer. He said he would not describe the race as "unseemly." Yet he added, "I do not want you to think it's any pleasure to run these races. But it's the way the statute reads and it's the only mechanism available for us to exercise our rights."

S. 734. A bill to amend the Internal Revenue Code of 1954 to provide for the exclusion from taxation of a limited amount of interest on savings; to the Committee on Finance.

By Mr. BAKER (for himself, Mr. JAVITS, Mr. DOMENICI, Mr. PERCY, Mr. BELLMON, Mr. CHAFFEE, Mr. CURTIS, Mr. DANFORTH, Mr. GRIFFIN, Mr. HATCH, Mr. HAYAKAWA, Mr. HEINZ, Mr. LUGAR, Mr. MCCLURE, Mr. SCHMITT, Mr. SCHWEIKER, Mr. WALLOP, and Mr. YOUNG):

S. 735. A bill to amend the Internal Revenue Code of 1954 to permit the accelerated depreciation of property placed in service in areas of high unemployment; to the Committee on Finance.

By Mr. BAKER (for himself, Mr. CURTIS, Mr. JAVITS, Mr. DOMENICI, Mr. BELLMON, Mr. CHAFFEE, Mr. DANFORTH, Mr. GOLDWATER, Mr. GRIFFIN, Mr. HATCH, Mr. HAYAKAWA, Mr. HEINZ, Mr. LUGAR, Mr. MCCLURE, Mr. PERCY, Mr. SCHMITT, Mr. SCHWEIKER, Mr. WALLOP, and Mr. YOUNG):

S. 736. A bill to provide American stock ownership plans for those of modest income by allowing deferral of taxes on certain funds invested in common stock; to the Committee on Finance.

By Mr. BAKER (for himself, Mr. PERCY, Mr. JAVITS, Mr. DOMENICI, Mr. BELLMON, Mr. CHAFFEE, Mr. CURTIS, Mr. DANFORTH, Mr. GOLDWATER, Mr. GRIFFIN, Mr. HATCH, Mr. HAYAKAWA, Mr. HEINZ, Mr. LUGAR, Mr. MCCLURE, Mr. SCHMITT, Mr. SCHWEIKER, Mr. TOWER, Mr. WALLOP, and Mr. YOUNG):

S. 737. A bill to amend the Internal Revenue Code of 1954 to provide income tax incentives for the conservation of energy used to heat or cool residences; to the Committee on Finance.

REPUBLICAN ECONOMIC PACKAGE

Mr. BAKER. Mr. President, I am very pleased this afternoon to be able to present for the consideration of the Congress and the Nation a comprehensive program offered as an alternative to the administration's economic stimulus plan. The purpose of the program is to decrease the presently unacceptable unemployment rate over the near term and, over the longer term, to stimulate capital formation and investment to provide expanding employment opportunities in the period of economic growth beyond the 1977-78 time period.

As you know, Mr. President, the Nation is now enjoying a gradual and broadly based economic recovery from the relatively deep recession of 2 years ago. Nevertheless, unemployment remains stubbornly high; and I and my colleagues who offer this plan believe that it is necessary to augment the present recovery with short- and long-term plans to stimulate present employment and to insure that the recovery continues with a rate of economic growth that provides job opportunities for an expanding labor force without reigniting high rates of inflation.

In putting together this package, the following criteria were deemed essential to accomplish the purpose of reduced employment and increased capital formation. First, we believe that measures to reduce cyclical unemployment, the unemployment created by lack of demand, must be of a permanent, confidence-building nature. We are convinced that temporary measures such as a one-time tax rebate are costly and inefficient.

Second, we believe that there must be programs focused to provide training and job opportunities for the structurally unemployed who comprise the bulk of total unemployment.

Third, the program must provide for long term economic growth through expanding capital formation and investment incentives.

Fourth, the program must utilize the private sector to the greatest extent possible. And finally, and perhaps most importantly, must minimize the inflationary impact of its components.

In all, Mr. President, there are nine legislative measures in this economic package. The first of these, designed to deal with cyclical unemployment, is a permanent reduction in tax rates for those individuals with an adjusted gross income of $18,000 or less.

In addition, there are two measures designed to address the even larger problem of structural unemployment. One, targeted on the unemployed young, who comprise 50 percent of total unemployment, is a recently introduced CETA Title VII, entitled the Youth Employment Act, which provides for comprehensive training and employment opportunities for young people. The other is an employment tax credit designed to stimulate the hiring of individuals who have been unemployed for 26 weeks or longer, the so-called "hard-core" unemployed.

In terms of policies for the promotion of long term growth and employment, there is first a permanent corporate tax rate reduction to 18 percent on the first $100,000 of corporate profits. Obviously, Mr. President, although all corporations will benefit from this proposal, it is designed primarily to assist those small businesses whose growth is essential to the long term economic and unemployment goals of the Nation.

Second, there are two measures dealing with dividend and interest exclusion. In order to encourage capital formation and investment, the current $100 dividend exclusion is raised to $600, or for a joint return $1,200. The second creates an $100, or for a joint return $200, interest exclusion to encourage savings. The former of these proposals, Mr. President, has the additional beneficial side effect of reducing the present tax inequity of the double taxation of corporate dividends.

Third, there is legislation designed to encourage investment in areas of high unemployment which provides for accelerated depreciation for new plants and equipment which are placed in those areas with unemployment rates in excess of seven percent. This is a three year only program limited to construction and equipment acquisitions begun in calendar year 1977 and completed within 36 months.

Finally, there is legislation designed to encourage common stock ownership by investors with modest incomes in which there is allowed a maximum tax deduction of $1,500 for equal amounts of earned income invested in stock ownership plans.

In a separate category, Mr. President, there is a measure to promote energy conservation through home insulation by providing a maximum tax credit of $225, or 30 percent of the first $750 expended for improving the insulation of residential buildings. I should emphasize that the severity of this winter and the attendant shortages in energy resources have only underscored the long-existing need for comprehensive energy policy. The measure proposed here today is but a small element of what must be done and be done quickly to address this all-important problem.

Finally, we have included a measure to encourage the rehabilitation of existing residential buildings by increasing the budget authority of the Government National Mortgage Association—GNMA. This measure, as do other measures in the package, should contribute significantly to the recovery of our vital construction industry in which unemployment remains relatively high.

As I have mentioned, Mr. President, one of these measures, the Youth Employment Training Act, or new title VII to CETA, already has been introduced. At this time, I ask unanimous consent that the remaining eight bills be introduced and printed in the RECORD in their entirety. In addition, Mr. President, I ask unanimous consent that a more comprehensive and detailed description of this package entitled "Two Million Jobs that Last," be printed at the conclusion of these remarks.

Finally, I should like to express my sincere admiration and appreciation for the efforts of Senators JAVITS, CURTIS, DOMENICI, BELLMON, MCCLURE, DOLE, DANFORTH, PERCY, and PACKWOOD, and the fine staff members who assisted them in putting this package together. I am also grateful to those of my colleagues who have already agreed to cosponsor all or a part of this legislation.

There being no objection, the bills and description were ordered to be printed in the RECORD, as follows:

S. 730

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Individual Tax Rate Reduction Act".

SEC. 2. (a) The table which appears in section 1(a) of the Internal Revenue Code of 1954 (relating to married individuals filing joint returns and surviving spouses) is amended to read as follows:

"If the taxable income is:	The tax is:
"Not over $1,000	8% of the taxable income
"Over $1,000 but not over $2,000	$80, plus 10% of the excess over $1,000
"Over $2,000 but not over $3,000	$180, plus 12% of the excess over $2,000
"Over $3,000 but not over $4,000	$300, plus 15% of the excess over $3,000
"Over $4,000 but not over $8,000	$450, plus 18% of the excess over $4,000
"Over $8,000 but not over $12,000	$1,170, plus 22% of the excess over $8,000
"Over $12,000 but not over $16,000	$2,050, plus 26% of the excess over $12,000
"Over $16,000 but not over $20,000	$3,090, plus 30% of the excess over $16,000
"Over $20,000 but not over $24,000	$4,290, plus 33% of the excess over $20,000
"Over $24,000 but not over $28,000	$5,610, plus 36% of the excess over $24,000
"Over 28,000 but not over $32,000	$7,050, plus 39% of the excess over $28,000
"Over $32,000 but not over $36,000	$8,610, plus 42% of the ecess over $32,000
"Over $36,000 but not over $40,000	$10,290, plus 45% of the excess over $36,000
"Over $40,000 but not over $44,000	$12,090, plus 48% of the excess over $40,000
"Over $44,000 but not over $52,000	$14,010, plus 50% of the excess over $44,000
"Over $52,000 but not over $64,000	$18,010, plus 53% of the excess over $52,000
"Over $64,000 but not over $76,000	$24,370, plus 55% of the excess over $64,000
"Over $76,000 but not over $88,000	$30,970, plus 58% of the excess over $76,000
"Over $88,000 but not over $100,000	$37,930, plus 60% of the excess over $88,000
"Over $100,000 but not over $120,000	$45,130, plus 62% of the excess over $100,000
"Over $120,000 but not over $140,000	$57,530, plus 64% of the excess over $120,000
"Over $140,000 but not over $160,000	$70,330, plus 66% of the excess over $140,000
"Over $160,000 but not over $180,000	$83,530, plus 68% of the excess over $160,000
"Over $180,000 but not over $200,000	$97,130, plus 69% of the excess over $180,000
"Over $200,000 but not over $300,000	$110,930, plus 70% of the excess over $200,000
"Over $300,000	$180,930, plus 70% of the excess over $300,000.".

(b) The table which appears in section 1(b) of such Code (relating to heads of households) is amended to read as follows:

"If the taxable income is:	The tax is:
"Not over $1,000	8% of the taxable income
"Over $1,000 but not over $2,000	$80, plus 11% of the excess over $1,000
"Over $2,000 but not over $4,000	$190, plus 14% of the excess over $2,000
"Over $4,000 but not over $6,000	$470, plus 17% of the excess over $4,000
"Over $6,000 but not over $8,000	$810, plus 21% of the excess over $6,000
"Over $8,000 but not over $10,000	$1,230, plus 23% of the excess over $8,000
"Over $10,000 but not over $12,000	$1,690, plus 26% of the excess over $10,000
"Over $12,000 but not over $14,000	$2,210, plus 28% of the excess over $12,000
"Over $14,000 but not over $16,000	$2,770, plus 30% of the excess over $14,000
"Over $16,000 but not over $18,000	$3,370, plus 31% of the excess over $16,000
"Over $18,000 but not over $20,000	$3,990, plus 32% of the excess over $18,000
"Over $20,000 but not over $22,000	$4,630, plus 35% of the excess over $20,000
"Over $22,000 but not over $24,000	$5,330, plus 36% of the excess over $22,000
"Over $24,000 but not over $26,000	$6,050, plus 38% of the excess over $24,000
"Over $26,000 but not over $28,000	$6,810, plus 41% of the excess over $26,000
"Over $28,000 but not over $32,000	$7,630, plus 42% of the excess over $28,000
"Over $32,000 but not over $36,000	$9,310, plus 45% of the excess over $32,000
"Over $36,000 but not over $38,000	$11,110, plus 48% of the excess over $36,000
"Over $38,000 but not over $40,000	$12,070, plus 51% of the excess over $38,000
"Over $40,000 but not over $44,000	$13,090, plus 52% of the excess over $40,000
"Over $44,000 but not over $50,000	$15,170, plus 55% of the excess over $44,000
"Over $50,000 but not over $52,000	$18,470, plus 56% of the excess over $50,000
"Over $52,000 but not over $64,000	$19,590, plus 58% of the excess over $52,000

"If the taxable income is:	The tax is:
"Over $64,000 but not over $70,000	$26,550, plus 59% of the excess over $64,000
"Over $70,000 but not over $76,000	$30,090, plus 61% of the excess over $70,000
"Over $76,000 but not over $80,000	$33,750, plus 62% of the excess over $76,000
"Over $80,000 but not over $88,000	$36,230, plus 63% of the excess over $80,000
"Over $88,000 but not over $100,000	$41,270, plus 64% of the excess over $88,000
"Over $100,000 but not over $120,000	$48,950, plus 66% of the excess over $100,000
"Over $120,000 but not over $140,000	$62,150, plus 67% of the excess over $120,000
"Over $140,000 but not over $160,000	$75,550, plus 68% of the excess over $140,000
"Over $160,000 but not over $180,000	$89,150, plus 69% of the excess over $160,000
"Over $180,000 but not over $280,000	$102,950, plus 70% of the excess over $180,000
"Over $280,000	$172,950, plus 70% of the excess over $280,000.".

(c) The table which appears in section 1(c) of such Code (relating to unmarried individuals (other than surviving spouses and heads of households)) is amended to read as follows:

"If the taxable income is:	The tax is:
"Not over $500	8% of the taxable income
"Over $500 but not over $1,000	$40, plus 10% of the excess over $500
"Over $1,000 but not over $1,500	$90, plus 12% of the excess over $1,000
"Over $1,500 but not over $2,000	$150, plus 15% of the excess over $15,000
"Over $2,000 but not over $4,000	$225, plus 18% of the excess over $2,000
"Over $4,000 but not over $6,000	$585, plus 21% of the excess over $4,000
"Over $6,000 but not over $8,000	$1,005, plus 24% of the excess over $6,000
"Over $8,000 but not over $10,000	$1,485, plus 27% of the excess over $8,000
"Over $10,000 but not over $12,000	$2,025, plus 28% of the excess over $10,000
"Over $12,000 but not over $14,000	$2,585, plus 29% of the excess over $12,000
"Over $14,000 but not over $16,000	$3,165, plus 31% of the excess over $14,000
"Over $16,000 but not over $18,000	$3,785, plus 34% of the excess over $16,000
"Over $18,000 but not over $20,000	$4,465, plus 36% of the excess over $18,000
"Over $20,000 but not over $22,000	$5,185, plus 38% of the excess over $20,000
"Over $22,000 but not over $26,000	$5,945, plus 40% of the excess over $22,000
"Over $26,000 but not over $32,000	$7,545, plus 45% of the excess over $26,000
"Over $32,000 but not over $38,000	$10,245, plus 50% of the excess over $32,000
"Over $38,000 but not over $44,000	$13,245, plus 55% of the excess over $38,000
"Over $44,000 but not over $50,000	$16,545, plus 60% of the excess over $44,000
"Over $50,000 but not over $60,000	$20,145, plus 62% of the excess over $50,000
"Over $60,000 but not over $70,000	$26,345, plus 64% of the excess over $60,000
"Over $70,000 but not over $80,000	$32,745, plus 66% of the excess over $70,000
"Over $80,000 but not over $90,000	$39,345, plus 68% of the excess over $80,000
"Over $90,000 but not over $100,000	$46,145, plus 69% of the excess over $90,000
"Over $100,000 but not over $150,000	$53,045, plus 70% of the excess over $100,000
"Over $150,000 but not over $200,000	$88,045, plus 70% of the excess over $150,000
"Over $200,000 but not over $300,000	$123,045, plus 70% of the excess over $200,000
"Over $300,000	$193,045, plus 70% of the excess over $300,000.".

(d) The amendments made by subsections (a), (b), and (c) take effect on April 1, 1977.

(e) Section 3402(a) of the Internal Revenue Code of 1954 (relating to requirement of withholding) is amended to read as follows:

"(a) Requirement of Withholding.—Except as otherwise provided in this section, every employer making payment of wages shall deduct and withhold upon such wages a tax determined in accordance with tables prescribed by the Secretary. The tables so prescribed with respect to wages paid more than 30 days after the date of enactment of the Individual Tax Rate Reduction Act and before January 1, 1978, shall reflect the full calendar year effect for 1977 of the amendments made by subsections (a), (b), and (c) of section 2 of that Act. For purposes of applying such tables, the term 'the amount of wages' means the amount by which the wages exceed the number of withholding exemptions claimed, multiplied by the amount of one such exemption as shown in the table in subsection (b)(1).".

(f) Within 90 days after the date of enactment of this Act the Secretary of the Treasury shall furnish to the Committee on Finance of the Senate and the Committee on Ways and Means of the House of Representatives a proposed draft of technical and conforming changes in the Internal Revenue Code of 1954 necessary to reflect the substantive changes in law made by subsections (a), (b), and (c) of this section.

S. 731

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subpart A of part IV of subchapter A of chapter 1 of the Internal Revenue Code of 1954 (relating to credits allowed) is amended by inserting immediately before section 45 the following new section:

"SEC. 44B. EMPLOYMENT EXPANSION.

"(a) GENERAL RULE.—There shall be allowed, as a credit against the tax imposed by this chapter for the taxable year, the amount determined under subsection (b) for that year.

"(b) DETERMINATION OF AMOUNT.—

"(1) IN GENERAL.—The amount of the credit allowable under subsection (a) for the taxable year is—

"(A) one dollar multiplied by the number of new employee hours of employment for the first 26 weeks of employment, and

"(B) 50 cents multiplied by the number of new employees hours of employment for the second 26 weeks of employment,

with respect to new employees who were unemployed for more than 26 consecutive weeks immediately preceding their employment by the taxpayer.

"(c) DEFINITIONS; SPECIAL RULES.—For purposes of this section—

"(1) NEW EMPLOYEE.—The term 'new employee' means an individual not employed by the taxpayer before January 1, 1977, and, with respect to any calendar quarter, not employed by the taxpayer during the same calendar quarter of the preceding year, and who, immediately prior to his employment by the taxpayer, was unemployed for at least 26 consecutive weeks.

"(2) NEW EMPLOYEE HOURS OF EMPLOYMENT.—The term new employee hours of employment' means the number of hours of employment for which the taxpayer compensates a new employee. A new employee whose compensation is not determined on an hourly basis shall be considered, for purposes of this section, to be compensated for not more than 40 hours of employment for each full calendar week he is employed.

"(3) CREDIT DENIED WHERE NEW EMPLOYEE DISPLACES ANOTHER.—No credit shall be allowed under subsection (a) with respect to a new employee if—

"(A) the employment of the new employee displaced any individual from employment by the taxpayer, or

"(B) the new employee replaces a former employee of the taxpayer—

"(i) who performed the same or similar services for the taxpayer as the new employee performs,

"(ii) whose services were terminated by the employer (other than by a termination described in section 50A(c)(2)), and

"(iii) who, at the time the new employee was hired, was available for reemployment by the taxpayer.

"(d) TREATMENT OF EXCESS CREDIT.—

"(1) ANNUAL LIMIT.—The amount of the credit allowed under subsection (a) for the taxable year may not exceed the liability of the taxpayer for the tax imposed under this chapter for that taxable year.

"(2) APPLICATION WITH OTHER CREDITS.—For purposes of paragraph (1), the liability for tax for the taxable year shall be the tax imposed by this chapter for that year reduced by the sum of the credits allowable under—

"(A) section 33 (relating to foreign tax credit),

"(B) section 37 (relating to credit for the elderly),

"(C) section 38 (relating to investment in certain depreciable property),

"(D) section 40 (relating to expenses of work incentive programs),

"(E) section 41 (relating to contributions to candidates for public office),

"(F) section 42 (relating to general tax credit),

"(G) section 44 (relating to purchase of new principal residence), and

"(H) section 44A (relating to expenses for household and dependent care services necessary for gainful employment).

"(3) CARRYOVER AND CARRYBACK OF EXCESS AMOUNTS.—If the amount of the credit determined under subsection (a) for any taxable year exceeds the limitation provided by paragraph (1) of this subsection for such taxable year (hereinafter in this subsection referred to as the 'unused credit year'), such excess shall be—

"(A) a credit carryback to each of the 3 taxable years preceding the unused credit year, and

"(B) a credit carryover to each of the 7 taxable years following the unused credit year,

and shall be added to the amount allowable as a credit by subsection (a) for such years, except that such excess may be a carryback only to a taxable year ending after December 31, 1976. The entire amount of the unused credit for an unused credit year shall be carried to the earliest of the 10 taxable years to which (by reason of subparagraphs (A) and (B)) such credit may be carried, and then to each of the other 9 taxable years to the extent that such unused credit may not be added for a prior taxable year for which such unused credit may be carried.

"(4) REGULATIONS.—The Secretary shall prescribe such regulations as are necessary to carry out the purposes of this section.".

(b)(1) Section 56(c) of such Code (relating to definition of regular tax deduction) is amended—

(A) by striking out "and" at the end of paragraph (7),

(B) by striking out the period at the end of paragraph (8) and inserting in lieu thereof a comma and the word "and", and

(C) by adding at the end thereof the following new paragraph:

"(9) section 44B (relating to employment expansion).".

(2) Section 6096(b) of such Code (relating to designation of income tax payments to Presidential Election Campaign Fund) is amended by striking out "and 44A" and inserting in lieu thereof "44A, and 44B".

(c) The table of sections for subpart A of part IV of subchapter A of chapter 1 of such Code is amended by inserting immediately before the item relating to section 45 the following new item:

"Sec. 44B. Employment expansion.".

SEC. 2. The Secretary of Labor and the Secretary of Commerce, after consultation with the Secretary of the Treasury, shall publicize the availability of the credit allowed by section 44B of the Internal Revenue Code of 1954 in connection with job placement service, training, and employment programs and other appropriate programs carried out through the Department of Labor or the Department of Commerce, respectively. The Secretary of Labor shall make particular efforts to coordinate the activities and programs of CETA prime sponsors with the availability of the credit allowed by section 44B of the Internal Revenue Code of 1954.

SEC. 3. The amendments made by the first section of this Act apply with respect to taxable years beginning after December 31, 1976.

S. 732

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 11(b)(1) of the Internal Revenue Code of 1954 (relating to normal tax) is amended by striking out "22 percent" and inserting in lieu thereof "18 percent".

(b) Section 11(c) of such Code (relating to surtax) is amended by striking out "26 percent" and inserting in lieu thereof "30 percent".

(c) Section 11(d)(1) of such Code (relating to surtax exemption) is amended by striking out "$25,000" and inserting in lieu thereof "$100,000".

(d) The amendments made by this section apply with respect to taxable years ending after December 31, 1977.

S. 733

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 116 of the Internal Revenue Code of 1954 (relating to partial exclusion of dividends received by individuals) is amended by striking out "$100" each place it appears, and by inserting in lieu thereof the following: "$600 ($1,200 in the case of a husband and wife making a joint return under section 6013)".

(b) The amendments made by this section apply to taxable years beginning after December 31, 1977.

S. 734

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part III of subchapter B of chapter 1 of the Internal Revenue Code of 1954 (relating to items specifically excluded from gross income) is amended by redesignating section 124 as 125, and by inserting after section 123 the following new section:

"SEC. 124. INTEREST.

"(a) IN GENERAL.—In the case of an individual, gross income does not include any amount received as interest or dividends on a time or demand deposit with—

"(1) a commercial or mutual savings bank the deposits and accounts of which are insured by the Federal Deposit Insurance Corporation or which are otherwise insured in accordance with the requirements of the law of the State in which the bank is located,

"(2) a savings and loan association, building and loan association, or similar association the deposits and accounts of which are insured by the Federal Savings and Loan Insurance Corporation or which are otherwise insured in accordance with the requirements of the law of the State in which the association is located, or

"(3) a credit union the deposits and accounts of which are insured by the National Credit Union Administration Share Insurance Fund or which are otherwise insured in accordance with the requirements of the law of the State in which the credit union is located.

"(b) LIMITATION.—The amount of interest excluded under subsection (a) for the taxable year shall not exceed $100 ($200 in the case of a husband and wife who make a joint return under section 6013).".

(b) The table of sections for such part is amended by striking out the last item and inserting in lieu thereof the following items:

"Sec. 124. Interest.

"Sec. 125. Cross references to other Acts.".

(c) The amendments made by this section apply to taxable years beginning after December 31, 1977.

S. 735

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part VI of subchapter B of chapter 1 of the Internal Revenue Code of 1954 (relating to itemized deductions for individuals and corporations) is amended by adding at the end thereof the following new section:

"SEC. 192. AMORTIZATION OF PROPERTY PLACED IN SERVICE IN HIGH UNEMPLOYMENT AREAS.

"(a) ALLOWANCE OF DEDUCTION.—If a taxpayer so elects, he is entitled to a deduction with respect to the amortization of the amortizable basis of job-creation property (defined in subsection (d)) based on a period of 60 months, or, in the case of a building which is job-creation property, a period equal to one-half of the useful life of the building. The amortization deduction shall be an amount with respect to each month of such period within the taxable year, equal to the amortizable basis at the end of such month divided by the number of months (including the month for which the deduction is computed) remaining in the period. The amortizable basis at the end of the month shall be computed without regard to the amortization deduction for that month. The amortization deduction provided by this section with respect to any month shall be in lieu of the depreciation deduction with respect to such basis for that month provided by section 167.

"(b) ELECTION OF AMORTIZATION.—The election of the taxpayer to take the amortization deduction allowed by subsection (a) shall be made by filing with the Secretary, in such manner, in such form, and at such time as the Secretary may by regulation prescribe, a statement of such election.

"(c) TERMINATION OF AMORTIZATION DEDUCTION.—A taxpayer who has elected under subsection (b) to take the amortization deduction provided by subsection (a) may, at any time after making such election, discontinue the amortization deduction with respect to the remainder of the amortization period. The discontinuance will begin as of the beginning of any months specified by the taxpayer in a notice in writing filed with the Secretary before the beginning of such month. The depreciation deduction provided under section 167 shall be allowed, beginning with the first month as to which the amortization deduction does not apply, and the taxpayer shall not be entitled to any further amortization deduction under this section with respect to such property.

"(d) DEFINITION OF JOB-CREATION PROPERTY.—For purposes of this section, the term 'job-creation property' means property placed in service after December 31, 1976, and before January 1, 1980, in an area the rate of unemployment for which is 7 percent or greater for the most recently closed calander quarter preceding the date on which the property is placed in service. For purposes of this subsection the term 'rate of unemployment' means the unemployment rate for that region calculated as a percentage of the civilian labor force for all individuals 16 years of age and over as determined by the Bureau of Labor Statistics of the Department of Labor.".

(b)(1) The table of sections for such part VI is amended by adding at the end thereof the following new item:

"Sec. 192. Amortization of property placed in service in high unemployment areas.".

(2) Section 263(a)(1) of such Code (relating to capital expenditures) is amended—

(A) by striking out "or" at the end of subparagraphs (C) and (E),

(B) by striking out the period at the end of subparagraph (F) and inserting in lieu thereof of a comma and the word "or", and

(C) by adding at the end thereof the following new subparagraph:

"(G) expenditures for job creation property which the taxpayer elects to deduct under section 192.".

(3) Section 1245(a) of such Code (relating to gain on disposition of certain depreciable property) is amended—

(A) by striking out "or 191" each place it appears in paragraphs (2) and (3)(d) and inserting in lieu thereof "191, or 192",

(B) by striking out "or 190" in paragraph (2)(D) and inserting in lieu thereof "190, or 192". and

(C) by inserting "or under section 192" after "under section 190" in the last sentence of paragraph (2).

(4) Section 1250(b)(3) of such Code (relating to depreciation adjustments) is amended by striking out "or 191" and inserting in lieu thereof "191, or 192".

(c) The amendments made by this section apply to taxable years beginning after December 31, 1977.

S. 736

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "American Stock Ownership Plans of 1976".

SEC. 2. AMERICAN STOCK OWNERSHIP PLANS FOR THOSE OF MODEST INCOME.

Subchapter D of chapter 1 of the Internal Revenue Code of 1954 (relating to deferred compensation, etc.) is amended by adding at the end thereof the following new part:

"PART III—AMERICAN STOCK OWNERSHIP PLANS FOR THOSE OF MODEST INCOME

"Sec. 428. American stock ownership plans for those of modest income.

"SEC. 428. AMERICAN STOCK OWNERSHIP PLANS FOR THOSE OF MODEST INCOME.

"(a) AMERICAN STOCK OWNERSHIP PLAN FOR THOSE OF MODEST INCOME.—For the purposes of this section, the term 'American stock ownership plan' means a trust created or organized in the United States for the exclusive benefit of an individual or his beneficiaries, but only if the written governing instrument creating the trust meets the following requirements:

"(1) Except in the case of a rollover contribution described in subsection (d)(4)—

"(A) no contribution will be accepted unless it is in cash;

"(B) contributions will not be accepted for the taxable year in excess of $1,500 on behalf of any individual; and

"(C) contributions will not be accepted on behalf of any individual for the 2 taxable years succeeding the taxable year in which a payment or distribution taxable to the individual under subsection (d)(2) is made.

"(2) The trust is designed to invest solely in common stock of domestic corporations.

"(3) The trustee is a bank (as defined in section 401(d)(1) or such other person who demonstrates to the satisfaction of the Secretary that the manner in which such other person will administer the trust will be consistent with the requirements of this section. An individual for whose benefit the trust is maintained may be granted, under the written governing instrument, the power to control the investment of the trust funds either by directing investments (including reinvestments, disposals, and exchanges) or by disapproving proposed investments (including reinvestments, disposals, or exchanges).

"(4) The assets of the trust will not be commingled with other property except in a common trust fund or common investment fund.

"(5) Contributions received by the trustee during a particular taxable year will be allocated to a separate class year account. Dividends and capital gains and losses received or realized by the trustee during a particular taxable year will be allocated among class year accounts on any reasonable basis. The interest of an individual in each class year account may not be paid or distributed before the end of the 7th taxable year following the taxable year for which such class year account was established, except in the case of death or disability.

"(6) The interest of an individual in the balance in his class year accounts is nonforfeitable.

An individual for whose benefit a class year account is maintained may be granted, under the written governing instrument, the right to direct the trustee as to the manner in which the common stock allocated to such account is to be voted.

"(b) AMERICAN STOCK OWNERSHIP ANNUITY.—For purposes of this section, the term 'American stock ownership annuity' means a contract for a variable annuity, as determined under regulations prescribed by the Secretary, issued by an insurance company which meets the following requirements:

"(1) Except in the cast of a rollover contribution described in subsection (d)(4)—

"(A) no premium will be accepted unless it is in cash;

"(B) the annual premium under the contract will not exceed $1,500 and any refund of premiums will be applied before the close of the calendar year following the year of the refund toward the payment of future premiums; and

"(C) premiums will not be accepted for the 2 taxable years succeeding the taxable year in which a payment or distribution taxable to the individual under subsection (d)(2) is made.

"(2) All assets attributable to premium payments will be invested solely in common stock of domestic corporations.

"(3) Assets attributable to the contract will not be commingled with other property except in a segregated asset account established for such annuity contracts.

"(4) Premiums that are received by the insurance company during a particular taxable year will be allocated to a separate class year account. Dividends and capital gains and losses on stock attributable to the contract that are received or realized by the insurance company during a particular taxable year will be allocated among class year accounts on any reasonable basis. The interest of an owner in each class year account may not be paid or distributed before the end of the 7th taxable year following the taxable year for which such class year account was established, except in the case of death or disability.

"(5) The entire interest of the owner is nonforfeitable.

The owner may be granted, under such an annuity contract, the right to direct the insurance company as to the manner in which the common stock allocated to him is to be voted, and the power to control the investment of assets attributable to premium payments either by directing investments (including reinvestments, disposals, and exchanges) or by disapproving proposed investments (including reinvestments, disposals, or exchanges).

"(c) ACCOUNTS ESTABLISHED BY EMPLOYERS AND CERTAIN ASSOCIATIONS OF EMPLOYEES.—A trust created or organized in the United States by an employer for the exclusive benefit of his employees or their beneficiaries, or by an association of employees (which may include employees within the meaning of section 401(c)(1)) for the exclusive benefit of its members of their beneficiaries, shall be treated as American stock ownership plans (described in subsection (a)), but only if the written governing instrument creating the trust meets the following requirements:

"(1) The trust satisfies the requirements of paragraphs (1) through (6) of subsection (a).

"(2) There is a separate accounting for the interest of each employee or member. The assets of the trust may be held in a common fund for the account of all individuals who have an interest in the trust.

"(d) TAX TREATMENT OF DISTRIBUTIONS.—

"(1) IN GENERAL.—Except as otherwise provided in this subsection, any amount paid or distributed out of American stock ownership plans or under an American stock ownership annuity shall be deemed to have been withdrawn first from contributions accepted for the taxable year in which the payment or distribution is received and then from the earliest class year accounts on a first-in, first-out basis. Amounts deemed to have been withdrawn from a class year account or accounts shall be included in the gross income of the payee, distributee, or individual for whose benefit such plan or annuity was established, as the case may be, for the taxable year in which the payment or distribution is received. The basis of any person in each class year account is zero.

"(2) CAPTIAL GAINS TREATMENT.—Any amount deemed to have been withdrawn from a class year account established more than 7 years before the taxable year in which the payment or distribution is received, and any amount paid or distributed on account of the death of the individual for whose benefit the American stock ownership plans or American stock ownership annuity was established, shall be treated as a gain from the sale or exchange of a capital asset held for more than 6 months.

"(3) PREMATURE DISTRIBUTIONS.—

"(A) IN GENERAL.—If any portion of a payment or distribution from American stock ownership plans or under an American stock ownership annuity to or on behalf of the individual for whose benefit such plan or annuity was established is deemed to have been withdrawn from a class year account established during the 7 years before the taxable year in which the payment or distribution is received, then, unless such payment or distribution is made on account of the death of the individual for whose benefit the plan or annuity was established, such individual's tax under this chapter for the taxable year in which such payment or distribution is received shall be increased by an amount equal to 10 percent of such portion of the payment or distribution.

"(B) DISABILITY.—Subparagraph (A) shall not apply if the amount paid or distributed is attributable to the taxpayer becoming disabled within the meaning of section 72(m)(7).

"(4) ROLLOVER CONTRIBUTION.—An amount is described in this paragraph as a rollover contribution if it meets the requirements of subparagraphs (A) and (B).

"(A) IN GENERAL.—Paragraph (1) does not apply to any amount paid or distributed out of American stock ownership plans under an American stock ownership annuity to the individual for whose benefit the plan or annuity was established if the entire amount received (including money and other property) is paid into an American stock ownership plan or an American stock ownership annuity for the benefit of such individual not later than the 60th day after the day on which he receives the payment or distribution. Any such amount shall, in the hands of the transferee, be deemed to be held in the same class year account as that from which the payment or distribution was made.

"(B) LIMITATION.—This paragraph does not apply to any amount described in subparagraph (A) received by an individual from American stock ownership plans or under an American stock ownership annuity if at any time during the 3-year period ending on the day of such receipt such individual received any other amount described in that subparagraph from American stock ownership plans or under an American stock ownership annuity which was not includable in his gross income because of the application of this paragraph.

"(5) EXCESS CONTRIBUTIONS RETURNED BEFORE DUE DATE OF RETURN.—Paragraph (1) does not apply to the distribution of any contribution paid during a taxable year to American stock ownership plans or for a American stock ownership annuity to the extent that such contribution exceeds the amount allowable as a deduction under section 220 if—

"(A) such distribution is received on or before the day prescribed by law (including extensions of time) for filing such individual's return for such taxable year,

"(B) no deduction is allowed under section 220 with respect to such excess contribution, and

"(C) such distribution is accompanied by the amount of net income attributable to such excess contribution.

Any net income described in subparagraph (C) shall be included in the gross income of the individual for whose benefit the plan or annuity was established for the taxable year in which received.

"(6) TRANSFER OF PLAN OR ANNUITY INCIDENT TO DIVORCE.—The transfer of an individual's interest in American stock ownership plans or a American stock ownership annuity to his former spouse under a divorce decree or under a written instrument incident to such divorce is not to be considered a taxable transfer made by such individual notwithstanding any other provision of this subtitle, and such interest at the time of the transfer is to be treated as American stock ownership plans or a American stock ownership annuity of such spouse, and not of such individual. Thereafter such plan or annuity for purposes of this subtitle is to be treated as maintained for the benefit of such spouse.

"(7) EFFECT OF PLEDGING PLAN OR ANNUITY ASSETS AS SECURITY.—If, during any taxable year of the individual for whose benefit American stock ownership plans or a American stock ownership annuity is maintained, that individual uses the plan or annuity or any portion thereof as security for a loan, the portion so used shall not be treated as distributed to such individual except to the extent that the lender forecloses upon the security.

"(e) TAX TREATMENT OF AMERICAN STOCK OWNERSHIP PLANS FOR THOSE OF MODEST INCOME.—

"(1) EXEMPTION FROM TAX.—Any American stock ownership plans for those of modest income is exempt from taxation under this subtitle unless such plan has ceased to be an American stock ownership plan by reason of paragraph (2). Notwithstanding the preceding sentence, any such plan is subject to the taxes imposed by section 511 (relating to imposition of tax on unrelated business income of charitable, etc., organizations).

"(2) LOSS OF EXEMPTION.—

"(A) IN GENERAL.—If, during any taxable year of the individual for whose benefit any working man's stock ownership plan is maintained, the plan engages in any one of the disqualifying transactions described in subparagraph (B), the plan will cease to be an American stock ownership plan as of the first day of such taxable year. For purposes of this paragraph, the separate account for any individual within an American stock ownership plan maintained by an employer or association of employees is treated as a separate American stock ownership plan.

"(B) DISQUALIFYING TRANSACTIONS.—For purposes of this paragraph, the term 'disqualifying transaction' means—

"(i) the acquisition of common stock from the individual for whose benefit the plan was established, except in the case of a rollover contribution described in subsection (d)(4);

"(ii) the acquisition of common stock for more than adequate consideration from a 'disqualified person' as defined in section 4975(e), applied as though the provisions thereof related to American stock ownership plans;

"(iii) the sale of common stock for less than adequate consideration to a disqualified person as so defined;

"(iv) borrowing to acquire common stock; or

"(v) loaning plan assets to the individual for whose benefit the plan was established without the receipt of adequate security and a reasonable rate of interest.

"(C) PLAN TREATED AS DISTRIBUTING ALL ITS ASSETS.—In any case in which a plan ceases to be an American stock ownership plan by reason of subparagraph (A) as of the first day of any taxable year, paragraph (1) of subsection (d) shall apply as if there were a distribution on such first day in an amount equal to the fair market value (on such first day) of all assets in the plan (on such first day).

"(3) COMMINGLING AMERICAN STOCK OWNERSHIP PLAN AMOUNTS IN CERTAIN COMMON TRUST FUND AND COMMON INVESTMENT FUNDS.—Any common trust fund or common investment fund of American stock ownership plan assets which is exempt from taxation under this subtitle does not cease to be exempt on account of the participation or inclusion of assets of a trust exempt from taxation under section 501(a) which is described in section 401(a), or of an individual retirement account described in section 408(a).

"(f) COMMUNITY PROPERTY LAWS.—This section shall be applied without regard to any community property laws.

"(g) CUSTODIAL ACCOUNTS.—For purposes of this section, a custodial account shall be treated as a trust if the assets of such account are held by a bank (as defined in section 401(a)(1)) or another person who demonstrates, to the satisfaction of the Secretary or his delegate, that the manner in which he will administer the account will be consistent with the requirements of this section, and if the custodial account would, except for the fact that it is not a trust, constitute American stock ownership plans for those of modest income described in subsection (a). For purposes of this title, in the case of a custodial account treated as a trust by reason of the preceding sentence, the custodian of such account shall be treated as the trustee thereof.

"(h) REPORTS.—The trustee of a American stock ownership plan and the issuer of an American stock ownership annuity shall make such reports regarding such plan or annuity to the Secretary or his delegate and to the individuals for whose benefit the plan or annuity is, or is to be, maintained with respect to contributions, distributions, and such other matters as the Secretary or his delegate may require under regulations. The reports required by this subsection shall be filed at such time and in such manner and furnished to such individuals at such time and in such manner as may be required by those regulations.

"(i) CROSS REFERENCE.—

"For tax on excess contributions to an American stock ownership plan or annuity, see section 4976."

SEC. 3. CONTRIBUTIONS TO AMERICAN STOCK OWNERSHIP PLANS FOR THOSE OF MODEST INCOME.

(a) IN GENERAL.—Part VII of subchapter B of chapter 1 of the Internal Revenue Code of 1954 (relating to additional itemized deductions for individuals) is amended by redesignating section 221 as 222 and by inserting after section 220 the following new section:

"SEC. 221. CONTRIBUTIONS TO AMERICAN STOCK OWNERSHIP PLANS FOR THOSE OF MODEST INCOME.

"(a) DEDUCTION ALLOWED.—In the case of an individual, there is allowed as a deduction amounts paid in cash during the taxable year by or on behalf of such individual for his benefit—

"(1) to American stock ownership plans for those of modest income described in section 428(a), or

"(2) to a American stock ownership annuity described in section 428(b).

No deduction shall be allowed for the 2 taxable years succeeding the taxable year in which a payment on distribution taxable to such individual under section 428(d)(2) is made. For purposes of this title, any amount paid by an employer to such American stock ownership plan or for such a American stock ownership annuity constitutes payment of compensation to the employee (other than a self-employed individual who is an employee within the meaning of section 401(c)(1)) includible in his gross income, whether or not a deduction for such payment is allowable under this section to the employee after the application of subsection (b).

"(b) LIMITATIONS AND RESTRICTIONS.—

"(1) MAXIMUM DEDUCTION.—The amount allowable as a deduction under subsection (a) to an individual for any taxable year may not exceed an amount equal to 15 percent of the compensation includible in his gross income for taxable year, or $1,500, whichever is less, multiplied by a fraction, the denominator of which is $20,000 and the numerator of which is $20,000 minus the excess of such compensation over $20,000.

"(2) RECONTRIBUTED AMOUNTS.—No deduction is allowed under this section with respect to a rollover contribution described in section 428(d)(4).

"(c) DEFINITIONS AND SPECIAL RULES.—

"(1) COMPENSATION.—For purposes of this section, the term 'compensation' includes earned income as defined in section 401(c)(2).

"(2) MARRIED INDIVIDUALS.—The maximum deduction under subsection (b)(1) shall be computed separately for each individual, and this section shall be applied without regard to any community property laws".

(b) DEDUCTION ALLOWED IN ARRIVING AT ADJUSTED GROSS INCOME.—Section 62 of such Code (defining adjusted gross income) is amended by adding at the end thereof the following new paragraph:

"(14) AMERICAN STOCK OWNERSHIP PLANS FOR THOSE OF MODEST INCOME.—The deduction allowed by section 221 (relating to American stock ownership plans).".

SEC. 4. TAX ON EXCESS CONTRIBUTIONS TO AMERICAN STOCK OWNERSHIP PLANS FOR THOSE OF MODEST INCOME.

Chapter 43 of the Internal Revenue Code of 1954 (relating to qualified pension, etc., plans) is amended by adding at the end thereof the following new section:

"SEC. 4976. TAX ON EXCESS CONTRIBUTIONS TO AMERICAN STOCK OWNERSHIP PLANS FOR THOSE OF MODEST INCOME.

"(a) TAX IMPOSED.—In the case of—

"(1) an American stock ownership plan (within the meaning of section 423(a)), or

"(2) an American stock ownership annuity (within the meaning of section 428(b)),

established for the benefit of any individual, there is imposed for each taxable year a tax in an amount equal to 6 percent of the amount of the excess contributions to such individual's plans or annuities (determined as of the close of the taxable year). The amount of such tax for any taxable year shall not exceed 6 percent of the value of the plan or annuity (determined as of the close of the taxable year). The tax imposed by this subsection shall be paid by such individual.

"(b) EXCESS CONTRIBUTIONS.—For purposes of this section, the term 'excess contributions' means the sum of—

"(1) the excess (if any) of—

"(A) the amount contributed for the taxable year to the plans or annuities (other than a rollover contribution described in section 428(d)(4)), over

"(B) the amount allowable as a deduction under section 220 for such contributions, and

"(2) the amount determined under this subsection for the preceding taxable year, reduced by the excess (if any) of the maximum amount allowable as a deduction under section 220 for the taxable year over the amount contributed to the plans or annuities for the taxable year and reduced by the sum of the distributions out of the plans or annuities (for all prior taxable years) which was included in the gross income of the individual for whose benefit such plan or annuity was established under section 428(d)(1).

For purposes of this subsection, any contribution which is distributed from the plan or annuity in a distribution to which section 428(d)(5) applies shall be treated as an amount not contributed."

SEC. 5. PENALTY FOR FAILURE TO PROVIDE REPORTS ON AMERICAN STOCK OWNERSHIP PLANS FOR THOSE OF MODEST INCOME.

Subchapter B of chapter 68 of the Internal Revenue Code of 1954 (relating to assessible penalties) is amended by adding after section 6690 the following new section:

"SEC. 6698. FAILURE TO PROVIDE REPORTS ON AMERICAN STOCK OWNERSHIP PLANS FOR THOSE OF MODEST INCOME.

"(a) IN GENERAL.—The person required by section 428(h) to file a report regarding an American stock ownership plan or an American stock ownership annuity at the time and in the manner required by section 428(h) shall pay a penalty of $10 for each failure unless it is shown that such failure is due to reasonable cause.

"(b) DEFICIENCY PROCEDURES NOT TO APPLY.—Subchapter B of chapter 63 (relating to deficiency procedures for income, estate, gift, and certain excise taxes) does not apply to the assessment or collection of any penalty imposed by subsection (a)."

SEC. 6. CONFORMING AMENDMENTS.

(a) The second sentence of section 46(a)(4) of the Internal Revenue Code of 1954 (relating to investment credit) and the second sentence of section 50A(a)(3) of such Code (relating to work incentive credit) are each amended by inserting after "certain retirement accounts)," the following: "section 428(d)(3)(A)(ii) (relating to additional tax on income from certain American stock ownership plans),".

(b) Subparagraph (A) of section 56(c) of such Code and subparagraph (A) of section 56(e)(1) of such Code (relating to minimum tax for tax preferences) are each amended by striking out section "531" and inserting in lieu thereof "428(d)(3)(A)(ii), 531".

(c) Subparagraph (B) of section 801(g)(1) of such Code (relating to contracts with reserves based on a segregated asset account) is amended by adding at the end thereof the following new sentence: "An American stock ownership annuity (as defined in section 428(b)) shall be deemed to meet the requirements of clause (ii)."

(d) Section 801(g)(7) of such Code is amended to read as follows:

"(7) Basis of assets held for qualified pension plan contracts and American stock ownership annuity.—In the case of contracts described in subparagraph (A), (B), (C), (D), or (E) of section 805(d)(1), or in section 428(b), the basis of each asset in a segregated asset account shall (in addition to all other adjustments to basis) be—

"(A) increased by the amount of any appreciation in value, and

"(B) decreased by the amount of any depreciation in value,

to the extent that such appreciation and depreciation are from time to time reflected in the increases or decreases in reserves or other items in paragraph (6) with respect to such contracts."

(e) The third sentence of section 901(a) of such Code (relating to foreign tax credit) is amended by inserting after "certain retirement accounts)," the following: "against the tax imposed for the taxable year under section 428(d)(3)(A)(ii) (relating to additional tax on income from certain American stock ownership plans),".

(f) Section 3401(a)(12) of such Code (relating to exemption from collection of income tax at source on certain wages) is amended by adding at the end thereof the following new subparagraph:

"(E) for a payment described in section 220(a) if, at the time of such payment, it is reasonable to believe that the employee will be entitled to a deduction under such section for such payment; or".

(g) Subsection (d) of section 6047 of such Code (relating to information relating to certain trusts and annuity and bond purchase plans) is amended to read as follows:

"(d) OTHER PROGRAMS.—

"(1) INDIVIDUAL RETIREMENT SAVINGS.—To the extent provided by regulations prescribed by the Secretary or his delegate, the provisions of this section apply with respect to any payment described in section 219(a) and to transactions of any trust described in section 408(a) or under an individual retirement annuity described in section 408(b).

"(2) AMERICAN STOCK OWNERSHIP PLANS FOR THOSE OF MODEST INCOME.—To the extent provided by regulations prescribed by the Secretary or his delegate, the provisions of this section apply with respect to any payment described in section 221(a) and to transactions of any plan described in section 428(a) or under an American stock ownership annuity described in section 428(b)."

(h) Section 4(b) of the Employee Retirement Income Security Act of 1973 is amended—

(1) by striking out "or" at the end of paragraph (4),

(2) by striking out the period at the end of paragraph (5) and by inserting in lieu thereof "; or", and

(3) by adding at the end thereof the following new paragraph:

"(6) such plan is American stock ownership plans for those of modest income (as defined in section 428(a) of the Internal Revenue Code of 1954) or an American stock ownership annuity (as defined in section 428(b) of such Code)."

SEC. 7. CLERICAL AMENDMENTS.

(a) The table of sections for part VII of subchapter B of chapter 1 of the Internal Revenue Code of 1954 is amended by striking out the item relating to section 220 and inserting in lieu thereof the following:

"Sec. 221. Contributions to American stock ownership plans for those of modest income.
"Sec. 222. Cross references."

(b) The table of parts for subchapter D of chapter 1 of such Code is amended by adding at the end thereof the following:

"PART III. AMERICAN STOCK OWNERSHIP PLANS FOR THOSE OF MODEST INCOME."

(c) The table of sections for chapter 43 of such Code is amended by adding at the end thereof the following new item:

"Sec. 4976. Tax on excess contributions to American stock ownership plans for those of modest income."

(d) The table of sections for subchapter B of chapter 68 is amended by inserting after the item relating to section 6697 the following new item:

"Sec. 6698. Failure to provide reports on American stock ownership plans for those of modest income."

SEC. 8. EFFECTIVE DATES.

(a) The amendments made by sections 1 through 3 shall take effect on July 1, 1977 and shall apply to taxable years beginning after December 31, 1976.

(b) The amendments made by section 4 through 7 shall take effect on July 1, 1977.

S. 737

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Energy Conservation Tax Incentives Act".

SEC. 2. AMENDMENT OF INTERNAL REVENUE CODE OF 1954.

Except as otherwise expressly provided, whenever in this Act an amendment or repeal is expressed in terms of an amendment to or repeal of, a section or other provision, the reference shall be considered to be made to a section or other provision of the Internal Revenue Code of 1954.

SEC. 3. INSULATION AND OTHER ENERGY-CONSERVING ALTERATION OF PRINCIPAL RESIDENCE.

(a) GENERAL RULE.—Subpart A of part IV of subchapter A of chapter 1 (relating to credits allowable) is amended by inserting immediately before section 45 the following new section:

"SEC. 44B INSULATION AND OTHER ENERGY-CONSERVING ALTERATION OF PRINCIPAL RESIDENCE.

"(a) GENERAL RULE.—In the case of an individual, there shall be allowed as a credit against the tax imposed by this chapter for the taxable year an amount equal to 30 percent of that portion of the qualified insulation and other energy-conserving component expenditures paid or incurred by the taxpayer during the taxable year with respect to any residence as does not exceed $750.

"(b) LIMITATIONS.—

"(1) APPLICATION WITH OTHER CREDITS.—In determining the credits allowed under—

"(A) section 33 (relating to foreign tax credit),

"(B) section 37 (relating to retirement income),

"(C) section 38 (relating to investment in certain depreciable property),

"(D) section 40 (relating to expenses of work incentive programs),

"(E) section 41 (relating to contributions to candidates for public office),

"(F) section 42 (relating to credit for personal exemptions),

"(G) section 44 (relating to purchase of new principal residence), and

"(H) section 44A (relating to expenses for household and dependent care services necessary for gainful employment),

the tax imposed by this chapter shall (before any other reductions except the reduction allowed under section 42) be reduced by the credit allowed by this section.

"(2) PRIOR EXPENDITURES TAKEN INTO ACCOUNT.—If the taxpayer made qualified insulation and other energy-conserving component expenditures with respect to any residence in any prior taxable year, then subsection (a) shall be applied with respect to such residence for the taxable year by reducing the $750 amount contained in such subsection by the amount of such prior expenditures allowed as a credit under this section for such prior taxable year.

"(3) VERIFICATION.—No credit shall be allowed under subsection (a) with respect to any qualified insulation and other energy-conserving component expenditures unless such expenditures are verified in such manner as the Secretary shall prescribe by regulations.

"(4) CERTAIN NEW EQUIPMENT.—No credit shall be allowed under subsection (a) for any amount paid or incurred for the installation of any entirely new heating system or for the installation of equipment designed to permit the use of alternate fuels.

"(5) SECTION NOT TO APPLY TO PROPERTY ACQUIRED WITH FEDERAL FUNDS.—This section does not apply to any property acquired by the taxpayer with amounts paid as a grant to the taxpayer by the United States (or any agency or instrumentality thereof), other than a grant made in the form of a loan or a loan guarantee.

"(c) DEFINITIONS AND SPECIAL RULES.—For purposes of this section—

"(1) QUALIFIED INSULATION AND OTHER

ENERGY-CONSERVING COMPONENT EXPENDITURES.—The term 'qualified insulation and other energy-conserving component expenditures' means any amount paid or incurred by an individual for insulation and other energy-conserving components (including amounts paid or incurred for the original installation of such insulation but not including amounts paid or incurred for insulation and other energy-conserving components in connection with any reconstruction of a dwelling unit) installed after December 31, 1976, and before January 1, 1980, in a dwelling unit located in the United States which is—

"(A) used by the taxpayer as his residence, and

"(B) in existence on January 1, 1977.

"(2) INSULATION.—The term 'insulation' means any insulation (including the insulation of furnaces or boilers not so equipped, and the ducts or steam and hot water piping extending therefrom), storm (or thermal) window or door, or any other similar item—

"(A) which is specifically and primarily designed to reduce, when installed in or on a building, the heat loss or gain of such building,

"(B) the original use of which commences with the taxpayer,

"(C) which has a useful life to the taxpayer of at least 3 years, and

"(D) which meets the criteria and standards for energy conserving improvements prescribed by the Secretary of Housing and Urban Development under section 2 of the National Housing Act, or such similar criteria and standards as the Secretary may prescribe.

"(3) OTHER ENERGY-CONSERVING COMPONENT.—The term 'other energy-conserving component' means any—

"(A) retention head burner or comparable new burner at a reduced firing rate or such firing rate as is necessary to achieve a reduction in the amount of fuel consumed as a result of increased combustion efficiency,

"(B) devices electronically or mechanically operated to provide prompt and effective ignition,

which meets such performance and safety standards, including having a useful life of at least three years, and which will materially increase the efficiency of operation of the unit, thereby conserving fuel, as the Secretary may prescribe by regulations after consultation with the Administrator of the Federal Energy Administration and the Secretary of Housing and Urban Development, and the original use of which commences with the taxpayer.

"(4) HEATING SYSTEM.—The term 'heating system' means the entire assembly of items, fixtures, equipment, or materials which is designed, when installed in or on a building, to provide the heating for such building, to provide for the heating of the water used within such building, and to provide for the automatic operation and control of such hardware. Such term includes, but is not limited to, all necessary fittings and related installations which are a part of such assembly.

"(5) JOINT OCCUPANCY.—In the case of any dwelling unit which is jointly occupied and is used during any calendar year as a residence, by two or more individuals—

"(A) the amount of the credit allowable under subsection (a) (after applying subsection (b)(2)) with respect to any qualified insulation and other energy-conserving component expenditures paid or incurred during such calendar year by any of such individuals with respect to such dwelling unit shall be determined by treating all such individuals as one taxpayer whose taxable year is such calendar year; and

"(B) each of such individuals shall be allowed a credit under subsection (a) for the taxable year in which such calendar year ends (subject to the limitation of subsection (b)(1)) in an amount which bears the same ratio to the amount determined under subparagraph (A) as the amount paid or incurred by such individual during such calendar year for such expenditures bears to the aggregate of the amounts paid by all of such individuals during such calendar year for such expenditures.

"(6) TENANT STOCKHOLDER IN COOPERATIVE HOUSING CORPORATION.—In the case of an individual who holds stock as a tenant stockholder (as defined in section 216) in a cooperative housing corporation (as defined in such section), such individual—

"(A) shall be treated as owning the dwelling unit which he is entitled to occupy as such stockholder; and

"(B) shall be treated as having paid his tenant stockholder's proportionate share (as defined in section 216(b)(3)) of any qualified insulation and other energy-conserving component expenditures paid or incurred by such corporation.

"(d) REDUCTION OF BASIS.—The basis of any property shall not be increased by the amount of any qualified insulation and other energy-conserving component expenditures made with respect to such property to the extent of the amount of any credit allowed under this section with respect to such expenditures.

"(e) CARRYOVER OF UNUSED CREDIT.—If the amount of the credit determined under this section for any taxable year (including amounts carried over to that year under this subsection) exceeds the liability of the taxpayer for tax under this chapter for that taxable year, the excess shall be carried over to the next taxable year.

"(f) TERMINATION.—This section shall not apply to any amount paid or incurred after December 31, 1979, except in the case of amounts paid after such date pursuant to a binding contract entered into before January 1, 1980.".

(b) TECHNICAL AND CONFORMING AMENDMENTS.—

(1) The table of sections for such subpart A is amended by inserting immediately before the item relating to section 45 the following new item:

"Sec. 44B. Insulation and other energy-conserving alteration of principal residence.".

(2) Subsection (a) of section 1016 (relating to adjustments to basis) is amended by striking out the period at the end of paragraph (20) and inserting in lieu thereof a semicolon and by inserting after paragraph (20) the following new paragraph:

"(21) to the extent provided in section 44B (d), in the case of property with respect to which a credit has been allowed under section 44B.".

(3) Section 6096(b) (relating to designation of income tax payment to Presidential Election Campaign Fund) is amended by striking out "and 44A" and inserting in lieu thereof "44A, and 44B".

TWO MILLION JOBS THAT LAST—A PROGRAM FOR PERMANENT JOBS AND INVESTMENT FOR AMERICANS

I. SUMMARY

Highlights:

1. Permanent personal tax reductions effective April 1, 1977, totaling $17.3 billion in FY 77 and FY 78. The savings from these tax cuts would approximate $180–$210 per year for the family of four in the $15,000–$20,000 adjusted gross income brackets. Lesser amounts would go to higher income brackets.

2. A targeted youth employment and training program totaling $3.1 billion in FY 77 and FY 78.

3. A targeted employment tax credit encouraging the private sector to hire persons unemployed over 26 weeks; $1.00 credit per hour for the first six months, $0.50 per hour for the second six months; estimated $2.3 billion total revenue cost in FY 77 and FY 78.

4. Longer term investment incentives through (a) permanent tax reductions emphasizing small businesses, and (b) several programs designed to encourage smaller investors; total $2.8 billion in FY 77 and FY 78.

5. A housing rehabilitation program through GNMA; $200 million outlay in FY 78.

6. An energy conservation incentive through 30% tax credit on the first $750 of residential insulation investment; $500 million total in FY 77 and FY 78.

7. The job impact of the package is to create 1.83 to 2.3 million new jobs by the end of 1978, including 450,000 training and work experience positions.

8. For a total gross cost of $26.2 billion over fiscal years 1977 and 1978 (the net cost of $21.1 billion), the unemployment rate is reduced to an estimated 5.5% by the end of calendar 1978 from the current level of 7.9%. Moreover, the longer term investment components in the package should insure a sustained recovery with additional jobs created in 1979 and beyond to accommodate the expected growth in the labor force.

Economic analysis:

There is little doubt that the economy is continuing a broadly based recovery. Moderate growth appears to be assured over the next several quarters and additional economic stimulus is not required in the near future to avoid a recession. However, there is evidence that an economic package to sustain the recovery is probably needed in order to assure significant and continued improvement in the unemployment rate and to reinforce consumer and business expectations which have been formed on the presumption that a stimulus package was forthcoming. Moreover, the impact of the exceptionally cold winter may require additional adjustments for humanitarian or economic reasons, but that question will be approached apart from this package. Since Congressional action on some type of stimulus package is likely, considerable care must be exercised regarding the size and the components of that package. Too much stimulus will likely cause another inflation cycle and the wrong components of the package will merely be an inefficient way of adding to the deficit and adding to inflation without a lasting improvement in the unemployment picture.

A successful stimulus package must recognize that the current unemployment problem consists of several component parts, each of which requires a different solution. Of the 7.9 percent current unemployment level, only about 1.5 to 2.0 percentage points is considered cyclical unemployment; that is, unemployment which might improve with demand generated by a broad stimulus program. As much as 3.0 percentage points of the current unemployment picture is structural unemployment; that is, unemployment caused by labor force skills and behavior that are not appropriate for available employment opportunities, or those that flow naturally from an improving economy. The solution to this problem requires sharply focused programs. Finally, there is a longer term need for capital formation in order to provide expanding employment opportunities at rising real wages. Unless that problem is addressed at this time, inflationary pressures caused by shortages, decreased output per worker and lack of additional employment opportunities appear likely in the future. To avoid these future problems, it is recommended that the Federal Government formally declare a national policy in support

of adequate capital investment in the private sector.

Given the above analysis, the following criteria are essential to any economic package:

(1) In attacking unemployment caused by lack of demand, it must be recognized that temporary solutions have had very limited success in the past; thus, permanent, confidence-building solutions must be used now and this means a permanent tax cut, not some form of temporary gimmick.

(2) The package must include programs which are focused on the special unemployment problems of youth and minorities (50% of the present unemployment consists of persons aged 16–24).

(3) The package must provide for the longer term economic growth in order to sustain the recovery beyond the immediate 1977–1978 period. This requires programs which encourage investment for creation of future jobs.

(4) The package must utilize the private sector, rather than the government sector, to the fullest extent possible in the creation of jobs and in training and work experience programs.

(5) The package must attempt to minimize the inflationary impact of its components.

The Republican package proposed here was designed with these criteria in mind. Starting with a goal of reducing unemployment to the rate of approximately 5½ percent by the end of calendar year 1978, Table I identifies the number of additional jobs needed to be created. With about a 2 percent growth in the labor force and the Congressional Budget Office current estimates of projected economic growth (3½–5%), about 0.9 percentage points of unemployment will be eliminated by normal economic growth alone using the midpoint of the CBO range. This still leaves an additional 1.5 million jobs which must be created to reduce unemployment to the goal of 5½ percent. Table II provides details of the proposed economic package, including costs and job creation estimates for each component. Table III compares the package proposed here with the Carter Administration package. In summary, for less cost ($26.2 billion gross cost here versus $31.2 billion for the Carter package), more jobs are created by this proposed package (1.83–2.3 million versus a Carter estimate of 1.2–1.5 million). This difference is primarily due to the fact that the Carter temporary rebates create only temporary demand, and thus only have temporary job creation impacts.

That the tax cut should be permanent rather than a temporary rebate is very important. Background studies have shown that temporary rebates are primarily used by consumers to reduce debt or add to savings and do not give sufficient confidence to consumers that they will incur installment debts. The January 27, 1977 Harris Poll confirms these studies as 62% of those surveyed said they would "put the money in the bank" or "pay off debts". Only 21% said they would "buy things they need." Thus, a temporary rebate would not appear to provide a stimulus to sales of major durables or non-durable purchases, an important objective of any stimulus program.

Regarding inflation, the Republican package can be expected to have a more favorable impact on inflation than the Carter proposal. The inflation pressures associated with employment increases are moderated by the focus on structural employment, the reduction of labor costs from the employment tax credit, and the investment incentives. Moreover, the temporary rebates of the Carter package are likely to create a surge in the money supply or a sharp increase in interest rates.

In summary, rather than to solve all economic problems through macroeconomic stimulation and publicly initiated projects of low productivity, the package described here attempts to address specific problems with specific solutions.

TABLE I.—EMPLOYMENT PROJECTIONS

	Average for—			
	Year 1977	Quarter 1977: 4	Year 1978	Quarter 1978: 4
Labor force (millions)		97.8		100.0
Growth rate (without additional stimulus) [1] (percent)	3.5–5.0		3.5–5.5	
Unemployment rate (without additional stimulus) [1] (percent)		7.1–7.8		6.6–7.6
Number of unemployed (millions)		6.9–.76		6.6–7.6
Number of employed (millions)		90.2–90.9		92.4–93.4
Assume approximate midpoint of above growth range (without additional stimulus) (percent)	4.5		4.5	
Unemployment rate (percent)		7.3		7.0
Number of unemployed (millions)		7.2		7.0
Number employed (millions)		90.6		93.0
Possible policy objective: Unemployment rate (percent)				5.5
Number of unemployed (millions)				5.5
Number employed (millions) (if reach unemployment objective)				94.5
Number of additional jobs needed (millions)				1.5
Proposed stimulus package: Jobs created (millions)				[2] 1.83–2.3

[1] According to CBO report, "The Disappointing Recovery," Jan. 11, 1977.
[2] This total includes 450,000 training and work experience positions created by the package.

TABLE II.—DETAILS OF THE REPUBLICAN ECONOMIC PACKAGE

[Dollar amounts in billions]

	Fiscal year 1977	Fiscal year 1978	2-yr cumulative cost	Jobs by end of calendar 1978 (thousand jobs)
1. Permanent personal tax reduction (affects all taxpayers, emphasis for low and middle income, effective Apr. 1, 1977)	$4.5	$12.8	$17.3	450–600
2. Structural unemployment policies:				
(a) Youth employment and training, new CETA title VII	1.0	2.1	3.1	[1] 700–800
(b) Targeted employment tax credit (persons unemployed 26 weeks or longer)	.4	1.9	2.3	450–550
3. Policies to stimulate long-term investment				[2] 100–200
(a) Permanent corporate tax reduction for small business (cut rate to 18 percent for 1st $100,000 profit; effective Jan. 1, 1978)	0	2.1	2.1	
(b) Increase in dividend exclusion to $600 (helps stimulate equity investment, effective Jan. 1, 1978)		.2	.2	
(c) Interest income exclusion ($100 exclusion, helps smaller savers, effective Jan. 1, 1978)		.2	.2	
(d) Accelerated depreciation for investment in high unemployment areas (retroactive to Jan 1, 1977)		.2	.2	
(e) Broadened stock ownership plan to encourage common stock ownership (effective Jan. 1, 1978)		.1	.1	
4. Program to stimulate housing rehabilitation (budget authority, $1,000,000,000 in fiscal year 1977, $2,000,000,000 in fiscal year 1978; but outlays small)		.2	.2	80–100
5. Energy conservation: Home insulation tax credit	.2	.3	.5	50
Gross cost	6.1	20.1	26.2 [3]	1,830–2,300
Less: Expenditures saved due to higher employment	−.8	−4.3	−5.1	
Net cost	5.3	15.8	21.1	

[1] Includes 450,000 training and work experience positions created.
[2] For 3(a), 3(b), 3(c), 3(d), and 3(e).
[3] Total jobs.

Note: The net cost figures only reflect direct Federal expenditures saved from higher employment (unemployment compensation, food stamps, AFDC, and medicaid) and do not reflect tax revenue increases generated by higher employment.

TABLE III.—COMPARISON OF PACKAGES

	Republican	Carter	Republican		Carter	
			By end of 1977	Cumulative total by end of 1978	By end of 1977	Cumulative total by end of 1978
2-year costs (billions of dollars):						
Gross cost	26.2	31.2				
Less expenditures saved due to higher employment	−5.1	−4.2				
Job impact (thousands):	21.1	27.0				
Total jobs created			550–750	1,830–2,300	940–1,040	1,215–1,515
Newly created training and work experience positions included in jobs totals			(250)	(450)	(200)	(350)

Note: The jobs numbers included in the Carter totals are those claimed by the administration. There is some doubt that these numbers will flow from the Carter package.

II. INTRODUCTION

There is growing concern that traditional economic analysis and policies are not sufficient to deal with problems of lagging growth in the current environment of high unemployment, exceptionally high budget deficits, and persistent inflation.

The building blocks of conventional macro analysis include general relationships ("rules of thumb") between—

(a) Total employment, total labor force and the overall unemployment rate;

(b) The unemployment rate and the real growth rate of the economy relative to its potential;

(c) The amount of economic stimulus applied through fiscal policy and the resultant real economic growth of the economy;

(d) The impact of economic stimulus on the rate of inflation, both in the short-run and the long-run; and

(e) Changes in federal expenditures, revenues and budget deficits induced by normal economic growth and fiscal policy initiatives.

Although there are other cause and effect relationships that could be isolated and discussed, there are perhaps the most commonly estimated and manipulated "rules of thumb". Using these historic relationships, macroeconomics can make rough projections of economic activity, unemployment rates, and federal finances under a variety of alternative scenarios. Table IV on the next page shows the unemployment rates and Federal deficits which would occur if historic rules are extrapolated at four, five and six percent real GNP growth rates.

Note that by the end of calendar year 1978 even the "six percent rate of real growth" scenario leaves high and unacceptable rates of unemployment and a very large Federal deficit. These projections are in the middle of projections made by CBO nad others, and are consistent with recent commercial forecasts (DRI, Chase and Wharton).

Both unemployment and the prolonged deficit would invoke real sociological and economic displacement. Unemployment is always unacceptable. The growing size of the Federal debt (over $701 billion now) must be continually refinanced, will eventually compete for capital with a recovering private sector, and could send interest rates soaring. The possibility of renewed rapid inflation is a risk confronting and inhibiting consumer, business, and government policy decisions. For these and other reasons it is essential at this time to design government policies which address all of these factors weighing heavily on present and future economic conditions.

In particular, this analysis suggests that the magnitude of fiscal stimulus, measured by the amount of tax reduction or of expenditure increase, is not a reliable guide to the effects on real growth and the unemployment rate. There exist focused economic policy options which will improve upon the inflation deficit, unemployment, and growth tradeoffs associated with economic stimulus.

TABLE IV.—UNEMPLOYMENT RATES AND FEDERAL DEFICIT UNDER ALTERNATIVE REAL GNP GROWTH RATES

	Calendar year quarter								
	1976:4 [1]	1977:1	1977:2	1977:3	1977:4	1978:1	1978:2	1978:3	1978:4
Potential real GNP [2] (billions)	$1,438.6	$1,451.1	$1,463.6	$1,476.2	$3,489.0	$1,501.9	$1,514.8	$1,527.9	$1,541.1
Projected real GNP with alternative real growth rates (billions):									
4 percent real growth	1,281.5	1,294.1	1,306.9	1,319.8	1,332.8	1,345.9	1,359.2	1,372.5	1,386.1
5 percent real growth	1,281.5	1,297.2	1,313.1	1,329.3	1,345.6	1,362.1	1,378.8	1,395.7	1,412.9
6 percent real growth	1,281.5	1,300.3	1,319.4	1,338.7	1,358.4	1,378.3	1,398.5	1,419.0	1,439.8
Projected unemployment rate with alternative real growth rates [3] (percent):									
4 percent real growth	7.9	7.88	7.84	7.80	7.75	7.71	7.67	7.63	7.58
5 percent real growth	7.9	7.80	7.67	7.54	7.41	7.29	7.16	7.03	6.91
6 percent real growth	7.9	7.71	7.50	7.29	7.08	6.87	6.66	6.46	6.25

[1] Actual value.
[2] Reflects 3.5 percent growth rate of potential GNP as specified in Economic Report of the President, January 1977.
[3] Extrapolated from estimation of "Okun's Law" (32.03 (PGNP—GNP/GNP)+4=U).
[4] For each 1-percent unemployment above 4½percent, expenditures for unemployment compensation, food stamps and so on increases about $3,500,000,000 and revenues are reduced about $13,200,000,000. This is added to the calculated full-employment surplus.

The characteristic of the present and prospective unemployment and economic growth problems are described and analyzed in Section II. It is concluded that the economic policies adopted to attack those economic problems will produce growth, employment, and inflation results superior to traditional or temporary stimulus policies so long as those policies satisfy the following criteria:

(1) In attacking unemployment caused by lack of demand, it must be recognized that temporary solutions have had very limited success in the past; thus, permanent, confidence-building solutions must be used now and this means a permanent tax cut, not some form of temporary gimmick.

(2) The package must include programs which are focused on the special unemployment problems of youth and minorities (50% of the present unemployment consists of persons aged 16–24).

(3) The package must provide for the longer term economic growth in order to sustain the recovery beyond the immediate 1977–1978 period. This requires programs which encourage investment for creation of future jobs.

(4) The package must utilize the private sector, rather than the government sector, to the fullest extent possible in the creation of jobs and in training and work experience programs.

(5) The package must attempt to minimize the inflationary impact of its components.

An economic package which satisfies these criteria is described in general, including specific legislative proposals, in Section IV.

The proposed stimulus package will be viewed in three parts:

1. General fiscal stimulus designed to produce permanently higher levels and growth of consumer and related business spending in order to reduce cyclical unemployment. A permanent reduction in personal income taxes focused on the middle and lower income brackets is recommended as most effective.

2. Targeted employment programs to reduce structural unemployment. Programs are recommended which utilize the existing training and employment structure to focus more aggressively on unemployed youth and which use the unique allocation ability of the private sector to assist labor market entrants and others experiencing extended job search.

3. Long-term employment and growth stimulus through policies encouraging capital formation. Policies are recommended to encourage investment and expansion primarily by small competitive businesses and direct investment in private enterprise by savers. Assistance is also recommended for the housing industry through a housing rehabilitation program.

4. Policies to aid the housing and construction industry rapidly and, at the same time upgrade the quality of the housing stock. An increase in mortgage purchases of rehabilitated housing units is recommended as most effective.

5. Policies to conserve energy and reduce fuel waste. A tax incentive for home insulation is recommended.

III. THE NATURE OF UNEMPLOYMENT, INFLATION, AND LONG-RANGE GROWTH

As actual GNP falls short of its potential, persons (and equipment) become unemployed. Or, conversely, as persons become unemployed, the rate of GNP growth falls from its potential. The different wordings are not insignificant. If persons become unemployed because GNP fails to grow adequately, the problem may be termed cyclical unemploy-

ment. That is, the problem is deficient overall demand. If, on the other hand, GNP falls because persons cannot be adequately employed, the problem is structural unemployment. Not only are the causes different, but also the cures. The current 7.9 percent unemployment rate is partly cyclical in nature (roughly 1½–2 percentage points), and partly structural (on the order of 3 percent). The remainder is short-term unemployment which occurs as persons move into the labor force or switch jobs (frictional unemployment).*

Economic growth affects these unemployment classifications differently. Historically since 1966, a 3% closing of the gap between potential and actual real GNP has been accompanied by a 1 percentage point decreasing rate of unemployment. This relationship was held until the unemployment rate reaches 4%, but there is now evidence that the 4% level to which this relationship has been accurate may currently be too low by as much as 1½ percentage points.

In addition, the rule (Okun's Law) is not consistent among groups within the economy. Table V shows the historic responsiveness of sectors of the labor force to changes in aggregate demand, and historic levels of unemployment for various sectors of the labor force are shown in Table VI. These results clearly indicate that an acceleration of economic growth alone is not sufficient to reduce the unemployment rate to desirable levels among some labor force segments.

*The point at which a person "frictionally" unemployed can be classified as "structurally" unemployed because of the duration of job search or low employment prospects cannot be defined with precision.

TABLE V.—RESPONSIVENESS OF LABOR FORCE SEGMENTS TO CHANGES IN GNP GAP[1]

[In percent]

Labor force segment	Reduction in gap required to reduce segment's unemployment rate 1 percent	Segment's unemployment rate at which changes in aggregate demand no longer reduce their unemployment rate
Married males	2.20	1.7
Females	2.94	5.0
Nonwhite	4.80	7.2
Teenage	5.56	12.6
Tennage males	6.02	12.0
Teenage females	4.54	14.1
Teenage nonwhite	10.10	25.3

[1] Data based on the period 1966–76.

TABLE VI.—SELECTED QUARTERLY UNEMPLOYMENT RATES (PERCENT)

	75.1	75.2	75.3	75.4	76.1	76.2	76.3	76.4		7.51	75.2	7.53	75.4	76.1	76.2	76.3	76.4

Increased Labor Force Participation

The proportion of the population eligible for civilian employment which is either employed or seeking employment is termed the participation rate. Over the past decade the labor force participation rate of the US civilian population has increased from 57.8 percent to 60.8 percent. This means that just to keep the unemployment rate constant, job opportunities must increase faster than the rate of population growth by the amount of increased participation. For example, if adjusted to reflect the labor force participation rate of 1966, the unemployment rate in 1976 would be 3.1 percent, not the present 7.9 percent. This calculation is shown on Table VII.

TABLE VII.—EMPLOYMENT STATUS OF 16 YR AND OVER POPULATION UNDER DIFFERENT LABOR FORCE PARTICIPATION RATES

	Noninstitutional population (M)	Armed Forces (M)	Labor force participation rate (LFPR) (percent)	Employed (M)	Unemployment rate (percent)	Unemployment rate at 1966 (LFPR) (percent)
1966	131.2	3.1	57.8	72.9	3.8	3.8
1970	140.2	3.2	59.0	78.6	4.9	3.0
1973	148.3	2.3	59.8	84.4	4.9	1.5
1974	150.8	2.2	60.3	85.9	5.6	1.4
1975	153.4	2.2	60.4	84.8	8.4	4.4
1976	156.8	2.1	60.8	87.8	7.9	3.1

Note: Adjusted to reflect labor force participation as recently as 1973, the current unemployment rate would be 6.3 percent rather than 7.9 percent.

Total employment in the US economy has increased from its recession low of 84.2 million employed workers in March, 1975, to 88.4 million in December, 1976. This 4.2 million increase is historically high for any postwar recovery, but has been largely counteracted by the 3.9 million increase in participants, from 92.0 million to 95.9 million. If the labor force were to continue to grow at the same 3 percent annual rate over the next year, by traditional calculation, a 5.0 percent increase in real GNP would be required just to absorb new entrants; a 6.1 percent real growth rate would be required to reduce the rate of unemployment 1 percentage point.[1]

A look at participation rates is not meant to dispel the worry of unemployment but rather to gain insight into its composition and possible remedies. Though the adult male participation rate, traditionally the most easily employed segment, has declined over a 10-year period, the decline has been more than overcome by increased adult female and teenage participation. Both the female and teenage participation rates have increased nearly 7 percentage points over the last decade. Youth unemployment (ages 16–19) accounts for nearly 25 percent of the present 7.9 percent unemployment rate.

Between now and 1985, the teenage component of the population will fall from 4.9 percent to 3.6 percent of the population. The nonwhite teenage population will crest seven years behind the 1974 crest of the white teenage population, however. The division between male and female will remain essentially static with female participation expected to continue its increase. Thus, if demographics were the entire story, there is only slight prospect for immediate improvement in the overall unemployment rate.

Historic participation rates of various labor market segments are shown below.

[1] Calculations from testimony of Julius Shiskin, Commissioner of Labor Statistics before the Joint Economic Committee of Congress, January 12, 1977. In analyzing these labor force trends, it is difficult to account for the number of non-participants who are *discouraged* from seeking work by poor economic indicators, or those additional participants *encouraged* to seek work because of the falling real family incomes caused by past inflation or fears of future inflation.

TABLE VIII.—AVERAGE ANNUAL PARTICIPATION RATES OF VARIOUS LABOR FORCE SEGMENTS

[Percent of eligible civilian population]

	All	Teenage	Adult female	Adult male	Nonwhite
1966	57.8	48.2	40.2	83.6	62.9
1967	58.6	48.4	41.1	83.5	62.8
1968	59.0	48.4	41.5	83.2	62.2
1969	59.1	49.1	42.6	82.8	62.1
1970	59.0	50.0	43.3	82.6	61.8
1971	59.4	50.0	43.4	82.1	60.9
1972	59.8	52.9	43.6	81.6	60.0
1973	59.8	53.8	44.3	81.3	60.3
1974	60.3	54.9	45.2	81.0	60.0
1975	60.4	54.2	46.0	80.3	59.1
1976	60.8	55.0	46.9	79.7	59.4

Unemployment and Inflation

The relationship between the rate of inflation and the unemployment rate has shifted dramatically since 1970 and indicates that any given unemployment rate is associated with a much higher rate of inflation than in the pre-1970 period. The shift may be attributed to cost-push inflation, new structural immobilities in the product and labor markets, or forces external to the U.S. economy that have not been experienced before. Several hypotheses have been set forth, among them:

1. Labor force participation is much more responsive now than in the past to changes in economic activity. Expectations of continued inflation exacerbate this response.

2. Recent experience with high inflation rates has increased the sensitivity of consumers and businesses to actual or anticipated inflation. In addition, consumers have reacted to inflation by decreasing, rather than accelerating, spending plans. In addition to any loss in real purchasing power, personal savings has increased to provide for future needs and to avoid accumulation of liabilities that may be difficult to service in the future. Consequently, increased inflation has brought on decreased real purchasing and production along with increased unemployment.

3. Government regulation of private industry may push up prices at every level of unemployment. Regulation has two inflationary effects—

(a) increased costs for market participants; and

(b) reduced competition by shielding market participants from competitive measures.

Some forms of regulation may be desirable for other reasons but never is it costless. For example, Murray Weidenbaum discusses such costs in his 1975 AEI publication, Government Mandated Price Increases:

"As would be expected, the ever more complicated safety system—as well as federally mandated pollution controls—are increasing the price of motor vehicles. . . . for the typical new 1974 passenger automobile, the estimated cost of the successive changes required in the 1968–74 period to meet federal standards. According to these data, the federally mandated costs average $320 per car. With new car purchases totalling about 9 million for 1974, American motorists thus paid approximately $3 billion extra for the governmentally imposed requirements."

Other Federal regulations have been cited. Among these are OSHA regulations (Weidenbaum notes a 26 percent increase in compliance cost between 1972 and 1973), regulation of transport routes, government procurement practices and excessive patent protection.

4. Low investment in productive capital has restricted economic growth which, in the face of growing consumer income, adds to inflationary pressures. At least two reasons for lower investment might be suggested:

(a) Much investment has been channeled into mandated environmental and safety devices which, though no doubt desirable, have substantially reduced investment funds available to produce those products measured in GNP accounts.

(b) There has been a long-term general decline in before tax profits as a percentage of GNP—averaging 10.6 percent of GNP in 1960, 11.1 percent in 1966, 7.8 percent in 1971 and 8.6 percent in 1976. The same general trend for after tax profits may be noted as well. According to the September, 1974 Morgan Guarantee Survey, the after tax rate of return on corporate capital adjusted for underdepreciation has declined steadily from 10.0 percent to 4.8 percent in 1974. This would be consistent with continued growth only if risk factors were simultaneously reduced. In fact, however, corporate risk has apparently increased in recent years with additional regulatory restrictions, potential litigation, enormous sums of capital required, and energy and other international uncertainties.

Paul McCracken testifying before the U.S. Senate Committee on the Budget, January 11, 1977, noted that corporate profit taxes adjusted for underdepreciation would be 54 percent of corporate income in 1976 contrasted with 41 percent a decade ago. Likewise, he noted retained earnings in 1976 will be 60 percent below those of 1966 compared to a 40 percent increase in real compensation of employees. Decreasing rates of return to capital and falling ability of firms to finance capital internally seriously impair prospects for future US economic growth, employment, and stable prices.

Many have suggested that unemployment and excess measured capacity in the US economy will prevent a strong dose of fiscal stimulus from having inflationary consequences. Revised Federal Reserve Board statistics placed third quarter capacity utilization at 80.9 percent of capacity (using 1967 as the benchmark year for output). The high post-war capacity utilization rate, however, was 91.6 percent in the second quarter of 1966, and it has been below the current level in 37 quarters since 1948. Of these periods, the 9 most recent quarters show sizeable increases in the price level. Because many other factors are involved, and because of recent behavior patterns, it would be hazardous to assume that measures of excess capacity any longer fully insulate the economy from inflationary pressures and assure dramatic employment gains from fiscal stimulus.

IV. POLICIES TO COMBAT CYCLICAL UNEMPLOYMENT

Economic recovery since the 1975 second quarter trough has been characterized by an initial inventory liquidation of historic proportions and a gradual rebuilding to normal levels. The consumer sector suffered from lack of demand for both durable and nondurable goods. The initial drop in consumer durable purchases was so great that even though the rate of increase of durable purchases has matched previous recoveries and is expected to remain strong, the overall level is still low. Consumer spending on nondurables is forecast to remain sluggish for the foreseeable future. Business spending for plant and equipment has been extremely low throughout the recovery and although corporate financial structure has greatly improved, investment shows few signs of regaining strength soon.

Permanent individual income tax cut

To provide a strong and lasting stimulus to the consumer sector, any stimulus package should include a permanent tax rate reduction directed primarily toward low and middle income individuals. The higher realized and anticipated utilization rates of existing production facilities will at the same time provide the kind of stimulus to investment in plant and equipment that is needed at the present time. The permanent nature of the tax cut is important. Many studies have indicated that potential consumers require the security of the permanent reduction to incorporate their new purchasing power into their spending stream. These same studies indicate that temporary reductions—or rebates—are likely to be used largely to reduce debt or will be put into savings (note the Harris opinion survey, January 27, 1977, among other studies). A tax rebate would thus contribute a relatively small and short-lived stimulus. Only a tax cut of a permanent nature (for example, a rate reduction or increased personal tax credit) would provide the strong and steady support for private spending that is essential for continued growth.

If fiscal policy were to duplicate the size of the 1964 tax cut, which some economists (though not all) view as a successful application of stimulus, the magnitude would be 2 percent of GNP, or about $35 billion. There are, however, at least three arguments which mitigate against a cut of that magnitude:

1. A portion of the 1964 tax cut was called for by the increasing drag upon after-tax income as inflation forced consumers into progressively higher marginal tax brackets. There had been no tax reduction for the preceding seven years before 1964; however, in the current situation, the 1975 tax cut and its recent extension has, to some extent, lessened but not totally obviated this need. While the entire tax cut provides economic stimulus relative to current policy projections, at least $6 billion of tax reduction can be viewed as necessary to offset the tax-increasing effects of inflation since the 1975 tax cut.

2. The composition of the industrial economy and labor force has changed radically since a decade ago, as has been illustrated earlier. Industry is more service oriented and requires more skilled labor. Also, a much larger proportion of current unemployment is structural in nature. Targeted job policies would be a much more effective approach to this problem than exclusive use of aggregate demand stimulus and would entail less risk of inflation aggregated by labor and product shortages.

3. Due to the extraordinary rates of inflation experienced in recent years, producers and consumers may be more sensitive to inflation, and, therefore, price decisions in the economy may be very sensitive to demand-stimulus policies.

An annualized $12–$13 billion tax reduction of a permanent nature would be sufficient to reduce cyclical unemployment problems and a reduction in rates for tax brackets of $18,000 adjusted gross income and below is recommended. This reduction is directed toward lower adjusted gross income brackets because taxpayers in these brackets tend to spend a greater average share of their income than relatively higher AGI classes. By adjusting all brackets $18,000 or below, some tax relief is provided to all taxpayers, but the maximum benefit goes to the 60 percent of all taxpayers who are in the tax brackets of $18,000 and under. Total personal income tax collections are reduced 7½ percent with the reduction being 14 percent of the tax liability for those individuals in adjusted gross income brackets of $18,000 or less. These brackets receive nearly 80 percent of the tax relief.

The tax liability savings for the various adjusted gross income classes is shown on Table IX.

TAXABLE IX.—EXAMPLES OF PERSONAL INCOME TAX RELIEF

JOINT RETURN, FAMILY OF 4

Taxable income [1]	Adjusted gross income	Tax liability [2]		Savings
		Current	Proposed	
$5,000	$10,100	$670	$490	$180
$10,000	15,500	1,640	1,430	210
$15,000	20,800	2,830	2,650	180
$20,000	25,800	4,200	4,110	90
$30,000	35,800	7,700	7,650	50
$50,000	55,800	16,880	16,830	50

PERCENTAGE DISTRIBUTION OF TOTAL TAX REDUCTION BY ADJUSTED GROSS INCOME CLASS [3]

	Percent
0 to $5,000	4.8
$5,000 to $10,000	24.3
$10,000 to $15,000	29.1
$15,000 to $20,000	23.6
$20,000 to $30,000	15.2
$30,000 to $50,000	2.1
$50,000 to $100,000	.5
Over $100,000	.1

V. TARGETED PROGRAMS TO COMBAT STRUCTURAL UNEMPLOYMENT

This paper has made the case that a considerable proportion of unemployment at the present time is structural in nature, confined in many cases to labor force subsegments, and not totally susceptible to programs aimed at restimulating aggregate demand. For this reason, it is imperative that any stimulus package contain major elements directed toward these structural elements.

A. *Youth Unemployment*

As the 3.6 million unemployed youth ages 16 to 24 (including 1.8 million under age 20) make up a disproportionate share of the unemployed (nearly 50%), a specific program which focuses on youth is essential to addressing the structural unemployment problem. A newly introduced CETA Title VII, The

Youth Employment Act (YEA), which provides for comprehensive manpower services for youth, including work experience, on-the-job training, classroom training and public service employment is recommended for this stimulus package. YEA makes efficient use of the available CETA structure and provides flexibility to allow prime sponsors to structure the program to meet the needs of 14–24 year old youths in individual localities. The existing CETA Title I mechanisms, including the comprehensive planning process, the conditions for receipt of assistance, manpower councils at the State and local levels, and other administrative procedures, are incorporated by reference eliminating the need for a new bureaucratic agency. A bonus is provided for prime sponsors who engage in cooperative projects with local or State education agencies. YEA provides for private sector involvement as well as public sector employment. Authorization is $1.0 billion in FY 77 and $2.8 billion in FY 78 ($0.7 billion of the FY 78 total is attributable to the CETA Title III Summer Youth Program which is combined with activities of the new title, leaving a net increase of $2.1 billion for youth employment).

The Comprehensive Employment and Training Act (CETA) is written in seven titles directed toward both cyclical and structural unemployment problems. The titles direct funds to State and local governments for funding jobs for the unemployed, the long-term unemployed, the disadvantaged, older Americans, American Indians, Summer Youth Programs and job training. For FY 76, the outlays and actual jobs funded are shown in the tables prepared by CBO (Tables 6 and 7). For FY 77, $3.3 billion in BA and $2.3 billion in outlays has been appropriated for Title I–V. Though a supplemental is required for funding Title VI, room is available in the budget to provide 500,000 Title VI jobs at an average cost of $8,200 per job—$3.2 billion in BA and $2.0 billion in outlays. Already 260,000 individual slots are provided for under the continuing resolution for CETA Title VI.

Such jobs must be filled by individuals unemployed 15 weeks or longer. These additional 240,000 job placements are not included in this package as they are already authorized and included in the current services budget. It should be understood that the Carter Stimulus package takes credit for these jobs already authorized.

B. Employment tax credit

In addressing the structural unemployment problem, it is desirable to rely whenever possible on the unique allocation ability of the private sector and to provide direct encouragement to the employment initiatives of labor force participants and employers. A targeted employment tax credit program can provide significant assistance and incentive in securing private employment for individuals not presently or adequately served by public training and employment programs. Employment of persons who face particular difficulty in finding a job and acquiring marketable skills and experience would be encouraged while total employment in the economy is increased. This approach represents a partnership of the government and the private sector in resolving the difficult unemployment problem faced by the economy.

The wage cost incurred by business can be a major factor in determining whether a particular potential employee will be hired and whether additional workers will be hired. Wage costs may also strongly affect the prices charged and the resulting level of sales and production. The government recognizes the uncertainty and possible financial sacrifices faced by many businesses in hiring persons whose initial skills and experience do not match existing or potential job openings. Businesses cannot profitably hire workers and pay a wage that is in excess of the revenue generated by the employees activity.

TABLE X.—SELECTED EMPLOYMENT AND TRAINING OUTLAYS IN FISCAL YEAR 1976

[In millions of dollars]

Programs	Activities					
	On-the-job training	Classroom training	Work experience	Public service employment	Other	Total [1]

[2] An emergency supplemental appropriation merged titles II and VI of CETA for the purpose of extending title VI positions beyond its expiration date of Dec. 31, 1975.
[3] Not applicable.

Payment of an employment tax credit to private employers can be an effective way to bring about easier and more extensive (shorter job search and less employment) of targeted labor force groups and increased total employment in the economy.

An employment tax credit program targeted on individuals who have been unemployed for 26 weeks or longer is recommended. This approach would focus benefits on those most in need of work experience and earned income, and whose unemployment demonstrates an inability to secure a job without assistance.

Since extended unemployment is most prevalent in areas with high overall unemployment rates, this target would also serve to focus program benefits in high unemployment regions. There are presently approximately 1.3 million people who have been unemployed 26 weeks or longer. Between the second quarter of 1977 and the fourth quarter of 1978, as many as 3.0 million persons may have experienced unemployment of this duration. A tax credit of $1.00 per hour during the first six months of employment and $.50 per hour during the second six months is estimated to bring about 450–550 thousand reduction in unemployment by the end of 1978 at a cost of $0.4 billion in FY 77 and $1.9 billion in FY 78.

A variety of targeted or general program designs and administrative mechanisms are possible. A tax credit is easy to administer and would allow prompt implementation and employment at the initiative of business and eligible employees. Program information could be disseminated quickly through existing Treasury, Labor and Commerce Department channels.

The employment tax credit approach can fill an important gap in existing manpower and employment programs. Such a program can encourage and financially enable employers to provide a period of skill adjustment or on-the-job training for those who are not being reached by institutional manpower programs, for individuals who do not need extensive formal training or re-training, and for persons who encounter serious difficulty bridging the gap from public training and employment programs to private sector employment. In addition, by enabling businesses to hire additional workers at a lower net cost, the employment tax credit approach can have a direct favorable impact on the rate of inflation and total employment. That is, it provides a stimulus directly to the supply side of the market. This stimulus would be particularly effective in increasing employment at the present time when businesses generally have excess production capacity, as now, when the economy is in a recovery phase. Additional employees can more readily be put to work with existing underutilized equipment.

Because this approach to stimulating the economy has not been tried extensively, the exact effects of the employment tax credit are not known. As compared to other methods of attempting to increase employment, however, the employment tax credit directly encourages productive private sector jobs with high prospects of permanent employment. Those employed under the credit will be earning full wages paid mostly by private employers and will be paying taxes rather than drawing unemployment compensation and other income supplements. The employment tax credit could easily be extended to a broader eligibility if it proves as successful as anticipated in expanding employment without added inflation.

VI. POLICIES FOR LONG-TERM GROWTH AND EMPLOYMENT

Increased consumer demand resulting from reduced tax drain and targeted policies with-

out an undue increase in the overall rate of unemployment will do much to encourage capital investment, yet business decisions are such that an expectation of continued increased profitability over the useful life of the capital is required to evoke the outlay.

A. Corporate tax rate reduction

A permanent cut of the corporate normal tax rate from the current level (20% on the first $25,000 corporate profits, 22% on the second $25,000, and 48% thereafter) to 18% on the first $100,000 of corporate profits is recommended and would provide a reduction in corporate tax collections of about $2.1 billion for FY 78 (assuming a 1/1/78 effective date). In order to maintain the current 48% rate on profits in excess of $100,000, the surtax would have to be increased from 26% to 30%; however, this would have absolutely no tax dollar impact on profits over $100,000. The economic effect of this proposal should be to stimulate small business, although all corporations would receive some tax relief from the proposal. It should be noted that most service-oriented businesses are relatively small and labor intensive. Further, the service sector is the fastest growing sector in the economy. Consequently, the proposal should have a particularly favorable impact on employment.

B. Increased dividend and interest exclusion

An increase in the dividend exclusion from the current $100 ($200/joint return) to $600 ($1200/joint return) is recommended and is estimated to reduce FY 78 revenues by approximately $.2 billion. The addition of a $100 ($200/joint return) interest exclusion is recommended and is expected to further reduce revenues in FY 78 by $.2 billion. Both of these measures have an effective date of January 1, 1978. It is anticipated that these two proposals will encourage saving and investment through increasing their after tax rates of return. Further, the current tax system levies excessive burdens on dividend income through the combined effects of the corporate and individual income tax. This proposal should reduce this inequity. Finally, these exclusions will provide a measure of tax simplification for the recipients of small amounts of interest and dividend income.

C. Accelerated depreciation for high unemployment areas

In an effort to encourage investment in areas with high unemployment, accelerated depreciation for new plant and equipment is recommended. Specifically, for areas with unemployment rates in excess of 7%, it is proposed that (1) for buildings, straight-line depreciation over a period equal to one-half their useful lives be allowed, and (2) for equipment, firms be allowed to amortize over five years with a full investment tax credit (under current law, a full investment tax credit is allowed only for seven-year or greater amortization periods). This incentive would be limited to projects begun in calendar year 1977 and completed within 36 months. The revenue loss associated with this proposal is negligible for FY 77 and $0.2 billion for FY 78.

D. Stock ownership proposal for lower and middle income investors

A stock ownership proposal designed to encourage common stock ownership by lower and middle income investors is recommended. Under such plans, there is a $1500 limit on the maximum amount of the annual contribution eligible for the exclusion from income tax, and the income earned by such plans will be tax exempt. Taxation is deferred until the benefits are actually distributed at which time they will generally be subject to tax at capital gain rates. The maximum benefit accrues to those persons in the income brackets of $20,000 or under, but the proposal also benefits individuals in the $20,000 to $40,000 income brackets.

VII. ENERGY CONSERVATION THROUGH HOME INSULATION CREDIT

Current concern over the energy crisis and the resultant implications for the economy underscore the need for energy conservation. A tax credit designed to encourage residential insulation (including thermal windows, storm doors, etc.) is proposed as a part of this stimulus package—specifically, a refundable credit of 30% of the first $750 insulation expenditure (maximum credit of $225). It is further suggested that the provision be effective for the period between January 1, 1977 and December 31, 1978. The revenue losses associated with this proposal are estimated to be $0.2 billion for FY 77 and $0.3 billion for FY 78.

As noted earlier, the home insulation tax credit is only the first of what may prove to be several proposals related to moderating the economic cost of the severe winter. Additional time is required to assess the exact nature of the winter's impact so that appropriate Federal responses can be designed. It was not intended that the home insulation tax credit be the only program addressing this problem.

VIII. CYCLICAL PROBLEMS IN THE HOUSING INDUSTRY

Though unemployment in the construction industry remains relatively high, the housing industry component is showing definite signs of recovery. The preliminary estimate of privately owned housing starts in 1976 is 1,539,700. This is 33 percent above the total of 1,160,400 for 1975. Privately owned housing units were started in December 1976 at an estimated seasonally adjusted annual rate of 1,940,000. This was 13 percent above the revised November 1976 rate of 1,716,000 and 51 percent above the December 1975 rate of 1,283,000.

The December seasonally adjusted annual rate for single family housing starts was 1,323,000 units compared with the November rate of 1,237,000. The rate in December for units in apartment buildings with 5 or more units was 502,000 compared with the revised November rate of 382,000. The December rate for units with 2 to 4 units was 115,000. Housing starts do not include mobile homes.

Funds available at savings and loan institutions (which finance 45 percent of all single-family home mortagegs) continue to be abundant. Savings capital at these institutions has risen from $243.0 billion in December, 1974, to $286.0 billion in December, 1975, and to $330.3 billion in December of 1976. Over this same period total conventional, VA, and FHA loans outstanding by savings and loan institutions have risen from $249.3 billion in December, 1974 to $278.7 billion in December, 1975 and to $319.6 billion in December, 1976. Nevertheless, this stimulus package contains four elements which would have considerable impact upon unemployment in the construction industry.

1. By adding to the Federal deficit smaller amounts with more prompt impacts than other packages, less pressure is placed upon interest rates as the economy recovers towards full employment. Lower nominal interest rates may be the single most beneficial factor in promoting recovery in the construction industry.

2. As indicated later in this paper under "Policies for Long-Term Growth," an interest income exclusion from taxes is recommended. This interest exclusion from individual income tax liability encourages a continued flow of savings to thrift institutions.

3. A permanent cut in the corporate and individual income tax rates encourages long-term investment in durable goods and new plant and equipment. This is an effect which temporary rebates would not have.

4. To encourage construction while at the same time directing money to central city regions, it is recommended that Budget Authority be added to the Government National Mortgage Association (GNMA) budget for rehabilitation of housing units.

At present, GNMA does not have a secondary market in rehabilitation mortgages, but the omission could be redressed by administrative changes. Budget Authority would be $2.0 billion in FY 77 and $1.0 billion in FY 78. Outlay cost, assuming that GNMA could sell the mortgages under a "tandem" procedure, would be the difference in the sales price of a note bearing a 7½ percent GNMA interest and the market interest. This would add approximately $.2 billion to the FY 78 budget, though nothing would be added in FY 77 as the program takes 6–15 months to obtain loan commitments but FHA approval could be expedited to reduce this delay. The amounts indicated would be sufficient to upgrade (not add to housing stock) about 75,000 units. It should be noted, however, that data regarding costs are very uncertain since the program has never operated under a rehabilitation scheme.

In the longer term, there is a continuing need to examine the way in which we finance the purchase and sale of housing. A number of imaginative proposals for recasting the mortgage instrument have been made, including proposals for an equity-adjusted mortgage which would allow the purchasers to make lower payments during the early years and higher payments during later years, thus tailoring the payment stream to expected increases in income. Also worthy of consideration are the variable rate mortgages and other alternative mortgage instruments.

IX. STIMULUS PACKAGE EFFECTS ON GROWTH, EMPLOYMENT, AND INFLATION

An economic stimulus package of the type indicated by this analysis would produce employment and growth results somewhat better than the 6% real growth rate (1977 and 1978) and the 6% unemployment rate (end of 1978) suggested by President Carter and others as appropriate economic goals. In addition, a smaller budget deficit over a long period and lower inflation rates than associated with other stimulus packages yielding the same goals can be anticipated because of the targeted nature of the program.

It is difficult to predict the precise numerical effects of any economic stimulus policy, and misleading to calculate the effects of a stimulus package as the simple summation of the estimated effects of its parts. This is particularly true of the stimulus package described here. The employment tax credit program to stimulate employment and training is a novel approach which introduces direct incentives, the effects of which are difficult to predict from historical data. Similarly, past experience is insufficient to gauge the economy's response to the innovative and substantially increased focus on the problem of structural unemployment. Thus, the conclusion concerning the growth and employment goals that could be achieved is based on disaggregated or microeconomic comparisons of the focused and unique nature of this stimulus approach compared to conventional estimates of other, more traditional stimulus packages.

Finally, the longer-run absorption of an expanding labor force at growing real wage levels requires an adequate flow of savings into productive capital formation. Although industry utilization rates now appear to be below the full capacity range, policies are needed which are compatible with bringing capital foundations as a percent of GNP back to, or above, levels of the last two decades. In furtherance of these policies, the Federal Government should formally declare a na-

tional policy in support of adequate capital investment in the private sector.

In addressing these components of the present and future unemployment problem, the analysis and policy decisions must be increasingly disaggregated and microeconomics in focus. The appropriateness of simple macroeconomic measures of U.S. economic performance and the effectiveness of macroeconomic policies to solve our economic problems are highly questionable. The tradeoffs associated with this approach appear to be increasingly unfavorable. For this reason, we must look to policies which provide incentives and direction resulting in more optional employment, production, and pricing decisions in the private economy. It is only in this that the main distributional problem in our economic system—unemployment—can be satisfactorily resolved over time.

By Mr. CRANSTON (for Mr. HASKELL):

S. 738. A bill to provide a uniform system of reimbursement for and reporting of expenses incurred by Senators and employees of the Senate while traveling outside the United States on official business, and for other purposes; to the Committee on Rules and Administration.

CONGRESSIONAL FOREIGN TRAVEL ACT OF 1977

Mr. CRANSTON. Mr. President, on behalf of the Senator from Colorado (Mr. HASKELL) I introduce the Congressional Foreign Travel Act of 1977. I ask unanimous consent that a statement by Senator HASKELL, together with the bill and a summary thereof, be printed in the RECORD.

There being no objection, the statement, bill, and summary were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HASKELL

Last week, I introduced legislation to prohibit the use of public funds for overseas travel by lame-duck Senators, and to prevent the Senate from paying for first-class air travel for Senators and Senate employees, except in certain special instances. In addition to these economies, I also outlined certain proposals that I would be introducing to improve the way in which we finance and account for the expenses of our foreign travel.

Today, I am introducing those proposals in the Congressional Foreign Travel Act of 1977, and I sincerely hope that my colleagues will appreciate its merits and enact it swiftly. We have nothing to lose and everything to gain, in terms of earning the public's trust and respect, by bringing sound principles of economy and reporting into play and ending abuses in the use of public monies for foreign travel.

My bill will prohibit double-dipping and provide a penalty therefor, stringently curb the use of Defense Department "black bag" funds for Congressional travel, restricting the use of such funds to the payment of air and ground transportation only; it will require itemized reports of foreign travel expenditures from each Member and Senate employee within 15 days of returning from a trip, and reports from the federal agencies providing funds and services for such trips within the same time. These expense reports are to be published in the Congressional Record in full, within 5 days of receipt.

Within 30 days of the beginning of each new session of Congress, each Senate Committee and each agency providing services and funds to Senators and Senate employees traveling abroad, is to furnish the Secretary of the Senate a consolidated annual report of the foreign travel expenditures of each Senate committee and each Senator and Senate employee for the preceding year. These reports are also to be published in the Congressional Record within 5 days of receipt. In the case of the Senate Select Committee on Intelligence, information identifying the foreign countries in which Members and employees traveled may be omitted from any report at the Chairman's discretion.

I think these simple reforms and improvements in procedure are absolutely necessary to bring a semblance of order and accountability to our system of paying for, and reporting to the public, the expenses of this body for foreign travel. Members and Senate employees must have the privilege of traveling abroad in order to perform their duties properly and to inform themselves on matters of importance before the Senate. But we must not abuse that privilege—we must be as careful with the public's money as we are with our own, and we must open our books to public scrutiny if we are to regain the people's confidence and faith. Moreover, I think a small reduction in the perquisites we afford ourselves will prove a useful reminder that we are indeed the servants of the people and not exalted persons deserving of special deference and treatment. But the important thing is that we institute sound principles of administration and public disclosure in this area of Senate conduct, and that we hold each Member and Senate employee fully accountable for his or her expenditure of public funds on foreign travel, as we do with domestic travel.

S. 738

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Congressional Foreign Travel Act of 1977".

DEFINITIONS

SEC. 2. For purposes of this Act, the term—

(1) "employee of the Senate" includes an employee of a joint committee of Congress whose salary is disbursed by the Secretary of the Senate; and

(2) "foreign travel" means travel by a Senator or employee of the Senate outside of the limits of the United States in the course of the performance of the official duties of the Senator or employee.

LIMITATIONS ON TRAVEL AND SUBSISTENCE REIMBURSEMENT

SEC. 3. (a) Notwithstanding any other provision of law, in the case of any foreign travel by a Senator or an employee of the Senate—

(1) the sum of (A) the amounts received, and (B) the value of services received at no cost by the Senator or employee from any sources for per diem allowances or subsistence expenses (as defined in section 5701 of title 5, United States Code) in connection with that travel shall not exceed $75 per day; and

(2) amounts received by the Senator or employee from any sources as reimbursement for transportation expenses shall not include any amount which constitutes reimbursement for transportation—

(A) which is provided at no cost by an agency of the Federal Government or any other source, or

(B) which is in excess of the actual cost of such transportation.

(b) Any Senator or employee of the Senate who knowingly or willfully receives any amount in excess of the amount provided for in subsection (a)(1) or who knowingly and willfully receives any amount prohibited by subsection (a)(2) shall be subject to a civil penalty of $10,000.

(c) The seventh paragraph in the matter under the heading "Administrative Provisions" for the Senate in the Legislative Branch Appropriation Act, 1957 (2. U.S.C. 68b) is amended by inserting after "Higher rates" the following: "(not in excess of $75 per day)".

LIMITATIONS ON USE OF AGENCY APPROPRIATIONS FOR CONGRESSIONAL TRAVEL

SEC. 4. Section 1314 of the Supplemental Appropriation Act, 1954 (31 U.S.C. 22a) is amended by striking out the period at the end thereof and inserting in lieu thereof the following: ", except that such funds may not be used to pay to or reimburse any Member of Congress or any employee of the Congress for any expenses, other than air or ground transportation expenses, incurred by the Member or employee in traveling beyond the limits of the United States for the examination of estimates of appreciations.".

REPORTING REQUIREMENTS

SEC. 5. (a)(1) Each Senator and employee of the Senate shall, within 15 days (not including any day on which the Senate is not in session) after the return of the Senator or employee from any foreign travel, submit to the chairman of the committee with respect to which such foreign travel relates an itemized report listing—

(A) any amount of foreign currency received during section 502(b) of the Mutual Security Act of 1954, as amended (22 U.S.C. 1754(b)), any amount received as a member of an interparliamentary group described in section 105(b) of the Legislative Branch Appropriation Act, 1961, as amended (22 U.S.C. 276c–1), and any amount received from the contingent fund of the Senate, any agency of the Federal Government, or any other source,

(B) each separate expenditure from the total amount listed under subparagraph (A) and the purpose for which such expenditure was made, and

(C) an estimate of the cost of each service (including transportation) provided at no cost to the Senator or employee by an agency of the Federal Government.

(2) Each Senator who engages in foreign travel as a member of an interparliamentary group described in section 105(b) of the Legislative Branch Appropriation Act, 1961, as amended (22 U.S.C. 276c-1), and each employee who engages in foreign travel in connection with any such group, shall submit the report described in paragraph (1) to the Chairman of the Committee on Foreign Relations of the Senate.

(3) Within 30 days (not including any day on which the Senate is not in session) of the convening of each session of the Congress, the Chairman of each Committee of the Senate and each joint committee of the Congress whose funds are disbursed by the Secretary of the Senate shall submit to the Secretary of the Senate a report listing for the previous calendar year—

(A) the total expenditures for foreign travel,

(B) the total expenditures for each Senator and employee for foreign travel in connection with the duties of such committee,

(C) each foreign travel trip of each Senator or employee and the amount expended on that trip, and

(D) each foreign country visited by a Senator or employee and the amount expended with respect to that country.

(4) Each report submitted under this subsection shall be published in the Congressional Record within 5 days (not including any day on which the Senate is not in session) after receipt by the chairman or the Secretary of the Senate, as the case may be.

(5) In the case of the Select Committee on Intelligence of the Senate, there may be omitted, at the discretion of the chairman of such select committee, from any report under this subsection, such information as would identify the foreign countries in which members and employees of such select committee traveled.

(b)(1) Each agency of the executive branch of the Federal Government shall, within 15 days (not including any day on which the Senate is not in session) after the

return from foreign travel of a Senator or employee of the Senate with respect to whom such agency provided any funds or services in connection with such travel, submit to the Secretary of the Senate a report listing—

(A) the amount of funds expended and the purposes for which the funds were expended, and

(B) the estimated cost of any services (including air and ground transportation) provided to the Senator or employee by such agency.

(2) Within 30 days (not including any day on which the Senate is not in session) of the convening of each session of the Congress, each agency of the executive branch of the Federal Government shall submit to the Secretary of the Senate a report listing—

(A) the total amount of funds expended in connection with the foreign travel of Senators and employees of the Senate for the previous calendar year,

(B) the total amount of funds expended for each committee of the Senate and each joint committee of the Congress whose funds are disbursed by the Secretary of the Senate for the previous calendar year, and

(C) for each Senator and employee of the Senate a separate total of the amount of funds expended for foreign travel for the previous calendar year.

(3) Each report submitted under this subsection shall be published in the Congressional Record within 5 days (not including any day on which the Senate is not in session) after its receipt by the Secretary of the Senate.

TECHNICAL AND CONFORMING AMENDMENTS

SEC. 6. (a) Section 502 (b) of the Mutual Security Act of 1954 (22 U.S.C. 1754 (b)) is amended—

(1) by inserting after "such committee" the first time it appears in the second sentence thereof the following: "(other than a committee of the Senate or a joint committee of the Congress whose funds are disbursed by the Secretary of the Senate)";

(2) by striking out in such second sentence "(if the committee be a committee of the House of Representatives or a joint committee whose funds are disbursed by the Clerk of the House) or to the Secretary of the Senate (if the committee be a Senate committee or a joint committee whose funds are disbursed by the Secretary of the Senate)"; and

(3) by striking out the last sentence thereof.

(b) Section 105(b) of the Legislative Branch Appropriations Act, 1961, as amended (22 U.S.C. 276c-1), is amended to read as follows:

"(b) Each Member of the House of Representatives who is a member of the United States group or delegation to the Interparliamentary Union, the NATO parliamentarian's Conference, the Canada-United States Interparliamentary Group, the Mexico-United States Interparliamentary Group, or any similar interparliamentary group of which the United States is a member, and each employee of the House of Representatives, by whom or on whose behalf expenditures are made from funds appropriated for the expenses of such group or delegation, shall file with the Committee on Foreign Affairs of the House of Representatives an itemized report showing all such expenditures made by or on behalf of each member or employee together with the purposes of the expenditure, including lodging, meals, transportation, and other purposes. Within sixty days after the beginning of each regular session of Congress, the chairman of the Committee on Foreign Affairs shall prepare a consolidated report showing with respect to each such group or delegation the total amount expended, the purposes of the expenditures, the amount expended for each such purpose, the names of the members or employees by or on behalf of whom the expenditures were made and the amount expended by or on behalf of each member or employee for each such purpose. The consolidated reports prepared by the chairman of the Committee on Foreign Affairs of the House shall be filed with the Committee on House Administration of the House. Each such consolidated report shall be printed in the Congressional Record within ten days after receipt by the Committee on House Administration of the House.".

SUMMARY OF PROVISIONS OF THE CONGRESSIONAL TRAVEL ACT OF 1977

1. Double-dipping is prohibited in the following manner: The bill limits the total sum that a Senator or employee may receive for per diem or subsistence expenses to be paid if living costs are provided free of charge. Transportation cannot be reimbursed if it is provided at no cost, and reimbursement can only be made for the actual cost of transportation.

2. The bill provides a $10,000 penalty for willful violation of the above provisions against double-dipping.

3. The use of so-called "black bag" funds for traveling Congressmen and Senators and Congressional employees is limited to the provision of air and ground transportation. These are agency monies authorized to be used for the purpose of "examination of estimates of appropriations in the field" under Section 1314 of Public Law 83-207. Under this bill that section is amended to restrict the use of such funds on the part of Members of Congress and Congressional employees, to the funding of air and ground transportation. This is done as an additional check on excessive expenditures, and because this particular travel fund has been so badly abused in the past.

4. Within 15 days of returning from a foreign trip (days when Congres is actually in session) each Senator or Senate employee must submit an itemized travel expense report to the chairman of the authorizing or appropriate committee giving the amounts of money received from any source (counterpart funds, contingent fund, agency funds), and the expenditures made from these funds. This report is to include the estimated cost of services provided at no cost by the federal government, including transportation.

5. Within 15 days of a Member's returning from a foreign trip, any federal agency helping to support that trip by funds or services is to send a complete report of the cost of such services and expenditures to the Secretary of the Senate. This applies to the travel of Senate employees as well.

6. The Members' and employees' reports as well as the agency reports, are to be published in the Congressional Record within 5 days of receipt. It is hoped that this dual reporting to different authorities and the publication of both sets of reports in the Congressional Record, will help to assure accuracy and will assist Senators and Senate employees in holding down expenses while traveling overseas.

7. These reporting requirements extend to Members and Senate employees traveling abroad as members of interparliamentary groups or special delegations. Each member of such group is thus required to submit his or her own expense report, but these reports are to go to the Chairman of the Senate Foreign Relations Committee. The agencies helping to support such groups will file their reports for each member with the Secretary of the Senate.

8. Within 30 days of the convening of each session of Congress, each committee chairman must submit a consolidated annual report to the Secretary of the Senate of all expenditures by the committee for foreign travel for the previous year. This report is to include total foreign travel expenditures for the committee, the total expenditures on foreign travel for each committee member and employee, and the total expenditures on each trip taken and for each country visited by each Member and employee.

9. Within 30 days of the convening of each session of Congress each federal agency providing funds and services to members and employees traveling overseas must submit an annual consolidated report to the Secretary of the Senate to include the total of all expenditures for foreign travel of Senators and Senate employees, the total amount expended on foreign travel for each committee, and the total expended for each Senator and Senate employee on foreign travel for the previous calendar year.

10. These consolidated annual reports from the Senate committee and the federal agencies are to be published in the Congressional Record in full, within 5 days of receipt.

11. In the case of the Senate Select Committee on Intelligence, information identifying the foreign countries in which Members and employees traveled may be omitted from any report at the Chairman's discretion.

By Mr. PEARSON:

S. 740. A bill to amend the Internal Revenue Code of 1954 to eliminate the exclusive use requirement for deducting expenses attributable to a personal residence used for certain home industries; to the Committee on Finance.

BUSINESS USE OF HOME FOR CERTAIN HOME INDUSTRIES

Mr. PEARSON. Mr. President, today I am introducing a bill to correct an oversight in the Tax Reform Act of 1976. As an unintended result of provisions relating to the business use of the home deductions, America's cottage industries have been seriously threatened.

Under the tax law as amended last year, deductions attributable to the business use of a personal residence are allowable for income tax purposes only if the taxpayer uses a particular portion of his residence exclusively for certain business purposes on a regular basis. In addition, the residence must be used either as the taxpayer's principal place of business, as a place of business for meeting patients, clients, or customers, or, in the case of a separate structure, in connection with the taxpayer's trade or business. As a special rule, the exclusive use test does not apply to certain cases where a taxpayer uses his residence for inventory storage.

In general, the changes made last year were intended to provide more definitive rules than had existed in the past and to prevent the conversion of personal nondeductible expenses into deductible business expenses simply because a taxpayer incidentally used his personal residence to perform some business activities. The situations covered under the act would ordinarily indicate the conduct of business which would result in incurring incremental expenses above and beyond those which would have been incurred if the residence had only been used for personal purposes.

I generally agree with the objectives of the provisions of the Tax Reform Act. The amendment will be valuable in eliminating excessive abuses principally by

self-employed professionals in the higher income brackets. However, there are other business activities conducted in the home which ordinarily give rise to additional expenses for which no deduction would be allowable because the exclusive use test cannot be satisfied. These activities are those customarily involved in a so-called home or cottage industry. In particular, I am concerned with the situation where a taxpayer uses his home to provide day care facilities for children. In this case, it is not practicable to expect a residence to be divided into one portion to be used exclusively for the care of children and another portion to be used for personal purposes. However, it would be difficult to deny that the business use occasions additional wear and tear on the residence and additional utilities expenses.

My bill would eliminate the inequitable treatment of these home industries by permitting a deduction for the allocable expenses without regard to the exclusive use test. These expenses would be deductible to the extent attributable to a trade or business of a kind customarily carried on in the home as a sole proprietorship if the activities conducted outside the home are merely incidental activities. A limitation on the deductibility of the expenses would apply so that the deductible expenses for the business use of the home could not exceed the business income and thereby generate a loss to shelter other income.

Mr. President, I hope that this bill will be favorably considered as a measure to bring equity back into the tax code. The breadth of last year's bill and the time allowed for its consideration precluded sufficient deliberation on items such as this. We now have time to smooth out the rough edges of that comprehensive legislation.

I ask unanimous consent to have the text of the bill printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 740

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) Subsection (c) of section 280A of the Internal Revenue Code of 1954 is amended by striking out paragraph (4) and inserting immediately after paragraph (3) the following new paragraphs:

"(4) CERTAIN HOME INDUSTRIES.—Subsection (a) shall not apply to any item which is attributable to any trade or business of a kind customarily carried on in the home as a sole proprietorship if the activities conducted outside the home are merely incidental to the conduct of such business.

"(5) LIMITATION ON DEDUCTIONS.—In the case of a use described in paragraph (1), (2), or (4), and in the case of a use described in paragraph (3) where the dwelling unit is used by the taxpayer during the taxable year as a residence, the deductions allowed under this chapter for the taxable year by reason of being attributable to such use shall not exceed the excess of—

"(A) the gross income derived from such use for the taxable year, over

"(B) the deductions allocable to such use which are allowable under this chapter for the taxable year whether or not such unit (or portion thereof) was so used."

(b) EFFECTIVE DATE.—The amendments made by this Act shall apply to taxable years beginning after December 31, 1975.

By Mr. PROXMIRE:

S. 741. A bill to amend section 313 of the National Housing Act to provide authority for emergency home purchase assistance at lower interest rates, and for other purposes; to the Committee on Banking, Housing and Urban Affairs.

EMERGENCY MORTGAGE CREDIT ACT OF 1977

Mr. PROXMIRE. Mr. President, I am introducing S. 741, the Government National Mortgage Association Emergency Tandem Plan Amendments of 1977, a measure designed to improve the Nation's major program for emergency assistance to the housing market.

We are all aware that the housing market is perennially plagued by cyclical instability, and that its periodic recessions have been growing longer in recent years. We are only now pulling out of the housing downturn which began in 1973–74. The Nation had a housing-start level of only 1.1 million units in 1975 and about 1.5 million in 1976, compared to our statutorily set goals of 2.6 million per year.

In 1974, the Congress tried to respond to this problem by enacting the Emergency Home Purchase Assistance Act, which created the GNMA emergency tandem plan. This program, known as the Brooke-Cranston program after my two distinguished Banking Committee colleagues, who were its principal sponsors, is a very sound basic approach to the cyclical problems of the housing market. When the Secretary of HUD determines that adverse economic conditions are having a disproportionate impact on the availability of mortgage credit, she or he may activate the tandem plan. This enables lenders to offer below-market rate loans on single- and multi-family properties, and then to sell these loans to GNMA. GNMA, which is an agency within HUD, can in turn hold the loans or can sell them as whole mortgages or as mortgage-backed securities, either on the market or to the Federal Financing Bank.

The Committee on Banking, Housing and Urban Affairs held hearings last fall on this program and found that the basic mechanism is a very good way to pump money into the housing market. However, we also received testimony that the current structure of the program has made it far less effective than it should have been. Some of the shortcomings have been caused by the Ford administration's implementation, such as their refusal to allow GNMA to sell loans to the Federal Financing Bank.

In other areas, however, I think the program's weaknesses must be corrected through the statute itself. Our hearings indicated that many of the single-family units assisted under the tandem plan were not actually incremental purchases, but were merely substitutes of Government-subsidized sales for sales which would have occurred even without the program. The Library of Congress in a report to the committee for the hearings indicated that the average income under the program was about $21,000. This suggests not only that the program was assisting affluent rather than moderate-income families, but also that it was probably not having a maximal impact on stabilizing the market, since many of these purchases undoubtedly did not need an interest-rate subsidy in order to occur. By subsidizing people who could afford to buy a house without assistance, the program has been undercutting its countercyclical impact by missing the opportunity to generate housing starts which would not occur without a special stimulus.

A second problem area in the program has been the method used to allocate the funds. HUD has generally based its allocations on building permit data from several years ago, a highly inaccurate approach. One of the main goals of the program is to stimulate the housing market as a way to stimulate employment in the larger economy, and the funds should, therefore, be allocated to areas which have both housing needs and unemployment problems. To use it in places which do not meet both of these criteria is to waste a good part of the funds.

Accordingly, I am today introducing a bill which would amend the program to deal with these and other problems. The major changes would be as follows:

First. The home sales price and mortgage limits under the program would be eliminated, and replaced by a provision limiting eligibility of borrowers to people with up to 120 percent of median area income.

Second. The downpayment required on single-family homes without mortgage insurance would be reduced from 20 to 10 percent, again to help bring these purchases within reach of families who have difficulty affording a home.

Third. The interest rate would be changed from the lower of the FHA rate or 7½ percent, to the lower of the FHA rate or a rate determined by the Secretary of HUD as appropriate for meeting the purposes of the program.

Fourth. The Secretary of HUD would be directed to develop a formula for allocating the funds, based upon both housing need and unemployment in a given locality, in order to assure more efficient use. This is particularly important at the present time, when the economy needs a quick stimulus, but much of the single-family housing market is already thriving. An allocation system should channel the funds to the areas where they are needed and can quickly be used.

Fifth. The Secretary of HUD would be directed to devise ways to encourage the use of the program for housing rehabilitation and for acquisition and rehabilitation of housing in the inner cities. This directive would also empower her to structure special rules for this purpose, including, if necessary the establishment of a lower interest rate for inner-city and rehabilitation loans. This provision ties in with the objective of using the funds where both housing need and unemployment are acute. At the same time, however, there are constraints on the degree to which this type

of lending can be emphasized without sacrificing the goal of getting a quick, countercyclical stimulus from the program. The bill makes it clear that any effort by the Secretary to channel the funds into innercity areas would have to be made consistent with the primary countercyclical goal of the program.

Sixth. The amendments would make explicit the program's currently implicit goal of expanding homeownership opportunity for moderate-income people. Again, the bill makes it clear that this goal is subordinate to the primary objective of having a quick-impact, countercyclical program, to the extent that the two may be inconsistent. To the extent, however, that it is possible to achieve the countercyclical goal and help moderate-income homebuyers at the same time, this objective should be pursued.

Mr. President, the GNMA tandem plan already has an unused borrowing authority approved by Congress in the amount of $5 billion. With the amendments contained in my bill, the tandem program would became a very fine vehicle for providing the kind of short-term economic stimulus which President Carter has been seeking for the economy. At an average mortgage amount of $38,000, the available borrowing authority would produce more than 130,000 housing starts, or about 260,000 jobs. This very significant impact can be achieved, moreover, at only a minimal cost to the Government, as the loans which the Government buys under the program can be resold at very little loss when economic conditions are right. The jobs would be in the private sector, and would be working toward meeting our housing needs. This would be particularly true if HUD used the program to stimulate single-family housing rehabilitation in the cities, where the need for both housing and employment is critical.

I believe that this bill is a sound and timely proposal, and I urge my colleagues to consider it favorably.

By Mr. DURKIN:

S. 743. A bill to provide for the protection of franchised distributors and retailers of motor fuel; to encourage conservation by requiring that information regarding the octane rating of automotive gasoline be disclosed to consumers, and to prevent deterioration of competition in gasoline marketing; to the Committee on Commerce, Science, and Transportation.

PETROLEUM MARKETING PRACTICES ACT

Mr. DURKIN. Mr. President, I am introducing today a bill which will go a long way toward helping this Nation's small and independent gasoline dealers to keep providing their valuable service, and toward giving the consumer the chance to make more economical purchases at the gasoline pumps.

Title I of this bill gives small dealers needed protection against abrupt, unreasonable, and unjustified terminations of their franchises by the big oil conglomerates who arbitrarily decide to close them out. This bill will establish uniform and fundamental rights and obligations in the relationship between franchisors, the large oil companies, and franchisees, the small gasoline dealers who, until now, have been powerless to stand up to any demands or actions by their suppliers, however unfair or unrealistic. This title will allow the dealers to go to court to enforce their rights against unfair terminations, and against unjustified failures to renew their franchises by the big oil conglomerates.

Title II of this bill will give gasoline consumers the first hard information they will have in order to compare widely varied gasoline prices and quality. Title II will require refiners to state and certify the octane ratings of their product. These ratings will be required to be posted clearly on the gas pumps for consumers to see. In addition, new automobiles after the effective date of this provision must display clearly the octane requirements for the particular model car. The effect of these requirements will be to make sure consumers do not overbuy higher priced gasoline that they do not need. This measure will also help significantly to conserve on the use of more intense and thus higher priced gasolines than are required in today's model cars.

Title III of this bill strikes a blow at the predatory pricing practices of the big oil companies who control all levels of fuel supply, transportation and delivery . . . from the well to your gas tank. Under this provision, small independent gas dealers will no longer be forced out of business by underpricing and loss leaders used by the big oil companies. It will force the big companies to charge essentially the same price for their gasoline whether it so sold in company stations or by small private dealers.

These provisions protect our consumers from price gouging and give the small gasoline dealers a chance to continue in business in the face of heretofore dictated contract terms and predatory practices of the large oil companies. I urge quick consideration and passage of this bill.

Mr. President, I ask unanimous consent that this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 743

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Petroleum Marketing Practices Act".

TABLE OF CONTENTS

TITLE I —FRANCHISE PROTECTION
Sec. 101. Definitions.
Sec. 102. Sanctity of franchise relationship—termination and failure to renew.
Sec. 103. Trial franchise period—failure to renew.
Sec. 104. Notification of termination or failure to renew.
Sec. 105. Enforcement.
Sec. 106. Relationship of this Act to State law.
TITLE II—OCTANE DISCLOSURE
Sec. 201. Definitions.
Sec. 202. Octane rating program.
Sec. 203. Rulemaking authority.
Sec. 204. Enforcement.
Sec. 205. Judicial review.
Sec. 206. Effective date.
TITLE III—PROHIBITION ON CERTAIN UNFAIR PRACTICES IN THE MARKETING OF AUTOMOTIVE GASOLINE
Sec. 301. Findings and purpose.
Sec. 302. Prohibition on discriminatory subsidization of direct retail gasoline marketing activities with profits derived from crude oil production, refining, or other marketing activities.
Sec. 303. Prohibition of loss leader marketing of automotive gasoline.
Sec. 304. Accounting practices.
Sec. 305. Enforcement.

TITLE I—FRANCHISE PROTECTION

DEFINITIONS

SEC. 101. As used in this title:

(1) The term "franchise" means any written or oral agreement or contract—

(A) between a refiner and a distributor,

(B) between a refiner and a retailer,

(C) between a distributor and another distributor, or

(D) between a distributor and a retailer, under which a refiner or distributor (as the case may be) grants the authority for, or permits, a retailer or distributor to use, in connection with the sale, consignment, or distribution of motor fuel, a trademark, trade name, service mark, or other identifying symbol or name which is owned or controlled by such refiner or by a refiner which supplies motor fuel to the distributor which grants the authority for, or permits, such use. The term "franchise" includes any written or oral agreement or contract under which a retailer or distributor (as the case may be) is granted the authority, or permitted, to occupy premises owned, leased, or in any way controlled by a refiner or by a distributor, which premises are to be employed in connection with the sale, consignment, or distribution of motor fuel under a trademark, trade name, service mark, or other identifying symbol or name which is owned or controlled by such refiner or by a refiner which supplies motor fuel to the distributor which grants the authority for, or permits, such occupancy. The term "franchise" includes any written or oral agreement or contract pertaining to the supply of motor fuel which is to be sold, consigned, or distributed under a trademark, trade name, service mark, or other identifying symbol or name which is owned or controlled by a refiner. The term "franchise" includes the unexpired portion of any franchise, as defined by the preceding sentences of this paragraph, which is transferred or assigned as authorized by the provisions of such franchise or by any applicable provision of State law which permits such transfer or assignment without regard to any provision of the franchise.

(2) The term "franchise relationship" means the respective motor fuel marketing or distribution obligations and responsibilities of a franchisor and a franchisee which result from the marketing of motor fuel under a franchise.

(3) The term "franchisor" means a refiner or distributor (as the case may be) who grants the authority for, or permits, a retailer or distributor to use, in connection with the sale, consignment, or distribution of motor fuel, a trademark, trade name, service mark, or other identifying symbol or name under a franchise.

(4) The term "franchisee" means a retailer or distributor (as the case may be) who is granted the authority or permitted, to use, in connection with the sale, consignment, or distribution of motor fuel, a trademark trade name, service mark, or other identifying symbol or name under a franchise.

(5) The term "refiner" means any person engaged in the refining of motor fuel, and includes any affiliates of such person.

(6) The term "distributor" means any per-

son, including any affiliate of such person, who—

(A) purchases motor fuel for sale, consignment, or distribution to another; or

(b) receives motor fuel on consignment for consignment or distribution to his own motor fuel accounts.

(7) The term "retailer" means any person who purchases motor fuel for sale to the general public for ultimate consumption.

(8) The term "motor fuel" means gasoline and diesel fuel of a type distributed for use as a fuel in self-propelled vehicles designed primarily for use on public streets, roads, and highways.

(9) The phrase "failure to comply" does not include—

(A) any failure which is only technical or unimportant to the franchise relationship; or

(B) any failure for a cause beyond the reasonable control of the franchisee.

(10) The phrase "to renew a franchise relationship" means to reinstate, continue, or extend the franchise relationship—

(A) at the conclusion of the term, or on the expiration date, stated in the relevant franchise;

(B) at any time in the case of a relevant franchise which does not state a term of duration or an expiration date;

(C) following a termination on or after the date of enactment of this Act of the relevant franchise, which was entered into prior to the date of enactment of this Act.

(11) The term "affiliate" means any person who (other than by means of a franchise) controls, is controlled by, or is under common control with, any other person.

(12) The term "abandonment" means any failure of the franchise (other than for a cause beyond the reasonable control of the franchisee) to operate the premises, which are the subject of the franchise, for a period of at least 5 consecutive days, accompanied by evidence of the intent of the franchisee to terminate operation of such premises, such as the removal of personal property of obvious value from such premises. The failure of the franchisee to furnish an explanation to the franchisor for such failure to operate such premises, within 10 days of the commencement of such failure to operate such premises, shall create a presumption that the franchisee intends to terminate operation of such premises.

(13) The term "relevant geographic market area" includes a State or a standard metropolitan statistical area as periodically established by the Office of Management and Budget.

(14) The term "termination" includes cancellation.

SANCTITY OF FRANCHISE RELATIONSHIP—TERMINATION AND FAILURE TO RENEW

SEC. 102. (a) Except as provided in subsection (b) and section 103, no franchisor may terminate any franchise (entered into or renewed on or after the date of enactment of this Act) prior to the conclusion of the term, or the expiration date, stated in the franchise, or may fail to renew any franchise relationship (without regard to the date on which such franchise was entered into or renewed), unless the notification requirements of section 104 are met, and—

(1) the franchisee failed to comply with any provision of the franchise, which provision is both reasonable and of material significance to the franchise relationship, and, with respect to which such failure, the franchisor first acquired actual or constructive knowledge—

(A) not more than 120 days prior to the date on which notification of termination or failure to renew is given, if notification is given pursuant to section 104(a); or

(B) not more than 60 days prior to the date on which notification of termination or failure to renew is given, if less than 90 days notification is given pursuant to section 104(b);

(2) the franchisee failed to exert good faith efforts to carry out the provisions of the franchise and, with respect to which such failure, the franchisor first acquired actual or constructive knowledge—

(A) not more than 120 days prior to the date on which notification of termination or failure to renew is given, if notification is given pursuant to section 104(a); or

(B) not more than 60 days prior to the date on which notification of termination or failure to renew is given, if less than 90 days notification is given pursuant to section 104(b);

(3) during the period in which the franchise is in effect, there occurs an event which is relevant to the franchise relationship, as a result of which termination of such franchise, or nonrenewal of the franchise relationship is reasonable, and, with respect to which such occurrence, the franchisor first acquired actual or constructive knowledge—

(A) not more than 120 days prior to the date on which notification of termination or failure to renew is given, if notification is given pursuant to section 104(a); or

(B) not more than 60 days prior to the date on which notification of termination or failure to renew is given, if less than 90 days notification is given pursuant to section 104(b); or

(4)(A) the franchisor and the franchisee agree in writing to terminate the franchise or not to renew the franchise relationship, not more than 180 days prior to the date of such termination, or, in the case of nonrenewal, not more than 180 days prior to the conclusion of the term, or the expiration date, stated in the franchise;

(B) the franchisee is promptly provided with a copy of such agreement, together with the summary statement of the provisions of this title described in section 104(d); and

(C) within 7 days after the date on which the franchisee is provided a copy of such agreement, the franchisee has not posted by certified mail a written notice to the franchisor repudiating such agreement.

(b) Except as provided in subsection (a) and section 103, no franchisor may fail to renew any franchise relationship unless the notification requirements of section 104 are met, and—

(1) the franchisor and the franchisee fail to agree to reasonable changes or additions to the provisions of the franchise, unless such failure is the result of the franchisor's insistence upon such changes or additions for the primary purpose of preventing the renewal of the franchise relationship;

(2) the franchisor received numerous bona fide consumer complaints concerning the franchisee's operation of the premises which are the subject of the franchise, the existence and nature of which complaints the franchisee was promptly apprised following receipt of such complaints by the franchisor and, if such complaints related to the condition of such premises or to the conduct of any employee of such franchisee, the basis of which complaints was not promptly cured or corrected by the franchisee; or

(3) the franchisee repeatedly failed to operate the premises which are the subject of the franchise in a clean, safe, and healthful manner after having received repeated notices of such failures from the franchisor.

(c) As used in subsection (a), the phrase "an event which is relevant to the franchise relationship, as a result of which termination or nonrenewal of such franchise is reasonable" includes events such as—

(1) fraud or criminal misconduct relevant to the operation of the premises which are the subject of the franchise;

(2) declaration of bankruptcy or judicial determination of insolvency;

(3) continuing severe physical or mental disability of at least 3 months duration which renders the franchisee unable to provide for the continued proper operation of the premises which are the subject of the franchise;

(4) loss of the franchisor's right to grant possession of the premises, which are the subject of the franchise, through expiration of an underlying lease, if the franchisee had been notified in writing, prior to the commencement of the term of the then existing franchise, of the duration of the underlying lease and of the fact that such underlying lease might expire and not be renewed during the term of such franchise (in the case of termination) or at the end of such term (in the case of nonrenewal);

(5) condemnation or other taking, in whole or in part, of the premises, which are the subject of the franchise, pursuant to the power of eminent domain;

(6) loss of the franchisor's right to grant the right to use the trademark, trade name, service mark, or other identifying symbol or name which is the subject of the franchise, if such loss was not due to trademark abuse, violation of Federal or State law, or other fault or negligence of the franchisor, which such abuse, violation, or other fault or negligence is related to action taken in bad faith by the franchisor;

(7) destruction of all or a substantial part of the premises which are the subject of the franchise;

(8) failure by the franchisee to pay to the franchisor in a timely manner when due all sums to which the franchisor is legally entitled;

(9) abandonment by the franchisee of the premises which are the subject of the franchise;

(10) failure by the franchisee to operate such premises for an unreasonable period of time;

(11) willful adulteration, commingling, mislabeling, or misbranding of motor fuels or other trademark violations by the franchisee;

(12) knowing failure of the franchisee to comply with Federal, State, or local laws or regulations relevant to the operation of the premises which are the subject of the franchise; and

(13) conviction of the franchisee of any felony involving moral turpitude.

(d) In the case of any termination of a franchise (entered into or renewed on or after the date of enactment of this Act), or in the case of any failure to renew a franchise relationship without regard to the date on which such franchise relationship was entered into or renewed)—

(1) if such termination or failure to renew is based upon an event described in subsection (c)(5), the franchisor shall fairly apportion between the franchisor and the franchisee compensation, if any, based upon any loss of business opportunity or good will; and

(2) if such termination or failure to renew is based upon an event described in subsection (c)(7) and if the premises which are the subject of such franchise are subsequently rebuilt or replaced by the franchisor and the franchisor operates such premises under a franchise, the franchisor shall, within a reasonable period of time, grant to the franchisee a right of first refusal of the franchise applicable to such premises.

TRIAL FRANCHISE PERIOD—FAILURE TO RENEW

SEC. 103. (a) The provisions of section 102 shall not apply to the failure to renew any franchise relationship under a trial franchise. For purposes of this section, the term "trial franchise" means any franchise—

(1) which is entered into on or after the date of enactment of this Act;

(2) the franchisee of which has not previously been a party to a franchise with the franchisor;

(3) which is in writing and states clearly and conspicuously—

(A) that the franchise is a trial franchise;

(B) the duration of the initial term of the franchise;

(C) that the franchisor may fail to renew the franchise at the conclusion of the initial term stated in the franchise by notifying the franchisee, in accordance with the provisions of section 104 of this Act, of the franchisor's intention to fail to renew; and

(D) that the provisions of section 102, limiting the right of a franchisor to fail to renew a franchise, are not applicable to such trial franchise; and

(4) the initial term of which is for a period of not more than one year.

The term "trial franchise" does not include any unexpired period of any term of any franchise (other than a trial franchise as defined by the preceding sentence) which is transferred or assigned by the franchisee to the extent authorized by the provisions of the franchise or any applicable provision of State law which permits such transfer or assignment, without regard to any provision of the franchise.

(b)(1) No franchisor may fail to renew any franchise relationship under a trial franchise at the conclusion of the initial term of such franchise unless the notification requirements of section 104 are met.

(2) The provisions of section 102 shall apply to any failure to renew any franchise relationship under any franchise described in subsection (a) if such franchise relationship is renewed after the period stated in subsection (a)(3)(B).

NOTIFICATION OF TERMINATION OR FAILURE TO RENEW

SEC. 104. (a) Prior to termination of any franchise or failure to renew any franchise relationship, a franchisor shall furnish notification to the franchisee who is a party to such franchise or such relationship—

(1) in the manner described in subsection (c); and

(2) except as provided in subsection (b)(1), not less than 90 days prior to the date on which such termination or failure to renew takes effect.

(b)(1) In circumstances in which it would not be reasonable for a franchisor to furnish notification pursuant to subsection (a)(2) such franchisor shall furnish notification to the franchisee affected thereby on the earliest date on which furnishing of such notification is reasonably practicable.

(2) With respect to any termination or failure to renew a franchise to which paragraph (1) applies, the franchisor may not establish a new franchise relationship with respect to the premises which are the subject of such franchise before the expiration of the 30-day period which begins—

(A) on the date notification was posted or personally delivered; or

(B) if later, on the date on which such termination or failure to renew takes effect. A franchisor may, if permitted to do so by the franchise agreement, repossess the premises which are the subject of the franchise and, in circumstances under which it would be reasonable to do so, operate such premises through employees or agents during such 30-day period.

(c) Notification furnished under this section—

(1) shall be in writing;

(2) shall be posted by certified mail or personally delivered to the franchisee; and

(3) shall contain—

(A) a statement of intention to terminate or fail to renew such franchise, together with the reasons therefor;

(B) the date on which such termination or failure to renew takes effect; and

(C) the summary statement prepared under subsection (d) of this section. In the case of notification furnished under this section prior to the date of publication of such summary statement in the Federal Register, such summary may be furnished to the franchisee not later than 5 days after it is published in the Federal Register, rather than at the time that the matter described in subparagraphs (A) and (B) is furnished.

(d) Not later than 30 days after the date of enactment of this Act, the Administrator of the Federal Energy Administraion shall prepare and publish in the Federal Register a simple, concise summary of the provisions of this title, including a delineation of the respective responsibilities of, and the remedies and relief available to, any franchisor and franchisee under this title.

ENFORCEMENT

SEC. 105. (a) If a franchisor terminates any franchise or fails to renew any franchise relationship in a manner which fails to comply with the requirements of section 102 or 103, or fails to comply with the requirements of section 102(d), the franchisee of such franchise or such franchise relationship may maintain a civil action against such franchisor. Such action may be brought, without regard to the amount in controversy, in the district court of the United States in any judicial district in which the principal place of business of such franchsor is located or in which such franchisee is doing business, except that no such action may be maintained unless commenced within 3 years after the date of such failure to comply with the requirements of section 102 or 103.

(b)(1) In any action under subsection (a), the court shall grant such equitable relief as the court determines is necessary to remedy the effects of any termination of a franchise or failure to renew a franchise relationship in a manner which does not comply with the requirements of section 102 or 103, or any failure of the franchisor to comply with the requirements of section 102(d), including declaratory judgment, mandatory or prohibitive injunctive relief and interim equitable relief.

(2) Except as provided in paragraph (3), in any action under subsection (a), the court shall grant a preliminary injunction if—

(A) the franchisee shows that the franchise of which he is a party has been terminated or the franchise relationship of which he is a party has not been renewed;

(B) the franchisor does not demonstrate to the satisfaction of the court that such franchisor is likely to prevail in a trial on the merits; and

(C) the court does not determine that the action brought by the franchisee under subsection (a) is frivolous.

(3) Nothing in this subsection shall be construed as preventing any court from requiring the franchisee in any action under subsection (a) to post a bond, in an amount established by the court, prior to the issuance or continuation of any injunction.

(4) In any action under subsection (a), the court need not exercise its equity powers to compel continuation or renewal of a franchise relationship if such action was commenced—

(A) more than 90 days after the date on which notification pursuant to section 104 (a) was posted or personally delivered to the franchisee; or

(B) more than 30 days after the date on which the termination of such franchise or the failure to renew such franchise relationship takes effect if notification was not provided pursuant to section 104(a).

(c) In any action under subsection (a), the franchisor shall have the burden of proving that his termination of the franchise or failure to renew the franchise relationship complied with the requirements of section 102 or 103, and, if applicable, that he complied with the requirements of section 102(e).

(d)(1) If the franchise prevails in any action under subsection (a), the court—

(A) shall award actual damages as determined by the jury (unless trial by jury has been waived);

(B) in the case of any such action which is based upon conduct of the franchisor which was in gross or willful disregard of the requirements of section 102 or 103, or the rights of the franchisee thereunder, may award exemplary damages, where appropriate; and

(C) shall direct that reasonable attorney and expert witness fees be paid by the franchisor, unless the court determines that only nominal damages are to be awarded to such franchisee, in which case the court, in its discretion, need not direct that such fees be paid by the franchisor.

(2) The questions of whether to award exemplary damages and the amount of any such award shall be determined by the court and not by the jury.

(3) In any action under subsection (a), the court may, in its discretion, direct that reasonable attorney and expert witness fees be paid by the franchisee if the court finds that such action is frivolous.

(e)(1) In any action under subsection (a) with respect to a failure of a franchisor to renew a franchise relationship in compliance with the requirements of section 102, the court may not compel a continuation or renewal of the franchise relationship if the franchisor demonstrates to the satisfaction of the court that—

(A) the basis for such failure to renew is a determination made by the franchisor in good faith and in the normal course of business—

(i) to convert the premises which are the subject of the franchise to a use other than the sale or distribution of motor fuel;

(ii) to materially alter, add to, or replace such premises;

(iii) to sell such premises;

(iv) to withdraw from the marketing of motor fuel in the relevant geographic market area in which such premises are located; or

(v) that renewal of the franchise is likely to be uneconomical to the franchisor despite such reasonable changes or reasonable additions to the provisions of the franchise as may be agreed to by the franchisee.

(B) the requirements of section 104 have been complied with; and

(C) the failure to renew is not for the sole purpose of converting the premises, which are the subject of the franchise, to operation by employees or agents of the franchisor for such franchisor's own account.

(2)(A) Except as provided in subparagraph (B) the provisions of paragraph (1) shall not affect any right of any franchisee to recover damages and reasonable attorney and expert witness fees under subsection (d) if such failure to renew is prohibited by section 102.

(B) In any action under subsection (a) to which the provisions of this subsection apply, the franchisee may recover actual damages under subsection (d)(A), but any award of actual damages for loss of future earnings or profits, if any, shall be limited to 3 years. In determining the amount of any such actual damages the jury shall consider factors in mitigation of such damages, including—

(i) efforts of the franchisee to obtain substitute employment; and

(ii) whether, within the 90-day period after notification was given, pursuant to section 104, the franchisor—

(I) made a bona fide offer to sell the premises which are the subject of the franchise to such franchisee; or

(II) if applicable, offered the franchisee a right of first refusal of at least 45 days duration, of an offer, made by another, to purchase such premises.

RELATIONSHIP OF THIS TITLE TO STATE LAW

SEC. 106. (a) To the extent that any provision of this title applies to the termination (or the furnishing of notification with respect thereto) of any franchise, or to the

nonrenewal (or the furnishing of notification with respect thereto, of any franchise relationship), no State, territory, or possession of the United States, or any political subdivision thereof, nor the District of Columbia, the Commonwealth of Puerto Rico, or any political subdivision thereof, may adopt, enforce, or continue in effect any provision of any law or regulation (including any remedy or penalty applicable to any violation thereof) with respect to termination (or the furnishing of notification with respect thereto) of any such franchise or to the nonrenewal (or the furnishing of notification with respect thereto) of any such franchise relationship unless such provision of such law or regulation is the same as the applicable provision of this title.

(b) This title shall not be construed to authorize any transfer or assignment of any franchise or to prohibit any transfer or assignment of any franchise as authorized by the provisions of such franchise or by any applicable provision of State law which permits such transfer or assignment without regard to any provision of the franchise.

TITLE II—OCTANE DISCLOSURE

DEFINITIONS

SEC. 201. As used in this title:

(1) The term "gasoline retailer" means any person who sells automotive gasoline to the general public for ultimate consumption.

(2) The term "automotive gasoline" means gasoline of a type distributed for use as a fuel in any motor vehicle.

(3) The term "motor vehicle" means any self-propelled four-wheeled vehicle, of less than six thousand pounds gross vehicle weight, which is designed primarily for use on public streets, roads, and highways.

(4) The term "new motor vehicle" means any motor vehicle the equitable or legal title to which has not previously been transferred to an ultimate purchaser.

(5) The term "ultimate purchaser" means, with respect to any new motor vehicle, the first person who in good faith purchases such new motor vehicle for purposes other than resale.

(6) The term "manufacturer" means any person who imports, manufactures, or assembles motor vehicles for sale.

(7) The term "octane rating" means a comparative ranking of the antiknock characteristics of each grade or type of automotive gasoline.

(8) The term "octane requirement" means the minimum octane rating of each grade or type of automotive gasoline recommended, by the manufacturer of a motor vehicle, for use in motor vehicles, or a class thereof, imported, manufactured, or assembled by such manufacturer, for the efficient operation of such motor vehicle without knocking.

(9) The term "model year" means a manufacturer's annual production period (as determined by the Federal Trade Commission) for motor vehicles or a class of motor vehicles. If a manufacturer has no annual production period the term "model year" means the calendar year.

(10) The term "octane overbuying" means the act of purchasing automobile gasoline, as a fuel for a motor vehicle, which possesses antiknock characteristics greater than necessary for the normal operation of such motor vehicle, without knocking.

OCTANE RATING PROGRAM

SEC. 202. (a) Not later than 6 months after the date of enactment of this Act, the Federal Trade Commission shall, by rule, prescribe and make effective—

(1) testing procedures for the determination of the octane rating of automotive gasoline;

(2) requirements, applicable to any refiner who distributes gasoline, with respect to testing automotive gasoline in accordance with the procedures established under paragraph (1);

(3) requirements, applicable to any person who distributes automotive gasoline (other than any person who distributes automotive gasoline exclusively at retail) with respect to certification of the octane rating of automotive gasoline distributed by such person to another person for a purpose other than ultimate consumption by such other person;

(4) requirements, applicable to any gasoline retailer, with respect to the display of the octane rating of automotive gasoline at the point of sale to ultimate consumers of such gasoline; and

(5) requirements, applicable to any manufacturer of new motor vehicles, with respect to the display of the octane requirement of new motor vehicles on the fuel gage or dashboard of such motor vehicles.

(b) Notwithstanding section 18 of the Federal Trade Commission Act, the Federal Trade Commission shall prescribe the rule required by subsection (a) in accordance with section 553 of title 5, United States Code, with opportunity for presentation of written and oral views.

(c) Effective 90 days after the effective date of rules with respect to test procedures under subsection (a)(1), no person who distributes automotive gasoline may make any representation respecting the octane rating of such gasoline, unless such gasoline has been tested in accordance with such test procedures and such representation fairly discloses the results of such testing.

(d) In prescribing rules under subsection (a), the Federal Trade Commission shall consider—

(1) the need for a uniform octane rating system that provides meaningful information respecting the antiknock characteristics of automotive gasoline to the greatest number of retail automotive gasoline purchasers so as to reduce octane overbuying;

(2) the need to reduce wasteful consumption of energy resulting from octane overbuying;

(3) the need to reduce lead in motor vehicle exhaust emissions resulting from octane overbuying;

(4) the need to reduce unnecessary consumer costs resulting from octane overbuying;

(5) the need for coordination of information provided to motor vehicle operators respecting the octane requirement of motor vehicles with information respecting the octane rating of automotive gasoline provided retail automotive gasoline purchasers through labeling of automotive gasoline by gasoline retailers;

(6) ease of administration and enforcement;

(7) industry practices in the manufacture and importation of motor vehicles and in the distribution and marketing of automotive gasoline; and

(8) the effect of altitudinal and climatic variances upon octane requirements.

RULEMAKING AUTHORITY

SEC. 203. (a) The Federal Trade Commission shall have procedural, investigative, and enforcement powers, including the power to issue procedural rules in enforcing compliance with the rules prescribed pursuant to the requirements of this title, and to require the filing of reports, the production of documents, and the appearance of witnesses, as though the applicable terms and conditions of the Federal Trade Commission Act were part of this title.

(b)(1) The Federal Trade Commission shall have authority to further define terms used in this title and to amend the rules prescribed pursuant to section 202(a).

(2) Notwithstanding section 18 of the Federal Trade Commission Act, the Federal Trade Commission may exercise the authority granted by this subsection to prescribe rules in accordance with section 553 of title 5, United States Code, with opportunity for presentation of written and oral views.

ENFORCEMENT

SEC. 204. (a) It shall be an unfair or deceptive act or practice in or affecting commerce (within the meaning of section 5(a)(1) of the Federal Trade Commission Act) for any person to violate rules prescribed under section 202(a)(2), (3), (4), or (5), section 202(c), or rules prescribed under section 203.

(b) The Federal Trade Commission may enter into interagency agreements with the Environmental Protection Agency and such other agencies of the United States as the Commission determines appropriate for the purpose of assuring enforcement of the provisions of this title consistently with minimization of the cost of field inspection and related compliance activities and reduction of duplication of similar or related field compliance activities performed by agencies of the United States.

JUDICIAL REVIEW

SEC. 205. Any rule prescribed by the Federal Trade Commission pursuant to the authority of section 202(a) or section 203(b) is subject to judicial review only to the extent authorized by, and in accordance with, chapter 7 of title 5, United States Code, except that—

(1) the second sentence of section 705 thereof is not applicable; and

(2) any reviewing court may not hold unlawful and may not set aside such rule on any ground other than a ground specified in subparagraph (A), (B), (C), or (D) of section 706(2) thereof.

EFFECTIVE DATE

SEC. 206. (a) Rules under paragraph (1) of section 202(a) shall take effect not later than 6 months after the date of enactment of this Act.

(b) Rules under paragraphs (2), (3), and (4) of section 202(a) shall take effect not later than 9 months after the date of enactment of this Act.

(c) Rules under paragraph (5) of section 202(a) shall take effect not later than the beginning of the first motor vehicle model year which begins more than 9 months after the date of enactment of this Act.

TITLE III—PROHIBITION ON CERTAIN UNFAIR PRACTICES IN THE MARKETING OF AUTOMOTIVE GASOLINE

FINDINGS AND PURPOSE

SEC. 301. (a) The Congress hereby finds that:

(1) Gasoline marketers, which directly operate retail outlets for the sale of automotive gasoline while simultaneously engaging in crude oil production, refining, or other petroleum product marketing activities, possess the potential to subsidize their direct operation of retail outlets with profits derived from crude oil production, refining, or other marketing activities.

(2) Gasoline marketers which are exclusively engaged in the operation of retail outlets for the sale of automotive gasoline and related services are unable to compete effectively with such subsidized retail outlets.

(3) The elimination of effective competition in gasoline retailing from nonintegrated independent marketers will injure competition and result, in the long run, in higher prices to consumers.

(4) Loss leader sales of gasoline by persons primarily engaged in activities other than the marketing of automotive gasoline and the providing of related services (for example, convenience store operations and chain department store operations) threaten to injure competition in automotive gasoline.

(5) Protection of the Nation's system of independent service station operators is es-

sential to foster commerce, to permit continued use of the Nation's highways by business and recreational travelers and to protect the health and safety of the Nation's highway travelers.

(b) The purpose of this title is to further competition in automotive gasoline marketing and to protect the Nation's independent service station operators from discriminatory and unfair competition.

PROHIBITION ON DISCRIMINATORY SUBSIDIZATION OF DIRECT RETAIL GASOLINE MARKETING ACTIVITIES WITH PROFITS DERIVED FROM CRUDE OIL PRODUCTION, REFINING OR OTHER MARKETING ACTIVITIES

SEC. 302. (a) No dual distribution marketer of automotive gasoline in or affecting commerce may establish or maintain retail automotive gasoline prices which do not recover—

(1) the cost of automotive gasoline transferred to, or purchased by, retail outlets (other than retail outlets described in subsection (c)) controlled by such marketer; plus

(2) the cost of operating such retail outlets.

(b) For purposes of this section:

(1) The cost of automotive gasoline transferred to a retail outlet controlled by a dual distribution marketer of automotive gasoline shall equal the price which such marketer would lawfully charge for such gasoline if the retail outlet were not controlled by such marketer or any affiliate of such marketer.

(2) The price a dual distribution marketer charges another person for similar types, grades, and quantities of automotive gasoline purchased, for resale through similarly situated retail outlets not controlled by such marketer or an affiliate of such marketer, shall create a presumption that such price is the price which such dual distribution marketer would lawfully charge under the preceding paragraph if the retail outlet were not controlled by such marketer or an affiliate of such marketer. Such presumption may be rebutted by evidence showing that—

(A) such price charged to such other person by such dual distribution marketer was lawfully charged pursuant to the provisions of section 2 of the Clayton Act, as amended by the Act of June 19, 1936, entitled "An Act to amend section 2 of the Act entitled 'An act to supplement existing laws against unlawful restraints and monopolies and for other purposes', approved October 15, 1914, as amended (U.S.C., title 15, sec. 13), and for other purposes"; and

(B) such provisions of such section would permit the charging of a different price by such marketer, to a purchaser of automotive gasoline for resale through such retail outlet (controlled by such marketer or an affiliate of such marketer), if such retail outlet were not controlled by such marketer or an affiliate of such marketer, based upon a grounds specified in such section, including differences in costs, applicability of discounts available on proportionally equal terms, and the good faith meeting of an equally low price of a competitor.

(3) The costs of operating retail outlets owned or controlled by a dual distribution marketer or an affiliate of such marketer include—

(A) the total amount expended in rendering services at such retail outlets in connection with retail sales of automotive gasoline to ultimate consumers made through such outlets; for example, payments for electric utility services, water, heat, labor, management services, janitorial services, grounds maintenance, building maintenance, repairs to buildings and fixtures, local real estate taxes, rent (if such retail outlets are not owned by such marketer or an affiliate of such marketer); plus

(B) an amount representing reasonable amortization of nondepreciable capital assets of such retail outlets utilized in connection with retail sales of automotive gasoline to ultimate consumers made through such outlets; plus

(C) an amount representing a reasonable allowance for depreciation of depreciably capital assets of such retail outlets utilized in connection with retail sales of automotive gasoline to ultimate consumers made through such outlets.

(4) The term "dual distribution marketer of automotive gasoline" means any person who both—

(A) markets automotive gasoline at wholesale to another person who purchases such automotive gasoline for resale; and

(B) markets automotive gasoline at retail to ultimate consumers through retail outlets (other than retail outlets described in subsection (c)) controlled by such person or any affiliate of such person.

(5) The term "automotive gasoline" has the same meaning as such term has in title II of this Act.

(6) The term "affiliate" means any person who, directly or indirectly, controls, is controlled by, or is under common control with, any other person.

(7) The term "control" includes any ownership of any direct or indirect legal or beneficial interest in another person or any direct or indirect lawful power or influence arising through interlocking directorates or officers, contractual relationships, agency or exchange agreements, or licensing or leasing agreements, but does not include any such power or influence arising solely through a franchise.

(8) The term "franchise" has the same meaning as such term has in title I of this Act.

(9) The term "retail outlet" means any service station or other facility located in the United States through which automotive gasoline is sold to the general public for ultimate consumption.

(c) The provisions of this section shall not apply to any retail outlet—

(i) controlled by a marketer pursuant to the requirements of a law, regulation, or ordinance of a State or political subdivision thereof or pursuant to the terms of a contract between such marketer and a State or political subdivision thereof;

(ii) controlled by a marketer, in whole or in part, for the bona fide purpose of training employees, franchisees, or prospective franchisees, in the marketing of automotive gasoline or the operation or management of a retail gasoline outlet; or

(iii) controlled by a marketer by reason of the operation of such retail outlet by employees or agents of such marketer pursuant to section 104(b)(2) of this Act.

PROHIBITION ON LOSS LEADER MARKETING OF AUTOMOTIVE GASOLINE

SEC. 303. (a) Except as provided in subsection (b), no person engaged in the marketing or distribution of automotive gasoline in or affecting commerce may sell automotive gasoline at retail as a loss leader.

(b) Subsection (a) shall not apply to any person who markets or distributes automotive gasoline as a franchisee through a single retail outlet.

(c) For purposes of this section:

(1) The term "automotive gasoline" has the same meaning as such term has in title II of this Act.

(2) The term "franchisee" has the same meaning as such term has in title I of this Act.

(3) The term "retail outlet" means any service station or other facility located in the United States through which automotive gasoline is sold to the general public for ultimate consumption.

ACCOUNTING PRACTICES

SEC. 304. (a) No person to which the provisions of section 302 of this title apply may fail to maintain books and records, consistent with sound accounting principles, which demonstrate compliance with the requirements of that section.

(b) The Administrator of the Federal Energy Administration is authorized, after consultation with the Financial Accounting Standards Board, to prescribe, by rule, mandatory accounting standards applicable to the marketing activities, including the direct marketing of automotive gasoline at retail to ultimate consumers through retail outlets controlled by such person or an affiliate of such person, of any person to which the provisions of section 302 apply.

ENFORCEMENT

SEC. 305. (a) It shall be unlawful for any person to violate section 302, 303, or 304 of this Act.

(b)(1) Any person who violates any provision of subsection (a) shall be subject to a civil penalty of not more than $5,000 for each violation.

(2) Any person who wilfully violates any provisions of subsection (a) shall be fined not more than $5,000 for each violation.

(c) Whenever it appears to the Administrator of the Federal Energy Administration, or any person authorized by such Administrator to exercise authority under this section that any person has engaged, is engaged, or is about to engage in acts or practices constituting a violation of subsection (a), such Administrator or such person may request the Attorney General to bring a civil action to enjoin such acts or practices, and upon a proper showing, a temporary restraining order or a preliminary or permanent injunction shall be granted without bond. In such action, the court may issue mandatory injunctions commanding any refiner to comply with any provision of section 302, 303, or 304, the violation of which is prohibited by subsection (a).

(d) Any person suffering legal wrong because of any act or practice which constitutes a violation of subsection (a) may bring a civil action for appropriate relief, including an action for a declaratory judgment or writ of injunction. The district courts of the United States shall have jurisdiction of actions brought under this subsection without regard to the amount in controversy.

By Mr. WILLIAMS:

S.J. Res. 21. A joint resolution to authorize the President to proclaim annually the last Friday of April as "National Arbor Day"; to the Committee on the Judiciary.

Mr. WILLIAMS. Mr. President, today I am introducing a joint resolution directing the President to proclaim an annual "National Arbor Day" the last Friday in April.

The real and symbolic value of trees has been recognized since ancient times. In the myths and customs of early civilizations, trees symbolized life, strength, and renewal. The fate of legendary heroes was sometimes linked to the fate of a particular tree. Tree planting often marked the birth of a child, a marriage, or the ascension of a ruler.

In the United States, tree planting observances had their origins in the Great Plains. It was in the desolate prairies of Nebraska that J. Sterling Morton conceived the idea of devoting 1 day each year to the planting of trees.

There were many practical as well as esthetic reasons for planting trees. They provided shade and shelter, prevented erosion, and were a source of fuel and building materials. Morton also recognized the social and educational, moral,

and even spiritual functions of tree planting. "How enduring are the animate trees of our planting," he wrote.

They grow and self-perpetuate themselves and shed yearly blessings on our race. Trees are the monuments I would have. The cultivation of flowers and trees is the cultivation of the good, the beautiful and the noble in man.

A resolution Morton introduced before the Nebraska State Board of Agriculture proclaimed the first Arbor Day in 1872. Over a million trees were planted on that first Arbor Day, and in 1885 it was made a legal holiday in Nebraska. Several other States soon followed suit.

Unfortunately, as the frontier disappeared and our Nation became increasingly urbanized, interest in Arbor Day declined. The need to plant and maintain trees, however, is greater than ever.

The hostile natural environment encountered by J. Sterling Morton has largely been replaced by the equally hostile manmade environment of our cities. Instead of the desolate landscape of the Great Plains, we are faced with the desolation of concrete. And just as the early tree plantings in Nebraska produced manifold benefits, trees can serve to beautify our cities, cut air and noise pollution, provide shade, and cushion extremes of heat and cold. In recent years, unfortunately, city trees have become victims of budget cuts, diseases, and environmental stresses. They are often inadequately cared for, and when they die they are not replaced. Therefore, a new commitment to tree planting is urgently needed. A uniform National Arbor Day would help to renew this commitment. The National Arbor Day Committee has worked tirelessly for the past 25 years toward this goal. Largely due to the committee's efforts, 23 States has passed laws to designate the last Friday in April as Arbor Day. The legislation I am introducing today would establish a unified annual nationwide observance of Arbor Day. Through such legislation I believe we can rekindle interest in this important celebration of our ties with nature.

Mr. President, I ask unanimous consent that the resolution be printed at this point in the RECORD.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 21

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is hereby authorized and requested to issue annually a proclamation designating the last Friday of April "National Arbor Day" and calling upon the people of the United States to observe such day with appropriate ceremonies and activities.

ADDITIONAL COSPONSORS

S. 82

At the request of Mr. BUMPERS, the Senator from Wyoming (Mr. HANSEN) and the Senator from New Mexico (Mr. SCHMITT) were added as cosponsors of S. 82, a bill to amend title 18, United States Code, to authorize courts, upon the completion of any juvenile proceeding to release to any victim of such juvenile delinquency information on the final disposition of the juvenile who has been adjudicated delinquent.

S. 87

At the request of Mr. BUMPERS, the Senator from Nebraska (Mr. ZORINSKY) was added as a cosponsor of S. 87, a bill to amend title II of the Social Security Act to increase to $4,800 the amount of outside earnings permitted without deductions from benefits thereunder.

S. 92

At the request of Mr. WILLIAMS, the Senator from Maryland (Mr. SARBANES) and the Senator from Oregon (Mr. PACKWOOD) were added as cosponsors of S. 92, to amend the Export Administration Act of 1969.

S. 104

At the request of Mr. INOUYE, the Senator from South Carolina (Mr. THURMOND) was added as a cosponsor of S. 104, to amend the Social Security Act.

S. 113

At the request of Mr. CASE, the Senator from Maryland (Mr. MATHIAS) and the Senator from Hawaii (Mr. MATSUNAGA) were added as cosponsors of S. 113, to promote confidence in the branches of the Federal Government.

S. 119

At the request of Mr. INOUYE, the Senator from Hawaii (Mr. MATSUNAGA), the Senator from New York (Mr. JAVITS), and the Senator from South Carolina (Mr. HOLLINGS) were added as cosponsors of S. 119, to incorporate the Pearl Harbor Survivors Association.

S. 133

At the request of Mr. INOUYE, the Senator from New York (Mr. MOYNIHAN) was added as a cosponsor of S. 133, to amend the Public Health Service Act.

S. 174

At the request of Mr. CLARK, the Senator from Connecticut (Mr. WEICKER) and the Senator from Delaware (Mr. BIDEN) were added as cosponsors of S. 174, to amend the United Nations Participation Act.

S. 175

At the request of Mr. SCHWEIKER, the Senator from Florida (Mr. CHILES) was added as a cosponsor of S. 175, to provide a special program of financial assistance to Opportunities Industrialization Centers.

S. 224

At the request of Mr. INOUYE, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of S. 224, to amend title 5, United States Code.

S. 261

At the request of Mr. KENNEDY, the Senator from New York (Mr. JAVITS) was added as a cosponsor of S. 261, to amend the Internal Revenue Code.

S. 294

At the request of Mr. MELCHER, the Senator from Colorado (Mr. HASKELL) and the Senator from Nebraska (Mr. ZORINSKY) were added as cosponsors of S. 294, a bill to amend the Meat Import Quota Act of 1964 to define fresh, chilled and frozen meat, and for other purposes.

S. 369

At the request of Mr. INOUYE, the Senator from South Carolina (Mr. THURMOND) was added as a cosponsor of S. 369, to amend the Tariff Act.

S. 412

At the request of Mr. HUMPHREY, the Senator from Minnesota (Mr. ANDERSON) was added as a cosponsor of S. 412, the Modern Congress Act of 1977.

S. 459

At the request of Mr. CHURCH, the Senator from Vermont (Mr. LEAHY) and the Senator from Minnesota (Mr. HUMPHREY) were added as cosponsors of S. 459, to authorize reduced air fares for youth and elderly.

S. 489

At the request of Mr. BROOKE, the Senator from Oklahoma (Mr. BARTLETT), the Senator from New Jersey (Mr. CASE), the Senator from Minnesota (Mr. HUMPHREY), the Senator from New York (Mr. JAVITS), the Senator from Maryland (Mr. MATHIAS), the Senator from Montana (Mr. METCALF), and the Senator from Illinois (Mr. STEVENSON) were added as cosponsors of S. 489, to amend the Foreign Assistance Act of 1961.

S. 503

At the request of Mr. BAKER, the Senator from Rhode Island (Mr. CHAFFEE), the Senator from Michigan (Mr. GRIFFIN), the Senator from Pennsylvania (Mr. HEINZ), the Senator from Indiana (Mr. LUGAR), the Senator from Illinois (Mr. PERCY), the Senator from Pennsylvania (Mr. SCHWEIKER), and the Senator from North Dakota (Mr. YOUNG) were added as cosponsors of S. 503, the Youth Employment Act.

S. 508

At the request of Mr. CHURCH, the Senator from North Dakota (Mr. BURDICK) was added as a cosponsor of S. 508, to eliminate the trading of potato futures on commodity exchanges.

S. 528

At the request of Mr. WILLIAMS, the Senator from Missouri (Mr. EAGLETON) was added as a cosponsor of S. 528, relating to collective-bargaining contracts.

S. 543

At the request of Mr. PELL, the Senator from New Hampshire (Mr. MCINTYRE) was added as a cosponsor of S. 543, to amend title VII of the Social Security Act.

S. 551

At the request of Mr. HUMPHREY, the Senator from Washington (Mr. MAGNUSON) was added as a cosponsor of S. 551, relating to compensation of persons injured by certain criminal acts.

S. 567

At the request of Mr. THURMOND, the Senator from Virginia (Mr. WILLIAM L. SCOTT) was added as a cosponsor of S. 567, relating to the distribution of food stamps.

S. 621

At the request of Mr. BUMPERS, the Senator from New Mexico (Mr. DOMENICI), the Senator from Michigan (Mr. RIEGLE), and the Senator from Nebraska (Mr. ZORINSKY) were added as cospon-

sors of S. 621, a bill to provide for guidelines and strict liability in the development of research related to recombinant DNA.

S. 672

At the request of Mr. HUMPHREY, the Senator from South Dakota (Mr. MCGOVERN), the Senator from Maine (Mr. HATHAWAY), and the Senator from New Jersey (Mr. WILLIAMS) were added as cosponsors of S. 672, relating to solar energy devices for Government buildings.

S. 688

At the request of Mr. MELCHER, the Senator from Montana (Mr. METCALF) was added as a cosponsor of S. 688, a bill to eliminate a restriction relating to certain lands granted to the State of Montana.

S. 690

At his own request, the Senator from Colorado (Mr. HART) was added as a cosponsor of S. 690, for the relief of the Jefferson County Mental Health Center in Colorado.

SENATE JOINT RESOLUTION 2

At the request of Mr. BUMPERS, the Senator from Nebraska (Mr. CURTIS) was added as a cosponsor of Senate Joint Resolution 2, a joint resolution proposing an amendment to the Constitution to provide that, except in time of war or economic emergency declared by the Congress, expenditures of the Government may not exceed the revenues of the Government during any fiscal year.

SENATE JOINT RESOLUTION 11

At the request of Mr. STONE, the Senator from Minnesota (Mr. ANDERSON) was added as a cosponsor of Senate Joint Resolution 11, providing for a National Leadership Conference on Energy Policy.

SENATE RESOLUTION 49

At the request of Mr. PELL, the Senator from Illinois (Mr. STEVENSON) was added as a cosponsor of Senate Resolution 49, relating to international environmental impact statements.

SENATE RESOLUTION 81

At the request of Mr. BAYH, the Senator from Illinois (Mr. STEVENSON), the Senator from Louisiana (Mr. JOHNSTON) and the Senator from New Mexico (Mr. SCHMITT) were added as cosponsors of Senate Resolution 81, relating to the expulsion of George Krimsky by the Soviet Government.

SENATE RESOLUTION 87—SUBMISSION OF A RESOLUTION AUTHORIZING SUPPLEMENTAL EXPENDITURES

(Referred to the Committee on Rules and Administration by unanimous consent)

Mr. CHURCH (for himself and Mr. HANSEN) submitted the following resolution:

S. RES. 87

Resolved, That section 4 of S. Res. 373, Ninety-fourth Congress, agreed to March 1, 1976, is amended by striking out "$547,000" and inserting in lieu thereof "$556,000".

Mr. CHURCH. Mr. President, I send to the desk a resolution authorizing supplemental expenditures for the Special Committee on Aging for inquiries and investigations, and I ask unanimous consent that it may be referred to the Committee on Rules and Administration.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE RESOLUTION 88—SUBMISSION OF A RESOLUTION RELATING TO THE METRIC SYSTEM OF MEASUREMENT

(Referred to the Committee on Rules and Administration.)

Mr. PELL (for himself and Mr. INOUYE) submitted the following resolution:

S. RES. 88

Whereas the United States was an original signatory party to the 1875 Treaty of the Meter (20 Stat. 709) which established the General Conference of Weights and Measures, the International Committee of Weights and Measures, and the International Bureau of Weights and Measures;

Whereas the use of metric measurement standards in the United States has been authorized by law since 1866 (Act of July 28, 1866; 14 Stat. 339);

Whereas the Metric Conversion Act of 1975 declared that the policy of the United States shall be to coordinate and plan the increasing use of the metric system in the United States and to establish a United States Metric Board to coordinate the voluntary conversion to the metric system;

Whereas it is the aim of the Senate to assist the United States Metric Board in carrying out the policies of the Metric Conversion Act of 1975, particularly with regard to greater public understanding of and education about the metric system;

Whereas a need currently exists for the Senate to participate in the Nation's conversion to the metric system: Now, therefore, be it

Resolved, That (a) units of weights and measures contained in all bills, resolutions, and amendments, and in all committee reports, shall be expressed in units of the metric system of measurement (as defined in section 4(4) of the Metric Conversion Act of 1974) either (1) as the sole or primary unit of measurement or (2) as an alternative unit of measurement to a non-metric unit of measurement.

(b) It shall not be in order to consider any bill, resolution, or amendment which does not comply with the provisions of subsection (a), and it shall not be in order to consider any bill or resolution reported by any committee unless the committee report accompanying that bill or resolution complies with the provisions of subsection (a).

Mr. PELL. Mr. President, I am pleased to introduce, for myself and Senator INOUYE, a resolution to require the inclusion of units of the metric system of measurement in all Senate bills, resolutions, amendments, and committee reports which contain references to units of weights and measures.

This Senate resolution serves as a natural and necessary follow-up to action in the 94th Congress on bills S. 100 and H.R. 8674, signed by President Ford on December 23, 1975, as Public Law 94–168, the Metric Conversion Act of 1975. As the sponsor of S. 100 and as the original Senate sponsor of metric conversion legislation in 1963, I believe that the Senate must move now to keep pace with the U.S. Metric Board in facilitating the Nation's switch to metric.

Hearings conducted by the distinguished Senator from Hawaii (Mr. INOUYE) on metric conversion legislation revealed that our citizens have been ahead of their government for some time in understanding the advantages of the metric system. Now that Congress has acknowledged the obvious in passing the Metric Conversion Act, it is time for the Senate to make its own procedures consistent with national policy.

There is no need to fear confusion in the Senate due to the requirements of this resolution, nor should we be concerned about delays in the legislative process. The timely flow of legislation will not be interrupted.

The great majority of Senate documents, Mr. President, will not be affected by this resolution, simply because they contain no references to units of weights and measures in the first place. For the ones that do, it is a simple matter for the drafters of the bill, report, amendment, or resolution to place in parentheses next to the unit its metric equivalent. For example, if a highway bill refers to an additional 3,000 miles of construction needed to complete the Interstate Highway System, the notation 5,000 kilometers must be placed immediately thereafter in parentheses.

A point of order will lie for omission of this simple task. I believe such a strict sanction is needed to put the Senate on record as being behind the move to metric. Yet even with a point of order, correction of any flaws will be an easy matter, so as not to disrupt the legislative process.

Mr. President, this Senate resolution serves to symbolize the Senate's continuing commitment to our national policy, as stated in Public Law 94–168, of coordinating the increasing use of the metric system in the United States.

NOTICES OF HEARINGS

COMMITTEE ON FOREIGN RELATIONS

Mr. SPARKMAN. Mr. President, as chairman of the Committee on Foreign Relations, I wish to announce that the committee has scheduled a meeting at 10 a.m. on February 22, 1977, in room 4221, Dirksen Senate Office Building, to take up the following:

Paul C. Warnke, of the District of Columbia, to be Director of the U.S. Arms Control and Disarmament Agency, with rank of Ambassador during his tenure of service as Director;

S. 174, to amend the United Nations Participation Act of 1945 to halt the importation of Rhodesian chrome;

Senate Congressional Resolution 7, relating to freedom of emigration;

The following-named Foreign Service Officers for promotion from class 1 to the class of career minister:

Harry G. Barnes, Jr., of Maryland.
Robert A. Hurwitch, of Illinois.
Richard B. Parker, of Kansas.
Thomas R. Pickering, of New Jersey.
Harry W. Schlaudeman, of California.
Ronald I. Spiers, of Vermont.
Christopher Van Hollen, of Virginia.

Foreign Service Officer Promotion List (1/10/77).

Foreign Service Information Officer Promotion List (1/10/77).

Committee budget.

Subcommittee structure.

SUBCOMMITTEE ON OCEANS AND INTERNATIONAL ENVIRONMENT

Mr. SPARKMAN. Mr. President, as chairman of the Committee on Foreign Relations, I wish to announce that the Subcommittee on Oceans and International Environment has scheduled a hearing for February 23, 1977, at 10 a.m., in room 4221, DSOB, to receive testimony from executive branch and public witnesses on Senate Resolution 49, expressing the sense of the Senate that the U.S. Government should seek the agreement of other governments to a proposed treaty requiring the preparation of an international environmental impact statement for any major project, action, or continuing activity which may be reasonably expected to have a significant adverse effect on the physical environment or environmental interests of another nation or a global commons area.

COMMITTEE ON ENERGY AND NATURAL RESOURCES

Mr. JACKSON. Mr. President, I would like to announce for the information of the Senate and the public, the scheduling of an informational oversight hearing before the Committee on Energy and Natural Resources.

The hearing is scheduled for March 24, 1977, beginning at 10 a.m. in room 3110, Dirksen Senate Office Building. The subject of the oversight hearing will be the concept of an international petroleum transshipment port and storage center located in the Palau District, western Caroline Islands, Trust Territory of the Pacific Islands.

In order to provide a comprehensive briefing for the members of the committee and other interested persons, formal testimony has been requested from those involved in the concept proposal, affected Federal agencies, representatives from Palau, and selected conservation groups.

For further information regarding the hearing, you may wish to contact Mr. James P. Beirne, counsel to the committee, at 224–7145 or write to the Committee on Energy and Natural Resources, room 3106, Dirksen Senate Office Building, Washington, D.C. 20510.

SMALL BUSINESS COMMITTEE

Mr. NELSON. Mr. President, on February 24 and 28 at 10 a.m. in room 6202 of the Dirksen Senate Office Building, the Senate Small Business Committee will conclude the hearings begun last fall by Senator ABOUREZK on the decline of the supplemental airline industry in the United States. The hearings will be chaired on Thursday, February 24, by Senator HASKELL and on Monday, February 28, by Senator HATHAWAY.

The hearings held last fall explored the process by which all but 6 of the original 142 supplemental air carriers have gone out of business. Those hearings led Senator ABOUREZK to conclude that unwise policies of the Civil Aeronautics Board, the military, and the Central Intelligence Agency were largely responsible for the devastation of these small business airlines. The hearings, to be chaired by Senators HASKELL and HATHAWAY, will focus on the problems of the remaining supplementals, including charter regulations, applications for low-cost scheduled service, discriminatory enforcement of rules by the CAB, and military airlift contract procedures.

ADDITIONAL STATEMENTS

REQUEST FOR ADDITIONAL RECOMMENDATIONS FROM SENATORS ON COMMITTEE SYSTEM IMPROVEMENTS

Mr. STEVENSON. Mr. President, the temporary Select Committee To Study the Senate Committee System completed its major assignment with the Senate's approval February 4 of Senate Resolution 4, the committee system reorganization amendments. Nevertheless, before it concludes its life of 11 months on February 28, the select committee intends to make additional recommendations to the Senate.

At the select committee's business meeting February 9, Members present adopted an outline of subjects on which the staff will report prior to a final meeting of the committee on February 24. Those topics are:

1. Committee staffing.
2. Severance pay under Senate Resolution 4 transition.
3. Committee system management.
4. Scheduling.
5. Information distribution and communications.
6. Media in committees.
7. Committee consideration of Presidential nominations.
8. Foresight and futures.
9. Oversight.
10. Committee review—legislative veto—responsibility.
11. Excessive demands on committees.
12. Conference procedures.
13. Information gathering.
14. Internal committee rules and procedures.

Senators and all interested parties are invited to submit their recommendations or comments for the consideration of the select committee, in writing, to any member of the committee or to the committee offices, 401 Senate Courts. The committee does not plan additional hearings, but does plan to publish the additional statements and staff reports, as well as to consider such statements in making final recommendations. Statements must be received by February 21, to be placed before the committee in its final considerations.

Mr. President, I ask unanimous consent to have printed in the RECORD an outline statement of the background and illustrative questions and options with regard to the subjects I have named.

There being no objection, the outline statement was ordered to be printed in the RECORD, as follows:

OUTLINE STATEMENT

1. COMMITTEE STAFFING

A. Background.—S. Res. 4 did not attempt to settle certain problems of committee staffing because they are best addressed after questions of committee system structure are settled.

B. Illustrative Questions and Options.—

1. S. Res. 60: Under S. Res. 4, Senators will continue to receive the same allowance for personal committee staff as in the past, but widespread use of such funds as if they are personal clerk hire funds may argue for including them in clerk hire allowances or otherwise simplifying their administration.

2. Permanent Committee Staff; The Legislative Reorganization Act of 1946, as amended, provides the standing committees of the Senate, and the Select Committee on Small Business with a permanent staff of 12 persons, 6 professionals (4 majority, 2 minority) and 6 clerical (5 majority, 1 minority). Through additional legislation and special resolutions, however, some such committees have increased the sizes of their permanent staffs, from one to as many as 18.

These sizes are unrealistic today, and do not accurately reflect the workload of the committees, especially now that these workloads have been increased in some committees as a result of jurisdictional consolidation and new assignments. In addition, the majority-minority ratios are out-of-date under the new minority staffing provision of S. Res. 4. Accordingly, the Select Committee may wish to propose appropriate modifications of the Legislative Reorganization Act to increase the size of permanent staffs and decrease the size of investigative.

3. Invesigative Staff; Many investigative staff members are, in effect, permanent staff members. An increase in the size of the permanent committee staffs would take cognizance of this fact, and facilitate the funding of committees. Likewise, some staff members of permanent select committees should be designated as permanent rather than investigative staff. The tasks of the committees, and especially the Rules Committee, and Senate control of staff proliferation, might be greatly facilitated if investigative staff were authorized through a single resolution from each committee rather than multiple resolutions.

2. SEVERANCE PAY FOR DISPLACED STAFF UNDER S. RES. 4

A. Background.—Provisions for Severance Pay Under S. Res. 4.—The Rules Committee's Report accompanying S. Res. 4, states that:

"The question of severance pay for Senate staff employees, whose jobs are eliminated because of the reorganization of the Senate committee system, was addressed in S. Res. 4 and discussed extensively in the Rules Committee markup. Because of the complexity of the subject and the need for numerous technical changes in the language, the section of S. Res. 4 giving the details of severance pay provisions was dropped, although the Rules Committee accepted the principle, as outlined in the Select Committee's recommendations.

"The Select Committee will issue a second report on this subject, no later than February 28, 1977, to the Committee on Rules and Administration, which will act on it before the end of the transition period—July 1, 1977."

B. Questions Concerning Severance Pay.—

1. General Guidelines and Standards to be followed.
2. Standards of Eligibility.
3. Effect of Reemployment on Severance Pay.
4. Effect of Retirement Annuities on Severance Pay.
5. Factors Determining the Amount of Severance Pay.
6. Effect of Unemployment Compensation and Compensation for Job-related Injury on Severance Pay.
7. Effect of Severance Pay on Retirement or Accrual Leave.
8. Severance Pay to Third Party Beneficiaries and Survivors.
9. Limits on the Amount of Severance Pay.
10. Method of Payment.

3. COMMITTEE SYSTEM MANAGEMENT

A. Background.—Among the mandates of the Select Committee is "to make recommendations which promote optimum . . . effec-

tiveness of committees in the creation and oversight of Federal programs." This leads the Select Committee to consideration of the *management* of the committee *system*, including questions of setting priorities, setting legislative agendas, articulating objectives and developing methods of achieving those objectives. Responsibility for such management of the system may fall upon party leaders, policy committees, party conferences, the Committee on Rules and Administration and other officials.

B. Illustrative Questions and Options—1. Require each Senate committee to issue: a) projected agenda or statement of objectives each year, including plans for hearings and dates for completing their recommendations of major legislation, and, b) a followup report on the extent to which the agenda was followed and the objectives were, or were not achieved, and why.

2. Require the majority leadership, assisted by the policy committee, to insure a projected Senate agenda each year or each Congress, outlining for each committee the major policy areas targeted for legislation or major consideration. Give the leaders and the policy committees the responsibility to monitor each committee's progress in meeting these official programs for action.

3. Give the party leaders the authority to temporarily merge (or propose the merger of) subcommittees on 2 or more standing committees for consideration of an omnibus bill which cuts across the jurisdictions of 2 or more committees. For example, the Senate might consider an urgent bill on the Outer Continental Shelf through a temporary joint subcommittee composed of members from relevant subcommittees of the Committees on Energy, Environment, and Commerce.

4. Create a privileged procedure for the temporary creation of ad hoc committees with legislative authority, which satisfies critics of the proposed arrangement. (Deleted from S. Res. 4 by the Rules Committee.)

4. SCHEDULING

A. Background.—The Select Committee included some recommendations relating to scheduling of committee and subcommittee meetings and hearings, and scheduling of committees vis a vis the Senate floor, in its initial set of recommendations, S. Res. 586/S. Res. 4. The computerized scheduling service and designated meeting times for committees were incorporated in the reorganization as passed. Recommendations to control the timing of roll call votes on the floor to minimize interruptions in committee meetings were deleted in the Rules Committee. However, there are a number of other possible innovations in scheduling. Some have been proposed by Senator Robert C. Byrd, and others by the Commission on the Operation of the Senate. Some relate to internal committee scheduling, others to streamlining scheduling among committees, and yet others to committee vs. the floor.

B. Illustrative Questions and Options.—

1. With majority leader authorized to alter as session progresses, require that one day weekly be kept open for committee meetings only with no floor session except for extraordinary circumstances. (Byrd)

2. Begin session with 3 days for committee meetings only, 2 days for floor debate only (with control in hands of majority leader to alter as necessary), and gradually change mix of committee and floor days as session progresses, (similar to Commission)

3. Electronic voting system in Senate, with adequate safeguards to allow Senators attending hearings at least 15 minutes before the first roll call occurs in a series of back-to-back votes. (Byrd)

4. Closed circuit television of floor debate to committee rooms and to Senators' offices. (Byrd/Baker)

5. No roll call votes before a certain specified hour (1 o'clock or 2 o'clock). (Byrd letter says 1 p.m.) (Rules Committee deleted provisions from S. Res. 4.)

6. Move all committee and subcommittee meetings to the Capitol when the Senate is in session; create enough hearing rooms in Capitol to make this possible.

7. Establish a central meeting rooms scheduling office, with control over committee and subcommittee hearing and meeting rooms, to schedule meetings through the computerized scheduling service, to match size of meeting to size of room, and to maximize convenience of Senators.

8. Allow each committee to hire and utilize hearing examiners, and to hold official hearings without committee members present. (Also part of Information Gathering—Item IV—1.)

5. INFORMATION DISTRIBUTION AND COMMUNITATIONS

A. Background.—One major problem of the Senate committee system is a lack of coordination in informing Senators and Senate employees (or House Members, the Administration, State and local governments, and the public) of the activities of Senate committees, and of related floor activities. A good deal of time and of staff and Senator resources can be wasted by 100 and more offices separately tracking down information on what is happening, or has happened in an issue or in committees.

B. Illustrative Questions and Options.—

1. Have closed circuit television of committee hearings and floor debates back to Senators' offices (S. Res. 74—Senator Byrd of W. Va.); or have teletype system to relay information on committee hearings and floor debates to Senators, staff, and committee offices.

2. Have brief daily summaries of *Congressional Record* prepared and distributed to offices of Senators and committees.

3. Institutionalize the *Committee Reorganization Telegraph* (CRT) concept, by: (a) requiring each committee to assign staff, when useful, to monitor and summarize on a daily basis important hearings or open committee or subcommittee meetings; and (b) distribute such information, on demand, through Cathrode Ray Tube equipment in the office of each Senator or other interested party.

4. Institute a regular Supplement to the Whip Notice, parallel to the House of Representatives' DSG supplements, with information on upcoming floor issues, including proposed or anticipated amendments, pros and cons, etc., prepared by the Party Policy Committees.

5. Require staff of each committee to provide each day an update on the status of major legislation before the committee for distribution, on demand, through computerized records and CRT equipment.

6. MEDIA IN COMMITTEES

A. Background.—S. Res. 109 included as an assignment of the Temporary Select Committee the study of "media coverage of meetings." Committee staff has underway an analysis of television network news coverage of Senate committees, by Steve Rutkus of CRS. It can expand upon that analysis to suggest possible recommendations to facilitate media coverage of Senate committee activities.

B. Illustrative Questions and Options.—

1. Create a Senate Press Officer, or an official Reporter of the Senate, or a central clearinghouse, whose function would be to provide information on all Senate activities, particularly in committees, to Senate staff and to representatives of the mass media. The Reporter would provide as much advance notice as possible of scheduled committee and subcommittee meetings and hearings, and would provide summaries of their activities.

2. Enlarge the facilities available to the media, especially the electronic media, who cover congressional activities.

3. Provide for the Senate itself to videotape committee and subcommittee hearings, placing the tapes in archives and making them available for loan to media representatives for news broadcasts.

7. COMMITTEE CONSIDERATION OF PRESIDENTIAL NOMINATIONS

A. Background.—During every Congress, the Senate is obliged to exercise its Constitutional power of advice and consent to more than 100,000 presidential nominations, ranging from appointments to the Supreme Court to commissions and promotions in the military services. Referred on the same basis as legislation, nominations are handled by the Senate's committees in a variety of ways—in full committee or subcommittees, with extensive questionnaires or little information, with systematic questioning or offhand queries, with or without clearances from the Senators of the nominee's state, with approval the day of nomination or at a more deliberative pace.

S. Res. 4 will have some automatic effect on the consideration of nominations. With less jurisdictional overlap there will be fewer joint referrals. The workload of nominations will be slightly equalized with the consolidation of some committees. Judiciary's ad hoc subcommittee on nominations presumably will change.

B. Illustrative Questions and Options.—

1. Should committees develop their own agendas, which would fit into the committee's overall workload?

2. Should committees use more systematic analysis of nominations, and if so, who should carry on the analysis?

3. Should committees thoroughly examine what nominees intend to do in office, and if so, how?

4. Should the consideration of nominations be more deliberative, and by what means?

5. Should the process be made more open, and if so, how?

6. What Senatorial standards governing possible conflicts of interest, if any, should be adopted?

8. FORESIGHT AND FUTURE

A. Background.—At present, the Senate anticipates future trends only on an ad hoc, rather than a comprehensive basis. Nothing in the Senate rules requires that Senators exercise foresight or utilize futures techniques or resources. Such activities are secondary to the Senate's representation, decisionmaking, and oversight activities.

B. Illustrative Questions and Options.—

1. Continue present practice of exercising and not exercising foresight on an ad hoc basis.

2. Amend the standing rules to fix responsibility explicitly for foresight and futures research in the committees, as the House rules do.

3. Committees could establish, unilaterally or at the direction of the Senate, subcommittees in part responsible for foresight and futures research.

4. Adopt a rule explicitly fixing responsibility for foresight and futures research in the leadership or in the policy committees.

5. The Senate or the committees could require periodic committee reports on emerging issues.

6. The Senate or the committees could require periodic committee hearings on emerging issues.

7. The Senate or the committees could require periodic staff briefings on emerging issues and the uses of futures research.

8. The Senate or the committees could require committees to file a foresight state-

ment along with the report on all legislation to identify emerging issues and the likely effects of future trends.

9. Empower the Joint Economic Committee to consider concurrent resolutions on national growth and development, thereby fixing responsibility for foresight in that committee.

10. Encourage or require the Congressional Research Service to carry on more futures research and better transmit such research to Senate committees.

11. Encourage or require the Congressional Budget Office to carry on more alternative budget analysis and better disseminate such analysis within Congress.

12. Encourage or require the Office of Technology Assessment to arrange more discussion of futures issues with committees and their staffs.

13. Encourage informal groups of Senators or staff to deal with futures research in the manner of the Congressional Clearinghouse on the Future.

9. OVERSIGHT

A. Background.—Adoption of S. Res. 4 enhances the Senate's capacity to conduct oversight. By rationalizing jurisdictions, committees are better able to review significant and related executive activities. Limiting committee and subcommittee assignments will reduce committee meeting conflicts and permit Senators uninterrupted opportunity to oversee meaningful subject areas. Finally, comprehensive policy oversight will enable various committees to review broad, interrelated policy areas such as health or energy.

B. Illustrative Questions and Options.—

1. Amendments to "sunset" legislation.

2. Special agendas, objectives or reports in comprehensive policy oversight subjects.

3. Establishment of oversight subcommittees on the standing committees.

4. Development of an annual or biannual oversight agenda or report, by the Governmental Affairs Committee, Senate leadership or each committee, that would identify the review responsibilities of each standing committee.

5. Amendment of Senate rules to require committee reports to contain oversight objectives prior to a bill's consideration on the Senate floor.

6. Special rules to encourage the conduct of oversight field investigations or hearings.

10. COMMITTEE REVIEW RESPONSIBILITY

A. Background.—In 196 acts between 1932 and 1976, Congress adopted no less than 295 separate provisions for congressional review, deferral, approval or disapproval of proposed or contemplated executive agency actions. They apply to deferred expenditures of authorized appropriations, foreign arms sales that meet certain criteria, regulations issued by the Federal Elections Commission, and a host of other decisions by a variety of agencies. Although the constitutionality of the so-called "legislative veto" has been challenged and is the subject of pending litigation, the question has never been tested directly nor the practice curtailed by the Federal courts.

In the meantime, it is an increasingly popular device to check executive discretion. Eighty-nine statutes containing at least 163 such provisions were passed in the last six years alone. In the 94th Congress bills were introduced to permit Congress to veto any regulation found contrary to the intent of the authorizing statute (S. 2258 by Senator Brock) or any regulation carrying criminal penalties (S. 1678 by Senator Abourezk).

There is no uniformity among existing legislative review provisions. They run the gamut from simple directives to agencies to consult in advance with appropriate committees, to specific provisions for disapproval of actions, to requirements that Congress must approve decisions before they take effect. In some cases there is a fixed time period for review, e.g., 30, 60 or 90 days), in others none. Under various statutes, both House, either House, the Senate, the House of Representatives, or the appropriate committees of one or both Houses have veto authority. The impact of congressional review, let alone its possible expansion, upon the workload and effectiveness of Senate committees has received very little study.

As a result of S. Res. 4, the committee reorganization, there will be only minor changes in committee jurisdiction over statutes providing for congressional review. The Committee on Governmental Affairs, for example, acquires jurisdiction over resolutions disapproving Federal pay increases; and the Energy and Natural Resources Committee gains review obligations with the addition of jurisdiction over naval petroleum reserves in Alaska and the development of non-military nuclear energy. On the other hand, authority over budget deferrals and rescission, the principal area of activity in the Senate to date, remains unchanged by S. Res. 4. Generally speaking, the jurisdictional changes do not overburden any committee with review responsibilities and, consequently, are unlikely to either expedite or delay consideration of "congressional veto" measures.

B. Illustrative Questions and Options.—

1. Uniform reporting. In view of the confusion over the terminology of congressional review and lack of systematic reporting, the Committee may wish to recommend that an appropriate office of the Senate periodically publish a compilation of statutory review provisions and congressional actions, in which items could be categorized by type of authority, by agency, and by committee. Such a document would be comparable to Reports to be Made to Congress, a list of statutory reporting requirements, issued by the Clerk of the House.

2. Agenda and priorities. The Committee may wish to recommend that Senate committees examine their review obligations at the beginning of each session of Congress, assess their importance relative to other legislative and oversight responsibilities, and establish an agenda for considering executive decisions required to be submitted to them.

3. Uniform procedures. The Committee may wish to recommend a study of review activities in some depth which results in recommendations for uniform committee procedures, time limits, and other requirements. These matters, however, raise controversial and complex policy questions that differ from one policy area to another and are probably beyond the mandate of the Select Committee.

4. Demands on committees. Alternatively, the Committee may wish to examine legislative review provisions in the context of other, increasingly heavy, demands being imposed on Senate committees for action and analysis. (Note: Item III—5. Excessive Demands on Committees.)

11. EXCESSIVE DEMANDS ON SENATE COMMITTEES

A. Background.—The dramatic increase in the workload of Senate committees is the product of self or Senate-imposed demands as well as the times. Sec. 252(a) of the Legislative Reorganization Act of 1970 requires committees to submit an estimate of the costs involved in implementing the provisions of a reported bill for each of the five succeeding years; revenue measures must contain estimates of the gain or loss in revenues for a one-year period. The Congressional Budget Act requires annual reports by each standing committee to the Senate Budget Committee of estimates for budget authority, revenues, and surplus or deficit relating to subjects within its jurisdiction.

A 1974 amendment to the House rules, requiring that authorization bills be accompanied by a statement assessing their inflationary effect, presaged similar moves in the Senate. Introduced in the Senate in recent sessions were resolutions mandating so-called consumer, economic, family, fiscal, paperwork, free enterprise, deficit, information, program judicial, local government, and manpower as well as inflation impact statements on proposed legislation. In addition, there were bills requiring committees to review all grant-in-aid procedures, advisory committee activities, grants and contracts above a certain figure, and programs' cost-effectiveness. The "sunset" bill, which was pending floor action at the close of the 94th Congress, would require review and reauthorization of nearly all government programs every five years. Bills were also introduced in the last Congress to permit either or both houses to veto any executive agency regulation found contrary to the intent of the authorizing statute or carrying criminal penalties. Altogether, Congress has adopted 235 separate legislative review or veto provisions in 196 acts since 1932.

The Senate, over the protests of Senators Magnuson and Ribicoff, adopted a Talmadge amendment to S. Res. 4 requiring each bill be accompanied by a "regulatory impact" statement estimating the number of individuals and businesses subject to regulation, the economic effects on consumers and businesses, the implications for personal privacy, and the amount of additional reporting and record-keeping that may result. A printed amendment to S. Res. 4 imposing a "paperwork impact" statement on committees was not called up.

Apart from redistributing responsibilities and streamlining procedures and in the fact of strong countervailing pressures, the Select Committee will find it difficult to reduce significantly the total workload of the committee system. Nonetheless, the Senate lacks a realistic assessment of the cumulative impact of present demands upon committees, the consequences of adding to them, and the ability of Senate committees to meet them.

B. Illustrative Questions and Options.—

1. Issue a report analyzing the limits of the Senate's (or anyone's) ability to predict the primary (e.g. budget costs), secondary (e.g., economic impact), and tertiary (e.g., litigation) effects of legislation.

2. Determine and publish estimates of the staff resources and other costs to Senate committees in terms of both numbers and skills.

3. Analyze and report the demands imposed upon congressional support agencies by present and proposed requirements for such information and analysis.

4. Analyze the experience of Senate and House committees under present rules and statutes requiring these specialized reviews.

5. Recommend criteria for evaluating proposals to impose these impact statement responsibilities on committees.

6. Recommend certain of the impact statement requirements, and oppose certain others.

12. CONFERENCE PROCEDURES

A. Background.—S. Res. 4 made no recommendations with respect to conference committees. However, during hearings of the Select Committee, several Senators, most prominently Senator Clifford Hansen, suggested reform proposals for the Committee's consideration. And during the past decade, a number of Senators have sponsored various conference reform resolutions.

B. Illustrative Questions and Options.—

1. Joint House-Senate Conference Rules: A unique aspect of conference procedure is that both chambers are affected by changes adopted by one house. For example, as part of its rules for the 95th Congress, the House voted to require all conference sessions to be open unless the House votes to close them. Does the Senate have to amend its rules to give effect to this provision? Relatedly, can Senators (Representative) vote to exclude

from conference sessions House (Senate) members who are not conferees? How should the chairmen of conference committees be selected? Perhaps these and other questions ought to be resolved through joint House-Senate rules on conference meetings.

2. Selection of Conferees: A recurring issue is how to insure that conferees support the majority position of the Senate. Additionally, should provision be made, as some Senators have suggested, to encourage junior and non-committee members to be appointed as conferees?

3. Internal Conference Procedures: Few rules or precedents regulate internal conference activities. Accordingly, should rules be established to govern such matters as proxy voting in conference, quorum requirements, reporting requirements, or the offering of amendments in conference?

13. INFORMATION GATHERING

A. Background.—The volume and the complexity of Senators' and committee responsibilities—and of the information relevant thereto—have increased greatly. Yet the information staffs serving Senators—personal, committee, Senate, and "outside" agencies—and the ways Senators organize to receive information—especially hearings—are outmoded. In fact, these resources and techniques may add to the difficulties Senators experience rather than reduce them. For one example, many staff manufacture more information which Senators must try to sort through when the staff should be winnowing the information to reduce the amount of time Senators must devote to receiving it. For another example, Senators—and others—waste a large portion of their time in a most inefficient technique for information gathering—hearings—when other techniques may do the job more efficiently—and just as responsively. Computers and gadgets do not provide answers to these problems. If even partial answers can be found, they will be fundamental redefinitions of how Senators use their time and a new design for the system which serves their information needs.

B. Illustrative Questions and Options.—

1. Utilize "hearing masters" (retired judges or Members of Congress) in place of some committee hearings.

2. Establish methods and a faculty to train or advise committee and other staff to digest and winnow, rather than proliferate, information to meet Senators' needs.

3. Establish a "management advisory office" or management consultancy so Senators may tap the "best management minds in the country" about organizing their own objectives and techniques, as well as their staffs.

4. Train committee staff to make hearings, when they are used, more effective, for example by preparatory field investigation, instruction or rehearsal of witnesses, systematic digesting of hearings testimony.

5. Establish an "Office of Adversary General," to assure that major proposals get thorough skeptical examination.

6. Authorize, in place of some subcommittees, one-Senator task forces with staff.

7. Establish committee rules and procedures to reduce and control the production of low priority information.

8. Because of the complexities and the importance of this question, recommend a one or two year study (by CRS; by the Rules Committee) of proposals like those listed (except hearings masters on which there is already a substantial record). In particular, such a study should determine whether other organizations which must have similar "information" problems—multinational corportations, giant universities, U.S. state and foreign legislatures, the Vatican, the CIA and other U.S. executive branch bodies—have developed information management cultures or techniques which may be useful to the Senate.

14. INTERNAL COMMITTEE RULES AND PROCEDURES

A. Background.—The rules applying to the procedures of the Senate's committees are not always comprehensive, modern, or consistent. At present, they are scattered in the standing rules of the Senate, standing orders and resolutions, the legislative reorganization acts, the Congressional Budget Act, and various other statutes, as well as rules adopted by the individual committees themselves. Collecting and incorporating all of them into the standing rules would provide a single, comprehensive, readily available reference source to committee procedures, powers, and duties.

B. Illustrative Questions and Options.—

1. Require or recommend that the Senate, or individual committees, set up an automated (computer assisted) document control system. Presently documents are scattered in various files and central indexes often do not exist.

2. Recodify the Senate's rules to incorporate provisions of rule-making statutes and clarify ambiguous language regarding committee procedures.

3. Rewrite rules to state explicitly that subcommittees are governed by their committees' rules and the applicable rules of the Senate. The House rules do so specify.

4. Explicitly apply all "sunshine" rules to subcommittees as well as committees, especially rules authorizing closed meetings in cases of disorder, obligation of a chairman to enforce order without a point of order, and the requirement to prepare a complete transcript or recording of meetings.

5. Eliminate the Appropriations Committee's exemption from procedural regulations, e.g., procedures for calling additional and special meetings; who presides in the chairman's absence; publication of roll call votes; procedure for supplemental, minority, and additional views in reports; procedures for prompt filing of reports.

6. Require a majority quorum for transaction of business.

7. Apply the quorum rules of standing committees to ad hoc committees.

8. Clarify the "sunshine" procedure for voting to close a meeting or hearing.

9. Limit or prohibit proxy voting.

10. Require that a record of committee action be available for inspection by the public at reasonable times.

11. Permit broadcasting of open committee meetings, as well as open hearings, under uniform rules or such rules as a committee or subcommittee deemed necessary.

12. Require that a tabulation by name of each Senator of all roll call votes appear in a report on a measure.

13. Permit any member duly authorized by a committee to file a report if the chairman does not within some reasonable time.

14. Clarify, under the rules authorizing committees to continue to act until their successors are appointed at the beginning of a Congress, the definition of a quorum.

15. Adopt uniform rules of procedure for investigations by the Senate's committees.

16. Require notice of at least seven days to members of a committee or subcommittee who are members of the minority party before ny meeting is held to consider amending or reporting any measure, with the requirement to be waived only by majority vote of all members, with a minority party member actually present who votes to waive it.

17. Require at least 24-hours' notice to minority party members of a committee or subcommittee before the consideration of any amendments to any measure.

18. Require a majority vote of a committee or subcommittee with a majority of the members actually present and at least one minority party member present in order to issue a committee print.

19. Require that at least one majority party member and at least one minority party member be necessary to constitute a quorum for a standing committee or subcommittee.

DEATH OF HENRY G. CARRISON, SR.

Mr. THURMOND. Mr. President, on Friday, February 4, Mr. Henry G. Carrison, Sr., died in Camden, S.C., at the age of 92. Mr. Carrison was an eminent banker and civic leader and leaves behind him an invaluable legacy of achievement and service. I felt that my colleagues would like to know of his passing, and to join me in celebrating his long and productive life.

Mr. Carrison's banking career began in 1906 and continued for six decades. He served for a number of years as president of the Commercial National Bank, helping to engineer its merger with the Citizens and Southern National Bank of South Carolina. Over the years, his business acumen and gracious, kindly manner won the respect of the entire community, and especially of Camden businessmen. When he retired from banking at the age of 83, he was obliged to open a new office so he could continue to handle some of the important community responsibilities he had taken on, including the finances of the Camden Hospital and the Government savings bond program.

Mr. Carrison was particularly devoted to the Camden Hospital, which he also served as a director for 8 years and president for 4. Indeed, there were very few opportunities to benefit his fellow citizens which he did not eagerly grasp. He was twice elected mayor of Camden, holding that office from 1922 to 1926, and in that capacity earned the gratitude of all succeeding generations of Camdenites by getting the city's streets paved. Still earlier, in an era which few now alive can still recall, he belonged to the Camden Volunteer Fire Department.

The numerous clubs and fraternal organizations of which he was a member attest to his friendliness and sociability. These include the Masons, the Shrine Club, the Rotary Club, the Greater Kershaw County Chamber of Commerce, and the Camden Country Club. Most of these groups at one time or another were privileged to have him as president or in some other important office. While he was not ostentatious about his religious faith, he belonged all his life to Grace Episcopal Church, where he was a regular worshiper and senior warden.

Despite his many interests and the many demands on his time, Mr. Carrison was always attentive to his family,

and obviously found in his home life the greatest source of his strength and his contentment. His marriage to the late Phyllis Hickson was notable for its longevity and for the shared affection which was its sturdy foundation. It was heartwarming to see them celebrate their 60th wedding anniversary in the summer of 1973.

Together, they reared a family that justly deserved the pride they took in it. One son, Daniel, had a distinguished career in the U.S. Navy, rising to the rank of captain, and later did an outstanding job for me here in the Senate as my administrative assistant for 4 years. He is also an author of note. Incidentally, an added advantage of having Dan Carrison on my staff was that it gave me the opportunity to get to know his father better.

I wish to extend my sincere condolences on the death of Mr. Carrison, not only to Dan, but also to his other son, Henry G. Carrison, Jr., of Rembert; his daughters, Mrs. Jack Haile of Camden, and Mrs. Elizabeth Boykin of Columbia; his sister, Mrs. Sumner Waite of Camden; and his 10 grandchildren and 10 great-grandchildren. Although Mr. Carrison was quite ill in recent months, I know that all of them will find it difficult to adjust to life without him. I would urge them to dwell, in the succeeding weeks and months, not so much on their loss as on their good fortune in having had this fine Christian gentleman in their family.

It was an honor, as I can affirm, just to have him as a friend.

Mr. President, at the time of Mr. Carrison's death, a number of articles about him appeared in various South Carolina newspapers. So that my colleagues may consult them for further testimony as to his high character and rare achievement, I ask unanimous consent that representative accounts be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Camden (S.C.) Chronicle, Feb. 7, 1977]

FINAL RITES TODAY FOR MR. CARRISON

Funeral services for Henry G. Carrison, Sr., 92, prominent Camden banker and civic leader who died Friday, Feb. 4 at the Kershaw County Memorial Hospital after an extended illness, were held today (Monday) at 11 a.m. at Grace Episcopal Church with the Rev. Harry Lawhon officiating. Burial was in Quaker Cemetery.

Active pallbearers were Jordan Waite, Sumner Waite, Bernard Manning, Henry Carrison, III, Perry Carrison, Frank Wooten, Kirk Carrison and Charles Wills DuBose.

Honorary pallbearers were Jack Whitaker, C. P. DuBose, Henry Savage, John Villepigue, R. M. Kennedy, Jr., Moultrie Burns, John de Loache, Bennie Marshall, Kenneth Clark, William L. Goodale, Roland Goodale, Dr. Carl West, W. F. Nettles, Jr., Henry Lee Clyburn, Hugh Chapman, Ralph Little and Austin Sheheen, Sr.

Born in Camden, Mr. Carrison was the son of the late Henry G. and Margaret Jordan Carrison. An active banker for 60 years, Mr. Carrison retired at the age of 83 and opened an office on Rutledge Street where he continued to handle business matters related to the Camden Hospital and the Government Savings Bond program. He was highly regarded in the business community and was serving as president of the Commercial National Bank when it merged with the Citizens and Southern National Bank of South Carolina in 1962.

Mr. Garrison served two terms as mayor of Camden during 1922–26, and was praised for his leadership in paving the streets of the city. He also served eight years as a director of the Camden Hospital and was its president from 1946–50. In his early life he was a member of the Camden Volunteer Fire Dept. and also served on a number of business commissions. He was a founder and first president of the Camden Country Club and was a lifelong member and senior warden of Grace Episcopal Church.

In June 1973, Mr. Carrison and the late Phyllis Hickson Carrison celebrated their 60th wedding anniversary, and they continued that happy union until Mrs. Carrison's death on June 19, 1976, just one day after their 63rd anniversary.

Mr. Carrison held memberships in the Camdan Hunt, the Masons, Shrine Club, Rotary Club (past president), Executive's Club, Springdale Hall Club, and the Greater Kershaw County Chamber of Commerce. He served on the State Hospital Board and, served the Bord of Directors of the C and S National Bank.

As a contributor to the business, civic, religious and social life of Camden, Mr. Carrison will be missed by a wide circle of friends and a large family. Surviving are two daughters, Mrs. Jack Haile of Camden and Mrs. Elizabeth Boykin of Columbia; two sons, Captain Daniel Carrison, U.S. Navy (Ret.) of Myrtle Beach, S.C. and Henry G. Carrison, Jr. of Rembert; one sister, Mrs. Sumner Waite of Camden and 10 grandchildren and 10 great granchildren.

Kornegay Funeral Home was in charge of arrangements.

[From the Columbia (S.C.) State; Feb. 6, 1977]

HENRY G. CARRISON SR., FORMER BANKER, DIES

CAMDEN.—Henry G. Carrison Sr., 92, former mayor of Camden, banker and civic leader, died Friday in Kershaw County Memorial Hospital after a long illness.

Born in Camden, Mr. Carrison was a son of the late Henry G. and Margaret Jordan Carrison.

Mr. Carrison was serving as president of the Commercial National Bank in Camden when it merged with the Citizens and Southern National Bank in 1962. Mr. Carrison retired from the banking business at the age of 83. He had been a banker for 60 years.

He served two terms as mayor of Camden from 1922–26 and during his administration streets in Camden were paved.

He also served eight years as director of the Camden Hospital, and as president from 1946–50. In his early years he was a member of the Camden Volunteer Fire Company. He served on a number of civic commissions.

Mr. Carrison was founder and first president of the Camden Country Club and was a life-long member and senior warden at Grace Episcopal Church.

He was also a member of the Camden Hunt, the Camden Chamber of Commerce, the Executive Club, Springdale Hall Club, and he was a Mason and a Shriner. He was past president of the Camden Rotary Club and served as a director on the state Hospital Board and he was the county director for Kershaw County two terms. He was also a former director of C&S National Bank.

In June 1973, Mr. Carrison and his wife, the late Phyllis Hickson Carrison, celebrated their 60th wedding anniversary. Mrs. Carrison died June 19, 1976, one day after their 63rd anniversary.

Surviving are two daughters, Mrs. Jack Haile of Camden and Mrs. Elizabeth Boykin of Columbia; two sons, Capt. Daniel Carrison (USN-ret.) of Myrtle Beach and Henry G. Carrison Jr. of Rembert; a sister, Mrs. Sumner Waite of Camden; 10 grandchildren and 10 great-grandchildren.

Services will be at 11 a.m. Monday in Grace Episcopal Church, with burial in Quaker Cemetery.

Kornegay Funeral Home is in charge.

[From the Charleston (S.C.) News and Courier, Feb. 6, 1977]

H. G. CARRISON, CIVIC LEADER, DEAD AT 92

CAMDEN.—Henry George Carrison Sr., 92, a banker and civil leader, died Friday at a Kershaw County hospital.

The funeral will be 11 a.m., Monday at Grace Episcopal Church. Burial will be in Quaker Cemetery, directed by Kornegay Funeral Home.

Mr. Carrison was born at Camden, a son of the late Henry G. Carrison and Mrs. Margaret Jordan Carrison. A banker for 60 years, he retired at 63. He was president of the Commercial National Bank until it merged with the Citizens and Southern National Bank of South Carolina in 1962.

Mr. Carrison, a former director and president of Camden Hospital, served two terms as Camden mayor from 1922 to 1925.

He was a founder and first president of the Camden Country Club, a member and senior warden of Grace Episcopal Church and a former county director of Kershaw County. A Mason and Shriner, he also was a member of the Camden Chamber of Commerce, the Excutive Club and the Springdale Hall Club.

Surviving are: two daughters, Mrs. Jack Haile of Camden and Mrs. Elizabeth Boykin of Columbia; two sons, Capt. Daniel Carrison, USN (ret.), of Myrtle Beach and Henry G. Carrison Jr. of Rembert; a sister, Mrs. Sumner Waite of Camden; 10 grandchildren and 10 great-grandchildren.

[From the Camden (S.C.) Chronicle, Feb. 7, 1977]

H. G. CARRISON, SR.

Henry G. Carrison, Sr., one of Camden's most distinguished and most influential citizens, died Friday at the age of 92. Mr. Carrison served his native city and county in a number of important positions, including mayor, a director and president of the local hospital, as president of one of the county's most progressive banks, and as a leader in his church.

Mr. Carrison was one of the true builders of Camden and Kershaw County. It was through his leadership that the city's streets were first paved, and his wisdom and leadership was sought on numerous councils and commissions which guided the orderly and prosperous growth of the area.

Mr. Carrison was a kindly gentleman, always anxious to engage a friend in conversation and lend a helping hand to the county's farmers who had suffered a temporary setback at the hands of a fickle weatherman or Mother Nature.

Mr. Carrison was a devoted husband, loving father and valued friend, and Camden and Kershaw County are richer for his long and productive life.

May he rest in peace.

REPORT ON FUNDS OBLIGATED FOR CHEMICAL AND BIOLOGICAL WARFARE

Mr. McINTYRE. Mr. President, in keeping with the past practice of the Armed Services Committee to advise the Senate and the public of the activities of the Department of Defense in the area of chemical and biological warfare—CBW—I request unanimous consent to have printed in the RECORD at the conclusion of my remarks the report cover letter and the annual report on funds obligated for CBW research during fiscal year 1976 and the transition period.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. McINTYRE. My colleagues may recall that previously the Department of Defense's report on funds obligated in chemical and biological warfare research programs were submitted semiannually, as required by section 409 of Public Law 91–121. Subsequent to a General Accounting Office study on executive branch reports to Congress, Public Law 93–608 was passed, changing the Department of Defense semiannual Report on Chemical and Biological Warfare program from a semiannual report to an annual one. The Department of Defense advised the Armed Services Committee of its intention to implement this change in reporting frequency on March 14, 1975.

As the cover letter indicates, the next report will cover a 12-month period and will be submitted by the end of November, 1977.

THE SECRETARY OF DEFENSE,
Washington, D.C., December 10, 1976.

Hon. NELSON A. ROCKEFELLER,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: In accordance with the requirements of Section 409, Public Law 91–121, as amended by Section 2, (4) of Public Law 93–608, the report on funds obligated in the chemical warfare and biological research programs during fiscal year 1976 and the transition quarter is enclosed. The next report will cover a 12-month period (FY 77) and will be submitted by the end of November 1977.

The report provides actual obligations through 30 September 1976.

Section 4 of the Army report provides an adjustment summary which reflects change data to the second half, FY 1975 report. This summary will permit the revision of estimated obligations to actual. The Departments of the Navy and Air Force reported no adjustments to their segment for the second half, FY 1975 report.

The attached report has also been sent to the Speaker of the House of Representatives.

Sincerely,

W. P. CLEMENTS, Jr.

EXHIBIT 1

DEPARTMENT OF DEFENSE—ANNUAL REPORT ON CHEMICAL WARFARE AND BIOLOGICAL RESEARCH PROGRAM OBLIGATIONS FOR THE PERIOD JULY 1, 1975 THROUGH SEPT. 30, 1976, RCS DD-D.R. & E. (SA) 1065 (ACTUAL DOLLARS)

	Army	Navy and Marine Corps	Air Force	Total
Chemical warfare program	$48,883,000	$1,093,000	$1,496,000	$51,472,000
R.D.T. & E.	(35,279,000)	(1,060,000)	(1,496,000)	(37,835,000)
Procurement	(13,604,000)	(33,000)	(0)	(13,637,000)
Biological research program	17,727,000	0	0	17,727,000
R.D.T. & E.	(17,727,000)	(0)	(0)	(17,727,000)
Procurement	(0)	(0)	(0)	(0)
Ordnance program	25,647,000	198,000	0	25,845,000
R.D.T. & E.	(8,120,000)	(0)	(0)	(8,120,000)
Procurement	(17,527,000)	(198,000)	(0)	(17,725,000)
Total program	92,257,000	1,291,000	1,496,000	95,044,000
R.D.T. & E.	(61,126,000)	(1,060,000)	(1,496,000)	(63,682,000)

DEPARTMENT OF THE ARMY ANNUAL REPORT ON CHEMICAL WARFARE AND BIOLOGICAL RESEARCH PROGRAMS (JULY 1, 1975 THROUGH SEPT. 30, 1976), RCS DD-D.R. & E. (SA) 1065

[In conducting the research described in this report, the investigators adhered to the "Guide for Laboratory Animal Facilities and Care" as promulgated by the Committee on the Guide for Laboratory Animal Resources, National Academy of Sciences—National Research Council]

SEC. 1.—OBLIGATION REPORT ON CHEMICAL WARFARE PROGRAM FOR THE PERIOD JULY 1, 1975 THROUGH SEPT. 30, 1976, DEPARTMENT OF THE ARMY, RCS DD-D.R. & E. (SA) 1065

OBLIGATION REPORT OF RESEARCH, DEVELOPMENT, TEST, AND EVALUATION FUNDS FOR THE PERIOD JULY 1, 1975, THROUGH SEPT. 30, 1976; REPORTING SERVICE: DEPARTMENT OF THE ARMY; DATE OF REPORT: SEPT. 30, 1976; RCS: DD-D.R. & E. (SA) 1065

Description of R.D.T. & E. effort	Funds obligated (millions of dollars)		Explanation of obligation
	Prior year	In-house	
	Current fiscal year	Contract	
Chemical warfare program	—.022	32.396	During the 15-mo period, fiscal year 1976 and fiscal year 197T, the Department of the Army obligated $35,279,000 for general reseacrh investigations, development and test of chemical warfare agents, weapons systems, and defensive equipment. Program areas of effort concerned with these obligations were as follows:
	35.301	2.883	
			Chemical research:
			Basic research in life sciences $940,000
			Exploratory development 6,860,000
			Total chemical research 7,800,000
			Lethal chemical program:
			Exploratory development 1,709,000
			Advanced development 756,000
			Engineering development 4,543,000
			Testing 433,000
			Total lethal chemical 7,441,000
			Incapacitating chemical program: Exploratory development, total 645,000
			Defensive equipment program:
			Exploratory development 11,770,000
			Advanced development 3,982,000
			Engineering development 2,344,000
			Testing 860,000
			Total defensive equipment 18,956,000
			Simulant test support 437,000

(JULY 1, 1975 THROUGH SEPT. 30, 1976), RCS DD-D.R. & E. (SA) 1065—Continued

[In conducting the research described in this report, the investigators adhered to the "Guide for Laboratory Animal Facilities and Care" as promulgated by the Committee on the Guide for Laboratory Animal Resources, National Academy of Sciences—National Research Council]

SEC. 1.—OBLIGATION REPORT ON CHEMICAL WARFARE PROGRAM FOR THE PERIOD JULY 1, 1975 THROUGH SEPT. 30, 1976, DEPARTMENT OF THE ARMY, RCS DD-D.R. & E. (SA) 1065—Continued

Description of R.D.T. & E. effort	Funds obligated (millions of dollars) Prior year: Current fiscal year	Funds obligated (millions of dollars) In-house: Contract	Explanation of obligation
1. Chemical research	—.066	7.535	
	7.806	.265	
(a) Basic research in life sciences.	(.000)	(.885)	
	(.940)	(.55)	Life sciences basic research in support of chemical materiel: 1. In a study of anticholinesterase effects on mammalian brain stem function the nature of the nerve agent Soman (GD) effects on both inspiration and expiration has been characterized. The dependence of respiratory integrity in the brain stem on conscious or nonanesthetic states has been shown. Speciffc sites of respiratory blockade by nerve agents were shown. 2. In an investigation of the interrelations among cyclic nucleotides and acetylcholine (ACh) in protected and unprotected animals poisoned with GD, it was found that injection of 3 doses of dibutyryl andenosine 3,5'-monaphosphate (cAMP) and theophylline resulted in a 50 percent lowering of plasma somanase activity, the enzyme which detoxified GD. Assay procedures were set up for cAMP, cyclic guanosine mononucleotide and ADh. Poisoning of rats with 1 medium lethal dose of GD causes greater than a 2-fold rise in cerebral ACh. A report entitled "Synthesis of Cholinesterase Following Poisoning With Irreversible Anticholinesterases: Effects of Theophylline-N⁶, 0²-Dibutyryl Andeosine 3',5-Monophosphate on Synthesis and Survival" was submitted for publication. 3. In order to study the mechanism of spontaneous reactivation of GD-inhibited acetylchotinesterase, it was necessary to develop a model system utilizing acetylcholinesterase inhibited with P-nitrophenyl methylphenylphosphinate to permit an efficient study of perturbing agents on the spontaneous reactivation process. Oral presentation on the above model system was given at the 10th Middle Atlantic Regional Meeting of the American Chemical Society (February 1976). 4. Studies of sites of action of incapacitating agents in animal brains have shown that anticholinergics injected into dorsomedial thalamus and caudate block pain information and that electrolytic or chemical lesions of central gray matter potentiate morphine analgesia. In preparation of extension of these studies, rat locomotor activity cages were completed. 5. In order to classify and predict pharmacological activities of organophosphates and carbamates using pattern recognition techniques, pertinent structure-toxicity data, and pattern recognition analysis for predictive toxicity vectors for carbamates were assembled. Structure-toxicity data, and partial identification of pertinent toxicity features of organophosphates have been assembled. Several computer programs concerning atom-centered fragments and pattern-recognition algorithms were written. 6. The characterization of receptor substance, including mechanisms of reaction with transmitter ligands, and control of permeability of post-synaptic membranes required obtaining radioactively labeled stereospecific ligand for study of muscarinic receptor. Binding activities of stereospecific ligand to those of atropine, scopoamline and quinuclidine benzilate were compared. Investigations of a number of chaotropic agents for solubilization of muscarinic receptor in a biologically active form were completed. 7. Research studies were conducted for new concepts for detection and identification, fundamental aspects of chemical agents research, fundamentals of dissemination and dispersion phenomena, sorbent research, and micellar catalysis for decontamination. Studies on ion-molecule reactions (Ion-Cluster Mass Spectrometry) for detection of chemical agent continued to be promising with the threshold sensitivity for nerve agent sarin (GB) being determined to be 0.002 micrograms per liter of air. Soil microorganisms which have been grown on thiodiglycol, a hydrolytic product of the blister agent Mustard (HD), have been shown to hydrolyze the thiodiglycol to hydrogen sulfide. This illustration of metabolic pathway is an achievement toward a goal of isolating enzymes for use in detection. 8. Evaporation rates and dynamic behavior of liquid droplets under a variety of conditions have been determined for several chemical agents. A technique compatible with holography has been developed to study aerosol formation from explosive dissemination. As part of an objective of developing quantitative relationships between chemical structure, physicochemical properties and biological activity, correlations were obtained using octanol/water partition coefficients. In a study geared toward providing new detector and analytical reagents a variety of compounds were classed on the basis of the rates at which they produced chemiluminescence.
(b) General Chemical Investigation.	(—.006)	(6.650)	Prior year deobligation resulted from the withdrawal of residual funds upon completion of effort.
	(6.866)	(.210)	Exploratory development effort. 1. Search for new compounds: Many new compounds prepared in-house or obtained from outside sources were evaluated as potential agents with possible deterrent application in the areas of binary lethal, incapacitating, and riot control technology and training devices. The results of initial toxicity screening determined the basis for additional studies and whether synthesis of homologs and analogs was warranted. Improved methods for effective screening of compounds are continually sought to predict more reliably and economically the utility of new chemicals. Several hundred combinations have been tested for nerve agent prophylaxis and/or therapy. Clues were developed that lead to the fielding of a 2d generation treatment and advanced toxicological study of a potentially superior 3d generation treatment, as well as 1st generation prophylaxis. Additional compounds are being added to the existing data bank in which the chemical properties and characteristics of all possible chemical agents, intermediates and decomposition products will eventually be stored. Data obtained using a chemical ionization mass spectrophotometric method are being included. This method allows significantly more positive identification of agents and related compounds, even at the picogram level. The information contained in this data bank is vital to research planning and to intelligence, surveillance, arms control, environmental assessment, and forensic determinations. 2. Techniques of evaluating effects of chemicals: (a) Data previously collected from human studies on state dependent learning and vigilance were collated. A determination was made whether to include these in the test battery for future studies. Signal detection tests were initiated to measure the effects of an anticholinergic, and a peripherally acting anticholinesterase compound. It was determined that the anticholinergic significantly altered pain discriminability. To date these tests appear to be the most sensitive animal tests there are to predict drug effects in humans. Attempts will be made to determine whether this same paradigm can be applied to test drug effects on vision. A new test is being evaluated to determine whether it can be used to predict the effects of drugs on frustration in humans. (b) The protocol for standardizing the assay of blood cholinesterase by manual and automated methods for all branches of the Department of Defense was completed. An automated method for the determination of concentrations of physostigmine and pyridostigmine in human blood was developed. Quantitative methods for the complete analysis by extraction, ultraviolet, and gas chromotography of a therapeutic mixture containing 3 active ingredients were perfected. A method was developed for the assay of an agent simulant in urine in concentrations 1/80th of those previously reported. Studies were initiated on a more sensitive method for measuring triphosphoninositide activity in the brain to determine whether a specific brain site is involved in GB intoxication. Rapid automated methods are being sought to determine the stability of dilute nonaqueous solutions of chemical agents. 3. Medical effects of chemical agents: Improved procedures for assessing the metagenic properties of chemical compounds have been established. Chlorpromazine, considered a possible adjunct in prohpylaxis and therapy against nerve agents, was shown to be mutagenic to bacteria. Preliminary data shows that a proposed simulant produced mutagens in the fruit fly. Many selected compounds are being reexamined for mutagenicity. The analgesic properties of cholinergic and of anticholinergic compounds were studied to separate motivation changes from sensory deficits and allow more meaningful predictions of the effects in man. Using localized EEG recordings in somatosensory areas of the thalamus and caudate of rats and monkeys, atropine mimicked morphine in depressing pain evoked activity. Scopolamine and benactyzine also produced analgesia as measured by behavioral tests. Furthermore, atropine and benactyzine disrupted (increased) time perception in the rat. Improved equipment and techniques for electroretinography, visual evoked response research, tear analysis, and cataract formation have been established. Using a differentially radiolabeled glycolate, the distribution, binding, elimination, and metabolic conversion of the compounds is being studied in subprimate brain, peripheral tissues, and body fluids.

DEPARTMENT OF THE ARMY ANNUAL REPORT ON CHEMICAL WARFARE AND BIOLOGICAL RESEARCH PROGRAMS
(JULY 1, 1975 THROUGH SEPT. 30, 1976), RCS DD-D.R. & E. (SA) 1065—Continued

[In conducting the research described in this report, the investigators adhered to the "Guide for Laboratory Animal Facilities and Care" as promulgated by the Committee on the Guide for Laboratory Animal Resources, National Academy of Sciences—National Research Council]

Description of R.D.T. & E. effort	Funds obligated (millions of dollars)			Explanation of obligation
	Prior year	In-house		
	Current fiscal year	Contract		
				4. Chemical dissemination and dispersion technology: (a) Studies were conducted to investigate and clarify the mechanisms and methods of the delivery, dissemination, and dispersion of agent materials and to conceive and evaluate new concepts of their use. The resulting technology and data base serves as the foundation for assessing our vulnerability to foreign threat and for the development of advanced deterrent systems as well as combat support systems. (b) Equations were developed to describe the instantaneous nonsteady state flow during the voiding of bulk liquid fill from spinning cylinders. Successful validation of the equations was obtained for up to 3,000 rpm and the evaluation of higher rates, geometries, and fluid properties are in progress. The second phase of this study, developing an analytical description of the resulting droplet size distribution, was undertaken and experimental techniques are being established based on holographic analysis of the aerosol spray. (c) A test program utilizing an explosive test bomblet was concluded and demonstrated that both plant and binary product GB are very resistant to destructive flashing. A methodology was established which showed that the oxygen index of a material, a measure of its flame propagation potential, is part of a basis for estimating the disposition of a liquid to flash when explosively disseminated. (d) Pyrotechnic efforts included: (1) Determination of critical parameters which would allow the design of much faster burning pyrotechnic mixtures; (2) conduct of curing studies to develop a polymer-based pyrotechnic riot control agent (CS) mix; and (3) study of various techniques of utilizing imbiber heads for the pyrotechnic dissemination of a fog oil smoke. (e) Supported chemical munitions development programs where aerodynamic parameters are involved in delivery and dissemination of the chemicals. Conducted wind tunnel tests for static and dynamic stability; performed trajectory analyses using wind tunnel and flight test data; prepared data which made possible design changes for improved performance of chemical munitions. 5. Chemical testing and assessment technology: (a) The need to evaluate and/or predict the operational performance effectiveness of new and improved chemical defensive and deterrent systems requires continuing development of test and assessment procedures, simulation techniques and models, and continuing investigation, development and evaluation of simulant materials. (b) A mixture consisting of triethyl phosphie, dibutyl amine and ethyl acetate has been developed and successfully used as a simulant for the XM736 binary nerve agent VX projectile. (c) Toxicological studies on simulants were conducted to obtain information to support requests for approval by the Office of the Surgeon General. Dimethylmorpholinophosphoramidate (DMMPA) was given prime consideration as an intake simulant for casualty assessment and, in combination with a fluorescent dye, for use in material contamination assessment. (d) Simulation models were developed to estimate the expected fraction surviving chemical attack when either prophylactic or therapeutic protection or both are provided. Simulation models for chemical agent attack were improved to simultaneously consider both the vapor and liquid particle challenge posed by intermediate volatility agents. Preliminary models to assess the burden of defense equipment (heat stress, performance proficiency reduction) have been developed. (e) A flame photometry device employing sodium chloride was developed to test protective equipment. (f) Improvements were made to the nitrogen purge/air infiltration procedure which was then used to simulate chemical agent vapor infiltration into tanks, armored personnel carriers and self-propelled howitzers. 6. Technical evaluation of foreign chemical warfare potential: (a) Support was supplied in the planning, conduct, and evaluation of a series of rocket sled tests, a fuze check test, and a missile flight test using simulant materials. A preliminary transport and diffusion model was completed, and an evaluation of intelligence information based on the preliminary model performed. Reviews of intelligence information were performed as it became available. Planning coordination of Edgewood Arsenal, Md., technical area 12, chemical threat assessment technology, was also accomplished. (b) Data from the second series of rocket sled tests were reduced which provided an excellent data base for the breakup modeling. The second series differed from the first series in that free flight was achieved prior to warhead detonation, thus providing an environment similar to flight condition. A combination of the breakup model and dissemination model will provide realistic estimates for area coverage, contamination density, and particle size distribution. The initial breakup model addresses only the subsonic region and will be expended in fiscal year 1977 to incorporate transonic and supersonic delivery. The first validation firing was conducted at White Sands Missile Range, N. Mex., in July 1976, using a Lance Rocket System. The flight test has confirmed the veracity of the data base obtained from the rocket sled tests as the basis for breakup modeling. Preliminary analysis of disposition data also indicates agreement with the limited model presently available. (c) Limited sampling data were collected during the White Sands Missile Range tests of the Little John and Lance rocket systems that contained simulants. The data indicated that from a liquid agent detector point of view, there may be some significant differences in data obtained from dynamic rocket tests as compared to static spray trials. Attempts to obtain spread factor data for a simulant during the rocket sled tests were unsuccessful. Efforts are still continuing in devising a simple, reliable generator for simulants. 7. Chemical training agents and equipment investigations: (a) Investigations are underway to develop materials which resemble chemical agents in their employment, dissemination, action, and sensitivity to alarm systems, but which leave no harmful effects on troops, their equipment, or the environment. A statement of work in response to a training device requirement has set forth numerous criteria for simulated persistent and nonpersistent agents required by the user. While several prospective candidates were found to meet many of the needs, no completely satisfactory material has yet been discovered, so attempts must continue to find appropriate chemicals or formulations. (b) Various thickeners are being investigated for the formulation of thickened chemical training agents. In order to field a training device that possesses an operational capability, the simulant projector airburst liquid has been evaluated using training agents previously approved. The United States will require this item as an interim training device. The interim training agents being studied for use in this disseminator are polyethylene glycol 200, tri-(2-ethylhexyl) phosphate, and butyl mercaptan. (c) Summary data on dimethyl methylphosphonate obtained from allies on the irritancy, pharmacology, and chronic toxicity (rabbits and rats) failed to meet U.S. criteria for starting human trials with the compound. A biomedical evaluation by the Medical Review Board gave proposed data voids from which a research plan on the toxicology in four animals was derived. Laboratory quantities of dimethyl methylphosphonate were synthesized and characterized by nuclear magnetic resonance, mass spectroscopy, gas chromatograph and infrared and found to contain at least two impurities. Initial acute toxicity studies in mice and rats via parenteral and oral routes with these samples are underway. Studies on mutagenesis using fruit flies and the Ames test employing Salmonella typhimuriam were completed. Acute toxicity studies on bioassay approved pilot plant synthesized dimethyl methylphosphonate were initiated. 8. Chemical safety investigations: (a) A report has been prepared describing the collection and purification of samples for agent identification. A method for high volume sampling compatible with gas chromatography analyses was developed. Gas chromatography has been coupled with chemical ionization mass spectrography to furnish a method of detecting and identifying GB and VX in demilitarization products at very low levels. The high volume sampling and chemical ionization mass spectrography will be developed further. (b) Ecological field work on Carroll Island at Edgewood Arsenal, Md., has been completed and initial drafting of the comprehensive report covering this work has been started. Ecological investigations of Gunpowder Neck at Edgewood Arsenal, Md., are in progress and will continue.

DEPARTMENT OF THE ARMY ANNUAL REPORT ON CHEMICAL WARFARE AND BIOLOGICAL RESEARCH PROGRAMS
(JULY 1, 1975 THROUGH SEPT. 30, 1976), RCS DD-D.R. & E.(SA) 1065—Continued

[In conducting the research described in this report, the investigators adhered to the "Guide for Laboratory Animal Facilities and Care" as promulgated by the Committee on the Guide for Laboratory Animal Resources, National Academy of Sciences—National Research Council]

Description of R.D.T. & E. effort	Funds obligated (millions of dollars) Prior year Current fiscal year	In-house Contract	Explanation of obligation
			(c) 2 remote sampling systems to be used with controlled toxic test chambers have been designed and 1 is undergoing evaluation. An automated analytical system is in use and will be interfaced with the sampling system.
2. Lethal chemical program..	.091	7.166	
	7.441	.275	
(a) Agent investigations and weapons concepts.	(.080)	(1.709)	Exploratory development effort:
	(1.629)	(.000)	1. Lethal chamical agent investigations: (a) Synthetic, analytical, and physicochemical studies of toxic chemicals were performed to assess the lethal agent threat from a possible enemy. A new procedure has been developed for the binary synthesis of a lethal agent of intermediate volatility. A method to reduce the reaction rate of binary agent intermediates has been developed. 2 methods have developed for the in situ thickening of a persistent lethal agent obtained from a binary process. (b) Evaluations of methodology and procedures to deliver small sized drops of agent while maintaining a low temperature and high wind speed environment have continued. Some difficulty was experienced in delivery of small drops of simulated agent. Recalibration of the environmental animal exposure facility to attain controlled temperatures (75°, 40°, and 20° F.) and windspeeds (1.1 and 5.5 mph) is being completed in preparation for the evaluation of comparative effectiveness of thickened and nonthickened agents. 2. Lethal chemical weapons technology: (a) Success was achieved on techniques for binary production of an intermediate volatility agent, with limited work conducted on a number of the practical facets of synthesis. Studies of the reaction of stored intermediates was continued and expanded to ascertain the ultimate effects of intermediate degradation on product yield. Studies of agent physical properties and their effects on the efficiency of munition dissemination were conducted. Work in this area has been very successful in that physical properties can be modified easily without subsequent interference in reactions or any reduction in product yields. Property modification studies have required dua agent-simulant development, since only the latter can be tested in a number of the conditions of interest. (b) Projectile exploratory efforts included experiments to ascertain whether wide variations in internal reactions influence projectile ballistic performance (they do not) and whether mechanical resonances are generated which could influence fuze performance (they are). The study was expanded to include liquid-filled flight performance of both long- and short-range fin stabilized projectiles. Technique for increasing the efficiency of chemical dissemination was evaluated. (c) Experimental designs for a 2.75-in rocket warhead were developed. This effort included derivation of analytical models for the warheads effectiveness based upon experimental efforts. Testing included rocket firings and dynamic flight evaluation. 3. Chemical agent process technology: Investigation of processes for the synthesis of binary reactants were continued and small quantities of material prepared for test by others. 2 processes for synthesis of dimethyl disulphide intermediate were studied at the laboratory and bench scale and parametric data obtained to facilitate a selection of 1 process for pilot scale development. Analytical support was provided for the above activity of the development and synthesis laboratories.
(b) Agent pilot plant investigations.	(—.005)	(.306)	Prior year deobligation resulted from withdrawal of residual funds upon completion of effort.
	(.311)	(.000)	Advanced development effort:
			1. Lethal chemical agent processes: (a) Batches of 1 of the binary intermediates was made to obtain pilot plant data for scale up. Commercial sources of required chemicals were used. Process studies of alternate methods were contained to obtain data for the economic analysis for the best process for plant scale up. Alternate process studies of subpilot scale size to reduce the large quantities of aqueous waste solutions have been initiated. The waste materials from these studies have been collected to begin studies on waste disposal methods. (b) A filling and closing line design is currently in progress and was 50-percent completed during this period. A total of 180 canisters were filled and closed in support of the engineering development phase of this program. The modular filling and close capability, was used. All equipment functioned well, there were no leakers. A decision was made to use stamping for the inertia welded closure plug. This should eliminate the leakage problem caused by porosity found in the plugs cut from round stock.
(c) Tactical weapons systems.	(.000)	(.245)	Advanced development effort:
	(.450)	(.205)	Lethal chemical materiel: Efforts were initiated in the latter portion of fiscal year 1976 on technology areas relevant to development of a warhead for rocket systems. Contractual effort was begun on problems of large scale fluid mechanics, multiple subsystems and systems logistics. Provisions were made for a large scale dynamic simulant test of a rocket warhead concept.
	(.016)	(4.473)	Engineering development effort:
	(4.527)	(.070)	Lethal chemical ground munitions: (a) The development test II (DT II) of the 155 mm, XM687E1, GB2 projectile was satisfactorily completed and a detailed report covering this phase issued. Similarly, operational test II (OT II) has been completed. This latter involved troop tests to evaluate the adequacy of the projectile in use. The technical data package and reports documentation of the XM687E1 projectile were completed. (b) Engineer design testing of the 8-in, XM736, VX projectile was successfully completed and manufacture of hardware for DTII initiated. In the course of the former, various facets of structural integrity, operational performance, and ballistic performance were successfully demonstrated.
(d) Materiel tests in support of joint operational plans and/or service requirement.	(.000)	(.000)	No effort expended in this area.
	(.000)	(.000)	
(e) Army materiel Development Tests.	(.000)	(.433)	Efforts were directed toward the testing of binary weapon systems. 12 specific test programs were conducted. Major emphasis was on the completion of the DTII testing of the 155 mm, XM687, projectile. Physical testing in the area of rough handling, safety, reliability, suitability of the projectile, and ballistics were completed. 12 simulant dissemination trials were conducted. A final report for DT II testing of the 155 mm, XM687, projectile was published. Engineering design test with the 8-in projectile were conducted in the area of reliability; safety evaluation of the rounds for transportation, storage, rough handling, and firing; determination of the suitability of the projectile for DT II testing; and ballistic stability. Simulant dissemination trials with the 8-in projectile were conducted and data on area coverage, droplet spectra, and liquid recovery estimates were obtained. The most applicable simulant for support of the DT II test will be selected from the candidates tested. Planning for the DT II testing is in progress. Test efforts with the 8-in projectile will continue in fiscal year 1977.
	(.433)	(.000)	
3. Incapacitating chemical program.	Exploratory development effort: .000	.645	1. Incapacitating chemical agent investigations: Studies were carried out to devise a reaction suitable for producing a candidate incapacitant by a binary process. Although at least 3 separate approaches seemed promising initially, extensive investigations have failed to provide a feasible solution to this difficult technical problem. Techniques for studying the evaporation kinetics of combinations of selected liquid and semisolid incapacitants were reviewed. Work was conducted to develop analytical methods for identifying incapacitants in trace amounts: 1 of these used a thin layer chromatography technique, where the base values of candidates were determined relative to 2 reference dyes. Another analytical technique, previously developed for identification of promising incapacitants in work areas such as a manufacturing plant, was refined to give more accurate results. Analytical and physiochemical studies were performed to characterize incapacitants, their precursors, intermediates and side products. The scientific literature was reviewed for new leads on safe effective incapacitants. No promising leads were discovered.
	.645	.000

Description of R.D.T. & E. effort	Funds obligated (millions of dollars)		Explanation of obligation
	Prior year	In-house	
	Current fiscal year	Contract	
			2. Incapacitating chemical weapons technology: Available data on pyrotechnic incapacitating munitions has been reviewed with no solutions available to solve the safety problem of agent release during an accident. The binary agent approach is being adopted to solve this problem. A literature search has been conducted on lethal binary concepts to determine applicability to incapacitating munition design. The 2-compartment thermal generation principle is the most promising dissemination method available. Laboratory space has been obtained and equipment is being modified to perform laboratory studies on binary reaction conditions required prior to design of test munitions.
4. Defense equipment program.	−0.107	16.621	Prior year deobligation resulted from withdrawal of residual funds upon completion of effort.
	19.063	2.335	
(a) Physical protection investigations.	(−0.018)	(4.525)	Exploratory development effort:
	(5.776)	(1.233)	1. Chemical agent alarm technology: (a) Exploratory development continued on the advanced ionization detector in an effort to determine the optimum design for highest sensitivity and selectivity. Extensive testing was conducted to uncover possible interferences which trigger an alarm or cause serious deterioration of the detector. Field trips were made to Fort Benning, Ga., Tropic Test Center, Panama, Rocky Mountain Arsenal, Colo., Fort Carson, Colo., and to Nellis Air Force Base, Nev., where environmental tests were run with the prototype units in conjunction with all types of troop field exercises. A contract with Southern Research Institute calls for examination of many chemicals to determine laboratory type interferences. This contractor has made field trips to Smoky Mountain National Park and throughout the State of Florida, especially the Everglades, seeking more environmental type interferences. Results were favorable. A satisfactory immobilized enzyme product for use in the enzyme alarm was achieved through chemically bonding cholinesterase to the surface of urethane foam. An interference compensating circuit, using a fourth electrode was developed and results have been very promising. The fabrication of three new enzyme alarm units employing the latest technology was initiated. Based upon the results of studies on the mechanism of detection, improvements were made in the sensitivity and stability of automatic liquid agent detector (ALAD) paint. An operational effectiveness study based on a user scenario was conducted with results indicating significant casualty reduction associated with the use of the ALAD at the platoon level. Special instrumentation was designed and is being fabricated for 2 field trials. (b) A special 8 wavelength CO_2 laser system was built and subjected to initial testing. Computer techniques for modeling the laser system response were developed. Based upon the results of an in-house theoretical study and consultations with outside experts, an effort is underway to investigate heterodyne detection techniques using the CO_2 laser. This technique should give a large increase in sensitivity. Studies were terminated on use of the Remote Raman for airborne agent detection. The system's sensitivity, size, and complexity did not appear competitive with the CO_2 laser device. However, studies continued on the Raman concept for monitoring for the laser system and a new more powerful nitrogen laser was also purchased. The system's sensitivity increased as a result. Unfortunately fluorescence background stimulated by the system increased also. An argon laser was substituted for the nitrogen laser. Spectra obtained by the system have improved substantially. The system has been used to measure relative cross sections for the GB simulant diisopropylmethylphosphonate. (c) A chemically coated lucite plug was shown to be a simple, feasible method for detecting leaks within a VX munition. The coating changes color in the presence of VX vapor or its decomposition products. Limited long-term storage tests indicate that the coating is stable. 2. Chemical detection and identification technology: (a) A 3-yr contract was signed with Midwest Research Institute to study eel cholinesterase as a potential improved nerve agent detector and develop a test for refractory nerve agents. A 1-yr feasibility contract was awarded to Midwest Research Institute to study methods of detecting agents in water using standard detector tubes. Findings of current in-house investigations in all the above areas are being supplied to the contractor. Calspan Corp. completed a search of methods applicable to a nonspecific agent detector kit. They are presently evaluating the simplification of the ionization detector as a possible approach. (b) Significant increase in detection and identification capability has resulted from the improvement of the sensitivity and specificity of the ion cluster mass spectrometer system (ICMS) and field ionization mass spectrometry. Research on the ICMS has demonstrated sensitivity of less than 0.1 parts per billion of GB. New highly reactive cyclic thioureas were discovered detecting alkylating agents and phosphorylating agents by chromogenic, fluorogenic or nephelometric responses. A new ketooxime, has been synthesized which showed promise as a reagent in the M-8 chemical agent alarm, possible enhancing the capability of the alarm. Soil organisms have been cultured on chemical agent mustard hydrolysis products having enzymes capable of degrading the substrate to hydrogen sulfide and acidic materials. New ultrafine impregnated microporous membranes for use in a high volume sampling system have been prepared capable of selectively concentrating phosphorous esters from the atmosphere. 3. Chemical decontamination investigations: (a) Work on the polyvinyl alcohol (PVA) supplemental coating to prevent toxic agents from sorbing into agent permeable materials was held in abeyance after numerous unresolved application, adhesion, and weathering problems became evident. Multiple applications are required for adequate film thickness; film drying time is excessively slow; the sheen (gloss) of the film cannot be reduced to a level acceptable for camouflage purposes; although the PVA is not cold-water soluble, it is softened sufficiently by rainwater to be easily damaged; the adhesion is only marginal; and the film deteriorates with extended outdoor weathering. The feasibility of developing a man-portable spray apparatus for dispersing the standard decontaminating agent DS2, and having sufficient capacity to effectively decontaminate the largest tactical equipment and vehicles, was shown possible by modification of commercially available spray equipment and the program moved into advanced development in February 1976. After successful application trials at Fort Carson, Colo., the agent-resistant urethane paint was determined by the U.S. Army Materiel Development and Readiness Command surgeon to contain small quantities of a skin, eye, and respiratory irritant. It was dropped from the camouflage pattern program in which the paint is sprayed by troops at company level. As a result of this decision, the following approaches were undertaken: a.—By means of a research and development contract the state of the art was surveyed for innocuous polymeric systems with potential for agent resistance. 4 candidate coatings are now being evaluated for resistance to agent sorption; b.—U.S. Army Mobility, Equipment, Research, and Development Command (Meradcom) was tasked to reformulate the agent-resistance urethane into 11 camouflage colors with brush application capability. Brush application presents less hazard and requires less restrictive application precautions. Reformulation is near completion; c.—Meradcom was tasked to prepare various alkyd paints and painted panels to determine the effect on agent sorption properties of resin modification, thermal curing, and natural and accelerated weathering. The panel preparations are now complete. Long-term natural weathering and agent sorption tests are in progress. To speed up the evaluation of the agent sorptive properties of various materials and the effectiveness of different decontaminants, newly available automatic agent detection equipment has been evaluated and an advanced gas chromatograph ordered. A 1-yr contract for the development of a design criteria document to assist design agencies in the development of new equipment so as to minimize liquid agent contamination and/or maximize physical decontamination has been awarded. In-house and contract studies were initiated and are in progress to obtain sufficient data to increase the cost effectiveness ratio of a proposed decontamination kit for exposed skin and personal equipment to replace the present standard M-13 and M-258 chemical agent detector kits. Increased cost effectiveness is required for approval of the proposed letter of agreement on this item.

DEPARTMENT OF THE ARMY ANNUAL REPORT ON CHEMICAL WARFARE AND BIOLOGICAL RESEARCH PROGRAMS
(JULY 1, 1975 THROUGH SEPT. 30, 1976), RCS DD-D.R. & E. (SA) 1065—Continued

[In conducting the research described in this report, the investigators adhered to the "Guide for Laboratory Animal Facilities and Care" as promulgated by the Committee on the Guide for Laboratory Animal Resources, National Academy of Sciences—National Research Council]

Description of R.D.T. & E. effort	Funds obligated (millions of dollars) Prior year / Current fiscal year	In-house / Contract	Explanation of obligation
			(b) In the search for decontaminants for removal and destruction of toxic agents on vehicles, equipment and materiel, utilizing readily available materials in the field such as water, oxygen of the air and/or moisture, a number of micelle forming N-long chain alkyl pyridinium aldoximes were synthesized and evaluated against nerve agents GB and VX. Sulfur and nitrogen containing model compounds for sulfur mustard and VX were investigated as to their photosensitized oxidations by sunlight and oxygen in the air. The photooxidations of dibutylsulfide and diisopropylethylamine in methanol in the presence of the photosensitizer Rose Bengal were shown to proceed at moderately fast rates, depending upon light intensity, simple geometry and sensitizer concentration. Both reactions were zero order. Thus, fast rates are favored by dilute substrate in thin films. It has also been found that sensitizers covalently bound to polymers can be used for photooxidation of mustard. Moreover, photobleaching of the sensitizer is less when the sensitizer is affixed to a polymer matrix.
			4. Physical protection against chemical agents:
			(a) Emphasis was directed toward the development of nondestructive methods of measuring the residual gas life (protective capacity) of charcoal filters. Various techniques, such as: (1) the use of pilot canisters in parallel with the large filters, (2) CO/CO_2 techniques, (3) sampling from within the charcoal bed, and (4) electrical methods, were selected for further investigation. Baseline testing and simultaneous exposure of pilot canisters is in progress to determine the validity of this approach. Conversion of CO to CO_2 for measuring residual blood agent cyanogen chloride (CK) life indicates impregnant activity but not residual sorption capacity. Modification of this approach to provide this capability is in progress. Use of a probe in the bed to locate adsorption front for a test gas after unknown exposure is being actively investigated. Electrical methods of using semiconductor sensors and electromagnetic wave adsorption are also being investigated.
			(b) Development efforts have centered on finding an elastomer to replace silicone as the protective mask facepiece material. Polyurethanes thus far offer the most likely successful candidate materials. Several experimental polyurethanes have been investigated and efforts are being made to improve those areas of physical characteristics that are deficient. A contract is being negotiated to conduct a survey of commercially available elastomer falling within the range of required physical, chemical, and optical characteristics. The contract completion date is 6 months, at which time leading candidate material will be selected for further development.
			(c) Components of synthetic sweat which cause the greatest loss in sorptive capacity of activated charcoal were identified. Treatments for activated charcoal which will reduce the effects of poisoning by sweat were briefly examined. The materials are of a type which impart water repellancy to the charcoal without seriously affecting carbon tetrachloride adsorption. The penetration of GD through combat and protective clothing systems was measured. These studies were performed to collect agent vapor penetration data for a base line to be used during the development of new protective clothing systems. A contract request was released to investigate methods of producing fabrics containing sufficient chemical agent neutralizing activity to permit their use in protective clothing. Coordination with the U.S. Army Natick Research and Development Command was continued in an endeavor to develop an integrated plan for the development of chemical protective clothing.
			(d) In efforts aimed at increasing our ability to predict gas adsorption by activated carbon beds under dynamic flow conditions special emphasis was given to the study of dimethyl methylphosphonate (DMMP) adsorption as a function of flow velocity. For the case of pure physical adsorption, such as with DMMP, it was found that the adsorption rate constant varied nonlinearly with the superficial linear flow velocity over the range of 2–60 cm sec^{-1}. A mathematical model for the relation between adsorption rate and velocity indicated that a diffusion controlling step was dominant up to a velocity of 50 cm sec^{-1}. A study of whetlerite carbon reactivity against CK has shown that subsequent to initial adsorption of CK by the carbon, chemical destruction of the CK occurs via a 2-step catalytic hydrolysis, producing carbon dioxide and ammonia.
(b) Advanced development of defens ve systems	(−.033) / (4.015)	(3.744) / (.238)	Deobligation of prior year funds for reprograming to provide program continuity to the binary program pending congressional release of current year funds.
			Advanced development effort:
			1. Remote sensing alarm: In-house efforts were devoted to preparing for comparison tests against the Navy forward looking infrared detector. This included field tests, repairing the exploratory development hardware and data processing. Immediately prior to the scheduled date for comparison tests at Dugway Proving Ground, the Department of Defense postponed the tests indefinitely as a result of congressional action.
			2. New protective mask: The new protective mask will enter engineering development in March 1977. A unique transparent silicone rubber has been developed which provides optical clarity, flexibility across the required environmental temperatures, and low compression set characteristics. The use of this material permits the molding of the facepiece and lens as a single part and, therefore, the largest possible visual area is provided. The flexibility of the lens permits it to be utilized with optical instruments without significant loss in field of vision. The outsert for the mask is available in a flexible version for field use and a rigid version which provides ballistic protection for the tank and aircrew applications. The canister of the mask can be utilized on the facepiece or attached to a transitional hose which allows the canister to be mounted in a carrier. The configuration of the new protective mask has been firmly established and the sizing has been so adjusted that the military population, including females, can be accommodated in 3 sizes. A highly unique design of nosecup provides comfort and extends the range of face sizes which can be accommodated. The design of molds and other tools to fabricate the new protective mask has been initiated, and fully molded prototypes will be available for the advanced development testing which will precede entry into engineering development. Processes for coating the molded facepiece with a fluorinated ethylene propylene rubber and polyurethane material have been developed. Irradiation of the facepiece with high-speed electrons is accomplished to increase the hardness in the lens region, to decrease compression set and to eliminate crazing at the interface of the coatings and the facepiece. Permeability tests have been conducted on coated facepieces which indicate that the minimum NATO requirements for permeability can be met. The canister of the new protective mask has been subjected to penetration, rough handling, and environmental use testing. The canister appears capable of meeting the requirement for 10 yr of storage followed by 1 yr of operational use under temperate conditions. Requirements for ease of filter change, etc., have been met. The design of spectacles/inserts and the protective hood have not been finalized. Tests under arctic and tropical conditions using early prototypes indicate that the mask should meet the joint requirements established.
			3. Decontamination apparatus for vehicles: Advanced development (AD) was started in February 1976 using information generated earlier. Because of the short development schedule required by the proposed letter of agreement (PLOA), commercially available spray apparatus will be modified to meet the requirements of the PLOA and development will proceed directly from advanced development to type classification. Various types of spray apparatus were obtained from different manufacturers and evaluated for performance characteristics using decontamination agent DS2 simulant where possible. Among the pump types evaluated, the trombone type is superior, as is the stainless steel container. Evaluation of the various materials used in the construction of the spray apparatus for long-term compatibility with DS2 at ambient and elevated temperatures is in progress. A configuration control board has been established for this item and a proposed development plan and an initial draft system specification were drafted. A secretarial determination and findings and backup procurement plan for the advanced development contract have been forwarded for approval. The scope of work for the advanced development contract was prepared. Purchase requests to obtain specially modified commercial spray equipment and drawings from 2 manufacturers have been processed.

See footnotes at end of table

DEPARTMENT OF THE ARMY ANNUAL REPORT ON CHEMICAL WARFARE AND BIOLOGICAL RESEARCH PROGRAMS
(JULY 1, 1975 THROUGH SEPT. 30, 1976), RCS DD-D.R. & E. (SA) 1065—Continued

[In conducting the research described in this report, the investigators adhered to the "Guide for Laboratory Animal Facilities and Care" as promulgated by the Committee on the Guide for Laboratory Animal Resources, National Academy of Sciences—National Research Council]

Description of R.D.T. & E. effort	Funds obligated (millions of dollars) Prior year / Current fiscal year	In-house / Contract	Explanation of obligation
1. A (c) Collective protection systems.	(—.001) / (.521)	(.307) / (.213)	Prior year deobligation resulted from the withdrawal of residual funds following completion of effort. Engineering development effort: Modular collective protection equipment (MCPE): MCPE consisting of filter units, gas-particulate XM-56 (200 cfm), XM-59 (400 cfm), and XM-62 (600 cfm) together with the entrance, protective, XM-10 satisfactorily completed basic DT II/OT II tests. Environmental testing (arctic, tropic, and desert) will be completed by December 1976. M-56 filter unit and M-10 protective entrance were type-classified for TACFIRE use in March 1976. Work continues on MCPE applications to AN/TSQ-73, Improved Hawk and Patriot (SAM-D).
(d) Warning and detection equipment.	(—.055) / (1.879)	(1.305) / (.519)	Deobligation of prior year funds for reprograming to provide program continuity to the binary program pending congressional release of current year funds. Engineering development effort: 1. Chemical agent detector kit, XM-256: Engineering design testing was completed and hardware was made for product qualification testing. Tests were completed satisfactorily and items were fabricated for OT II/DT II. These tests were begun. 2 Paper, chemical agent detector, XM-9: The engineering design and long-term storage tests on the XM-9 were successfully completed. Tests at U.S. Army Training and Doctrine Combined Arms Test Agency, Fort Hood, Tex., established that the XM-9 was not sufficiently durable when used on vehicles in a combat environment and found that false positive responses were obtained with LSA (lubricant small arms). Systems analysis studies on the usefulness of the item have been completed as well as work to determine the optimum location for wearing the item. An alternate method for making B-1 dye has been found. Investigations have been initiated on developing a laboratory generator for dispensing small droplets. Dugway Proving Ground, Utah, has initiated methodology studies for testing the XM-9.
1. A (e) Medical defense against chemical agents.	(.000) / (6.012)	(5.880) / (.132)	Exploratory development effort: 1. Various vaccines proposed for nerve agent intoxication prophylaxis have been prepared and tested. An enzymatic slide test has been developed. A nerve agent antidote (TAB) has been fielded. New efforts have been initiated to provide an expanded data base for TAB to support Food and Drug Administration (FDA) requirements. These include detailed metabolism and drug distribution investigations. An improved therapy has been tested extensively in lower animal species and appears to warrant concerted effort as a future replacement for TAB. A first generation prophylaxis has been chosen and is awaiting approval by the Army Surgeon General and FDA for human testing. Stability of drugs now proposed was investigated in detail. Behavioral evaluation of current and proposed drugs were made. Methods for administration of cromolyn sodium, a mast cell stabilizer, were investigated as a first step in using this drug in pre- and post-phosogene intoxication in rats. 2. The vesicant and incapacitating effects of mustard agent (HD) are being studied with a special view toward establishing a rationale for their therapy and/or prevention. Studies on developing a pathogenic sequence from initial damage to deoxyribonucleic acid of basal cells to the occurrence of inflammation, edema and vesication continues. An animal model for vesication employing hairless mice and a quantitative measurement of edema formation following exposure to HD will be used. The efficacy of a number of selected antiinflammatory compounds in moderating skin damage produced by HD is being explored. The action of anticholinergic compounds (glycolates, benactyzine, atropine) can be successfully reversed by cholinergic agonist such as physostigmine. Dose-response curves of this therapeutic effect have been generated for a model system—the physostigmine reversal of benactyzine-induced somatosensory deficits. This cholinergic carbamate also significantly elevates pain threshold at the optimum therapeutic dose but produced analgesia at higher doses. Behavioral evaluations of the side effects of physostigmine will continue. These include evaluating the effects of this therapy compound on learning, memory, emotions, and sensory systems. In addition, time course studies on the duration of its therapeutic effects were conducted. 3. A rabbit-ear bioassay was developed for thickened agents, decontaminants and barrier materials. Bioanalysis of M-258 decontaminating kits showed poor cleaning of widely dispersed thickened nerve agent GD by kit scrapers of alcohol/water solvents. Therefore, acetone was substituted for alcohol in the M-258 kit solution I to result in significantly better cleaning and decontamination. Methyl and phenyl cellosolve show promise as alternate solvents, especially for prophylactic applications. The phase diaphragm concept was used to select alternate thickeners, decontaminant solvents, and agent additives. Contractor-furnished lipophilic oximes and hydroxamic acids, barrier materials, and a histologic assay for irritants and protectives. Effectiveness of barrier film containing fluoropolymar was demonstrated. Protocols were written for submission to the Office of The Surgeon General for study of the reservoir function of skin for possible use in protection, prophylaxis, and therapy of anticholinesterases.
(f) Materiel tests in support of joint operational plan.	(.000) / (.284)	(.284) / (.000)	Efforts were directed toward the field testing of the following: 1. U.S. Air Force chemical/biological (CB) modification kit, structure—KMU 450/F: Test was designed to determine the adequacy and reliability of the CB modification kit system to provide protection against penetration of CB agents. For this period tests in the area of chemical and biological challenge, exit/entry procedures using biological simulants, and pressure studies were conducted. Final reports covering all aspects of the test have been published. 2. Long path infrared chemical detector (LOPAIR)/forward looking chemical detector (FLIR) comparison test: Test was designed to obtain field test data required for a comparative evaluation of the LOPAIR and FLIR detection systems in a realistic harassing and interdiction for field situation. For this period a test plan and environmental imp act assessment (EIA) were developed, coordinated with Army/Navy proponents and published for the LOPAIR/FLIR comparison test. Laboratory investigations to validate sampling and chemical analysis methods for 2 simulants codispersed with various interferents were completed. Preparation of the Dugway Proving Ground, UT, test site, munition modifications, and preparation of an EIA for the Navy test site were in various stages of completion when the test program was suspended. 3. Decontamination capabilities of chemical units and teams: This test was designed to study the capabilities of U.S. Forces to decontaminate equipment which had been subjected to a thickened chemical agent attack, to determine any measures which might be adopted to improve these capabilities, and to determine the relative effectiveness of standard decontamination procedures on specific agent simulants and to establish a standard baseline time required for effective decontamination of standard Army equipment. Test has been completed. For this period, 26 simulant field trials to obtain data for a time-and-motion analysis was completed; 15 field trials with a chemical simulant to evaluate comparative decontamination procedures were conducted; 43 laboratory investigation tests to estimate the comparative effectiveness of selected decontamination solutions against 4 different surfaces contaminated with several agents was completed.
(g) Army materiel development tests.	(.000) / (.576)	(.576) / (.000)	Tests were conducted on the U.S. Army's defensive equipment and materiel and in the long-term environmental storage and surveillance testing. Test efforts were as follows: 1. Modular collective protection equipment (MCPE): This test effort was designed to perform a DT II test and to determine the capability of the MCPE to meet system specification requirement. Agent and simulant challenge tests were conducted. A final report was published. 2. Protective overgarment suit: Test is designed to obtain comparative data on each of the three chemical protective suits with regard to the level of protection afforded after specified intervals of wear, durability, and the degree to which suits meet the essential characteristics of the U.S. revised military and technical characteristics. Testing in the area of protective capabilities of new, worn, and stored garments, effects of salt water and fresh water immersion, suit of capabilities for spot emergency decontamination, flame resistant capabilities, storage effects, and air permeability was accomplished. A final report was published. 3. Chemical/biological test for the Stinger guided missile system: Test is designed to determine if system components can be successfully decontaminated without damage to the system. During this period testing was initiated. Test is scheduled for completion in fiscal year 1977.

DEPARTMENT OF THE ARMY ANNUAL REPORT ON CHEMICAL WARFARE AND BIOLOGICAL RESEARCH PROGRAMS
(JULY 1, 1975 THROUGH SEPT. 30, 1976), RCS DD-D.R. & E. (SA) 1065—Continued

[In conducting the research described in this report, the investigators adhered to the "Guide for Laboratory Animal Facilities and Care" as promulgated by the Committee on the Guide for Laboratory Animal Resources, National Academy of Sciences—National Research Council]

Description of R.D.T. & E. effort	Funds obligated (millions of dollars) Prior year Current fiscal year	In-house Contract	Explanation of obligation
			4. Chemical agent detector kit, XM-256: This test effort is designed to perform a DT II test and to determine: (1) the technical performance; (2) safety of the items; (3) its maintemance test support package; (4) demonstrate whether engineering is reasonably complete; and (5) effects of extreme climatic environments. During this period planning was accomplished and testing was initiated. Reports will be published in fiscal year 1977.
			5. Chemical Agent Detector Paper X-M9: This test is designed to determine if the XM-9 meets the design requirements, performance standards, and technical characteristics of the requirement, effects of extreme climatic environments on the item, and whether engineering is reasonably complete. For this period, a draft test plan has been prepared and laboratory technology was initiated to determine sensitivity test methods for extreme temperature ranges. Test will be completed 1st quarter fiscal year 1978.
			6. Chemical/biological/radiological vulnerability for ground launched laser designator: This test effort is designed to determine if system components can be successfully decontaminated without damage to the system. During this period planning was accomplished. Testing is to be initiated in fidscal year 1977.
			7. Battery computer system: Test is designed to determine if system components can be successfully decontaminated after chemical/biological contamination without damage to the system. Initial planning has been accomplished. Testing is scheduled for fiscal year 1978.
			8. Digital message device: This test is designed to determine if system components can be decontaminated without damage to the system. For this period all necessary planning has been accomplished. Test is scheduled for fiscal year 1977.
			9. Decontamination vehicle: Test was designed to determine the feasibility of decontaminating military equipment using a new decontamination vehicle concept. For this period a variety of panels were contaminated using chemical agents and then decontaminated. Testing was completed and a final report published.
			10. 155-mm cannon launched guided projectile, XM-712: Test is designed to determine if system components can be successfully decontaminated without damage to the system. For this period a test plan was prepared, coordinated, and published. Test is scheduled for conduct in fiscal year 1978.
			11. DT II of common thermal night sight: Test is designed to determine if system components can be successfully decontaminated without damage to the system. For the period a test plan was prepared, coordinated, and published. Test is scheduled for conduct in fiscal year 1977.
			12. Environmental surveillance: The long-term environmental storage and surveillance program had a total of 5 items undergoing some phase of testing at 1 or more of the test sites. Items consisted of masks, chemical detectors, and chemical alarm units.
5. Simulant test support	.000	.429	
	.437	.008	
(a) Materiel tests in support of joint operations plans and/or service requirements.	(.000)	(.429)	Efforts were directed toward the planning, conducting, and/or reporting of the following joint operational tests and operations research studies:
	(.437)	(.008)	
			1. Evaluation of delivery and assessment techniques: This test, consisted of four subtests, is in response to Army, Navy, and Air Force requirements and is concerned with evaluation of delivery and assessment techniques for simulant spray systems. Testing was completed in fiscal year 1974. For this period, data analysis was completed and the final reports covering all aspects of the test program were published.
			2. Hazards Evaluation: This test is a research effort with the aim of duplicating the contamination pattern of a massive chemical attack with the use of simulants and correlating simulant/agent data to permit hazard and vulnerability analyses. For this period, data analysis has been completed and a final report has been published.
			3. Evaluation of Marine vehicle to massive chemical attack: The U.S. Marine Corps requested a test to evaluate the effective use of the a landing vehicle when subjected to a simulated massive chemical attack. Data analysis has been completed and final report has been published.
			4. Vulnerability of Marine wing weapons unit: This test, in response to a U.S. Marine Corps requirement, involves a Marine wing weapons unit performing mission tasks with a nuclear trainer in a simulated toxic environment. The test is designed to evaluate minimum performance degradation caused by a massive chemical attack. For this period, data analysis was completed and a final report was published.
			5. Integrity of spray tanks and hazards to personnel: This operations research study is in response to a U.S. Marine Corps request which will evaluate the effects of chemical agents and decontaminates on the continued integrity of spray tanks and estimates of hazards associated with recycling or decontaminating the tanks. For this period, the study was finalized and published.
			6. Thickened agent survey: This study will review all past and current data on thickened chemical agents. For this period, a literature survey of data has been accomplished. Study will be completed in fiscal year 1977.
			7. Thickened agent investigation: This effort is a combination study and test. A study will be performed to determine the relationship of ground contamination to the impaction and distribution on man for thickened materials. The test is designed to obtain data on the dissemination characteristics of bursting munitions filled with thickened simulant and to estimated dose-casualty relationships for such munitions. During this report period, the study has been initiated. A literature survey of all data has been accomplished. Test plan was prepared, coordinated, and published. Testing was initiated. Test completion is scheduled for fiscal year 1977.
			8. Agent transfer factors: This test is designed to provide data on the transfer factor and pickup associated with the field employment of vehicles and equipment when exposed to thickened agent simulants. During this period a test plan was prepared, coordinated, and published. Testing was initiated. Test is scheduled for completion fiscal year 1977.

OBLIGATION REPORT OF PROCUREMENT FUNDS FOR THE PERIOD JULY 1, 1975, THROUGH SEPT. 30, 1976, REPORTING SERVICE: DEPARTMENT OF THE ARMY, DATE OF REPORT: SEPT. 30, 1976, RCS DD-D.R. & E. (SA) 1065

Description of R.D.T. & E. effort	Funds obligated (millions of dollars) Prior year Current fiscal year	In-house Contract	Explanation of obligation
Chemical warfare program	1.679	3.878	During the fiscal year 1976, the Department of the Army obligated $13,604,000 for procurement activities associated with chemical warfare agents, weapons systems, defensive equipment, and production base projects. Program areas of effort concerned with these obligations were as follows:
	11.925	9.726	Lethal chemical program: Materiel procurement 0; Production base projects $7,540,000; Total lethal chemical $7,540,000. Incapacitating chemical program: Materiel procurement 0; Production base projects 0; Total incapacitating chemical 0. Defensive equipment program: Materiel procurement 5,040,000; Production base projects 1,024,000; Total defense equipment 6,064,000.
1. Lethal chemical program	.050	1.214	
	7.490	6.326	
(a) Item procurements.	(.000)	(.000)	No obligations were incurred for procurement of lethal chemical end items.
	(.000)	(.000)	
(b) Production base projects: Chemical agent and munitions disposal system.	(.000)	(1.164)	Obligations incurred to purchase equipment for a multipurpose disposal system for use in detoxifying and/or disposing of obsolete unserviceable chemical munitions and toxic agents. Ultimate system will consist of a series of modules which can be transported to sites containing obsolete/unserviceable toxic agents/munitions, assembled and operated to detoxify and dispose of material.
	(7.480)	(6.326)	
155mm binary projectile, XM637.	(.050)	(.050)	Engineering and design in support of establishment of a chemical production load, assemble, and pack facility for 155 mm binary projectile, XM-637.
	(.000)	(.000)	
2. Incapacitating chemical program.	(.000)	(.000)	
	(.000)	(.000)	
(a) Item procurements.	(.000)	(.000)	No obligations were incurred for procurement of incapacitating chemical items.
	(.000)	(.000)	
(b) Production base projects.	(.000)	(.000)	No obligations were incurred for production base projects in support of incapacitating chemical programs.
	(.000)	(.000)	
3. Defense equipment program.	1.629	2.664	
	4.435	3.400	
(a) Item procurements: (1) Decontaminating apparatus, M12A1.	(.021)	(.232)	Obligations incurred for in-house support and procurement.
	(1.736)	(1.525)	
(2) Disperser, M33A1.	(.000)	(.160)	Obligations incurred for in-house engineering support for the M33A1 disperser buy.
	(.160)	(.000)	
(3) Filter unit, M8A3.	(.000)	(.085)	Obligations incurred for procurement and in-house engineering support for M8A3 filter unit to supply purified air for crewmembers of armored vehicles.
	(.567)	(.482)	
(4) Filter unit, M13A1.	(.000)	(.120)	Obligations incurred for procurement and in-house engineering support for M13A1 filter unit used to supply purified air for crewmembers of armored vehicles.
	(.948)	(.828)	
(5) Kit f/ M13A1 filter.	(.310)	(.000)	Obligations incurred for the procurement of kits for the M13A1 filter.
	(.000)	(.310)	
(6) Alarm, M8-M10.	(.834)	(.733)	The bulk of obligations was incurred for in-house support with a small portion obligated for Government-furnished materials and engineering change orders.
	(.000)	(.101)	
(7) Maintenance M14.	(.011)	(.000)	Obligations incurred for procurement of M-14 maintenance kit which is used on numerous chemical type items in the field.
(8) Shelter system, M51.	(.390)	(.268)	Obligations incurred for in-house engineering support and for engineering change orders.
	(.000)	(.122)	
(9) Mask, M25A1.	(.063)	(.042)	The in-house obligations incurred were for engineering support while the contractual effort was for microphones which were issued to a contractor as Government-furnished material.
	(.000)	(.021)	
(b) Production base projects: (1) Manfacturing technology for CB filters.	(000)	(350)	Obligations incurred for analysis of the processes used for filter production.
	(.350)	(.000)	

OBLIGATION REPORT OF PROCUREMENT FUNDS FOR THE PERIOD JULY 1, 1975, THROUGH SEPT. 30, 1976, REPORTING SERVICE: DEPARTMENT OF THE ARMY, DATE OF REPORT: SEPT. 30, 1976, RCS DD-D.R. & E. (SA) 1065—Continued

Description of R.D.T. & E. effort	Funds obligated (millions of dollars)		Explanation of obligation
	Prior year	In-house	
	Current fiscal year	Contract	
(2) Manufacturing methods and technology (M.M. & T.) for M229 refill kit component of chemical agent alarm.	(000)	(585)	Obligations incurred for in-house engineering support to improve M229 refill kit.
	(. 585)	(. 000)	
(3) M.M. & T. improvement and modernization of inspection aids.	(. 000)	(. 089)	Obligations incurred to conduct program for improvement of inspection aids for final inspection and surveillance testing of chemical/biological defensive and protective items.
	(. 089)	(. 000)	

SEC. 2.—OBLIGATION REPORT ON BIOLOGICAL RESEARCH PROGRAM FOR THE PERIOD JULY 1, 1975 THROUGH SEPT. 30, 1976, DEPARTMENT OF THE ARMY, RCS DD-D.R. & E. (SA) 1065

OBLIGATION REPORT OF RESEARCH, DEVELOPMENT, TEST, AND EVALUATION FUNDS FOR THE PERIOD JULY 1, 1975 THROUGH SEPT. 30, 1976, REPORTING SERVICE: DEPARTMENT OF THE ARMY, DATE OF REPORT: SEPT. 30, 1976, RCS: DD-D.R. & E. (SA) 1065

Description of R.D.T. & E. effort	Funds obligated (millions of dollars)		Explanation of obligation
	Prior year	In-house	
	Current fiscal year	Contract	
Biological research program	0. 008	11. 400	During the 15-month period of fiscal year 1976 and fiscal year 197T, the Department of the Army obligated $17,203,000 for general biological research investigations and the development and test of physical and medical defensive systems. Program areas of effort were as follows:
	17. 735	6. 327	Biological research: Basic research in life sciences, total ..... $387,000 Defensive systems: Exploratory development ..... 11,658,000 Advanced development ..... —2,000 Engineering development ..... 4,658,000 Testing ..... 499,000 Total defensive systems ..... 16,813,000 Simulant test support 3,000
1. Biological research	. 000	. 032	
	. 387	. 085	
(a) Basic research in life sciences.	(. 000)	(. 302)	Life sciences basic research in support of biological defense materiel: Basic research in support of biological defense materie included studies on remote detection and on approaches to improving the XM19 biological agent detector. Theoretical studies on remote detection of biological agents in the atmosphere, furnished estimates of the absorption and scattering efficiencies of micobiological aerosols subjected to ultraviolet irradiation, and estimates of the ambient fluorescence background of the (atmosphere which supported the potential for a second-generation detection concept. Time-intensity chemiluminescence response patterns were obtained for over 20 different microbiological materials using redesigned instrumentation with which the samples were differentiated into 3 characteristic response groups at the 14° C. optimum reaction temperature. In basic research in bio-identification, rapid identification of microorganisms was achieved by mass spectrometry analysis of the purine and pyrimidine composition of their nucleic acids by contract supported effort as the mass spectrometry research center, Stanford Research Institute. Identification was accomplished in 1 hour by application of upgraded procedures for extracting, purifying and hydrolyzing nanogram quantities the nucleic acids followed by field ionization mass spectroscopy-fingerprint analyses of the released purines and pyrimidines. Basic research on new concepts for biological decontamination focused on the feasibility of direct neutralization of airborne biological agents. Theoretical studies have developed models for lactic acid vapor disinfection of vegetable bacteria in aerosol particles. The significant reduction in casualties predicted by the model is supported by laboratory data of effective diinfection of bacterial aerosols with practicable concentrations of lactic acid disseiminated as vapors or droplets.
	(. 387)	(. 085)	
2. Defensive equipment program.	—. 008	12. 630	
	16. 821	4. 183	
(a) Physical defense against biological agents.	(. 000)	(1. 036)	Exploratory development effort: Physical defense against biological attack: 1. The 1st phase of in-house studies to further antiaerosol and protective countercloud technology associated with the chemical disinfection of biological aerosols was completed and a report prepared. The effectiveness of lactic acid droplets as a decontaminant for vegetative bacterial aerosols in an enclosed chamber as demonstrated. A contract to expand these studies and to pursue the development of a biological cloud neutralization system was awarded. The in-house chemical screening program for new vapor phase decontaminants is continuing in an effort to find a suitable replacement for beta-propiolactone and formaldehyde. Several potential disinfectants have been selected for further study. A contract package was completed for the exploratory development of a decontamination system for biologically contaminated personnel, equipment, and enclosures. The proposed procurement is a 4-year technical effort planned for fiscal year 1977 through fiscal year 1980. The in-house chemical screening program for potential disinfectants has resulted in the selection of 4 candidates for further study. Biological leakage tests leading toward development of new test technology were performed using the M-9A1 protective mask as the test fixture. 2. Time-rate chemiluminescence detector performance was evaluated for aerosolized pathogens at Fort Detrick, Md., to further establish the applicability for group specific identification of aerosolized materials. Efforts were made to improve the response separation between biological groups for identification. Data are being evaluated. A biological all clear kit for indication of agent presence following biological attack, exploratory development program was initiated. The developmental viability response indicator systems under study are resazurin and catalase. Responses of the 2 systems to pathogens were obtained; however, improvements in sensitivity are required to establish feasibility of these approaches for further development. Performance of the pattern acquisition and correlation technique system with improved pattern recognition electronics and use of a digital adaptive alarm logic was demonstrated for biological aerosols and ambient background. The theoretical feasibility of remote detection of biological aerosols in the atmosphere has been indicated as a result of contract and in-house analysis. Thus a contract was awarded to further establish the capability of remote detection using intrinsic fluorscence. Evaluation of bacterial pathogens of biological defense importance and tissue antibodies procurred from the Naval Biosciences Laboratory are being assessed in the chemiluminescent device as a potential means of achieving group specificity.
	(51. 278)	(. 242)	

SEC. 2.—OBLIGATION REPORT ON BIOLOGICAL RESEARCH PROGRAM FOR THE PERIOD JULY 1, 1975 THROUGH SEPT. 30, 1976, DEPARTMENT OF THE ARMY, RCS DD-D.R. & E. (SA) 1065—Continued

OBLIGATION REPORT OF RESEARCH, DEVELOPMENT, TEST, AND EVALUATION FUNDS FOR THE PERIOD JULY 1, 1975 THROUGH SEPT. 30, 1976, REPORTING SERVICE: DEPARTMENT OF THE ARMY, DATE OF REPORT: SEPT. 30, 1976, RCS: DD-D.R. & E. (SA) 1065—Continued

Description of R.D.T. & E. effort	Funds obligated (millions of dollars) Prior year / Current fiscal year	In-house / Contract	Explanation of obligation
(b) Biological defense materiel concepts.	(—.002) / (.000)	(.000) / (—.002)	Prior year advanced development deobligation resulted from withdrawal of residual funds following completion effort.
(c) Biological defense materiel.	(—.006) / (4.664)	(2.628) / (2.030)	Advanced development effort: Prior year deobligation as a result of residual funds withdrawn upon completion of effort. Engineering development effort: Various functional configurations of the XM–19 biological agent detector were field tested and evaluated. The results of these tests indicated that the design employing a static reaction cell for monitoring the chemiluminescent and reaction was superior to a continuous flow cell design. Thus emphasis was placed on the continued development of the static cel concept. Among the principal features this design offers is a significant improvement in the reproducibility in detector response to simulant challenges and a major reduction in the volume of agent required to operate the XM–19 biological agent detector over its mission interval. In-house effort was directed toward the detailed examination of the design of the new components employed in the static cell design, measuring the parameters which determine their performance, and testing and evaluating alternate designs. As part of these tests, an aerosol testing facility capable of presenting large aerosol particles was assembled. It became evident that additional equipment was needed to establish the range of particle sizes required to thoroughly evaluate the sampling capability of both the XM–19 and XM–2 biological sampler. Action was taken to procure the needed equipment and to make the necessary modifications to the existing facility so that a full spectrum of aerosols can be generated and quantitatively assessed. An XM–2 design leading toward a self-contained disposable aerosol sample reservoir was also tested and evaluated. This configuration offers a substantial simplification and reduction of logistics burden. The multiyear prime contract for Engineering Development of the subject system is under negotiation. To provide the initial impetus to this program, several small contracts have or will be awarded to critically examine selective design areas important to the initial engineering development program. These include the design of the XM–2, alternate aerosol concentrator designs, aerosol generating equipment for use in testing, the design of the electronic alarm logic for the XM–19, and further improvement in suppressing the effects of certain dust aerosols on the performance of the XM–19. A contractor is developing process data suitable for the preparation of procurement specifications for the luminol reagent and for the precoated impaction tape used in the XM–19. Also, alternate tape designs are being prepared for evaluation to determine if improvements in the specificity of the impaction/wash process can be achieved. Another contractor is conducting a detailed experimental program for the accumulation of data for a computer analysis by varying the formulation of the reagent and other parameters used in the XM–19 The analyses should result in optimization of variables for the best operational performance. A 3d contractor has redesigned the multinozzle concentrator resulting in fewer by varying the formulation of the reagent and other parameters used in the XM–19. The analyses should result in optimization of variables for the best operational performance. A 3d contractor has redesigned the multinozzle concentrator resulting in fewer parts, simpler mechanical design and reduction of the noise level. Prototypes were fabricated and are presently being evaluated in-house.
(d) Biological defense against biological agents.	0 / 10.904	7.088 / 3.816	This multifaceted program is a highly specialized field of infectious disease research because abnormal routes of administration (aerosols) many times alter the normal pattern of disease agents. Incidence of disease from biological warfare (BW) agents is significantly higher than that observed in natural infection with the same agent due to concentration of the agent in a small operational area. Agents used in BW, due to genetic engineering, stabilization, and use of resistant strains may present a different pattern for diagnosis. The United States recognizes its vulnerability to BW attacks, and the possibility that this type of weapon may be used against us and our allies. Medical defense depends on protection against illness, and, where protection cannot be provided, rapid diagnosis and successful treatment of those illnessess which occur. The investment strategy in this program is based on envisioned military operations, medical and scientific state-of-the-art, as well as continuous coordination and data input from the medical intelligence community. Within the framework of this strategy, the U.S. Army medical research of infectious disease (USAMRIID) research program emphasizes investigations on problems associated with the medical defense against BW agents and those microorganisms which require special containment facilities. The program has 3 principle task-related goals: (1) Pathogenesis of military important infections; (2) prevention and treatment of biological agent casualties; and (3) rapid diagnosis of biological agents. Significant progress in each of these categories is illustrated by the following examples: Pathogenesis of infections of military importance: The goal of this important area is to define mechanisms of both disease progression and defensive responses within the infected host involving a broad, multidisciplined study of the infectious process including metabolic, endocrine, and biochemical studies, interaction of vaccines and toxins, and the effects of radiation on infection. Investment payoffs in this area include: (a) Tissue enzymes (adenyl cyclase) and hormones (prostaglandins) found to be released early in the inflammation process of infection. (b) Early disease pattern (depression in amino acids and increase in acute phase globulins) defined in the infectious process. (c) The immune response following irradiation was found to be delayed. This is extremely important in the protection of the soldier against disease in a nuclear environment. (d) A major breakthrough was accomplished in developing the squirrel monkey as a model for studying respiratory infections. The immediate benefit in this is exampled by the recent establishment of a model for swine influenza. (e) A new and novel technique has been developed for scanning electron miscroscopy that enable 1 to visualize infection early in the disease. Virus particles can be detected as early as 7½ hr after virus adsorption to cells. Prevention and treatment of biological casualties: Since mass immunization against all potential biological warfare (BW) agents is neither feasible nor practical; vaccines are being developed against key microorganisms and toxins which experience and current intelligence data suggests to be of potential geographical military importance. New methods of immunoprophylaxis and therapy are being extensively studied, particularly in the antiviral area. Experimental approaches include: Develop new vaccines and toxins; improve efficacy of existing vaccines; cell-mediated studies; efficacy screening of antiviral compounds: aerogenic administration of antiviral compounds. Benefits include: (a) Vaccine development against potential BW agents such as anthrax, Venezuelan equine encephalomyelitis (VEE), tularemia, plague, and Q fever has been completed. Vaccines against chikungunya and Rift Valley fever arbovirus infections in Africa and Southeast Asia, are in final development. Vaccines against Dengue type 2, Mayaro virus, and sinbis virus found in South America, Africa, and Southeast Asia are in the early stages of development. (b) 2 classes of drugs, tilorone and polyinosinic-polycytidylic acid (PIC), have been shown effective in early protection against VEE and yellow fever by inducing interferon, a nonspecific protective substance. Rimantadine and amantadine have exhibited both prophylactic and therapeutic effects against influenza. (c) Lymphocyte transformation assay has been developed to study cell-mediated responses of specified disease agents and to evaluate the cellular effects of vaccines developed and commonly employed at USAMRIID. (d) PIC has been shown to be a potent drug for inducing better and quicker protection against VEE by increasing antibody responses. This drug also increases antibody responses to swine influenza. Rapid diagnosis of biological agents: This critical block of research supported by both in-house and contract research at a cost of $1,500,000, is aimed at rapidly identifying the causative agent in any BW attack so that appropriate supportive measures can be initiated earlier than is now possible in the current state-of-the-art. Subtle changes in the host's biochemical metabolic status serve as indicators of incubating infections. We must utilize and exploit methodology in various fields of science such as: 1. Immunoelectrophoresis—to rapidly identify the causative organisms by immunological means. 2. Mass spectrometry—to identify metabolites in the body fluids indicative of types of organisms. 3. Laser beam scattering—to rapidly identify the morphology of the causative organism. In order for rapid identification of BW agents to be a viable part of the total medical defense program, it must be approached on 3 interrelated levels: (1) whether or not infection is in progress; (2) what is the general nature of the infectious organism i.e. bacterial, rickettsial, or viral; and (3) what is the specific agent. The need for rapid diagnosis was exemplified in the recent "legionnaire's disease" outbreak in Philadelphia, Pa. While it is not suspected that this was the result of a BW agent, the diagnostic procedures routinely used were not adequately responsive to affect supportive medical care, and the identification of the etiology is still in doubt. Progress in pursuit of rapid identification is included in the following: (a) Metabolic process (oxidation of glucose and increased deoxyribonucleic acid synthesis can be used as indicators 4 to 6 hr post infection with herpes virus.

SEC. 2.—OBLIGATION REPORT ON BIOLOGICAL RESEARCH PROGRAM FOR THE PERIOD JULY 1, 1975 THROUGH SEPT. 30, 1976, DEPARTMENT OF THE ARMY, RCS DD-D.R. & E. (SA) 1065—Continued

OBLIGATION REPORT OF RESEARCH, DEVELOPMENT, TEST, AND EVALUATION FUNDS FOR THE PERIOD JULY 1, 1975 THROUGH SEPT. 30, 1976, REPORTING SERVICE: DEPARTMENT OF THE ARMY, DATE OF REPORT: SEPT. 30, 1976, RCS: DD-D.R. & E. (SA) 1065—Continued

Description of R.D.T. & E. effort	Funds obligated (millions of dollars) Prior year / Current fiscal year	In-house / Contract	Explanation of obligation
			(b) Procedures have been developed whereby alterations in the trace metals levels in conjunction with routine blood chemistry and analysis tests can detect early infection and differentiate between a bacterial (typhoid fever) and viral (sandfly fever) infection. (c) An immunoelectrophoresis procedure has been developed that affords rapid identification of a variety viruses in clinical specimens within 48 hr. Modification to a wide variety of agents may provide a means to quickly identify specific BW agents for medical treatment. (d) The development of mass spectrometry procedures now make it possible to positively identify a group of metabolites from the urine of patients with hepatitis. This procedure is being simplified for faster results in order to develop a rapid diagnostic tool for identification of BW agents. Significant advances have been made in development of vaccines, animal models of disease, treatment of disease, early diagnosis of infection, and in fundamental knowledge of infectious disease process. Important tissue culture and cost-saving advances have been made in technical aspects of large-scale vaccine development. Research continues in these areas with constant interaction with other Department of Defense agencies in all collaboration research and data information collection to obtain fundamental information upon which to base development of preventive and therapeutic measure and broaden our base for protection of the soldier from infectious disease.
(e) Foreign biological threat.	(.000)	(.236)	Operations research studies were conducted to evaluate and assess the biological threat to the United States and to U.S. military forces throughout the world. During this period, 11 studies were in progress:
	(.392)	(.156)	1. Study 1: Target vulnerability assessment: A 2-volume report was published; vol. 1 and executive summary, and vol. 2, the complete report (Biological Vulnerability Assessment). The report is an analysis of the vulnerability of a specific front to a biological attack, based on political, military, and environmental factors associated with that target area. 2. Study 3: Response protocol: A report on this study was completed during this period, titled Biological Defense Protocol. The report is an assessment of current capabilities and bioligical defense requirements for the U.S. Army in the field. The current capability is based on current attitudes regarding biological defense and training and equipment devoted to biological defense. Information was obtained from several sources. An analysis was made of training preparedness requirement in response to the biological threat. 3. Study 5: Target vulnerability analog definition: This study was completed and a report was published (Analog Environmental Parameters for Assessing Targets Vulnerability). An analysis was made of environmental conditions at selected sites to determine the duration and frequency of occurrence of conditions that would render the site a susceptible target to a biological attack. For the stringent conditions for attack that were imposed, the frequency of suitable conditions was relatively high. 4. Study 8: Target vulnerability: This study involves an assessment of the meteorology and topography, identification of strategic and tactical targets, and identification of possible modes of attack against U.S. forces, should they be involved in operations under this scenario. During this period, a literature review was initiated. Report is scheduled for completion in fiscal year 1977. 5. Study 10: Biological detector effectiveness for bomblet attacks: This study will evaluate the detection capabilities for an on-target bomblett against U.S. military forces based on current detector arrays. During this report period distribution patterns for biological bomblets have been defined and orientation on target has been examined to establish cloud travel patterns and cloud emergence. Requirements for detector density and location will be examined. Report is scheduled for completion in fiscal year 1977. 6. Study 11: Role of large particle size aerosols in biological defense: This study will assess U.S. troop vulnerability from biological attack involving large particle size aerosols. During this period an analysis of the physical properties of particles in the 20-micron diameter range and the relation of particle size to the numbers, survival, and dosage of micro-organisms in such particles was accomplished. A report is in preparation. Phase 2 will be an examination of data available for several organisms and the effect of particle size on animal infectivity for these organisms and is scheduled for completion in fiscal year 1977. 7. Study 12: Biological detector criteria for fixed installations: This study will develop procedures to determine the effectiveness of various biological detector criteria in preventing casualties for fixed installations. During this period analysis of building ventilation characteristics for a variety of climatological conditions was completed. Report is scheduled for publication in fiscal year 1977. 8. Study 15: Biological cloud patterns and profiles: This study will summarize all past test data on biological cloud patterns and profiles. During this period effects of wind speed and wind direction shears on instantaneous point and line source clouds were examined. The magnitude of the effect of these shears on the cloud distribution in space and time was studied for various terrain situations. The adequacy of current diffusion models to handle these situations will be investigated for possible modification. Report is scheduled for completion in fiscal year 1977. 9. Study 17: Analysis of the validity and integrity of biological treaties: This study will provide in the context of current and projected international relations, an analysis of the validity and integrity of biological treaties. During this period an examination of the following was accomplished: (1) events which contributed to the formulation and adoption of biological treaties; (2) strengths and weaknesses in the provision of these treaties; (3) alternative or unspecified procedures for assuring the integrity and validity of treaties. Study will be published in fiscal year 1977. 10. Study 18: Minimum capability for bilogical threat: This study will assess the technological requirements for development of biological weapons to meet a number of potential poles for use by groups having a low level of technical capability. During this period an analysis of the existence of the acquisition of the technical capability to produce, stockpile, and transport biological materiel for use in biological weapon systems was accomplished. Study will be completed in fiscal year 1977. 11. Study 19: Refinement of target vulnerability analog criteria: This study will provide for further characterization of target vulnerability analogs and will be applied to a number of sites and larger areas. During this period, refinement of analysis techniques has been initiated. Study is scheduled for completion in fiscal year 1978.
1. A (f) Army materiel development tests.	(.000)	(.107)	Obligations were incurred in the modification of an inclosed test chamber and a check out test procedures prior to testing of the XM-19 biological agent detector. Testing of the XM-19 is scheduled for fiscal year 1977.
	(.107)	(.000)	
3. Simulant test support	.000	.003	Obligations were incurred in the reporting of a test program which was in response to unified and specified commands and service requirements. Test was designed to evaluate the relationship between biological decay data between the mobile van/microfilament technique and free floating aerosols. Final report was published during this report period.

SECOND MOCK CONSTITUTIONAL CONVENTION

Mr. BAYH. Mr. President, for the past 2½ days we have been privileged to have an energetic and bright group of young men and women, from 25 high schools, primarily from the east coast, here in Washington, D.C., as a part of the second mock Constitutional Convention. These future leaders of America have engaged in debate aimed at amending specific sections of our Constitution. Mr. President, it was my privilege to sit in on their Friday morning session, held in the Dirksen Senate Office Building, room 1202. I believe with young people such as these 177 delegates, representing the future leaders of our country, that our Nation definitely has a great future and will be in the hands of some very outstanding Americans.

I am pleased to report that one of the items debated and voted on was an amendment to the Constitution, calling for the direct election of the President and the Vice President of the United States. After extensive arguments for and against direct elections, these fine young Americans overwhelmingly voted to amend the Constitution in order to provide for the direct election of the President. The final vote was 107 for, 18 against, and 13 abstensions.

In concluding, Mr. President, I think the desires expressed by these young Americans should be interpreted as one indication of the desires of the American people for the Congress of the United States to overwhelmingly endorse an amendment to the Constitution which would result in the direct election of the President and the Vice President of the United States. I request unanimous consent that the text of the amendment be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AN AMENDMENT

(To provide for direct election of the President and Vice President)

Resolved by the Second Constitutional Convention of the United States, in Congress assembled, That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States within seven years from the date of its submission by the Congress.

ARTICLE —

Section 1: The people of the several States, and of the District constituting the seat of government of the United States, shall elect the President and Vice President in the following manner: Each elector shall cast one vote for a pair of persons who shall have previously consented to the joinder of their names as candidates for the offices of President and Vice President. The pair of persons receiving the greatest number of votes shall be elected, if a said number be at least forty per cent of the total number of votes cast for such offices.

If no pair of persons receives such a number, the Senate and the House of Representatives shall meet in joint session and choose between the two pair of persons who received the highest number of votes. In making this choice, each Member of Congress shall have one vote, and a quorum shall consist of two-thirds of the total number of Senators and Representatives.

Section 2: The electors for President and Vice President shall have the qualifications requisite for electors of the most numerous branch of the State legislature, except that for electors of President and Vice President Congress may prescribe uniform qualifications.

Section 3: The times, places and manner of holding such elections shall be determined in each State by the legislature thereof. The date of the election shall be determined by Congress, and shall be uniform throughout the United States.

Section 4: The Congress shall have the power to enforce this article by appropriate legislation.

TRIBUTE TO JOE SEWELL

Mr. SPARKMAN. Mr. President, I take this opportunity to pay tribute to Joe Sewell, whose election to the Baseball Hall of Fame was announced last week. Joe Sewell's remarkable baseball skills have carried him from the sandlots of his native Titus, Ala., to the thrills of World Series play in Yankee Stadium, and now to the highest accolade: the honor of the Hall of Fame in Cooperstown, N.Y. Recognition by the Baseball Writers Association of America's Hall of Fame Committee represents the pinnacle of success in baseball. I am proud today to commend to our attention the richly deserved honors won by Joe Sewell, an excellent baseball player and an outstanding gentleman.

Joe was an upperclassman of mine at the University of Alabama. I have vivid memories of his room on the second floor of old Woods Hall at the university. After graduation from the university in 1920, Joe competed in major league baseball for the next 14 seasons. He was the Cleveland Indians' shortstop from 1920 to 1930, and the New York Yankees' third baseman from 1931 to 1933. His career batting average of .312 places him high among the all-time leaders for shortstops, and his best single season average of .353 in 1923 is a standard of excellence rarely achieved in baseball. Joe was also an outstanding defensive player: his career fielding percentage was .954. He led American League shortstops in putouts four consecutive seasons, and in assists during five seasons. Always dedicated and durable, he appeared in 1,103 consecutive games; only three men in the history of baseball have bettered that mark.

Joe Sewell is most famous, however, for his tenacity and aggressiveness as a batter. Using a heavy bat and a disciplined swing, he was virtually impossible to strike out. He says he could see the ball when it left his bat. In 7,132 major league at bats, he struck out only 114 times. He holds the season record low of only four strikeouts in 155 games in 1925.

Today, Joe Sewell is employed in public relations for a dairy firm in Tuscaloosa, Ala. After learning of his election to the Hall of Fame, Joe remarked that "It's a long, long way from Tuscaloosa to Cooperstown." But seldom has the journey been made so deservedly, and the honor so fully earned.

HELLER AND GALBRAITH SPEAK OUT ON TAX CUT

Mr. HUMPHREY. Mr. President, the December 12, 1976 Minneapolis Tribune published articles by two noted economists, Walter W. Heller and John Kenneth Galbraith, which had previously appeared in the Wall Street Journal and the New York Times, respectively. Dr. Heller is a proponent of the one-time tax rebate proposed by the Carter administration; Dr. Galbraith is an equally ardent opponent.

"The evidence of slowdown and slack is so pervasive," states Dr. Heller, "that plans for a tax tonic for our ailing recovery should be in full swing." The underutilization of labor and capital in the economy provide the basic case for a tax stimulus. Not only is this a domestic responsibility, but we also have worldwide obligations to help promote economic recovery. Dr. Heller does not believe that either a quick speedup in Federal spending or easier monetary policy can provide an adequate boost, thus shifting the obligation for aiding our lackluster economy to the tax side of the budget.

Dr. Heller's proposal is for a one-shot lump sum tax rebate that would focus chiefly on middle- and low-income consumers. He believes that this type of stimulus is attractive because it would quickly boost the economy when it is most needed; it would enable us to keep our options open for future policies; and finally, the 1975 tax experience proved that a rebate quickly enters the spending stream. As Dr. Heller states, it yields a "bigger short-run bang for the buck."

On the other hand, John Kenneth Galbraith is opposed to such a measure. "Those who advocate a tax cut," he states, "do so in deeply conditioned disregard to its economic ineffectiveness, its demonstrated political disutility and its patently reactionary social effects." It is his belief that people become aware of their tax saving only gradually, and especially so in the upper-income brackets. Consequently tax savings are spent slowly—and will not have a stimulating effect on the economy. According to Galbraith, it removes benefits from those Americans who have the least income and the greatest need for help. Rather, Dr. Galbraith advocates a plan to expand the economy by aiding our cities. "Making or keeping the cities livable is only the clearest alternative to tax reduction," he states.

Mr. President, both Dr. Heller and Dr. Galbraith are extremely articulate and intelligent economists. However, I find myself in agreement with Walter Heller on this occasion. The economy needs a boost right now. We cannot enlarge our spending programs quickly enough to do the entire job. And we must move cautiously on permanent tax cuts, for, as Dr. Galbraith rightly points out, our unmet pubic needs are great, and they must be financed. I do not want us to get ourselves into the position where we change the tax rates to the extent that we lose revenues badly needed to take care of the many basic needs of our country. A

tax rebate is just one component of the economic package for the revitalization of the economy. Its effects would be swift and positive—and for that reason, we should not hesitate to act.

Mr. President, I ask unanimous consent that the December 12, 1976 article from the Minneapolis Tribune be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WALTER W. HELLER SAYS WE NEED A TAX CUT

The watchwords on a tax cut, we are told, should be "wait and see." But given what we can plainly see, what are we waiting for (other than the reconvening of Congress)?

The evidence of slowdown and slack is so pervasive that plans for a tax tonic for our ailing recovery should be in full swing. Real gross national product (GNP) growth at a 3 to 3½ percent rate this quarter will mark the third consecutive quarter of drop-off in the rate of expansion. Average growth for the last nine months of 1976 will end up at less than 4 percent, that is, below the rate required merely to absorb the trend growth in labor force and productivity.

This is vividly reflected, for example, in a rise of 700,000 in the jobless total since May; real retail sales running below last spring; and two consecutive months of falling industrial production and slippage in the leading indicators.

But the case for the tax cut goes much deeper than the "pause that represses." For the economy has been marking time at rates of unemployment and underutilization hitherto known only at the depths of recession. Unemployment at 8 percent (not even counting part-time and discouraged workers); factory operating rates below 80 percent of capacity; and the continuing gap of $150 billion between actual GNP and potential GNP (at 5-percent unemployment)—on these numbers rests the basic case for tax stimulus, a case that a month or even a quarter of increase in the rate of recovery would scarcely touch.

Nor does the case for stimulus stop here. The United States would be shirking its world-wide responsibilities if it fails to step up the pace of recovery. Not only our industrial trading partners, but the non-oil countries of the Third World (and those from whom they borrow) are feeling the backlash of our go-ever-so-slowly fiscal and monetary policies.

How big a tax cut is needed? In part, the answer depends on whether the budget shortfall of $12 billion or so in 1976 will come home to roost on the fiscal 1977 budget. Careful analysis of the slippage indicates that it will work the other way, continuing to retard slightly, rather than accelerate, spending this fiscal year. Present estimates are that fiscal 1977 spending will not exceed $140 billion, $3 billion below the congressional ceiling.

Won't that be stepped up sharply by initiatives of President-elect Jimmy Carter? No. Past experience suggests that opportunities for quick speed-ups in federal spending are strictly limited. Quickly authorized step-ups in public service jobs and countercyclical grants to cities might add a couple of billion dollars during the fiscal year. But the basic fiscal stimulus for 1977 wil have to come from the tax side.

Won't easier monetary policy give the economy a significant boost? Some easing may be in the cards as recovery falls farther and farther behind schedule. But even in a cooperative mood, Chairman Arthur Burns and the Federal Reserve Board will accommodate rather than spearhead expansion.

Given this spending and monetary outlook, a sagging recovery, over-abundant idle resources, and a lackluster 1977 outlook, a minimum tax cut of $15 billion seems called for. In the light of a U.S. output potential nearing $2 trillion in 1977, and given the precedent of a $33 billion tax cut (in today's terms) in the rising economy of 1964, the figure of $15 billion may seem unduly modest. But fears of inflation and deficits may rule out a larger figure.

What kind of a tax cut would be most effective? Under today's circumstances, a simple lump-sum tax rebate focused chiefly on middle- and lower-income consumers would provide the best booster shot for our anemic recovery. The tax cut could be calculated in any one of several ways. For example, it could be a rebate of 1976 individual income taxes, subject to a fairly low ceiling and a fairly high floor (in other words, providing a refundable credit for those falling below the tax exemption line).

Another approach to a $15-billion tax cut would be to provide a $70 per capita refundable credit (payable both to those who pay taxes and those who do not). Since more than 200 million people are accounted for by exemptions on income tax returns, only about 15 million would have to be reached by means other than such returns. As to mechanics, the payment, as in 1975, would be calculated and refunded by the Internal Revenue Service as soon as possible after returns are filed.

A one-shot tax cut of this kind would have three decisive attractions: It's quick, it leaves basic budget options open, and it works.

Speed: In tax cutting, simplicity is the handmaiden of speed. To try to hammer out the form and distribution of a long-term tax cut could delay action for months. A refundable tax rebate or credit could move through Congress quickly, be paid promptly, and thus provide economic stimulus when it is most needed.

Keeping options open: By making the tax cut temporary and paying it in a lump sum rather than through lower withholding rates, one would in no way prejudice the size or form of a permanent tax cut. One would also leave open the choice between future tax cuts and new or expanded programs.

Most important, it works: That a one-shot tax cut would quickly get into the spending stream was proved beyond doubt (if proof were needed) by the $23 billion tax cut in 1975. Both the casual evidence provided by the economic upsurge in 1975 and the hard evidence of personal savings rates quickly returning to normal (evidence confirmed by the Michigan Survey Research Center's consumer surveys) demonstrate that a temporary tax cut does the work expected of it in boosting consumer spending. What of the "permanent income hypothesis" in this connection? Whatever may be the consumer reaction to large deviations from permanent income, small increments are quickly spent.

Why focus the temporary tax cut on the consumer rather than sharing it with business? Part of the answer, as just implied, is that the consumer cut will yield a bigger short-run bang for the buck. But beyond this, however strong the rationale may be for long-run incentives for business capital spending, the main deterrent to such spending today is economic slack, improved liquidity, net cash flows, and profit margins have poised business for a capital spending takeoff. A sizable consumer cut will help boost sales volume, press production closer to capacity, and thus help fuel that takeoff.

But what of the impact of the tax cut on budget deficits and inflation? On deficits, the answer is straightforward: The immediate loss of revenue would enlarge the fiscal 1977 deficit. But the stimulative effect would generate higher revenues to reduce the fiscal 1978 deficit.

On the inflation question, one starts with some reassuring economic facts:

First, the rate of inflation has been gradually subsiding, so the tax cut would be unleashed in an atmosphere of some reassurance (barring a huge jump in oil prices).

Idle capacity and unemployed labor ensure that most of the thrust of the tax cut would be translated into higher output, more jobs and higher incomes and profits. Recent attempts to boost prices in the face of a sputtering recovery have fared badly enough to provide some confidence on this score.

Even if the $15-billion tax cut had the full primary and secondary impacts expected of it, it could not push the economy close to its capacity, and it would not push it close to its speed limits. One test is to measure GNP advances against the Ford administration's conservative target of 12.2 percent real growth between the fourth quarters of 1975 and 1977 (as set forth last January). Merely to hit that conservative target by the end of next year would require a 6.8 percent real growth rate between the fourth quarters of 1976 and 1977. The stimulus of the tax cut would run no risk of propelling the economy beyond—or even very close to—that rate of advance.

No objective appraisal of the present economic setting suggests that the proposed tax cut would evoke more than a minimal response on the price front. But when it comes to inflation, "man does not live by economics alone." If people were jittery enough about inflation—and conditioned by false prophets to believe that business will translate any demand stimulus into higher prices—even a modest tax cut might heighten inflationary expectations.

Given the illogic of this response, one ought to bet against it. But a good way to hedge one's bets would be for Carter to accompany his call for a tax cut with a call on labor and business for wage and price moderation and an outline of the measures he intends to take to tackle inflation from the cost and supply side. In this connection, aiming the tax cut at the middle-and lower-income groups and thus boosting wage earners' real buying power might be helpful in trying to persuade labor to push a little less hard at the bargaining table.

In sum, balancing the minor-to-minimal risks of inflation against the substantial rewards in more jobs, output, income, and investment, one finds in the proposed $15-billion one-time tax cut, the kind of economic bargain the country should not deny itself.

JOHN K. GALBRAITH SAYS WE DO NOT NEED A TAX CUT

CAMBRIDGE, MASS.—In the weeks following the election, quite a number of my economist friends of distinguished reputation expressed themselves promptly and decisively on behalf of a tax reduction to stimulate the economy. No partisanship was involved; the same action was also proposed and taken early in the Ford administration.

Jimmy Carter has now indicated reservations over this decision to which he seems unilaterally to have been committed. The two key House committee chairmen, Reps. Henry S. Reuss of Banking and Currency and Al Ullman of Ways and Means, have also made clear their opposition. All who see even slightly below the surface of things will rejoice. Those who advocate a tax cut do so in deeply conditioned disregard of its economic ineffectiveness, its demonstrated political disutility and its patently reactionary social effects. These are firm words. I do not hesitate to specify.

A cut in the federal income tax is proposed as a quick way of stimulating the economy. The impression of quickness depends partly on vacuous economic jargon endlessly repeated, unrefreshed by thought, about the need to give the economy "a quick upward kick." And it depends even more on an unforgivable confusion between the time re-

quired to get congressional action and the time required for the action to have effect.

The first can be fast; the second is demonstrably very slow. That is because people become aware of their tax saving only gradually, and especially so in the better income brackets. In consequence, tax savings are spent but slowly, and in the higher brackets they are not likely to be spent at all. The evidence on the point is overwhelming.

In 1975, following the tax cut and associated rebates earlier in the year, "personal savings averaged 8¼ percent of disposable income (compared with) 7 percent average from 1960 to 1969. The savings rate rose sharply to 9.9 percent in the second quarter largely because of the tax rebates (and associated payments). Many consumers apparently made their spending decisions on the basis of longer-run expected income . . . roughly 80 percent (of the tax savings and rebates) was saved during the quarter."

Had savings not increased during the year, consumer expenditure would have been higher by about $32 billion.

All of this is from the last 1976 report of the President's Council of Economic Advisers. And I need hardly add that money so squirreled away has no stimulating effect on the economy. To urge the same policy in face of such evidence of past effect does at least take courage.

In 1974 and early 1975, there was also talk of a "quick upward kick"—the cliches of economics are the great constants of our oral literature. The improvement in output and employment was both gradual and temporary and combined, of course, with continuing inflation. To all this Gerald Ford is the best possible witness, for had the effect of the last tax cut been at all as promised, he would have won the election. Had he forgone the tax cut and come instead to the aid of distressed people and cities, he would also have won. (A tax increase, which I urged as the inflation was passing its peak, would, in retrospect, have been a bit much.)

The last tax cut having failed so dismally of its purposes, one supposes that my economic colleagues yearn now for a second chance to prove their wisdom. This is asking a great deal. Ford, an exceptionally generous man, was willing to perish for established economic belief. One wonders if Carter will be so nice.

The socially reactionary character of a tax cut stems from the same sources as its ineffectiveness. It derives also from an appalling tendency to look at the fiscal system of the federal government in isolation from that of the cities and states. And this tendency is not in the slightest measure ameliorated by its being advanced by men who, once liberal, have, like so many before them, been made conservatives by retaining a fixed position in face of the ineluctable march of evidence and events.

Thus the tax cut, in the form now commonly proposed, neatly and thoughtfully removes from all benefits the 25 percent—35 million no less—of adult citizens who have the least income, the greatest need for help and who are the most likely of all to spend what they get. They are excluded, of course, because having no tax liability, they have no tax to be reduced. A policy that systematically selects the most needful for the least help—in fact nothing—is utterly callous if not mildly obscene.

Meanwhile to look at the federal fiscal system in isolation is to ignore what Walter Heller (when not advocating tax reduction) has rightly cited as a major flaw in our fiscal system. That is the tendency, with increasing population, production and income, for the relatively expansive personal and corporate income taxes to bring a more than proportional increase in revenues to the federal government.

At the same time, the same increasing population; the increasing urbanization that goes with increasing industrial production; the public expenditures, such as those occasioned by the automobile, which result from increasing private consumption; and the demand for public services that goes step by step with higher private consumption all impose ever greater costs on the large cities. The revenue goes one place, the major costs another. In consequence, federal tax cuts are urged while the cities are laying off desperately needed teachers, policemen and sanitation workers, and parks are being returned to jungle. And these cuts in local spending and the fear of more act also to offset and negate the stimulative effects of a federal tax cut.

There is a yet more damaging effect from viewing the federal system in isolation. Many state and local services simply cannot be cut, so sales and property taxes must be raised. The generally progressive federal taxes go down, the sharply regressive property and sales taxes go up. Again this is not only cruel and reactionary but also a highly effective way of offsetting the stimulation from the federal tax reduction.

A year ago, in the very same days that the federal government was extending the last tax decrease to expand the economy, the Commonwealth of Massachusetts was voting $364 million in new sales, food and other regressive taxes to balance its budget. The Boston Globe rightly said that this combination of events made no sense. It was wiser in this regard than the New York Times, which despite the desperate financial needs of New York City and state, recently gave its support to a federal tax cut.

Effective action to expand the economy and simple decency thus unite in calling for support to the cities, maintenance and improvement of their services and avoidance of further regressive increases in sales and property taxes, and not further reduction in the federal income tax. I do not believe that the economics professors who argue for a tax reduction are motivated by pecuniary self-interest. They are principled men and also good and kindly parents. But there is not the slightest doubt that if they were on furlough, or threatened with it as are many other excellent and needed teachers, they would take a more penetrating view of tax reduction.

Making or keeping the cities livable is only the clearest alternative to tax reduction. President-elect Carter and his party have also promised improved health care, steps toward federalization of welfare and greater attention to other humane needs. Spending for these will also be more efficient in its full economic effect than remitting taxes. And, as we've seen, it is not inherently less prompt in effect. And once taxes are reduced, as all should now know, it will be flatly impossible to get them back up again.

The last tax cut was billed fulsomely, even extravagantly, by its proponents—the same proponents as now—as temporary. Not one of these advocates will now come forward and say that, should Carter's social program or the control of inflation require it, it could be rescinded. This one too, if enacted, will quickly be engraved in stone.

It is also incredible that we should be cutting taxes and enlarging the deficit when other means for stimulating the economy are not being fully used. Interest rates by all past standards are still high; those industries, most notably housing, that depend on borrowed funds are still in a fairly tight rein. To cut taxes and keep money tight makes no sense whatever.

Alfred Marshall, the great economist of the last generation, laid it down as a rule that economists should above all things fear applause. It is normally proof of error. The economists who urge tax reduction do win such applause. They are admirable exemplars of Marshall's law.

WHITE HOUSE CONFERENCE ON LIBRARIES AND INFORMATION SERVICES

Mr. JAVITS. Mr. President, by appointment of the President pro tempore of the Senate, I serve on the Advisory Committee of the White House Conference on Libraries and Information Services, and I have filed the following statement with the Labor/HEW subcommittee of the Appropriations Committee to support the needed $3.5 million appropriation.

Authorized by Public Law 93–568, the White House Conference will provide an opportunity for each State to assess its needs and have all the States convene in Washington to assist the Congress and the Nation develop a national library policy.

Our libraries have suffered terribly in the present fiscal difficulties facing many cities and States. Throughout the country, and particularly in urban areas, libraries have been forced to dismiss staff and reduce hours. It is a tragic paradox that during periods of high unemployment—times when people who are seeking work really need a library—that libraries are forced to shut their doors.

At the present time, the Committee on Labor and Public Welfare is considering an extension of the Library Services and Construction Act, LSCA. I am pleased that the special needs of urban libraries have been in the forefront of the discussion to extend LSCA. The American Library Association has already endorsed a new approach for special assistance to these urban libraries. I am sure that the recent meetings of the American Library Association held in Washington have provided many members with new information on the problems of libraries in their own State. I hope that such information will engender increasing support for the needs of our public libraries.

The most vexing problem facing the Nation and the Congress is surely the continuing high number of unemployed men and women. One of the most important resources for an unemployed person to regain a job is found at his public library. I was encouraged recently to learn from information provided by the New York State Department of Education of a federally supported program which began in the Yonkers Public Library and which is combating unemployment.

Federal funds under the Library Services and Construction Act are supporting 24 Job Information Centers offering unemployed persons all information at one site to simplify the problem of finding employment. This information includes Civil Service announcements, newspaper classified sections, company information and job listings, and some specially trained personnel to assist clients in using these resources. I ask unanimous consent that the full report on the job information centers be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. JAVITS. The Senate Appropriations Subcommittee on Labor/HEW is holding hearings on the funding of the White House Conference on Library and Information Services. In the 94th Congress, the committee reported a bill which included support for the Conference. This bill passed the Senate, but unfortunately the House had no appropriation and the final measure contained no funds for the White House Conference. I urge my colleagues to again include this measure, which has also been endorsed by former President Ford in his budget proposal submitted in January.

I ask unanimous consent that my statement submitted to the appropriations subcommittee in support of the White House Conference be printed at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. JAVITS. Mr. President, I believe that a new case is being made for Federal support of library programs. Libraries have used Federal funds well to reach out to serve unemployed persons, senior citizens, bilingual speaking Americans, economically disadvantaged and Americans who are institutionalized. Based on this performance, they certainly earn our increased care and a greater measure of Federal support. I am hopeful that both the legislative consideration of the Library Services and Construction Act and a new appropriation for the White House Conference on Libraries and Information Services will give our U.S. library system the opportunity again to prove its value to the Congress and to the Nation.

EXHIBIT 1

JOB INFORMATION CENTERS

An innovation in library services, New York State's approximately 24 Job Information Centers (JICs) began with one 1972 prototype in Yonkers Public Library. The idea was expanded throughout the State under funding from the Library Services and Construction Act.

Job Information Centers offer two distinct kinds of service: service to individuals and service to groups. Service to individuals consists primarily of guiding people to the proper resources at the center and to outside agencies of government or to private groups, whether organized or informal. Service to groups consists primarily of working with them to determine needs of job seekers and to provide a base from which groups can make their functions known.

The main objective of the JIC projects is to provide a service to unemployed and underemployed job applicants which gathers all information at one site to simplify the problem of finding employment. The center acts as a clearinghouse for data relating to job opportunities and the job searching process. Information at the center often includes Civil Service announcements on all levels (local, city, county, state and federal) classified sections of area newspapers (in Spanish and English), the New York State Job Bank Book (microfiche), vocational journals, trade publications, affirmative action registers, company information sources, job listings from private employment agencies, and direct input from private employers. Audiovisual presentations and free pamphlets are also on hand.

Materials concerned with all aspects of the job searching process are available to be used at the centers or borrowed. Assistance, if desired, is provided in using the various job searching tools. Types of employment covered range from highly skilled to unskilled labor, and professional and nonprofessional positions in all fields. This information is usually gathered by telephone, by correspondence, by personal contact, and by a thorough bibliographic search of printed materials.

Many Job Information Centers have specially trained librarians, as well as clerical and volunteer workers, to assist in the use of reference materials. Librarians assigned to the center may refer patrons to employment services and to other agencies. Telephone reference and referral service is also provided. Some provide notebooks for patrons' questions and answers. The center, however, is not a placement service. Job Information Centers do not engage in prescreening for employers, and do not compete with existing employment agencies. Instead, they provide information. Current information seeking largely focuses on the preparation of resources, talent inventories for career changes, preparation of background for interviews, and out-of-state job opportunities. Information is also available on alternative forms of educational advancement.

Clientele seeking information represents a cross-section of all socioeconomic, racial and educational backgrounds. A worker with specialized experience, without work due to shutdowns or retrenchment, can compile lists of companies that need his training, and discover positions available in companies that he might not have contacted. Due to the crunch for entry-level jobs, male college graduates, aged 19–26, tend to be heavy users in some centers. Services for the less skilled are also available.

Reasons for selecting the JIC alternative method of job hunting include personal attention available from the centers that is unavailable from overworked staff at state employment offices, as well as the value-free nature of the center's services. Central location and easy access usually boosts Job Information Centers' use, although some multicounty library systems, such as Mid-York in the Utica-Rome area, select a regionalized model of distributive services through member libraries.

Job Information Centers also provide links between agencies in the public and private sectors. Research has demonstrated JIC success in making patrons aware of private and public agency services, and in aiding agencies in assessing job seekers' needs. JICs develop community resource files containing names of agencies that can aid individuals in the job search process. Listings usually include agency functions, telephone, hours of service, contact individual, eligibility requirements and fees.

These JIC efforts have been well received by patrons, local businesses, and by private and public agencies. In more than one case, outside agencies also refer patrons to the JICs for assistance in locating out-of-state employment and for other information needs. One JIC referral resulted in the establishment of a new service agency. In some centers, community advisory panels have been developed to provide input in setting up JIC projects and to assist in evaluation.

Another variation of JIC services occurs in Buffalo, where monthly noonday employment forums include patron question-and-answer sessions with New York State Employment Service, Civil Service and private agency representatives. Topics center on unemployment benefits, job-seeking techniques, women's employment and the service of community organizations for job seekers. Crowds averaging about 100 persons have attended. Audience enthusiasm has forced extension of the sessions well over noon hour limits. Forums are cosponsored by the library and community agencies.

The Onondaga Public Library System in Syracuse offers a series of mini workshops dealing with career-educational topics scheduled in various area libraries. The system cosponsors the workshops with an independent counseling agency, the Regional Learning Service of Central New York.

Often a varied public relations program has been undertaken in connection with JIC programs. Media, public service announcements, newspaper coverage, posters, pamphlets, and even billboards have been used to alert potential patrons to the services offered. Additionally, many patrons recommend JICs to others.

Feedback on accomplishment is limited to use figures in most JICs. In Buffalo, use figures rose from an initial 450 patrons per month in August 1975, to an average of 1,000–1,200 patrons per month in 1976. New York Public Library's center averages 2,000 per month, with further usage during unmanned hours.

Information on age, sex, race, education and ultimate employment of patrons through JIC service is sometimes available. Much of this feedback, although valuable, is intermittent due to patrons' reluctance to fill out and return questionnaires. As one JIC spokesman put it. "We set up a situation in which people can help themselves and, when they succeed, they rightly take the credit."

Standardized feedback is also attempted on the uses of the three major program phases—job bank, community resource file, and general job information—as well as on referrals and telephone service.

Measurable reactions on the part of patrons, government and private agencies, and the business community have been overwhelmingly favorable.

JICs have successfully met their major objective by providing a complete on-site information service for job seekers. JICs have also successfully solved some job seekers' problems by promoting both the services of cooperating community agencies and the desirability of adequate preparation in job seeking. The undesirability of seeking information from agencies that admit the patrons' status as unemployed has been abbreviated through the use of Job Information Centers. Moreover, the JICs have succeeded in bringing public and private sector agencies into a cooperative effort to impact on unemployment problems in their communities.

EXHIBIT 2

STATEMENT OF SENATOR JACOB K. JAVITS BEFORE SENATE COMMITTEE ON APPROPRIATIONS, SUBCOMMITTEE ON LABOR/HEW, WHITE HOUSE CONFERENCE ON LIBRARY AND INFORMATION SERVICES

Mr. Chairman and Members of the Subcommittee, I appreciate the opportunity to present my views on the White House Conference on Library and Information Services. I request that my statement on this matter be printed in the hearing record. Under provision of PL 93–568, I have the honor of serving as a member of the Advisory Committee to the White House Conference. While I have been appointed for some time, other members have just been named, and the full 28-member body is now able to accept fully its mission. I am well aware that the Senate has acted favorably on this item before. Given the inclusion in President Ford's budget request of January of the full $3.5 million amount, I am hopeful that both House and Senate will favorably consider this important item.

I would like to outline briefly for the record some of the reasons why this conference is worthwhile and timely. The following six points summarize the critical importance of the White House Conference:

First, the conference will engage a wide spectrum of American people in a nationwide reassessment of the extent to which adequate

libraries and information services are available. During the recent visit to Washington of many librarians in connection with the American Library Association meeting, many members of Congress gained new awareness of current financial difficulties facing libraries. We are well into a period of reassessment of the needs for these services and the White House Conference can be an appropriate capstone to that effort.

Second, the informal aspects of our education system continue to expand. Libraries, museums and other cultural institutions and activities have experienced an explosion of public interest. The result is that libraries provide a key educational opportunity where more people are now seeking it—outside the traditional classroom. The White House Conference can examine the important linkages of libraries to the growing field of continuing education and lifelong learning.

Third, libraries have been called upon to provide more services for special need groups, such as bilingual, older Americans, institutionalized, economically disadvantaged, and remote rural populations. Recent budget problems have curtailed rather than expanded these services as the needs continue to grow. The White House Conference can carefully examine this critical situation.

Fourth, much emphasis in the Federal role for libraries has been placed on expanding interlibrary cooperation. Given the shortage of resources available in all types of libraries, coordinated to better use existing resources is critical.

Fifth, the White House Conference will provide an opportunity for publishers, manufacturers and producers of a wide range of education and information materials to demonstrate their products to the American people. This is not limited to books and journals, but also includes films, media, and a broad range of other non-print library resources.

Sixth, State and local governments will be assisted in the re-examination of the present and alternative systems of support for library services. Because the White House Conference is built on a structure of State conferences, each State and locality will have the opportunity to assess its needs as they relate to a national role of library support.

In reviewing these six reasons, it is clear that the White House Conference will have benefits to all participants in the information dissemination field. The requested amount of $3.5 million will place money in each and every State to assess their own library situation. In a time when a patchwork of local decisions based on individual financial considerations of State and localities are throwing library fundng into increasing uncertainty, this national Conference will provide the Congress and the Nation a clear picture of the library needs for the last part of this century. As much of the necessary work to plan a successful conference is being delayed for lack of appropriated funds, I hope that the Congress can act quickly in this important matter.

I appreciate this opportunity to submit a statement to the Committee and urge their favorable consideration.

VISIT OF MEXICAN PRESIDENT LOPEZ PORTILLO

Mr. SPARKMAN. Mr. President, at the beginning of next week, the President of Mexico will be arriving in Washington to meet with President Carter. Unfortunately for us, he will be here during a period when the Senate will be in recess. Although we will not be able to invite him to the Senate to give him the welcome he so richly deserves, I am certain that I speak not only for my colleagues on the Foreign Relations Committee, but for this entire body as well when I say to him, "Bienvenido."

Sixteen years ago, under the Presidency of John F. Kennedy, this country and our southern neighbor initiated the Mexico-United States Interparliamentary Conference. Having participated in several of these conferences, I have learned to appreciate how friendships can become fast and fruitful through an honest and direct approach to a variety of problems.

Mr. President, those of us who have had the good fortune to participate in these annual conferences have gained a deeper insight into Mexico's many successes and accomplishments. And as Senators know, Mexico, our good friend and ally, has been playing an increasingly important role internationally within the Organization of American States and the United Nations. Indeed, it speaks with respect and authority in virtually all international forums.

Mr. President, I have not had the pleasure of meeting President Jose Lopez Portillo y Pacheco, but I do know that he hails from a distinguished family from Guadalajara in the state of Jalisco—which incidentally is the city which hosted the very first meeting of the Mexican-United States Interparliamentary Group in February, 1961. His grandfather was the Governor of the state starting in 1911, and his father was a prominent historian until his death in 1974. President Lopez Portillo went through the fine public school system of his country, including the National University. Until the time he entered the Government in 1959 as an adviser to the Ministry of National Resources, he taught at the university and practiced law. Following his tenure with President Lopez Mateos, he entered the administration of President Diaz Ordaz, rising rapidly in the Ministry of the Presidency and taking charge of reforming the executive branch. During the Presidency of his great friend, Sr. Luis Echeverria, he held successively positions of growing importance, ending with that of Minister of Finance.

Mr. Lopez Portillo is known in his own country as being impatient with long-winded speeches. I am told he is expected to bring to Mexico during the 6 years he will hold office much of the same style of government which our own President Jimmy Carter is bringing to the United States. If that is the case, I know his visit with President Carter will be mutually rewarding.

It is highly appropriate that Mr. Carter's first official visit from another head-of-state should be President Lopez Portillo of Mexico. On behalf of all my colleagues in the Senate, we extend a warm welcome to him and his entire party.

COST-OF-LIVING ALLOWANCE TO CERTAIN CIVIL SERVICE EMPLOYEES—S. 716

Mr. MATSUNAGA. Mr. President, yesterday I cosponsored, along with my distinguished senior Senator from Hawaii (Mr. INOUYE), a bill which would restore the cost-of-living allowance to those civil service employees in Hawaii who are military retirees or dependents.

Federal employees in Alaska, Guam, the Virgin Islands, Hawaii and U.S. possessions by law are entitled to a cost-of-living allowance—COLA—in recognition of the fact that these areas are characterized by uniquely high living costs. The COLA rate is based on a yearly comparison of the cost of living in Metropolitan Washington, D.C., with the cost of living in each of these areas, and is drawn up by the Civil Service Commission. The actual yearly rate represents the percentage of difference between the two locations.

This past fall the Commission made two fundamental changes in the administration of the COLA law. First, the survey of the cost of living in Hawaii was extended from the city and county of Honolulu to the neighbor islands; that is, the island of Kauai, Maui, Molokai, Lanai, and Hawaii. Second, the Commission decided that Federal employees who are entitled to commissary and post exchange privileges would not be eligible for COLA.

The effect of the first revision of Federal policy, the extension of the survey to the neighbor islands, resulted in the creation of several different COLA rates within the one COLA-designated area of Hawaii. Rates range from 17.5 percent on Oahu to 5 percent on Molokai. Thus, personnel in identical jobs on different islands within the State will receive widely differing rates of COLA.

The second policy revision, the elimination of COLA for all employees who have post exchange and commissary privileges, clearly accords to the executive branch functions which, by law, are within the jurisdiction of the legislative branch. The law which established COLA and the mechanism by which COLA rates are arrived at reserves to the Congress the decision to terminate COLA for any area or all COLA areas. By arbitrarily terminating COLA for a class of employees, the Commission blatantly usurps congressional jurisdiction.

Let me note at this point that the Commission's decision also included the termination or reduction of COLA for employees who reside in Federal housing. While I question the arithmetic behind this decision, in my view the most urgent aspect of the entire situation is its effect on military retirees who live in private housing and have the privilege of patronizing post exchanges and commissaries. It is these individuals and families that are the hardest hit by this unexpected action.

In looking over the tables and charts furnished by the Commission as data supporting its action, I was struck by the fact that the commissary and post exchange privileges that are disqualifying people from receiving COLA were entirely voluntary in nature; that is, heads of families can choose not to use these privileges for any number of reasons. Indeed, it is obvious that factors such as distance from these facilities, limitations on types of merchandise carried in post exchanges and commissaries, and so on, are all quite logical reasons why these privileges are not necessarily used by all those who possess them. There is

no provision in the new regulations either for voluntary waiver of these privileges, or for verification of the actual use of these privileges.

It is my hope that Senate consideration of the bill introduced yesterday would entail an assessment as to what actual value commissary and post exchange privileges are to retirees residing in Hawaii.

Equally serious is the fact that the Commission's action penalizes selected citizens granted, by law, benefits from the Federal Government. Specifically, military retirees and other dependents receive commissary and exchange privileges by virtue of their service to our Nation. In effect, they earned these privileges. As civil service employees in Hawaii, these same individuals are earning COLA, just as are their coworkers. In effect, the Commission's decision discriminates against military retirees who have been rewarded by a grateful Government.

Mr. President, in my judgment, and I am certain my colleagues will agree, we must deliver on our obligations and commitments to our Nation's public employees, to our military personnel, and civil service personnel. We as a nation cannot call upon citizens to enter the public service either as military or civilian workers, if we do not intend to honor our word. I believe the Commission's action in this instance constitutes a grave abrogation of the commitment our country has made to those who serve it.

I call upon my colleagues to take prompt and favorable action on the legislation which was introduced yesterday. We cannot betray those in the public service to whom we have given our implied promise.

TELEVISION DRAMA HELPS BUILD ENLIGHTENED CONCERN FOR RETARDED

Mr. HUMPHREY. Mr. President, perhaps some of my colleagues were privileged to witness, Monday night, a drama telecast by the Hallmark Hall of Fame. If so, you will probably agree that it was a sensitive and thoughtful treatment of mental retardation.

The production, "Emily, Emily," takes up the story of Freddie Putnam, hero of the 1969 drama, "Teacher, Teacher," which was named outstanding dramatic television program by the National Academy of Television Arts and Sciences.

The Emily of the title is a graduate student who works with Freddie, a young retarded adult. The drama revolves around Freddie's need to lead a useful and fulfilling life, and how those around him learn to respect this claim.

I want to commend the producers of this program, Henry Jaffe Enterprises, Inc., and all of the other persons involved, not only for the quality of the educational and entertainment content, but because the film performs a true public service in familiarizing Americans with the problems of the retarded and the need for support and understanding from family and community.

Especially praiseworthy was this program's innovation in including four retarded persons among the supporting cast. By demonstrating confidence in the ability of the retarded for meaningful work and achievement, the producers and director have practiced what they preach in the show's theme.

This play should remind all of us of our uncompleted goals for the handicapped. For well over a decade, Presidents and Congress have been on record as supporting alternatives to institutionalization for the mentally retarded. It is our stated purpose to treat the retarded, wherever possible, in a supportive community environment. Hopefully, the old nightmare of restrictive institutions, without mental and physical stimulation, without hope and joy, where society warehouses and forgets the less fortunate, will rapidly become a relic of the past.

In a report to Congress in January, the General Accounting Office explored both successes and failures of the effort to integrate the retarded into society. In too many cases, the shortage of funds, a failure in commitment, and a lack of coordination have meant that we are still far short of our goal.

Despite real progress, serious deficiencies remain and must be addressed. Some of the problems can be solved by money, but not all. Some also relate to our failure to care enough, to demand a commitment to expressed national policy, and to enforce the rights of the handicapped. I look forward to the forthcoming White House Conference on Handicapped Individuals to help sharpen and renew our national commitment and order our priorities.

And I welcome every effort, such as this program, which illustrates what a difference each of us can make by discarding dehumanizing stereotypes and seeing the retarded as people with the potential for continuing development and a positive role in the community.

SEVERE WEATHER JEOPARDIZES FOOD SUPPLIES AND PRICES

Mr. HUMPHREY. Mr. President, I would like to bring to the attention of my colleagues a recent article from the Wall Street Journal which outlines the possible effects of our severe winter weather upon the supply of energy and food in the United States and the possible impact upon food prices.

The article points out that in many ways our weather has been very similar to the Soviet Union's winters, and many people are using the term "winterkill" to describe the possible damage to the winter wheat crop.

Many areas are facing severe drought. Precipitation in California as low as 10 percent in some places; therefore, irrigation levels have been cut to levels 49 percent to 69 percent of normal. In Florida, extreme cold has destroyed much of the tomato and citrus crop, causing predictions of price rises in the area of 100 percent.

In addition, the natural gas shortage is likely to lead to a shortage of nitrogen fertilizer in the coming season.

These concerns have prompted me to urge Secretary of Agriculture Bob Bergland to have the Economic Research Service undertake a study of the impact of this winter's weather on food production, availabilities and prices. These concerns could become even more serious if our cold weather continues.

Mr. President, I ask unanimous consent that the Wall Street Journal article and my letter to Secretary Bergland be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

FREEZE IS JEOPARDIZING MORE CROPS, INCREASING PRESSURE ON FOOD PRICES

(By Joseph M. Winski)

Huddled up there with your thermostat set at 65 to conserve fuel you may not have stopped to think about the poor chicken.

Many of the nation's laying hens are in the South, which, like much of the nation, is having one of its coldest winters ever. Hen houses in the South are generally unheated, and some chickens these days are spending more time shivering than laying eggs, with the result that the nation's egg production is dropping, albeit by only a few percentage points.

Or consider cattle. On the feeding lots of Texas and Iowa, among other states, they are eating extra feed just to maintain body temperatures. And cattlemen in the Plains states are worried that the prolonged cold weather will cause high losses among the calves that will begin arriving in a few weeks.

Whether or not you feel for these creatures, you will no doubt be feeling the effects before long—right in the pocketbook. Attention has been focused on this winter's damage to such crops as oranges and tomatoes and the effect this will have on food prices. But evidence is mounting that the big freeze of 1976–77 could have a sizable impact on other foods as well.

Some analysts believe the winter-wheat crop now in the ground is in jeopardy because the freeze is aggravating bad conditions caused by lack of moisture in some areas. Winter wheat constitutes about three-fourths of the nation's annual wheat crop.

ENERGY AND THE OUTLOOK

Beyond the direct impact on crops, the wicked weather is affecting food costs in other ways. Rising energy costs are rippling through the food system from farm to checkout counter, for example. Moreover, some weather analysts believe weather patterns point to a serious drought later this year. The West Coast is already in the grips of a serious drought.

These pressures on food prices, while considerable, don't necessarily mean that food prices are going to mount like this winter's fuel bills. But the chances of holding the 1977 price rise to the scant 3% increase of 1976 are certainly diminished, and any spurt in food prices now would further strain the struggling economic recovery and add to the building inflationary pressures.

The weather already has plunged Florida's agriculture into official disaster status. Besides oranges and tomatoes, the frost has affected green beans, peppers and other products. Charles Porter, an Agriculture Department fruit and vegetable specialist, says retail prices of Florida tomatoes and other vegetables may double this month—if they are available in stores at all.

Dean Chen, head of agricultural forecasting for Wharton Econometric Forecasting Associates Inc., sees the Florida freeze alone boosting the food component of the consumer-price index by perhaps 1%. But he

adds that this effect may be "for a very short period, possibly just the first quarter."

DISTRIBUTION PROBLEMS

Distribution problems are also adding to price pressures in some locations, especially in hard-hit Buffalo, N.Y., and rural areas blocked by heavy snow.

But perhaps the biggest worry is about the winter-wheat crop. Soil moisture is perilously low in most winter-wheat areas, and many places also have insufficient snow cover to provide moisture and protect the topsoil against wind erosion.

"The crop is vulnerable, there's no question about it," says Carl Schwensen, an official of the National Wheat Growers Association. He notes that last year's crop set a near record even though similar fears had been voiced last winter. But some observers believe the moisture problem this year is more severe and widespread than last year.

The unusual depth of the freeze aggravates the problem, making the ground less able to absorb any moisture when it does arrive. Moreover, the extreme cold itself may be responsible for some crop damage this year, and the word "winterkill" therefore is creeping into the Wheat Belt vocabulary.

SHADES OF RUSSIA

"The climate in some parts of wheat country is like Russia," says a Chicago food-industry consultant who notes that some Russian crop failures of recent years have been ascribed largely to winterkill. (The U.S. Agriculture Department said last week that about 14% of the Soviet Union's winter grain crop may be in danger of severe damage from this year's cold weather.)

In Kansas, the leading winter-wheat state, the crop has been characterized as in poor-to-fair condition. And the Agriculture Department says much of the overall crop is threatened with some damage from the unusual cold and lack of moisture.

U.S. wheat stocks remain abundant, "so we can stand some loss of the crop," Mr. Chen of Wharton Econometrics says. But the outlook for the crops in Russia and other countries could complicate the supply picture. The weather in India and Western Europe this winter is said to be less than favorable for the wheat crops there.

Because the food industry in general uses such huge amounts of energy, the impact of rising energy costs could be greater in this industry than in most others. A study conducted in late 1975 by Booz, Allen & Hamilton Inc. for the Federal Energy Administration showed the food industry (everything from the seed producers to restaurants in this study) uses 16.5% of all the energy consumed in the nation. That is probably more than is used by any other integrated industry, says Robert W. Shaw Jr., a Booz Allen vice president who headed the study.

The study didn't determine how much of the energy used by the food industry is natural gas, which appears on the verge of sharp price increases. "I suspect that it's a fairly substantial portion," Mr. Shaw says, but he adds that much of the industry may be able to shift readily to other types of energy.

Natural gas is essential in some cases, however. Fertilizer makers, for example, use gas as a raw material, and they have already been hampered by the natural-gas shortage. "We lost 73,000 tons the week before last—25% to 30% of normal production—because of gas cutoffs, and we're estimating that it's going to get worse," says Edwin M. Wheeler, president of the Fertilizer Institute, a trade association. Transporting fertilizer so it will be available for farmers in April also "is going to be a critical problem," Mr. Wheeler says. Reflecting the sudden difficulties, prices have started to rise, Mr. Wheeler adds.

Higher food prices probably won't be far behind. Rising energy costs will have an * * * between very cold Januarys and summer drought later. It is, he concedes, a "scary" picture.

Reid Bryson, the University of Wisconsin climatologist who has been saying for some time that weather patterns are changing, also sees in the recent weather some bad omens for future weather. He has warned of continuing, and possibly worsening, drought conditions in many parts of the world.

California's rainfall is far below normal this winter, and some towns have begun rationing water. Moreover, the snowfall accumulation that normally melts and feeds streams used for irrigation is as low as 10% of normal in some areas. A U.S. Department of Commerce report for Jan. 1 found irrigation water supplies in the West ranging from 49% to 69% of normal: things probably have worsened since, California officials say. Continued drought in California would have a greater impact than the Florida freeze because California produces a greater quantity and variety of foods.

Among corn-and-soybean states, Illinois, Iowa and others also need moisture badly, agricultural observers there say. "Soil moisture content in Illinois has been below normal for seven straight months," an Illinois Farm Bureau official says.

Bad as the winter has been, agricultural experts are hoping that it leaves gradually and steadily. Wheat growers say that alternate thawing and freezing of ground can cause considerable crop damage. Also, the moisture caused by sudden melting of snow or the ice in inland waterways probably couldn't be absorbed by the frozen earth; that could cause heavy water runoff, flooding and a whole new set of problems.

COMMITTEE ON
AGRICULTURE AND FORESTRY,
Washington, D.C., February 8, 1977.

Hon. BOB BERGLAND,
Secretary, U.S. Department of Ariculture, Washington, D.C.

DEAR BOB: My office has been in touch with the Economic Research Service of your Department regarding the need to carry out a study to assess the impact of this winter's weather on food production, availabilities and prices.

ERS indicated that this study would make sense and would be consistent with your interests and priorities. The ERS has already done some work on the impact of the severe weather on the Florida citrus and vegetable market.

However, there are many additional areas of our food and agricultural economy which are suffering from the severe cold weather. It is reported that egg production has dropped because many of our poultry producers are in the Southern states and without adequate protection. In addition, beef cattle are reportedly requiring additional feed and forage in order to help them stay warm. As you are well aware, the prices for feed and forage are much higher in many areas of the Midwest as a result of last summer's drought.

The Midwest is also extremely concerned over the possibility of severe damage to the winter wheat crop. The term "winterkill" is being used, and some experts are comparing our winter this year to winters experienced in the Soviet Union.

The Far West is also experiencing serious drought, and California has had to cut back on its water for irrigation and hydroelectric power. Colorado is resorting to cloud seeding in order to increase water supplies.

In the Northwest the Bonneville Power Administration has warned 17 aluminum, chemical and wood processing firms that it may have to reduce their energy loads in order to serve other customers.

There also is the possibility that nitrogen fertilizer supplies will be tight in light of the cutbacks in natural gas supplies which serve as the feed stock for nitrogen fertilizer production. While less than 3 percent of our natural gas is utilized for ammonia production, most experts indicate that commercial fertilizer increases domestic food production by at least 30 percent. Thus the availability of adequate nitrogen fertilizer supplies will be of major importance in assuring adequate food supplies and at reasonable prices this year.

The National Council of Farm Cooperatives indicates that the Southeast will be particularly hard hit, having lost 294,000 to 441,000 tons of ammonia production due to gas curtailment. In the case of corn, cotton, and tobacco these losses alone could result in losses of $688 million to just over $1 billion.

The President of the Fertilizer Institute, Mr. Edwin M. Wheeler, said, "we lost 73,000 tons the week before last—25 percent to 30 percent of normal production—because of gas cutoffs and we are estimating that it is going to get worse."

The severe weather is also having an impact on the nation's transportation system. Railroad cars, normally used for moving anhydrous ammonia at this time of the year, are being tied up because of the increased demand for propane gas. In addition, barges are tied up in the frozen Mississippi River leading to delays in grain sales. This is likely to lead to transportation tieups in the spring as demands for fertilizer increase at the same time export sales are resumed.

I realize that it may be difficult to estimate how long these conditions may continue; however, it is important to make the best possible estimate as well as steps which can be considered to alleviate the problem. It is important to be alert to the economic impact in terms of food supplies and prices as the Administration is developing its economic programs to stimulate the economy and deal with inflation. We also will need to be alert to the needs and concerns of our producers and any steps which are needed to assure adequate supplies of food in the coming year. I realize that you are extremely busy, but I hope that your Department can give this problem the attention which it requires.

With best wishes.

Sincerely,

HUBERT H. HUMPHREY.

ARMS RACE

Mr. GARN. Mr. President, the continuing controversy over relative strategic strengths of the United States and the Soviet Union is a healthy thing. At least it indicates that we are giving some attention to aspects of arms races and arms control that have not been thought about for too long.

A few days ago, I added my own contribution to the debate. The retiring Chief of Air Force Intelligence, Maj. Gen. George Keegan, has charged that the Soviet Union is superior to the United States in every conventional measure of strategic strength. Senator PROXMIRE released to the public a rebuttal by the Joint Chiefs of Staff, and claimed that the Joint Chiefs had refuted General Keegan. I noted that it was a mistake to call a difference of opinion of this type a refutation. Prudent men will weigh in the balance opinions on all sides of issues. Certainly the Joint Chief's opinion has weight; so does that of a former Air Force Chief of Staff for Intelligence. Nor is General Keegan alone in his generally pessimistic view of relative United States-Soviet capabilities.

In further support of my argument that we ought to evaluate all points of

view, both Washington newspapers have editorialized on the subject. The Washington Post, with which I am not often in agreement, pointed out that the Joint Chiefs' rebuttal "does not prove absolutely that Gen. Keegan was wrong." The Post further notes that:

A close reading of the Joint Chiefs' views . . . reveals that the Chiefs are not providing any basis beyond their own flat assertions to ease a bewildered citizen's anxieties.

The Washington Star makes much the same point. The Joint Chiefs feel that the Soviets do not have a superiority in strategic weapons but that "available evidence suggest the U.S.S.R. is engaged in a program designed to achieve such superiority." As the Star comments, "the 'evidence' suggests it, but what evidence?"

As the Star notes, this argument is largely in the dark. It is a question of which experts you choose to believe. For myself, I believe all the experts, and I weigh the evidence on all sides. All agree that there is a massive buildup going on in the Soviet Union, though they do not agree as to the reasons for it. For that, we will just have to trust our common sense, and our knowledge of human nature.

Mr. President, these two editorials are worth the attention of all Senators, and I ask unanimous consent that they be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

HOW DO WE KNOW WHO'S AHEAD?

It's useful that the Joint Chiefs of Staff have publicly disparaged Air Force Maj. Gen. George J. Keegan Jr.'s claim, made as he retired, that the Soviet Union has achieved military superiority over the United States. This doesn't prove absolutely that Gen. Keegan was wrong. But his erstwhile peers are surely familiar with his information; and, as professional military men, they presumably share his feeling that the U.S. military must, if it is to be responsible, anticipate such stark contingencies. So if he is unable to persuade them of the perils he professes to see, the rest of us are entitled to breathe a bit more easily.

But, of course, that is saying very little. A close reading of the Joint Chiefs' views, presented by Chairman George S. Brown in response to a query from Sen. William Proxmire, reveals that the Chiefs are not providing any basis—beyond their own flat assertions—to ease a bewildered citizen's anxieties. As it happens, the Chiefs do ont accept Gen. Keegan's proposition that the Russians are here—that is, ahead. They believe the Russians are coming—that is, trying to achieve superiority. But no more than he do they provide the materials on which their judgment is based.

In fact, there is an element of unreality threaded through almost all discussions of the Soviet-American strategic equation. Only the smaller part of it arises from the simple fact that some of the relevant information is secret. By far the larger part arises from the more complicated fact that there is no agreed measuring rod among professionals (as we learned from the recent Team A/Team B controversy). Some analysts count missile warheads; others count missile throw-weight. Some analysts stress hardware and technology in hand; others stress what's in the pipeline. Some analysts subtract from Soviet power those of its military forces trained on China and East Europe. Others lump everything the Russians have in the total available to hit the United States. Factors of each nation's putative will and its capacity to inflict or suffer attack are weighed in very different ways. So the argument goes.

It should be obvious from the debates of the past few months, not to speak of the past few decades, that in the absence of a minimal and explicit consensus on standards, either confusion will reign or arbitrary judgments will be made. The Carter administration, if it is to satisfy the public's legitimate concerns to be secure and to be consulted about its own security, must try to recast the framework of decision-making and discussion. It must expose not only its conclusions but its premises. It must provide more facts about defense, and more insight into the methods by which it fits facts into strategic judgments.

[From the Washington Star, Feb. 1, 1977]

STRATEGY AND SECRECY

It is reassuring to have it directly from the Joint Chiefs of Staff that the Soviet Union has not yet gained "military superiority" over the U.S., as the retiring chief of the Air Force, Gen. George Keegan, recently charged. And it is gratifying that Senator Proxmire, having secured this word from the Pentagon, saw fit to share it with the public.

But as usual what we have—a nine-page response to 25 key defense issues—are conclusions only: judgments without supporting evidence. The Joint Chief's statement raises the same persistent secrecy issue as the flap over the National Intelligence Estimates.

According to the Joint Chiefs, the Russians have no superiority in strategic weapons, but "available evidence suggests the USSR is engaged in a program designed to achieve such superiority."

The "evidence" suggests it, but what evidence? Consider the information the Chiefs are not prepared to make public, although it was furnished in a classified "annex" to Senator Proximire: The numbers of "hardened" sites, including missile silos, ground-to-air missile launchers, storage bunkers; blast shelters in manufacturing plants; storage bunkers for grains; civil defense training programs for officers and factory workers in the Soviet Union.

The missing information is obviously crucial to any informed public discussion of Soviet strategic intentions, of which not only General Keegan but many others take a view extending from dim to alarmist. This information is crucial because it bears on the Russian civil defense program. How extensive it is, how effective it might be, is central to any estimate of Russian strategic doctrine.

The Russians, it is said in explanation of their extensive civil and air defense measures, do not regard nuclear war as "unthinkable" or "unwinnable," but as a form of warfare that can be survived and even "won." The Russians, Mr. Paul Nitze has asserted, "have made, for 20 years or more, an approach to the problem of nuclear war that does assume . . . that nucelar war could happen, and that the Soviet Union could survive . . . In essence, Americans think in terms of deterring war almost exclusively. The Soviet leaders think much more of what might happen in such a war." The Joint Chiefs, in their communique to Senator Proximire, do not disagree.

This seems to be the consensus view among strategic obeservers; and if so it cannot be ignored. If it is right, it renders even more menacing the parallel judgment that the Russians are aiming for future strategic superiority. There is no disputing the trends, whatever their purpose, if expenditure is the measure.

Ten years ago, the Soviet Union had an estimated nine submarines capable of launching missiles, while the U.S. had 41. Today we still have 41; the Russians have 54. Ten years ago, the Russians had an estimated 1,000 nuclear warheads and we had 4,500. Today their inventory of warheads has more than tripled; ours has less than doubled. These figures could be of special significance, since in submarine-launched missile deterrence and total warheads the U.S. is thought to have a clear lead.

There are, to be sure, all sorts of imponderables in any casting up of the strategic balance; mere numbers and megatonnage can be misleading. Fortunately for mankind we have little idea, so far, what nuclear warfare would be like in practice. It is most unlikely to be the orderly and calculated affair of controlled stages sketched out with such elegance by the wargames theorists. To borrow one of the engaging phrases of the Joint Chiefs, all these things are "scenario dependent."

The U.S. cannot rely on the rather simpleminded theory that sneak nuclear attack is the only, or even the most likely, form of danger should the military balance tip in our disfavor. The closer the U.S. and the Soviet Union approach parity, the greater the value of the latter's preponderance in conventional military strength. If it happened, would the Russians be emboldened to throw their weight around in the hope that the U.S. and its allies would be intimidated?

The American public has an obvious self-interest in these unpleasant calculations and the arms negotiations they make imperative. The longer the arms race goes on, the more complex it becomes, the greater becomes the inherent peril of instability. Every new step, every new weapons system, aggravates the difficulties of control. The "mirving" of missiles on both sides, several years ago, was a fateful step up to a new level of instability. The building and deployment of masses of cruise missiles on both sides could be likewise. Cruise missiles are cheap, they are difficult to count and deter, and they can be cranked out like rabbits.

So we are all going to have to educate ourselves in the dread vocabulary and lore of strategic balance. The trouble is that government, with its cult of sometimes pointless secrecy, is not a good educator. Given the degree of secrecy—as reflected again in all the classified responses by the Joint Chiefs to Senator Proxmire—we are in the position of having to accept "expert" judgments without seeing the evidence; and that is a difficult position to be in—perhaps an unacceptable position for the citizens of a democratic state.

Strategy, as we have said before, is too important to be left to generals.

[From the Chicago Tribune, Feb. 2, 1977]

MR. MONDALE AND A-WEAPONS

Vice Presidents' trips abroad usually turn into bewildering montages of colorful bands playing at the airports, hasty visits to the national wonders, and dinner and platitudinous speeches with the people in charge.

Vice President Mondale's swing through Europe and Japan has turned out to be a shade more than that—but only a shade. It occurred at the start of the administration of a President not intimately known abroad. Mr. Mondale provided for the foreign leaders the first real hint of the character and interests of the new President with whom they will be dealing.

The leaders were told that Mr. Carter is deeply interested in tighter nuclear controls. And they gave the Vice President slightly better answers on that subject than might have been expected.

For example, Mr. Mondale spent four hours in talks with West German Chancellor Schmidt and got across to him the idea that President Carter is totally opposed to the treaty under which Germany would supply Brazil with nuclear technology. And Mr. Schmidt agreed to search for ways to change

the treaty. That answer may not have much concrete in it, but at least it isn't as airy as some.

The Vice President then took up with French President Valery Giscard d'Estaing the question of selling nuclear materials to developing nations [France is providing to Pakistan a nuclear fuel reprocessing plant which can yield plutonium suitable for use in nuclear weapons]. There is no evidence that President Giscard made sobbing vows to go and sin no more, but at least he did not follow his usual practice of telling foreign protesters to go fry their hats. Further, he replied warmly to Mr. Carter's call for a curb on conventional arms sales.

Maybe these foreign leaders are merely being polite, or cagey, until they take the measure of the new man. But it is just possible that they are responding positively to his declaration on curbing the spread of nuclear weaponry. There are ways of providing nuclear power without handing over the means of developing A-bombs.

Mr. Carter has aroused foreign hopes and still enjoys foreign good will. He has an opportunity which may fade away as his novelty wears off. If he keeps the momentum going and presses on for arms restraints, he may be able to accomplish things that old [and lame duck] voices could not.

[From the New York News, Feb. 2, 1977]

KEEP SPEAKING OUT

Secretary of State Cyrus Vance promises that the administration will continue sounding off publicly against repression and injustice in the Communist empire, although it won't be shrill or strident about it.

That's fine, but we hope boldness rather than timidity will rule when it comes to deciding when to voice our displeasure over tyranny. People hungering for freedom should have our support, even if it means occasionally hurting the Soviet Union's tender feelings.

[From the Atlanta Constitution, Jan. 20, 1977]

NUNN AND NATO

Georgia Sen. Sam Nunn continues to point out some serious chinks in our armor in Western Europe. Nunn who inspected our NATO defenses last month called a news conference yesterday to warn that Soviet forces could overrun NATO in a matter of days, not weeks as the Pentagon insists.

Nunn says we are badly out-gunned in Europe and that a nuclear confrontation might be the upshot of an attack by the Soviet Union.

A report by Nunn and Sen. Dewey Bartlett of Oklahoma warned:

"Soviet forces deployed in Eastern Europe now posses the ability to launch a potentially devastating conventional attack in Central Europe with little warning. Such an attack might be unattened by the telltale prior callup and transfer to the Central Region (of Europe) of Soviet divisions stationed in the western military districts of the U.S.S.R."

The report goes on to paint a grim picture that questions NATO's ability to recover from an attack and strike back effectively against the Russians.

All this is highly hypothetical—we hope. Nevertheless, Sen. Nunn is to be commented for pointing out serious and perhaps fatal deficiencies in the NATO defense system.

One might argue that a Soviet attack in Central Europe is not likely. But the single element that increases the likelihood of Soviet strikes is the Russians' awareness that NATO may be too weak to put up much of a defense. Therefore, it seems imperative to keep NATO in as good a fighting posture as possible in order to preserve peace in Europe.

[From the Baltimore Sun, Feb. 2, 1977]

MORE OPEN, MORE MORAL

On its first few days record, the Carter administration deserves credit for trying to demonstrate the more open and more morally based foreign policy that the American people were led to expect. The emphasis is on the word more. It is a matter of degree and emphasis, not a total change of style or substance.

Much of the openness was provided by Vice President Mondale, whose mission appears to have been largely to convey to foreign governments and their populations that the United States is to be trusted. He emphasized continuity with the main thrust of the American foreign policy of the past three decades.

The most important message he had for the Japanese was neither reaffirmation of the goal of partial military withdrawal from Korea nor his expression of the national interest in trading relations. It was assurance against "surprises," such as the Nixon administration's secret approach to China and its emergency economic measures of August, 1971.

The State Department's message of support for the Charter 77 movement in Czechoslovakia struck a responsive chord across the world. Yet the follow-up statement of support for the Soviet dissident, Andrei D. Sakharov, annoyed the Kremlin with which the Carter administration seeks accommodation on arms limitation, the Middle East and other matters. Small wonder the President and Secretary of State Vance were quick to claim bureaucratic muddle, giving the world to understand that while they agreed with the sentiments, they had no chance, as they should have had, to veto the statement.

Mr. Vance's dictum is that "We will not comment on each and every issue, but we will from time to time comment when we see a threat to human rights, when we believe it constructive to do so." It sounds like a caution to subordinates against excessive zeal as much as guidance to the public on what to expect. Though it reserves discretion, it is a guideline Americans can understand and use to judge performance.

Americans have the right to know what their foreign policy is and why, which was not always the case in recent years. But it would be wrong to suppose that diplomacy can be carried out in a goldfish bowl. If it could, the whole structure could be abandoned in favor of the United Nations. One of the U.N.'s difficulties is precisely that a public forum is the worst arena for the resolution of many disputes. Statesmen speaking on the record for the folks back home are unable simultaneously to test ideas for acceptability with adversaries.

It would be foolish to believe that arms limitation, Cyprus, the Middle East, Rhodesia, the Panama Canal dispute or other troublesome issues can be settled without some privacy of conversation before the public stage is reached. It would be wrong for the Carter administration to promise more openness than it intends to deliver. It would be just as wrong to discover a previously unknown harsh reality as an excuse for going back on its promise. What is needed is the right balance. The administration shows evidence of seeking it.

NEW MISSILE DEFENSE SYSTEMS STUDIED

Mr. SPARKMAN. Mr. President, a recent article in Aviation Week and Space Technology magazine describes some remarkable computer architecture and software which System Development Corp. is developing for the U.S. Army Ballistic Missile Defense Agency in Huntsville, Ala.

The PEPE system discussed in the article represents a major advance in parallel and associative processing by computer. This capability augments conventional technology and provides a high degree of reliable and rapid data to our Nation's missile defense system. I would hope that this extraordinary technology can also be utilized in meeting domestic, nonmilitary needs.

I ask unanimous consent that the article "New Missile Defense Systems Studied" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW MISSILE DEFENSE SYSTEMS STUDIED

(By Kenneth J. Stein)

HUNTSVILLE, ALA.—Multi-faceted research effort here is developing advanced data processing and associated sensor techniques that promise to fulfill stringent operational requirements of future ballistic missile defense systems.

Current research efforts at the Ballistic Missile Defense Advanced Technology Center focus on these major areas related to data processing for BMD applications:

Development of distributed data processing techniques to meet the extraordinary throughput requirements of ballistic missile defense systems, where computer performance is measured in millions of instructions per second (MIPS) and rates of 20–30 MIPS are routine. A typical BMD data system may be operational for about 30 sec. at that data rate and, therefore, researchers here are pressed to do advanced work in software engineering, as well as in hardware.

Development of a special data processor that exploits parallel and associative techniques to augment the capabilities of conventional computers in BMD service. The parallel element processing ensemble (PEPE), designed specifically for BMD applications, is engineered to handle high correlation and high computation loads, as well as a high file-search load, needed in BMD operations. In BMD service, PEPE can operate at an 800–MIPS rate. A limited-scale research machine to demonstrate and prove the technology is installed at the Advanced Research Center and completed initial acceptance tests last month.

Interactive computer terminals that interface with Advanced Technology Center processors to permit graphic presentations of dynamic data, such as radar waveform analyses and reentry vehicle physics for developmental concepts. The displays permit researchers interactive use of the computers in performing pure research or studies applied to intelligence data, using new algorithms especially developed for this task.

Development of packing concepts for modular missile-borne data processors interfacing with onboard sensors to create "a very smart bird" capable of initiating an intercept engagement in the mid-course regime prior to reentry—presumably simplifying the task of intercepting multiple reentry vehicles—far in advance of the traditional terminal-area encounter. The onboard processor could employ arrays of microprocessor elements directly backing each individual phased-array radar element or, farther down the road, optical processors directly behind each infrared optical sensor.

"The distributed data processing concept is the wave of the future," according to William A. Davis, Jr., director of the Advanced Technology Center.

ATC and its Advanced Research Center computer facility here is operated for the

Army Ballistic Missile Defense program by the Huntsville operation of System Development Corp. Davis reports directly to Brig. Gen. John G. Jones, director of the Ballistic Missile Defense program office. Jones, unique among Army program managers, is attached directly to the office of the Army Chief of Staff in the Pentagon.

System Development Corp., as contractor, has three principal functions at Huntsville, including:

Management of the center, which employs about 100 people.

Support of ballistic missile defense research in data processing.

Management of parallel element processing ensemble (PEPE) system design and architecture.

About 100 other researchers at Massachusetts Institute of Technology's Lincoln Laboratories also report to Jones.

The conventional ballistic missile defense approach for the past 15 years has had radar and interceptors hooked to a large data processing complex, Davis said. Now two fundamental changes in approach are appearing, described by Davis in these terms:

Transition to mini-sensors and miniprocessors that partition the problem. The defense may thus employ bistatic and multistatic radars, but the distributed processing would still be done on the ground as part of a terminal area defense.

Development of a mid-course regime intercept, with the preferred approach employing infrared optics rather than radar and sensor plus processing capability onboard the interceptor. Acquisition, tracking, discrimination and engagement would all be performed above the atmosphere by the mini BMD system onboard the interceptor.

A major transition is seen in the general direction of the data processing approach, with a need for multi-source information on a single target, Davis said. This implies global distribution of data processing resources, he pointed out.

At present, there are no weapons systems development programs downstream incorporating the center's concepts, a fact that researchers here say is "singular and frustrating." Davis characterizes the Advanced Technology Center's charter as "staying far out and preventing technical surprises."

Research funds here run about $12 million annually.

"Across the board, I think it's pretty obvious we are ahead in technology," Davis said. However, he added that he is concerned in at least three areas where he feels that the USSR is ahead.

These areas of concern exclude data processing and phased-array radar, Davis said. However, he added this observation:

"USSR radar does everything it needs to do, so what if it's not very elegant?"

According to Charles Vick, director of the data processing directorate, Advanced Technology Center, the problem in the future is not microprocessors, "but how we glue them together."

"We're entering, I think, the fifth generation of fairly non-smart little computers," Vick said, "and their effectiveness lies in how we put them together."

As a result, software development is turned into an engineering activity. "We don't hire programers to do research," Vick said. "Our people are somewhere in between a system analyst and someone who is fed up with conventional programing."

In keeping with the center's charter, Vick sees his job as channeling technology into future ballistic missile defense requirements.

"The Safeguard system plowed the ground in ballistic missile defense and conveyed the magnitude of the data processing problem," Vick said.

"Yes," he added, "we can do the ballistic missile defense solution, but not through conventional techniques. We must invoke some real science in data processing developments."

However, in order to test software developments, the researchers had to turn to simulation.

A typical terminal area ballistic missile defense operation requires about 500 million instructions per computer, with the complete "battle" taking about 30 sec., Vick pointed out. Thus, a typical terminal defense requires about 30 billion instructions, he said.

The Advanced Research Center's computer complex now contains four major computers missile defense data processing and simulation. All are owned by the Army, with the exception of some peripherals, and include:

A Control Data Corp. Model 7600 serial computer.

A CDC 6400, which serves as a frontend processor for the 7600.

A Texas Instruments Advanced Science Computer (ASC), a vector or array processor originally designed for seismic research applications.

PEPE, the parallel element processing ensemble built by Burroughs Corp. under contract to System Development Corp., incorporating distributed logic technology first developed by Bell Laboratories in the late 1960s.

During the computer selection process, a preliminary hard site demonstration program was employed, with a system environment and threat simulation (SETS) program in one computer used to interface with the computer under test, Vick said.

Land lines were used to link a General Research Corp. CDC 6400 in Santa Barbara, Calif., with candidate large computers in Minneapolis, Poughkeepsie, N.Y., and Austin, Tex. The candidates included CDC's 7600, an IBM 360-65, CDC Star—a vector machine—and Texas Instrument's advanced science computer.

The SETS software required as much funding expenditure as the tactical program, and was even more consuming of computer resources, according to Vick.

The interactive and reactive simulation included nuclear modeling extrapolations and reentry vehicle data, with the tactical machining issuing radar search commands to a radar model that replicated an actual phased-array radar system.

The radar model "looks" at the exact point where it is told to look and gets a simulated return pulse by pulse. In order to conduct this simulation over dedicated commercial land lines, an "interrupted real-time capability" was employed, stretching a 30-sec. ballistic missile "war" over an 8-hr. period.

The simulation had to employ unclassified software and simulated returns, so that cumbersome cryptographic equipment was not involved, Vick said.

In addition to the large scale serial type of machine, the center wanted the fourth generation associative processor technology embodied in PEPE, he added. PEPE operates with the CDC 7600 as host computer, picking up certain functions that involve large quantities of the same sort of processing that must be performed simultaneously, such as radar tracking and filter processing. An automated correlation unit picks the correct cell for data to go into. Each element includes Kalman filtering.

This provides true simultaneity, with smoothed data available in algorithms, Vick said. When the host computer asks for a target, the right one comes up.

Because the 7600 must update sequentially, this function would require too much of its resources—about 20-30 percent, Vick said. Thus, this is done in the adjunct PEPE elements and returned to the host.

PROGRAM CONSTRAINTS

Although the current PEPE was designed to incorporate 36 elements, the Advanced Research Center was constrained by DDR&E to limit the current demonstration to "the number of elements needed to prove the technology," Vick said.

"To really prove out signal and power distribution, we needed nine elements, which is the number installed here, but the PEPE backplane is wired to accept 36 elements," Vick said.

The center has built a PEPE-CDC 7600 interface, and the system is ready to run in actual tactical experiments, he added.

The CDC 7600 is also used in the interactive display system that permits operators at 19-in. color cathode ray tube terminals to analyze radar waveform, reentry vehicle and other data.

Typical displays demonstrated for Aviation Week & Space Technology included:

Process design—This shows realtime software breadboards interactive with the simulator to provide a gross overview of elements such as radar utilization, radar scheduling and other parameters.

Software requirements engineering—This is a display of graphic processing flows used in engineering validation of a system.

Waveform analysis—This produces radar ambiguity surface plots that mathematically represent the performance that a waveform would be expected to provide when transmitted from a properly designed radar system. It can, for example, be employed in designing waveforms that provide the test detection or tracking performance in realistic operating environments involving clutter from chaff or booster tank fragments. Conversely, the system can be used to analyze transmitted waveforms from an existing radar—using intelligence data, for example—to permit analysts to determine the properties that another designer may have been attempting to realize and to infer the type of hardware that might have produced the waveform. Thus, this display serves as an effective diagnostic tool for both design and evaluation of known and unknown radars.

Engagement analysis—This may be used to trace ICBM trajectories for evaluation of optical homing interceptors or terminal phase intercepts.

Reentry physics—This program permits graphic depiction of the flow fields around reentry vehicles, including vehicles immersed in tank fragments and multiple vehicles.

MARV engagement analysis—Engagement analysis, but now dealing with a maneuverable reentry vehicle.

Optical data discrimination—This analyzes a scanning array of infrared detectors, using a raster-type motion to map fields, depict hot spots and point source targets.

All the studies employ new algorithms developed by System Development Corp. as development tools permitting pure research not done previously and applied research on data gathered by the intelligence community.

Data are analyzed by others for appropriate agencies.

With advancing technology, the center is now looking toward future implementation of modular missile-borne computers that would put BMD intelligence on board the interceptor itself.

Both optics and phased-array radar sensors might be employed, but Vick believes an appropriate optic sensor is about five years down the road.

He expects to implement a radar research effort this year. In concept, a radar system could place a microprocessor behind each antenna element of a missile-borne phased array, controlling the phase and quadrature of the video. These could be summed up to provide receiver beam steering, building a virtual receive beam, Vick said.

"If you have data processing technology to put behind the phased array enough processing capability, you can build a staring, receive-only radar with illumination from elsewhere," Vick said. This could be either a bistatic system—incorporating one illuminator and two receivers—or multistatic—using a large number of receivers, he added.

The center is also studying solid-state memory devices for this requirement.

"Many functions require simple data processing but large amounts of memory," Vick pointed out.

In a concept called logic-enhanced memory, total environments could be mapped into three-dimensional large scale integration or charge-coupled device memories with minute processing capability behind the memory, according to Vick.

Magnetic bubbles are also a memory candidate for this application, but this technique must be treated cautiously because its susceptibility to a nuclear environment has not been tested properly, Vick said. The center recently initiated an effort in this area.

SPECIALIZED RELIABILITY

Reliability is of paramount importance, although in BMD work it has a specialized implication: Systems must exhibit exceedingly high reliability, but for a very short time, since the entire encounter may span 30 sec.

Principal reliability concerns involve interconnections and development of "fail-safe" fault-tolerant types of logic. In addition, researchers here are also concerned about fault-tolerant software that will provide a fail-back position.

Optical systems are coming to the fore because of advancements in optical technology and the transition to microminiature processors, Vick said.

"I believe we can now package as many MIPS in a small microprocessor as in the CDC 7600," he said.

In the optical area, too, the concept would be to provide interconnects to rather simple data processors directly behind the optical elements. The center has a program with Honeywell to develop data processing and optics capability.

"Over the next few years, we expect to home in on this, and fabricate prototype models, plus software and algorithms," Vick said.

For an optical system, the intention is to take data directly from the arrays and remain in the optical domain, storing the data in a holographic (laser) memory directly behind the arrays.

Simple processing can then filter out all objects in memory that have moved within a given interval, for example, simultaneously operating over the whole picture, Vick said.

Another program, at TRW, is expected to demonstrate laboratory equipment within about a year and one-half.

Film and other realtime storage media are also being examined, including a technique that composes an interference pattern "page" on film for readout by a reference beam.

"Memory is one of the most fruitful areas and will be the next thing to boom in data processing," Vick said.

COMPUTER PROVES ARCHITECTURE CONCEPT

HUNTSVILLE, ALA.—Parallel element processing ensemble (PEPE), a supercomputer system designed specifically to meet the requirements of ballistic missile defense has proved the parallel associative architectural concept during acceptance tests here.

PEPE was designed, developed and produced by System Development Corp. for the Army's Ballistic Missile Defense Advanced Technology Center as a means of exploiting parallel and associative processing techniques to augment the capabilities of conventional computers in BMD service, according to John A. Cornell, PEPE manager here.

The hardware was built under contract by Burroughs Corp., Paoli, Pa., which also did gate-level designs and the electrical and mechanical engineering.

Architectural concept of PEPE was designed specifically to meet the BMD processing requirements of high correlation loads, high scientific computation loads and multi-dimensional file search. At the BMD Advanced Research Center, PEPE interfaces with a Control Data Corp. CDC 7600 host computer for use in advanced research in ballistic missile defense data processing.

PEPE's prime function is keeping the huge, complex ballistic missile defense data base updated in real time, controlling search radar beams and tracking functions, discriminating warhead targets and maintaining precision tracks and target files. Precision, "closed-loop" tracks are maintained by the computer, employing seven-state, fully coupled Kalman filters with an update rate of 5–40 updates per second. If discrimination routines show a target not to be a warhead, it is maintained in a track-while-scan mode and updated when a search beam happens to intercept it.

These target files are maintained and updated to prevent inadvertent track initiation, discrimination and precision tracking from being repeated unnecessarily, Cornell explained.

As an example of the magnitude of the problem, Cornell noted that for 200 targets, each tracked at a radar pulse rate of 20 pps., 12 million instructions per second are required.

As a result, BMD people speak in terms of computer MIPS—millions of instructions per second—with PEPE demonstrating 800 MIPS in ballistic missile defense service. This compares with about 14 MIPS for the host CDC 7600 serial processor and about 25 MIPS for the Texas Instruments advanced science computer in the center here.

With the feasibility of PEPE now proved in the Advanced Research Center, it will be turned over soon to the Systems Technology Projects Office for further evaluation in the ballistic missile defense context.

System Development Corp., which manages PEPE and the Advanced Research Center for the Army Ballistic Missile Defense Program, has proposed the use of PEPE in the Site Defense program should the CDC 7700 basic data processor (two CDC 7600s sharing a common memory) prove unable to handle the data processing workload, Cornell said.

SDC has briefed Brig. Gen. John G. Jones, Ballistic Missile Defense Program director, and McDonnell Douglas Site Defense prime contractor, on PEPE capabilities in this application, and money has been earmarked in Fiscal 1977 funds to proceed further and deeper into designing the Site Defense type of system around PEPE, Cornell said.

System Development Corp. has also developed a single computer language called PFOR, which is a superset of Fortran for PEPE.

PEPE hardware is relatively inexpensive because it is highly replicated and is suited ideally to the advantages of large-scale integration, according to Cornell. Because of its multiple parallel processing elements, it has high reliability. Ninety percent of failures have practically no effect on the execution of the problem, Cornell said.

LITHUANIAN INDEPENDENCE DAY

Mr. ZORINSKY. Mr. President, February 16 is an important date in the lives of many Americans and freedom-loving peoples around the world. This date marks the 726th anniversary of the founding of the State of Lithuania and the 59th anniversary of the establishment of the modern Republic of Lithuania. Although Lithuania, along with Latvia and Estonia, were illegally incorporated into the Soviet Union, it has been the continuing policy of the United States not to recognize this incorporation. The U.S. Senate has continually supported this policy and I trust we will continue to do so. The United States should never forget the action of the Soviets in denying freedom to the Baltic States. I want to congratulate all Americans of Lithuanian descent and Lithuanians around the world on the commemoration of their independence day.

VANPOOLING—SAVING GAS, MONEY, AND HIGHWAY MILES

Mr. HUMPHREY. Mr. President, in these critically energy-short times, I wish to call the attention of the Senate to an emerging form of transportation which may well help save gasoline, markedly reduce congestion on the highway and significantly cut the amount of auto emissions into the air. It is called vanpooling, and I am proud to report that my home State of Minnesota is pioneering this effort.

The 3M Co. of St. Paul, Minn., is credited with being the innovator in this field. It started with six vans in 1972, and today it is operating 86. These vans, which are purchased by the company and are amortized by passenger fares based on distance from home to work, carry more than 900 3M employees to and from work. Each van takes six to seven cars off the highway and, in 1976, 3M says it saved 2 million vehicle miles and 165,000 gallons of gasoline with its program, which it calls "Commute-A-Van." In 1977, 3M says saving will be even greater, and it expects to top the 100-van mark later this year.

Throughout the Twin Cities Metropolitan Area, a growing number of major employers are actively practicing vanpooling. At present, 11 metropolitan area employers are running more than 135 vans. In addition to 3M, they include CENEX, General Mills, Honeywell, National Car Rental, Blue Cross and Blue Shield, Control Data, Minnesota Mutual Life Insurance, Farmers Union Grain Terminal Association, Richfield State Bank, Prudential Insurance, and the State of Minnesota. A half dozen other firms and agencies are now in the process of organizing van pools.

Also, Public Service Options, a nonprofit privately endowed research group, has begun a pilot study and demonstration of the van pooling concept in a multi-employer setting. This demonstration is expected to prove that van pooling is viable for many home work trips throughout the Nation.

Nationally, the van pooling concept is gathering considerable momentum. More than 100 public and private organizations have adopted the concept and more are joining daily.

Some evaluation of van pooling has been made, and these programs appear to be a convenient and attractive service for many persons making longer work trips where the van fares are competitive with the operating cost of the sin-

gle private automobile. Based upon 135 vans operating in the Twin Cities area, there may be a daily reduction of some 820 automobiles and similar parking demand, along with savings of over $280,000 in gasoline costs.

Meanwhile, the Minnesota Department of Transportation indicates that as van pool programs grow, car pooling also increases as a result of ride-sharing promotional activities.

Mr. President, I ask unanimous consent that several articles describing the expanded use of van pooling be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From U.S. News and World Report Magazine, Feb. 9, 1976]

"VANPOOLING"—NEW WAY TO BEAT THE HIGH COST OF COMMUTING

ST. PAUL.—Vans fitted out as small buses are the key to a new trend in commuting.

It's called "vanpooling," a big brother to carpooling but with some significant differences. For example:

Vanpoolers—groups of eight to 12—almost always work for the same company. The company supplies the van and supervises its operation on a nonprofit basis. Pool members get door-to-door service from home to office and return. And, best of all, it's usually the cheapest way available to make the trip.

The Highway Users Federation has estimated these costs, per person, for a typical 10-mile trip to work in major metropolitan areas:

Driver-only autos: $3.71 per trip.

Rail transit: $2.25 to $3.29.

Carpools: $1.86 or less, depending on the number of occupants.

Conventional buses: $1.76.

Eight-member vanpools: 54 cents.

A pioneer in vanpooling is Minnesota Mining & Manufacturing Company in St. Paul, where a pilot program of six vans in early 1973 has grown to 75 vans now with more than 800 regular riders. The company expects to add 25 more vans, accommodating a maximum of 300 more employes, during 1976.

Other major vanpooling programs are in operation at General Mills in Minneapolis, Continental Oil Company in Houston, Aerospace Corporation in El Segundo, Calif., and the Tennessee Valley Authority in Knoxville, Tenn., among other places. But the "3M" project is by far the largest and, perhaps, the most elaborate.

"Vanpooling," says Robert D. Owens, senior traffic-engineering specialist at 3M, "has clearly demonstrated that it is the better way to go—better, even, than the private auto. It's cheap. It's socially acceptable.

"And since we are heavily staffed with technical and scientific people who are environmentally conscious, it hold an ecological attraction."

BEHIND THE WHEEL

Each of 3M's vanpool routes has a pool coordinator, a company employe who volunteers to serve as the driver and to see that the 12-passenger van is kept clean and in good running order. In exchange, the co-ordinator receives free transportation, can use the van for personal trips during off hours for 8 cents a mile and gets to keep the fares collected from those passengers above the minimum of eight that the company requires for each route.

Fares vary from $16 to $34 a month depending on the length of the route. The shortest is about 5 miles one way and the longest more than 50. The fares are designed to keep the vans self-sustaining and are collecting directly by the company, rather than the driver. The vehicles, which are air-conditioned, carpeted and equipped with radios, are to be replaced every four years.

"The vans have been surprisingly popular," says Mr. Owens. "So far, we haven't had to sell the idea at all. We have 600 on our waiting list. Most of the groups form themselves, although we can use our computers if necessary.

"One test of the popularity came when we had to raise fares last April. We went up 10.6 per cent and, as far as I know, we didn't lose a single rider because of the increase."

Officials at 3M say they still are refining their ideas about the best way to run vanpools, but they already have come to some conclusions. One is that the total pickup time for passengers should not exceed the running time from the final pickup point to the office. Another is that the pooling idea is most popular with workers who have regular hours.

When 3M solicited comments from its van riders, most were highly enthusiastic. "I feel I've purchased a second car plus chauffeur, both for only $22 a month," wrote one employe. But another said: "I can't really claim to like it, but it has to be the proper route from a personal and social point of view."

[From Newsday, July 27, 1976]

FIRMS ON LI ASKED TO TRY VAN POOLING

(By Stuart Diamond)

Some Long Island companies are being asked to buy 12-passenger vans and turn them over to employees to drive to work as part of the nation's first government-initiated van pooling program.

The vans would be owned by the company but financed by the employees' fares. The workers would save up to $75 per month in automobile commuting costs; the company would save the cost of additional parking spaces, and the nation could save millions of gallons of gasoline per year, said an official of the Federal Energy Administration, which is sponsoring the program.

Long Island's two largest employers, Grumman Corp. of Bethpage, with 22,000 workers, and Long Island Lighting Co., with 5,400, are considering the program, officials of the firms said. Sixty Nassau and Suffolk firms are to be contacted this year and asked to participate.

"In general, the concept sounds great," Ira Freilicher, LILCO vice president, said. "Whether or not it works for us is another question, which we will have to study very carefully." A Grumman official said his firm, too, would study the program in the next several months.

The federal program is modeled after a project begun independently 3½ years ago by the 3-M Co. of St. Paul, Minn. That manufacturing firm, with 9,500 employees, started with six vans and has 77. The program has reduced the number of employee cars by 775, saving $2.5 million in parking spaces that otherwise would have been necessary, 3-M officials said. Worker absences and lateness have decreased because of the peer pressure to be on time for the van, company officials said. The monthly fare averages $26.25.

Nole Cook, an engineer who has been driving a van for 3½ years, said. "It used to cost $60 a month just for gas [to drive a car to work] and that was in 1973 . . . My van makes 10 miles per gallon and carries 12 people. That's 120 passenger miles per gallon."

Cook, who lives 42 miles from work, said his insurance rates have dropped 8 per cent because he does not drive his car to work. As the driver—elected after interviews by company officials—he rides free. Eight passengers pay, and three other riders recruited by Cook, pay him their monthly fares. He gets use of the van after hours for 8 cents per mile. Cook said all members of his van pool work the same day shift.

The Federal Energy Administration is conducting the program in five areas of the country, using the Gray Advertising Agency of New York as its marketing agent. The only federal money involved is $370,000 for the ad agency, an FEA spokesman said. The employees would buy the vans, and after three or four years of fare, the purchase cost would be recouped.

The program works as follows: the companies, either by hand or by computer, group employees by zip code. Then, questionnaires determine the number of interested employees. The company buys the air-conditioned vans for about $8,500, maintains them and sets the fares.

Bulova of Valley Stream also has been contacted by Gray, but probably will not enlist in the program because its 325 employes are too dispersed, a company official said.

Sydney Berwager, director of the office of passenger systems for the FEA, said his agency hopes van pooling will reduce commuter driving miles by up to 10 per cent within a decade. Studies have shown that more than three-quarters of the commuter automobiles in Nassau and Suffolk carry only one passenger.

[From the Corporate Report, December 1976]

POOLING? VANTASTIC!

(By Angelo Cohn)

Van-pooling, an idea whose time had come for Minnesota Mining & Manufacturing Co. almost four years ago, went national this past August and is now assuming international implications. The foreign connection comes with a visit this month by two executives from Renault, the French automobile manufacturer, to the 3M Center, the company's headquarters in suburban St. Paul.

The visitors from Paris, while apparently impressed by the transportation system's growth, haven't come to sell vehicles. They're here to learn how they might adapt the idea to carry some of their own 65,000 employes to and from work, thus reducing fuel demands and pleasing the environmentalists. Those, of course, were the same incentives that led 3M to introduce the van-pooling concept back in April 1973.

Helen Sever, 3M's supervisor of administrative services, is the person who fills in the financial details and also provides the information that may help Renault, as it's helped an increasing number of companies and institutions get on the road with employe motor vans. Sever says that with approximately three months of the current year still to go, 3M had figured that its pooling system had replaced some three-million vehicle miles of single-car driving in 1976 and achieved a savings of 165,000 gallons of motor fuel. Furthermore, each of the company's 12-passenger vans has produced the transportation equivalent of six-and-a-half automobiles—which is about like taking 500 cars off the highways and parking lots with the 77 vans in the fleet.

The late myths of this year are seeing considerable expansion of the pooling program at 3M. Fifteen more vans, including some with a 15-passenger capacity, are coming into service during the winter period, when the pooled transport service becomes especially attractive for many of the riders.

While recognizing the possible impact of adverse weather, however, Helen Sever believes that the economic incentive is what's made the pool vans go and grow. For an average cost of $26.50 a month, the users get 21 round trips, and trips average about 50 miles. Additional savings accrue to the pool riders, according to company studies, because many have foregone the purchase of a second family car, some have sold off the family's extra car and all stand to benefit from lower insurance rates and reduced repair or maintenance bills.

Similar information comes from other employers around the seven-county Twin Cities metro area. Such companies regularly

exchange data to help improve the systems. During the past summer, the increasing interest in van-pooling brought 3M together with Atlantic Richfield and Conoco to form NAVPO, the National Association of Van Pool Operators. The aforementioned attention from overseas is a further manifestation of a growing interest.

CENEX, the large agribusiness co-op based in South St. Paul, Minn., may be adding to its 20-van operation to meet anticipated winter demand. CENEX has refined the operation by allowing payroll deductions for the transportation, and its van-pool map covers round trips of up to 80 miles, with Scandia to the north and Cannon Falls to the south as "end-of-the-line" points on the longer routes.

A demographic type of survey among pool riders from 3M's headquarters shows 56 per cent of the users from administrative levels and 14 per cent from advisory. Nine per cent are classified as management, and 20 per cent are laboratory employes. Pools also are operated for 3M sales office personnel in Los Angeles and Caldwell, N.J., and Administrative Services has been given authority to put vans in other Minnesota and Wisconsin locations, though none has been programmed specifically as yet.

Most companies indicate that van-pool demand peaks during the winter months, but 3M has had year-round stability and waiting lists of potential riders.

NEW YEAR'S EVE AT 1,350 M.P.H.

New Year's Eve, supersonic-style, will be toasted in a unique tripleheader celebration that should launch 1977 as a very important year in transportation, with speed being the name of the game.

The starter is an announcement from Air France of a history-making party that will begin with New Year's Eve in Paris, end with New Year's Eve in Washington and include a New Year's Eve bash en route aboard the 1,350-mile-per-hour Concorde airliner that beats the clock westbound across the Atlantic and thus spans three midnights.

While all this is intended to appeal to the affluent free-spenders, it also dramatizes what supersonic flight has to offer above and beyond the more familiar options. It also shows how a midwestern executive can arrange a full day's business in London or Paris and miss only that one day from his office at home. High-speed travel also makes it possible for a jet-setter from the Midwest to enjoy a supersonic weekend in Europe—a night and a day in London, a night and a day in Paris—and return home in time for business Monday morning.

According to existing schedules, a person can leave the Twin Cities at 7:40 a.m. on a Friday, catch the Concorde's London flight in Washington and be in England that night. After a Saturday of shopping, sight-seeing or business, a European flight (aboard a subsonic jet) will put the traveler in Paris in time for dinner and nightclubbing. The visitor spends all of Sunday in Paris before the Concorde leaves DeGaulle airport at 8 p.m. The flight arrives back in Washington at 5:55 p.m. the same day! The flight cost is currently $1,654 round trip.

MANY BUSINESSES ARE TAKING A PLUNGE INTO THE VAN POOL

(By Ralph Blumenthal)

SOUTH PLAINFIELD, N.J., August 3.—Van pool, son of car pool, is packing them in here at the Prudential Insurance Company and a growing list of other locations around the country.

Each weekday morning, about 500 Prudential employees are picked up at or near their homes by 56 shiny blue 12-passenger vans owned by the company and driven by volunteers. At the end of the day, the vans carry them home again. The drivers travel free, and the other drivers split expenses to repay the company for its nonprofit venture.

"It's the best thing they ever did," said Mildred Bohlander of the cost services department as she stepped out of the gleaming-new, glass-sheathed Eastern home office at 3:20 P.M. the other day and cut across the parking lot to where the vans were clustered.

"I could just kiss the driver," she confided.

43 CONCERNS USES SYSTEM

A second-generation offshoot of the car pool, which employs private autos, the company-sponsored van pool with its minibuses is fast emerging as one of the most promising of the ride-sharing commutation programs designed to cut fuel consumption, pollution and traffic congestion.

With 43 concerns coast to coast now operating 590 commuter vans, the approach has won many rave reviews. But bus companies have condemned what they call the vans' unfair competition, and executives have acknowledged that group-riding puts restrictions on employee overtime and other scheduling.

At the same time, some other unusual commutation experiments are under way.

EMPLOYEES ARE PAID

In Hartford, the Phoenix Mutual Life Insurance Company has been paying employees $1 a day not to drive to work—they are eligible if they come in by car pool, bus, bicycle, foot or any means other than behind the wheel. It has cost the company about $500,000 so far.

Through Connecticut, the State Transportation Department has been collecting employees rosters from businesses and matching the names by computer for car pool rides.

And in Knoxville, the transportation center of the University of Tennessee has received a $1 million Federal grant to set up a commuter-travel "brokerage" service: It will figure out the best way for you to get to and from work.

In the van pool universe, Prudential is only No. 2—the Minnesota Mining and Manufacturing Company of Minneapolis-St. Paul, which pioneered the concept in April 1973, remains in the vanguard with 92 vehicles transporting 1,000 employes daily.

Prudential, with its 56 vans and more to be ordered soon at about $7,100 each, began its program last year in preparation for the move two months ago from Newark—where mass transportation was plentiful—to an industrial park area here, where access to public transportation is limited.

In what has become standard practice, Prudential, offered free commutation to volunteer drivers. The concern also allowed drivers to use their vans personally during off-hours at a charge of 10 cents a mile.

Among the applicants was Bill MacMillan, a 56-year-old, planning consultant who lives in Bloomfield, N.J. "The van came along just in time," he said. "I had just got rid of my other car and needed something for little trips around home."

"And don't forget, Bill," one of his passengers, Viola King, reminded him, "you get free transportation, too."

"Good heavens!" he said. "It never entered my mind."

The others in the van—six now, including Mrs. Bohlander share commutation charges of 17 cents a mile, designed to pay back Prudential for its outlay of about $400,000 for the 56 vans, plus maintenance and gasoline.

As their round trip totals 62 miles a day, they share a daily bill of $10.54, or $1.75 each. When the van pool replaces three employees who recently dropped out, the charge would fall to $1.17 each. That is almost half of the cost of gasoline alone for a medium-sized car making the same trip.

It is a congenial group that Mr. MacMillan begins picking up just after 6:15 a.m. for the 50-minute drive to the office for the start of the staggered workday. So far, the highlight was the time Mr. MacMillan made a sharp right turn that dumped Mrs. King, sitting next to him in the front seat, into his lap.

EXPERIENCE TERMED EXCELLENT

"We voted on that—it's not allowed any more," Mrs. Bohlander said. Despite a few fender-benders and manipulated mileage reports, Prudential's experience with the van pools has been excellent, according to Bill Vosseler, the coordinator of the program.

His finding is echoed by other businesses and Federal officials.

"It definitely is catching on," said Sydney Berwager, director of the Office of Energy Conservation and Environment of the Federal Energy Administration, which recently surveyed the programs and found that 43 concerns were involved and that they used 575 vans.

"If we could get 5 percent of commuters into van pools we could save 100,000 to 200,000 barrels of petroleum a day," Mr. Berwager said. He put the nation's total daily petroleum consumption at 18 million barrels, with commuters using two million barrel of gasoline.

"We've got more requests for space than we can handle," said Helen Sever, an administrator at the 3M Company, which expects to increase its van fleet from 77 to 90 by the end of the year.

With one-third of its 9,000 Twin Cities employees in some kind of ride-sharing program, the 3M Company has determined it has already saved the high cost of constructing additional parking space.

In Houston, the Continental Oil Company has calculated that each of its 37 vans represents savings of $8,000 a year in gasoline. In fact, a Conoco spokesman said. "It's been too perfect to be credible."

"Unless you can tell people there's something wrong with it," he said, "they think you're lying to them."

Officials at some other van pooling companies—Hoffmann-La Roche, in Nutley, N.J.; Corning Glass in Corning, N.Y., and Southern New England Telephone in Hartford—also praised their programs, but noted such drawbacks as scheduling limitations and inapplicability in wide-open rural areas.

Bus companies have found the competition unfair.

"It would be a great idea if they had to follow the same standards of safety, driver training and franchise expenses we do," said Dr. Leonard Casser, assistant secretary of the Manhattan Transit Company, one of the New Jersey communter bus lines.

Moreover, he said, since most of the bus lines were running in the red and have to be subsidized by the states, the vans, by siphoning off business, are costing additional tax dollars.

EVERYBODY WINS WITH VANPOOLING

(By Ruth Ann Patrick)

Employers across the nation are discovering that van pools can help save hundreds of thousands of gallons of gasoline, increase employee promptness and morale, reduce traffic noise and air pollution and substantially cut down on costly parking space.

Van pools differ from car pools in one important respect. The employer or sponsoring organization provides the vans that are used in the program. Costs are then split among the riders; the driver usually rides free.

"Everybody wins with vanpooling," says Robert Owen of the 3M Company of St. Paul, Minn., who is credited with conceiving the idea of employer-sponsored van pools four years ago.

"Our company has won because of decreased investment in traffic congestion," he said. "The employee wins because he has a

better way to go to and from work. And the general public wins because of the reduced use of energy, less air pollution and less congestion on the highways."

A number of commuter van programs sponsored by employers have already made dramatic progress in reducing commuter traffic and increasing satisfaction among their employees. The Minnesota Mining and Manufacturing (3M) Company in St. Paul was the first firm in the country to adopt a van pool program. This was immediately followed by similar programs by two other Minnesota companies, Cennex and General Mills.

The 3M Company introduced the van pool program to its employees in 1973. The company decided to purchase six twelve-passenger vans and agreed to provide a van for a minimum group of eight persons within a given geographical area. Ridership in each van was gradually increased to 12 persons.

The vans were operated by employee-drivers in a manner similar to a small private business. The company charged each employee a proportionate share of the operating costs for this service based on the mileage to and from the employee's home plus a share of the fixed acquisition cost of the van. As compensation for his services, the driver of each van was not required to pay for the commute.

By the end of 1975 there were over 900 employees in the van pool program, and the company had 75 vans in operation and four more on order. Overall in 1975, the 3M Company's van pool program "saved" 1.8 million vehicle miles not driven to and from work (an average of 2,200 miles per person) and 135,000 gallons of gasoline, or 175 gallons per employee.

Even with a 23 percent increase in employment at 3M's St. Paul facility from 1970 to 1975, the company's total parking space requirement was reduced by 1,500 spaces, a savings of $2.5 million in construction costs. The average number of passengers in 3M's commuter program is now 11.36 per van, the average round trip is 49 miles, and the total operating cost is slightly more than six cents per vehicle mile, with an average monthly cost per rider of $23.72.

The Cenex program began in October 1973 with two 12-passenger vans; today there are 21 vans carrying approximately 160 of the company's 620 St. Paul area employees. Starting with five deluxe 12-passenger vans in January 1974, General Mills doubled its van fleet within three months and now has 15 vans serving nearly ten percent of the company's 1,800 employees. Through the continued expansion of their programs, these companies have shown that commuter vans are highly successful in many ways.

At these companies, both the people who initiated the venture and those who participate in it feel great satisfaction with the program and speak of it enthusiastically. For instance, according to a recent employee survey, 80 percent of the employees at 3M using the vans think this method of transportation is more convenient than any other, and 97 percent said they wanted to continue commuting by van.

Another successful employer van pool program is the joint effort of the Aerospace Corporation and the Air Force's Space and Missile Organization (SAMSO) installation in Los Angeles, Calif. This differs from that of the 3M Company, first because it is a multi-employer van pool program, and also because it has three unusual features: the van style, the method of procuring the vehicles and the fare structure.

Rider comfort was a major consideration in selecting the type of van to be used. Since the vans are used over longer routes (the average round-trip is 65 miles) they have airplane-type reclining seats. The additional ridership induced by this feature more than compensates the companies for the additional cost of the seats and the reduced vehicle capacity of 10 passengers per van.

Another unusual aspect of this program is that the vans are leased rather than purchased, with the full cost paid through passenger fares. Fuel and maintenance service, partly provided by Aerospace facilities, is charged to each van on a per-mile basis, as are nominal costs of commercial liability and van program insurance.

Aerospace-SAMSO Commute-A-Van employs a unique fare system which combines monthly and daily charges. The average monthly cost per rider is $43. Each regular rider is charged one-third of his share of the monthly costs, and the remaining two-thirds is divided by 17 and assessed for each day the rider uses the van. In this way, each van breaks even if riders miss an average of one day a week each, in other words, if they ride 17 out of 21 work days a month.

According to Aerospace-SAMSO, strong management support is essential for the success of a van program. While vanpooling assures the prompt arrival of employees in the morning, it also guarantees their speedy departure at the end of the day. This may not prove compatible with companies which require their employees to work a lot of overtime.

The Aerospace-SAMSO Commute-A-Van Program was initiated in April 1975. Today it has 18 leased vans providing transportation for approximately 200 employees. An Aerospace Corp study showed a reduction in 1975 of two million vehicle miles driven and a savings of 130,000 gallons of gasoline attributed to the van pool program.

In April 1974, the Tennessee Valley Authority in Knoxville initiated a van pool program in cooperation with the TVA Employees Credit Union. The program began with the lease of six 12-passenger vans from Hertz Car Leasing. The TVA credit union handled the leasing and insurance arrangements for the vans since legal restraints forbid the use of government-owned or leased vehicles for transporting government employees between their homes and place of employment. Six 15-passenger vans have since been added to the program, which now provides transportation for over 140 TVA employees.

The door-to-door van pool service costs $23 per month for a 40-mile round trip, or less than four cents per passenger mile, based on 10 paying passengers. Continuous patronage for 11 months entitles a passenger to one free riding month. Van pool users pay monthly, either through payroll deductions or by check. Drivers are responsible for recruiting a group of 10 riders using lists provided by TVA and other sources, but ride free and have the personal use of the van for seven cents per mile.

During the day, between commuter trips, the van can be subleased by charitable organizations for a minimum charge of $63 per month.

Overall, TVA has increased van pool participation by about 40 percent in two years. Knoxville Mayor Kyle C. Testerman, a supporter of the program, stated, "Substantial evidence has been gathered that the car/van/bus pool plan can do more to save energy, reduce congestion and pollution, reduce parking problems, and increase access to the downtown area than any other program which we might be able to implement within the city."

In January 1973, Dr. Stephen Dickerson of the Georgia Institute of Technology, near Atlanta, began a van pool program with the purchase of one van. Now a public corporation known as Modnar, it operates four vans serving about 70 residents of the Atlanta metropolitan area. Modnar presently offers daily commuter transportation from two suburban areas to the Atlanta business district, and one van also serves a suburban shopping district. The Modnar Corporation carries two classes of passengers—regular and casual. Regular passengers have monthly standing reservations and are charged a daily fare; this arrangement is unusual in that each must pay for a minimum of two-thirds of the van trips made. Casual passengers make reservations on a space-available basis and pay about a 50 percent higher daily fare.

Some 75 companies are operating van pool programs using 1,000 commuter vans. Thirty of these companies recently formed the National Association of Van Pool Operators and chose David Lester of Atlantic Richfield Company as president. Here are some other examples of successful programs.

Continental Oil Company's year-old van pool programs now consists of 10 vans transporting 103 commuters in the Houston, Tex. area.

In a year and a half, Montgomery Ward in Chicago has expanded its program from six to 14 vans which carry approximately 150 employees.

In May of this year, Commercial Credit Company became the first employer to provide an employee van pool in Baltimore, Md. It has leased six vans which carry a total of 55–60 employees. This will eliminate 25 to 30 cars from the Baltimore rush hour, and 500 employees at Commercial Credit have indicated an interest in joining the program.

Van pools have proven attractive to many people for a variety of reasons. First, vans can carry up to three times as many people for less than twice the operating cost of a compact car. This results in lower costs per passenger mile.

Second, since there is no need for van pool riders to take turns driving as in the typical car pool, some riders have been able to dispense with their second car.

Third, van pools can operate more economically from areas of lower employee concentration and longer distances than can buses.

Fourth, van pools provide door-to-door service which makes them much more convenient for most people.

Finally, there is no problem with storing the van after work hours since in most cases the van pool driver uses it as a personal vehicle.

For the rider, these advantages result in convenient, lower-cost commuting with door-to-door service. For the driver, the benefits are even more rewarding. In addition to getting free transportation to and from work, the driver and his family may have personal use of the van during non-working hours, usually within a specified radius and at a reasonable cost per mile.

As a result of new legislation, employers may now find vanpooling more practicable. New federal highway legislation provides that certain van pool expenses, particularly the cost of obtaining vans for ride-sharing projects, may now be paid by the states from federal-aid highway funds made available by the Federal Highway Administration. These funds may not be used to acquire automobiles or buses for ride-sharing projects.

The Federal Aid Highway Act of 1976 provides that these funds may be used by the states for 90 percent of the costs to acquire 8 to 15-passenger vans; to pay personnel and other direct expenses of establishing van pool programs; and to recover any actual financial losses incurred if the van pool project fails. Certain other lesser costs may also be covered, depending on the requirements and eligibility of the van pool project.

The legislation stipulates that if a van pool project is supported by the state from federal funds, then commuters using the vans must be charged a proportionate user fee or rider fare to cover the reasonable costs of vehicle operation, maintenance and depreciation. This interest-free loan of federal-aid

funds used to acquire the vans must be repaid from riders' fares within four years.

This legislation opens the door to employers interested in realizing the many benefits already well demonstrated by car pool programs. What makes vanpooling especially attractive is the unique funding arrangement available whereby there is minimal financial risk to the employer in establishing a van pool program. Through the federal-aid funds allocated to each state, the employer can avoid heavy "front-end" costs but still take advantage of the many positive aspects of a van pool program such as self-sustaining operation, flexibility in terms of both employer's and employees' needs and the guarantee against losses should the project fail.

Federal-aid highway funds can also be used for implementing other aspects of car van pool and bus programs and improving the utilization of existing highways for pool vehicles.

Capital and operating assistance funds of the Urban Mass Transportation Administration (UMTA) can also be used to assist cooperative ridesharing projects such as commuter van pools, subscription buses, and other cooperative services for the transportation of small groups.

Contrary to some opinion, van pools do not compete with mass transit; rather, they aim at reducing the number of single-occupant cars in cities, especially during peak traffic hours. This is particularly true in the outlying areas surrounding the very large cities where the average occupancy of commuter automobiles is less than two passengers per vehicle and where there is inadequate or nonexistent mass transit service. As a spokesman for a north Baltimore County, Md. auto leasing firm put it, "Such a low auto occupancy rate is expensive, adverse to our national energy conservation program, harmful to the air, adds to traffic congestion and parking problems, and unnecessarily adds to the physical and emotional fatigue of everyone, especially commuters."

Employer organizations or individuals interested in solving their transportation problems through carpooling or vanpooling may receive detailed information and technical assistance for implementing a ride-sharing program by contacting their state transportation or highway agencies or the division office of the Federal Highway Administration located in each state. Or write to: Carpools, U.S. Department of Transportation (HHP-26), Washington, D.C. 20590.

AIR FORCE SURVEY ON MILITARY UNIONS

Mr. THURMOND. Mr. President, I read with concern an article by George C. Wilson which appeared on the front page of the February 8, 1977, edition of the Washington Post entitled, "Thirty-Five Percent of Air Force Enlisted People Favor a Union, Survey Finds."

The article points out that 35 percent of the enlisted men and 16 percent of the officers of the Air Force indicate they would join a union.

I have indicated on a number of occasions in the past that swift action is needed on this issue. This article reinforces my belief that immediate action is essential.

Mr. President, I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIRTY-FIVE PERCENT OF AIR FORCE ENLISTED PEOPLE FAVOR A UNION, SURVEY FINDS

(By George C. Wilson)

Thirty-five per cent of Air Force enlisted people and 16 per cent of the officers polled in the first such survey said they would join a military union if they had the chance.

Equally significant in view of those who conducted the Air Force poll is the large number of active duty people who are undecided, enough to constitute a possible majority for unionization, according to the survey obtained yesterday.

These and other findings are expected to impel both sides of the military union question to step up their efforts in coming months, with Congress trying to outlaw any organizing campaign.

The American Federation of Government Employees, AFL-CIO, voted at its convention in September to change its constitution to admit active military personnel into the union.

But AFGE president Kenneth Blaylock has said his union will not rush out to form locals within the military but will first develop a detailed organizational plan to submit to union members.

"If a majority votes for it," he said of the organizational plan, "we'll move. If they vote against it, we won't. It's that simple."

The Air Force survey of how officers and enlisted people felt about unions was conducted by Lt. Col. T. Roger Manley, Maj. Charles W. McNichols and G. C. Saul Young while they were at the Air Force Institute of Technology at Wright-Patterson Air Force Base in Dayton, Ohio.

The Air Force released their report on the poll results yesterday after The Washington Post put in a formal request for it.

The report said questionnaires went out last year to 800 officers and 800 enlisted people to obtain an Air Force-wide sample. The responses of 519 officers and 417 enlisted persons were adjudged complete enough to form the basis for weighing and assessment.

"The data presented in this report are believed to be reasonably representative of the Air Force population," the authors said. Their report makes these points:

"Enlisted personnel were significantly more pro-union than were officer personnel, 35 per cent vs. 16 per cent."

"An interesting phenomenon" was that 69 per cent of the officers who responded and 63 per cent of the enlisted people said any military union should not be restricted to enlisted people.

"Respondents expressed dissatisfaction with a perceived erosion of benefits, with pay raises which are considered to fall short of losses to inflation and with a perceived lack of representation of their interests with the Congress." They said military unions might reverse those adverse trends.

Sixty-five per cent agreed that military unions should stay out of "operational matters"—such as whether or not a hill should be assaulted in combat—and 75 per cent said that strikers would not be a legitimate weapon for collective bargaining.

"A surprising percentage" of noncommissioned officers, the sergeants who run the military day to day, said they either were undecided or would join a union.

"While the respondents resist the idea of military unionization, there does seem to be a belief that they could materially benefit from such an organization," the report said.

David Cortright, a staffer at the non-profit Center for National Security Studies, said yesterday that the poll is the first real indication of attitudes toward unionism within the military. Cortright himself advocates military unions, contending they would help prevent going into undeclared wars like Vietnam but would not be inhibiting during a declared war.

The Air Force as a service regards the study as the work of researchers rather than a department-wide project.

These were among the statements posed and the responses given in the survey of Air Force personnel:

I would join a union.

On percent:

	Officers	*Enlisted*	*All*
Disagree	64	32	40
Undecided	20	3	30
Agree	16	35	30

There is a need for a military union.

Disagree	65	40	46
Undecided	15	26	24
Agree	20	34	30

Military unionization is inevitable.

Disagree	70	40	48
Undecided	13	29	24
Agree	17	31	28

A military union could prevent the erosion of fringe benefits.

Disagree	32	21	23
Undecided	12	17	16
Agree	56	62	61

There is a need for a lobbying effort with the Congress in behalf of military personnel.

Disagree	26	16	19
Undecided	7	17	15
Agree	67	67	67

A military union could solve problems which an individual on his own would be unable to solve.

Disagree	33	25	27
Undecided	12	18	17
Agree	55	56	56

If military unions were established and recognized, the effectiveness of the Air Force would be:

Increased	16	34	29
No effect	14	25	22
Decreased	70	41	49

A military union would have a negative effect on discpline in the Air Force.

Disagree	19	36	32
Undecided	9	14	13
Agree	72	50	55

RULES OF THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the Committee on the Judiciary, at a meeting held February 11, 1977, adopted the procedural rules for the committee.

I ask unanimous consent that the rules be printed in the RECORD.

There being no objection, the rules were ordered to be printed in the RECORD, as follows:

COMMITTEE RESOLUTIONS

Resolved, by the Committee on the Judiciary, That, pursuant to subsec. (3) of rule XXV, as amended, of the Standing Rules of the Senate (S. Res. 180, 81st Cong., 2d sess., agreed to Feb. 1, 1950) a quorum of the committee, or any subcommittee thereof, for the purpose of taking sworn testimony shall consist of one Senator of said committee.

Resolved, by the Committee on the Judiciary, That the committee shall not take any action with respect to any report pertaining to an inquiry or investigation conducted by any subcommittee, unless, at least one day

before such action is taken, a copy of such report is furnished to each member of the committee. If, within 24 hours after a copy of any such report has been furnished to any member as herein provided, the member shall request that action be deferred thereon, no action shall be taken by the committee on the report prior to the 14th day after the day on which the report was furnished to the member or members requesting the deferral, unless an earlier date is specified by such member or members.

SEC. 2. For the purpose of this resolution, a copy of any report may be furnished to a member by (1) delivery to the member, or (2) delivery to the office of the member during office hours.

Resolved, by the Committee on the Judiciary, That the Internal Security Subcommittee shall, during the 95th Congress, continue its practice of conducting a hearing in executive session with each witness it subpenas, prior to any hearing of such witness in open session.

REGULATORY REFORM: MEETING THE NEEDS OF SMALL BUSINESS

Mr. HUMPHREY. Mr. President, I am in general agreement with those who contend that regulation of some sectors of the economy is well past the point of diminishing returns. This is particularly true of struggling small businesses which frequently find themselves sinking into failure under the burden of unnecessary regulatory reports and complex but often ineffective procedures required by a bureaucracy that is nourished on a steadily increasing appetite for paper. Some discouraging effects of the Occupational Safety and Health Act and the Employees Retirement Income Security Act programs are two classic examples of burying small business under an avalanche of report forms and complex if not incomprehensible regulations.

I do not mean to condemn the purposes of OSHA and ERISA legislation. On the contrary, the aim of these laws—to guard the health and safety of workers and provide them with income retirement rights—is directed toward real needs. But in implementing the legislation, the bureaucracy has too often been triggered by the form of regulation and has lost sight of the basic goals of these laws. As a result we have a self-perpetuating and multiplying paperwork and regulatory frenzy, not unlike the blizzards that buffaloed Buffalo.

An overriding irony in this situation is that Federal regulators, under the banner of serving the public interest, are regulating small business into extinction. This is true not only because small business is being suffocated under mounting yearly tonnage quotas of report and compliance forms, but because this places many small businesses in a critical uncompetitive position with big business. While big corporations can recruit battalions of experts to shuffle the regulatory paperwork, many small businesses cannot afford to hire a single attorney or engineer to help them comply with maddeningly insignificant requirements. The result is that small businesses, which are having a tough time competing with giant corporations as it is, also find themselves having to divert extremely limited resources to the task of punching their way out of the bureaucracy's paperwork bag. Big business ends up being handed a competitive advantage it does not in any way need and certainly should not have.

Mr. President, it is not an overstatement to say that in a real sense what is at issue is the health of the free enterprise system. Free enterprise and small business are synonymous. Small business comprises 96 percent or more of all the commercial and industrial entities in the Nation. It employs around half of the entire work force in the country. We can never hope to achieve a full employment economy unless we have conditions which promote vitality in the small business sector.

The need to regulate both small and large businesses is always going to be present but not to the point of providing a competitive advantage for big business over small business. Congress should take the action which will force a review of regulatory requirements throughout the Nation's business to the end that needless, destructive paperwork and procedures are eliminated and what is left is an effective regulatory structure that serves the public interest without burying free enterprise small business under multicolored triplicate forms.

The effect of overregulation of small business and an evaluation of the demands for regulatory reform and deregulation from the viewpoints of small business and big corporations are presented in a thoughtful article written for the Wall Street Journal by R. T. McNamar, Executive Director of the Federal Trade Commission.

Mr. President, I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REGULATION VERSUS COMPETITION

(By R. T. McNamar)

It has been well-documented that many types of government regulations fuel inflation, promote inefficiency, discourage innovation and generally reduce competition.

As a result there is vast dissatisfaction with the methods government has been using to approach both the problems of the marketplace and to achieve social objectives. Abolitionists are calling for "deregulation"; others are seeking "regulatory reform." At the highest level, President Ford has led the fight for a broad-scale review by calling for a National Commission on Regulatory Reform, and introducing in Congress a follow-up bill, the Agenda for Government Reform Act.

Yet, does all the dissatisfaction, the criticism and calls for legislative action mean that regulatory reform is an idea whose time has come? Unfortunately, I fear not.

First, regulatory reform means different things to different people. The very people who are loudest in extolling the virtues of the free enterprise system often are the ones who oppose reforms which would infuse more competition in the area in which they do business.

My own experience indicates the typical reaction heard from business is all too often, "Cut down on government paperwork and regulation, but my industry has special problems where more competition won't work." Unfortunately, the cumulative effect of preserving those regulations that are needed to take care of each individual industry or special interest group's problems is a maze of stupefying regulatory constraints that effectively prevent free market economics from providing the benefits of competition to the American people.

For example, the speciality steel, television manufacturers, shoe and industrial fastener industries have recently been attempting to obtain more government regulation—specifically higher protective tariffs. In this instance, it's protection against foreign competition. More commonly, industries and individual firms are seeking regulation to avoid domestic competition. In Washington one repeatedly hears the call for "orderly markets" to promote competition. Just what is an orderly market? It seems to be defined as one that has no corporate losers—only winners. Yet intrinsic in the definition of a market is consumer choice, which must result in an unchosen product or service. Given the demand level, shouldn't competition be close to a zero sum game?

DISAGREEMENT ON TERMS

Second, in the abstract, all observers would agree with the need to do away with the truly wasteful and purposeless regulation, while maintaining what is necessary to achieve a safe, honest and competitive marketplace. But few can agree on precisely what that means.

Hence we have a situation where many people are discussing regulatory reform from different perspectives and for different reasons. Some dislike the economic regulations which create anticompetitive inefficiencies such as artificially high prices and barriers to entry into a market. Others oppose the new issue-oriented regulations aimed at health and safety objectives—the so-called "social regulation." In this sphere, the administrative and economic costs of retooling production to meet government safety and health standards are often cited as reasons to "deregulate."

As a result, the confusion surrounding the imprecise—and not terribly useful—terms "deregulation" or "regulatory reform" provides an umbrella under which a great many companies seek both to eliminate their government-imposed operating cost increases and to shield themselves from the cold rain of increased competition.

Against this background, I believe that almost all companies have some vested interest in almost any existing or proposed government regulation. Admittedly simplistic, there seem to be three broad possible effects of government actions:

(1) Regulation can create a government-induced market for products by either requiring (or prohibiting) that business be done in a certain manner. In either event, established markets are disrupted. Those construction and engineering firms that have prospered because of the Environmental Protection Agency's enforcement of stricter water and air pollution standards have a major stake in existing regulation. Economically, the government has created new and larger markets for electrostatic scrubbers, precipitators, engineering services, etc. What would happen to the private firms that supply that market if the government were to cut back on its environmental enforcement efforts? Would these firms favor deregulation in this area?

(2) Regulation can affect the relative cost advantage of a firm's products vis-a-vis its competitors. Consider the well-publicized advantage of the Hess Oil Co. under the Federal Energy Administration's oil pricing regulations. The oil allocation and entitlements program vividly demonstrated that the cost structures of individual firms in the industry can be dramatically altered through government regulation. In the Hess example, geo-

graphic location of a refinery provided a government-created competitive advantage and profit windfall to the firm.

Historically, the operation of government regulation in the energy area has not only stimulated increased demand for energy through cheap energy policies but has determined that natural gas would be relatively less costly than other forms of fossil and non-fossil fuel. As a result, whether wisely or not, utilities, appliance manufacturers and construction firms have all had an interest in the government's policies in this area. And most of these firms are not at all interested in tampering with existing regulations in this area.

Indeed, preservation of the status quo seems to be the objective of many corporate executives. For example, in recent congressional hearings on reform proposals for the airline industry, TWA Chairman Charles C. Tillinghast Jr. said: "I should like to be able to say that TWA is not afraid of deregulation of market entry. . . . I cannot. We have been disadvantaged and damaged over too many years by route awards to our competitors and fare determinations tilted against our unique route structure."

He argued that a number of TWA's competitors are strong because they have "significant monopoly positions." One wonders whether Mr. Tillinghast would include Pan Am in this favored group. For years, the Civil Aeronautics Board, through its regulatory process, has denied Pan Am the right to domestic routes to complement its overseas operations—an advantage it appears TWA has had.

(3) Regulation can alter the price structure of an industry. For example, pollution regulations on sulphur were a bonanza for low-sulphur coal suppliers from the Western states versus higher polluting Eastern coal. Obviously, it is in their interest to favor stricter pollution control and government-forced conversion of utility plants from oil or natural gas to coal. Who can blame them?

In addition, the imposition of government regulations, particularly congressionally-mandated ones, has a distinctly anti-small business bias. Unintentionally, they provide large corporations with a competitive advantage over smaller firms, because the costs of complying with most government regulations are largely fixed costs in the short and intermediate term—capital investments, attorney's fees and administrative overhead. Since larger companies have more units of production to cover their fixed costs, their per unit costs of compliance tend to be lower than those of a smaller producer of the same product. Thus they derive a competitive advantage from the cost of complying with government economic and social regulations. Small wonder that one hears few cries for broad regulatory reform from big business itself.

Clearly, disagreement on the objectives of regulatory reform, coupled with the government's traditionally fragmented, nonsystematic legalistic approach enables almost any corporation rationally to maintain a schizophrenic position. To wit, support for reform or repeal of some regulations, namely the "burdensome" ones, while seeking the retention of those laws or regulations that protect them from competition in markets where they believe they may be weak vis-a-vis competitors.

In short, no company favors deregulation or regulatory reform in the abstract. Rather, the company's executives' position depends on the precise individual government action as it affects them and their perception of their relative competitive advantage (or disadvantage) from it. This plain fact is too often ignored in the theoretical rhetoric about the economic principles underlying "deregulation."

TOO MANY EASY CHOICES

Underlying these examples is my concern that the government and business community may have lost the will to change the existing system. The current regulations provide too many fees or paychecks to the lawyers who designed them and represent either the government or private firms. They give the Congress too many easy choices. A Congressman can use the existing regulations to climb the committee ladders to greater power and authority. This allows him to point to his economic activities as a panacea for the public, while at the same time using them to protect those constituent interests that are most important to him.

Lastly, but I fear most importantly, too many firms now have an opportunity to boost profits and preserve executive compensation levels with a political-regulatory solution. Indeed, a major reason that top airline executives may oppose more entry into the field, the abandonment or sale of unprofitable routes and an economic rationalization of the industry is very simple. The end result would be that some of the current firms would be smaller. In turn, the company's executive salaries and bonuses, not to mention perquisites, would be reduced to reflect the size and performance of the firm. In the face of a reduced compensation package, who can blame an executive for putting his interest ahead of free market ideals and the consumer? Indeed, he's acting as Adam Smith might have predicted he would.

So regardless of whether lower profits are caused by a declining industry, poor management or possibly increased competitive pressures, today the accepted course of action is to alleviate a corporate profit squeeze with government action. And, so long as legislative or regulatory redress is a viable option to lower profits, top management will use it.

After all, what legislator or regulator can be unmindful of cries to "preserve the independents," "protect small business," and "preserve present levels of service"? All of these are claimed by business executives under the guise of "fostering competition." By contrast, only a free market is willing to make blind, arbitrary, rational resources allocation decisions that are insensitive to executive compensation.

The recent Olympic trials provide a lesson in competition that American industry should study. The United States chooses its swimming, boxing and track teams using rigorous and demanding competition. Some of the "best"—based on past performances—fail to make it. It's the American way. We are one of the few nations to use this most competitive, most free, most fair method. Yet, like the Olympics themselves, it produces winners and losers.

Unfortunately, it appears that our economic competitors, today's corporate executives, may have lost their willingness to subject their firms and their own personal corporate bonuses to the same stringent risks of competition that we still demand of our athletes. If this is so, as a nation we have lost one of our vital forces that has made us great and given us our high standard of living. To date, the statements from top corporate executives about government regulatory reform seems an ominous harbinger. I hope I'm wrong.

OPPOSITION EXPRESSED TO A DUAL SYSTEM OF FEDERAL AND STATE REGULATION OF THE INSURANCE INDUSTRY

Mr. THURMOND. Mr. President, on February 1, 1977, the South Carolina General Assembly passed a concurrent resolution memorializing Congress not to enact pending legislation which would establish a dual system of Federal and State regulation of the insurance industry.

On behalf of the junior Senator from South Carolina (Mr. HOLLINGS) and myself, I ask unanimous consent that this resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

A CONCURRENT RESOLUTION

Memorializing Congress Not to Enact Pending Legislation Which Would Establish a Dual System of Federal and State Regulation of the Insurance Industry

Whereas, pending legislation in Congress offered by the Honorable Edward W. Brooke, Senator from Massachusetts, would establish a dual system of federal and state regulation of the insurance industry with insurers and rating organizations having the option of being regulated by either state or federal regulatory authorities, but not both; and

Whereas, insurers and rating organizations opting for federal regulation would in all probability no longer be required to pay state premium taxes and other fees, which would result in a significant loss of revenue for South Carolina and other state organizations; and

Whereas, in South Carolina alone, the regulation of the insurance industry at the state level is providing more than twenty-five thousand dollars annually in premium taxes and other fees, all of which is paid into the State Treasury for the benefit of all South Carolinians; and

Whereas, such dual optional regulation would be confusing to the consumer in that he would no longer know whether to look to the state or federal government for assistance regarding insurance problems; and

Whereas, under present regulatory procedures, the National Association of Insurance Commissioners, of which the South Carolina Insurance Department is an active participant, has as its object the promotion of uniformity in legislation and rulings affecting the insurance industry and the interests of insurance policyholders of the various states, territories and insular possessions of the United States, while at the same time the states, where necessary or desirable, are afforded the opportunity through their state legislators and regulatory authorities to demonstrate sufficient flexibility to tailor laws and regulations to meet the specific needs of their state's citizenry; and

Whereas, the General Assembly believes that continued regulation of the insurance industry at the state level is in the best interest of the insuring public of South Carolina. Now, therefore,

Be it resolved by the Senate, the House of Representatives concurring:

That Congress be memorialized not to enact pending legislation offered by the Honorable Edward W. Brooke, Senator from Massachusetts, which would establish a dual system of federal and state regulation of the insurance industry with insurers and rating organizations having the option of being regulated by either state or federal regulatory authorities, but not both.

Be it further resolved that copies of this resolution be forwarded to the President of the United States, to each United States Senator from South Carolina, each member of the House of Representatives of Congress from South Carolina, the Senate of the United States and the House of Representatives of the United States.

ROOTS

Mr. CULVER. Mr. President, the recently concluded television production, "Roots," has had an unprecedented impact on the entire Nation. The fact that we may have been descendants of former slaves or slave owners should not obscure the fact that progress has been and is being made toward making this

a land of opportunity for all—irrespective of race, color, sex, or creed.

Mr. President, the people of Iowa take pride in the fact that the photodirector of "Roots," who was responsible for filming a major portion of those very moving episodes, is Mr. Joseph Wilcots, a native of Des Moines, who is a graduate of Tech High in that city. Mr. Wilcots is believed to be the first black anywhere in professional films to hold the title of director of photography, a position he has had since 1974. The people of Iowa are proud of Mr. Wilcots' achievements; and congratulations are in order for him, his family, and his former teachers. I ask unanimous consent that an article about this extraordinary Iowan in the Des Moines Sunday Register of January 23, 1977, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PHOTODIRECTOR OF "ROOTS" TRAINED AT TECH HIGH

(By Frances Craig)

A 38-year-old man who credits his teachers at Des Moines Tech High with some of his success is director of photography for six of eight episodes of "Roots," a drama of black history starting on ABC at 8 tonight and running each night through next Sunday.

He is Joseph Wilcots, one of 12 living children of Minnie and Henry Wilcots, a retiree from 48 years at the Des Moines Register and Tribune Company as a maintenance worker.

Joseph Wilcots, now of Los Angeles is the first black anywhere in professional films to hold the title, Director of Photography, a status attained in 1974 and, he believes, still exclusive to him, he said in a telephone interview.

HIRED IN 1974

First approached about "Roots" in 1974, a year before shooting started, he was hired as director of photography by Stan Margulies, producer.

However, to his disappointment, the film was postponed ("So often, this means it never will be produced") and Wilcots became involved in other projects including a documentary series occupying him when "Roots" began shooting.

So necessarily, the first two episodes (Sunday and Monday) were directed by Steve Lorner, a "very talented white." The other six belong to Wilcots.

The reason for the postponement, as he later learned, was "the book really hadn't been written yet."

Everybody was too eager, he recounts—small wonder because it's a "beautiful story" with which Wilcots says he identifies.

His other films deal with black themes, including the TV series, "South by Northwest," a story of black migration to the North, in its concluding episodes at 3:30 p.m. this Sunday and next on IEBN.

Wilcots wrote and directed it.

TECH TEACHERS

Tech teachers lauded by him are Marie Brewer, retired, as "my splended art teacher" and William Kacena, who still teaches filmmaking at Tech.

The superiority of Kacena's instruction is something Wilcots says he recognized only later when he joined the Navy and was sent to the Naval School of Photograph in Florida where he was far ahead of others who (unlike himself) had college instruction.

The unfolding story of Joe Wilcots' own life and success would in itself make an inspiring documentary: Even by the time he reached his teens and Tech High, the boy already had built his own darkroom and established himself as a freelance photographer.

He began as a 7-year-old with a Brownie box camera, he relates. With earnings from a paper route and photo commissions mainly at Drake University (some of sorority and fraternity members who probably had no idea their photographer was a 10-year-old at the outset), he purchased a press, then a movie camera.

A tenth child of an education-minded family—eight of 12 are college graduates, although Joe still isn't one of them—he made up his mind early to be in charge of film-making ("Whatever that meant—I wasn't sure at the time").

As a regular patron of the old Strand Theater, he was impressed particularly by westerns of Oscar Micheaux, a black who produced films for and about his own people.

FOCUSED ON FACES

Even with his box camera, he relates, "I concentrated on faces and expressions because I knew they were an important part of films."

However, what really got him on the right track, he says, was reading Producer-Director Mervyn LeRoy's book, "It Takes More Than Talent" which explained the film "establishment" and gave some valuable tips such as "tell absolutely everybody you meet what your plans and ambitions are."

With the book, he also set himself a timetable of achievement which he says has run about five years behind time (director of photograph was set for 1969).

After high school graduation in 1958, Wilcots worked for a year with newsmen at WHO–TV and, as a cameraman for the Iowa State Department of Health. Then he went to Hollywood in 1959 to start his timetable.

DRAFTED

A draft notice interfered and he joined the Navy, to become a photonavigator. Here, practicing the "tell everybody" advice, Wilcots made an important friendship and a pact:

"Richard Edlund (a white naval-buddy) had been a press photographer for the Los Angeles Times, and I kind of turned his interests around to motion pictures. We made a deal that whoever made it first would help the other.

Released first from the Navy, Edlund got a start and telephoned his friend (released in 1963) who recalls. "He was working on a crew doing a commercial for Post cereals. They were having trouble photographing the box because 'Post' didn't stand out strongly on the film . . . I quickly repainted the box, and the director of the project simply said, 'See you tomorrow.' I was hired!"

From there, Wilcots quickly progressed by 1964 to assistant cameraman on such shows as "Lassie," "Gunsmoke," and "My Three Sons," obtaining a union card.

He moved up to camera operator in 1968 in films including "The Learning Tree," "Lady Sings the Blues" and many others.

In 1974, he became the film industry's first black director of photography while doing a behind-the-scenes film on the motion picture, "Leadbelly."

Wilcots and Bill Cosby are good friends; the Des Moines man has written for and filmed Cosby productions.

He is one of three partners in Mason Films, a small company specializing in educational films pertaining to blacks.

FAMILY TIES

He describes "Roots" as an "unbelievable experience" and notes, "Often a crew becomes like a family, but this experience was closer than any I've ever experienced."

Real family ties for him are closest of all, Wilcots says. Married, he has a 14-year-old son—"intensely interested in marine biology, only slightly in photography."

He frequently sees his parents, brothers and sister. Next July, a family reunion is planned in Oklahoma City, Okla. Attending besides Minnie and Joe Wilcots, will be these children and families:

From Des Moines, Loretta Hall, tester for the Educational High School Foundation; Cartrell Wilcots, dietary supervisor at Iowa Methodist Medical Center; Virgie Monroe, supervisor of alterations at JC Penney Co., Angela Mandley, promotion department, Register and Tribune, and Rebecca Harrison, homemaker.

From Seattle, Sherman Wilcots, dean of Seattle Area Community College; Emogene Henry, state employee; Lois Wright, claims adjuster for Safeco Insurance Co.

Coming from Los Angeles, besides Joe, will be Michael (sic), art director of the Cultural Afro Art Center there and Wayne Wilcots, distributor for Sunset Magazine.

From Philadelphia, Henry Wilcots, an architect.

A brother, John, is deceased.

Also attending will be many other Wilcotses—every relative the family could find through extensive searching.

There, the Wilcotses believe they may find their own "Roots."

YOUTH UNEMPLOYMENT: AN INTERNATIONAL PERSPECTIVE

Mr. HUMPHREY. Mr. President, the Bureau of Labor Statistics has just made available to me two papers which show that youth unemployment has become a major problem for all of the world's industrialized countries.

The first paper, titled "Youth Unemployment: An International Perspective," shows that youth unemployment increased substantially in most industrialized countries between the fourth quarter of 1973 and the fourth quarter of 1975, with Sweden the only exception.

The second paper, titled "Unemployment Rates by Age and Sex," shows that youths have much higher unemployment rates than adults in most industrialized countries and that the ratio of youth unemployment to adult unemployment ranges from a low of 2.4 in Japan to a high of 10.3 in Italy. That means that in Italy the unemployment rate among youths is more than 10 times the unemployment rate for adults.

On January 11, I introduced the Comprehensive Youth Employment Act of 1977. The purpose of this legislation is to provide our Nation's young people with the jobs and job counseling they need to take a productive and useful role in our society. This problem has become worldwide now, which increases our responsibility to take the initiative in demonstrating how young people can be fully integrated into an advanced, technologically sophisticated, industrial economy.

Mr. President, I ask unanimous consent that the articles be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

YOUTH UNEMPLOYMENT: AN INTERNATIONAL PERSPECTIVE

This paper briefly examines the effects of the 1974–75 recession on the labor market experience of youth in eight industrial countries. The analysis focuses upon unemployment and unemployment rates, which capture inadequately the full range of labor market difficulties experienced by young

people. A thorough analysis would include comparative data, presently lacking in most countries, on duration of unemployment, participation rates, discouraged workers, involuntary part-time, and other aspects of underutilization. Furthermore, unemployment rates do not measure the return home of foreign workers from such countries as France and Germany; a large proportion of migrants are in the younger age groups.

The accompanying table provides figures on the percentage change in unemployment and unemployment rates for all persons, youths, and adults. Youths are divided between teenagers, who characteristically have the highest unemployment rates in all countries studied, and those in their early twenties, who also have relatively high rates. The figures, although not adjusted to U.S. concepts, are reasonably comparable from country to country except for the British data which are based on registrations at employment offices. The British unemployment rates, particularly those for teenagers, are understated in comparison with the other countries where data are from labor force surveys.

IMPACT OF THE RECESSION ON YOUTH

The 1974–75 recession had a substantial impact on young people in all countries except Sweden, which experienced a decline in unemployment. However, in some countries, including the United States, the impact was relatively greater on adults (ages 25 and over than on youth). In the United States, teenagers continued to have much higher unemployment rates than adults, but the percentage increase in teenage unemployment from the end of 1973 to the end of 1975 was one-third that for adults. The percentage rise in unemployment among persons in their early twenties, however, approached the rise in adult unemployment. Australia and Japan had a pattern similar to that in the United States.

In contrast, young persons had a higher percentage increase in unemployment than adults in France, Germany, and Great Britain, and, to a much lesser extent, in Canada. The impact on youth was most severe in Germany, where unemployment of persons under 25 increased more than fivefold. In Great Britain, unemployment among young persons almost tripled, and in France it more than doubled. Unlike in the United States, teenagers in both France and Great Britain were harder hit than persons in their early twenties.

In Germany, the protection of older workers from dismissal has had an adverse impact on opportunities for those at the other end of the age spectrum. Collective bargaining agreements now contain special provisions for the protection of older workers which go far beyond the legal minimum requirements. As a result, in September 1975 workers age 55 or more made up only 10 percent of the registered unemployed; in the 1967–68 recession, they comprised 42 percent.

The situation in Japan contrasts sharply with that in Germany. Unemployment for Japanese youth rose at less than half the rate for adults. Part-time workers and older workers bore the brunt of the slump. Demand for new high school and college graduates remained fairly strong in 1975, although the youth unemployment rate rose to 3 percent (still the lowest rate among the countries studied). However, the situation appeared to be changing in late 1975 when one-third of Japan's major business enterprises decided to call off their annual recruitment of Spring 1976 college graduates. Many companies indicated that their long-term plans are to hire fewer new graduates because of considerable overstaffing.

Youth unemployment at the end of 1975 was over 10 percent in the United States, Canada, Australia, and France. The United States and France had, by far, the highest rates of teenage unemployment. Japan and Sweden had the lowest jobless rates for persons under 25. Sweden has experienced declining unemployment during the two-year period considered here, but the fall in adult unemployment has been much greater than the decline for teenagers. Spurred by signs of slackening labor market conditions, the Swedish government introduced new measures in late 1975 to encourage the hiring of young people.

MEASURES TAKEN TO COMBAT YOUTH UNEMPLOYMENT

During the recent recession, several foreign countries instituted special measures aimed at alleviating youth unemployment. Some of these programs are: (1) subsidies to employers to hire young people they would not otherwise employ (France, Great Britain, Sweden); (2) subsidies to employers who might not continue apprenticeships because of difficult economic conditions (Great Britain, Netherlands); (3) mobility allowances for students taking up summer jobs in other areas (Canada); (4) job creation for youth by the public authorities (Canada); (5) extension of compulsory education of encouragement to youth to extend their education voluntarily (Canada, France, Germany); and (6) financial support to unemployed youth, including those who have never worked (Belgium, Great Britain, Sweden).

[1] Data for April 1973 and April 1975.
[2] Data for May 1973 and April 1975.
[3] Data for July 1973 and July 1975. Unemployment rates are rough estimates computed from data on the registered unemployed by age and official projections of the midyear labor force by age.

Note: The figures shown have not been adjusted to U.S. concepts. With the exception of Great Britain, all of the statistics were derived from labor force sample surveys. Although the data are not strictly comparable even among the countries with surveys, because of differences in definitions, unemployment comparisons based on labor force surveys are much more valid than comparisons based on administrative statistics on the registered unemployed. Registration statistics are particularly uncertain for comparisons of youth unemployment since a high proportion of unemployed youths are new entrants in the labor force. New entrants are generally not eligible for unemployment benefits, and, therefore, are less likely to register with employment offices than the experienced unemployed.

PROBLEMS INVOLVED IN MAKING INTERNATIONAL UNEMPLOYMENT COMPARISONS

Since the early 1960's, the Bureau of Labor Statistics has published unemployment rates adjusted to U.S. concepts for major industrial countries. The basic labor force statistics of these countries, with the exception of Canada, require some adjustment to bring them into closer comparability with U.S. data. The accuracy of the adjustments depends on the availability of relevant information, and, in some instances, it is necessary to make estimates based on incomplete data. Therefore, it is possible to achieve only approximate comparability among countries. Nevertheless, the adjusted figures provide a better basis for international comparisons than the figures regularly published by each country.

The incomparability of national figures on unemployment is attributable to two chief causes: (1) differences in the systems for collecting data and (2) differences in concepts or definitions.

STATISTICAL SYSTEMS

Two systems for measuring unemployment are used by the countries studied by BLS. The United States, Canada, Japan, Italy, and Sweden depend on periodic (usually monthly) labor force sample surveys, while France, Germany, and Great Britain rely on monthly counts of registrants at employment exchanges. Labor force surveys generally yield the most comprehensive overall statistics since they are designed to cover all persons seeking work, whether or not they register with employment exchanges. Also, changes in legislation and administrative regulations do not affect the continuity of the survey series, but may have a substantial impact on registration data.

Fortunately all countries produce a good deal of supplementary information on unemployment in addition to the official unemployment rate. Such additional sources have been indispensible in adjusting the official data. For example, the three countries which use unemployment registrations as their official source of data also conduct periodic labor force surveys. BLS uses the results of these surveys to obtain adjustment factors to apply to the registered unemployed series. A problem arises from the fact that there is often a long time lag between data collection and survey publication (e.g., the latest published survey for Great Britain is for 1972; for France and

Germany, April 1975). Thus, BLS must occasionally make revisions to the comparative estimates when more recent surveys are published.

DIFFERENCES IN DEFINITIONS AND CONCEPT

Even when the same type of data collection method is used, definitions of unemployment and labor force may differ from country to country. Thus, labor force surveys may differ in regard to treatment of such groups as military personnel, students, unpaid family workers, discouraged workers, and persons on temporary layoff. Other areas of difference include criteria for seeking work, reference periods, age limits, and tests for current availability on the part of unemployed persons.

BLS is able to make adjustments of foreign country survey data to U.S. concepts for many of the differences noted above. Instead of adjusting the data of all countries to the U.S. lower age limit of 16, the foreign limits have been adapted to the age at which compulsory schooling ends. This is done because youths in several countries complete their education and enter the labor force on a full-time basis at earlier ages (i.e., 14 or 15) than in the United States.

There are certain conceptual differences for which it is not possible to make adjustments. For example, no adjustment can be made for the differences in the amount of time allowed for jobseeking activities. Since 1967, the U.S. survey has required active jobseeking within the past four weeks for a person to be counted as unemployed. Prior to 1967, the U.S. time period was vague and was probably interpreted by some jobseekers to refer only to the survey week. Special studies indicated that the effect of the change in definition in 1967 resulted in only a small increase in the number of persons enumerated as unemployed. In several foreign countries, the reference period for unemployment appears to be limited to the survey week. However, in practice, the reference period may be longer than the survey week because persons awaiting the results of previous job applications are generally counted as unemployed.

In the United States, unemployed persons must be currently available to begin work (except for minor illness) and actively seeking work. There are questions in the survey which test a person's current availability and jobseeking activity. Most other countries mention current availability and active jobseeking as requirements for classification as unemployed, but do not have specific tests of these points in their survey questionnaires. A few countries probe only into the current availability of students who say they are looking for work. In most cases, BLS cannot make adjustments for differences in the degree of probing in survey questionnaires. However, recent changes in a number of countries indicate a trend toward more specific questions and more probing into labor force status.

Adjustments by age and sex. Adjusted unemployment rates by age and sex are less reliable than the overall adjusted unemployment rates. Whereas adjustments made to the overall unemployment rates are based on published statistics generally available each year, adjustments by age and sex have been partly estimated on the basis of data which are not available annually. Although the necessary breakdowns by sex are usually available, age distributions often pose a problem. For instance, age distributions of career military personnel are often available only for census years. In some cases, assumptions about the age distribution of certain groups had to be made. For example, the age distribution of unpaid family workers who worked less than 15 hours was assumed to be the same as the distribution for all unpaid family workers.

(Prepared by: U.S. Department of Labor, Bureau of Labor Statistics, Office of Productivity and Technology, January 1977.)

CONSERVING ENERGY AT HOME

Mr. BUMPERS. Mr. President, we are interested in doing all that is possible to conserve energy. However, many of us are unaware of which efforts will be productive and what part of our everyday habits is counterproductive.

An excellent article which appeared in the February 9 edition of the Wall Street Journal provided some helpful suggestions about energy conservation. This article provides useful information from those who have studied fuel use to homeowners. I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEAR A SWEATER? YES; LOWER HEAT? MAYBE; USE FIREPLACE? NO—MORE HEAT THAN LIGHT EXISTS ON ENERGY CONSERVATION; TWIN BEDS VS. DOUBLE BED

(By Frederick C. Klein and Paul Ingrassia)

There was President Carter on national television last Wednesday night, wearing a sweater, sitting before a blazing log in his White House fireplace, and preaching the necessity of conserving fuel during this very long, very cold, very difficult winter. He asked that home thermostats be set at 65 degrees during the day and 55 degrees at night.

Of the President's three energy-saving "tips," experts on homeheating could find no fault with only one—his sweater. A wood fire is a cheery and perhaps necessary prop in a presidential fireside chat, but it wastes other fuels rather than saves them, these experts say. As for turning down the thermostat 10 degrees at night, maybe it's a good idea and maybe it isn't.

It all goes to show that keeping warm this winter without going broke and being considered unpatriotic is no simple matter. The three-month siege of record-low temperatures over much of the country has sent homeowners on a frantic hunt for advice on heating and on such other cold-weather problems as frozen water pipes. What they are getting is a jumble of facts, misconceptions and old wives' tales.

This unhappy situation arises partly because little research on home heating has been carried on in recent years. "Scientists have been far more concerned with exotic subjects, like getting men to the moon," says John Muller, an engineer for the Federal Energy Administration in Washington. He relates that as a result of some recent

queries, he undertook an extensive search for scholarly papers on the effects of fireplace use on other heating systems. He found only one.

It also arises from some differences among people who have looked into home heating "This is a technical matter, and, as such, it generates shades of opinion," says William Chapman, vice president of Johnson Controls Inc. of Milwaukee and president of the American Society of Heating, Refrigerating and Air-Conditioning Engineers. He adds, "What kills you are generalizations. There are few things one can say about heating that are true under all circumstances."

In an effort to cut through the confusion and impart some useful information to homeowners, The Wall Street Journal interviewed Mr. Chapman and a dozen others who have studied fuel use and related subjects.

Here is what they say:

CLOSING ROOMS

Money and fuel can be saved by shutting off radiators or heat registers in rooms and keeping the doors closed, but the amount won't be proportional to the amount of space sealed off, according to Warren Harris, a professor emeritus of mechanical engineering at the University of Illinois.

The type of home most likely to benefit from this device is the rambling ranch house, Prof. Harris says. Closing off rooms or whole floors in two- or three-story homes "doesn't do that much good" because insulation between floors usually isn't sufficient to stop heat from rising to such places, he adds.

THERMOSTAT SETTINGS

In general, the lower the home thermostat is set, the greater the savings of energy and money, but there are some important qualifications.

First, anyone who dials down his thermostat 10 degrees at night, as President Carter suggests, should be prepared to keep it down for at least eight hours. Setting it back for less than four hours probably will result in a net energy loss. Between four and eight hours is a "gray zone."

The explanation is that when the thermostat is turned up again in the morning, a gas or oil furnace must work extra hard to reheat the house (such furnaces constitute 70% of all residential heating units in the U.S.) To do this, the furnace runs continuously for a time and can burn fuel faster than the heat exchanger (the plate over which air is passed to be heated) can push it into the house. Thus, "a higher-than-normal percentage of heat goes up the chimney," Mr. Chapman says.

"If you've dialed down for eight hours or more, the fuel you've saved will more than make up for what you lose in the kickup period," he continues. "If you've dialed down for four hours or less, you'll get the same 'quickup' loss without the savings to offset it."

Second (and relatedly), dialing down even for eight hours or more might not be a good idea when the temperature is extremely low, say, around zero or less. That's also because of the energy loss during reheating. Experts say that if your furnace has to run for more than two hours straight to reheat your home, dial only a few degrees or not at all down. Additionally, an overheated furnace can pose a fire danger.

Finally, authorities don't recommend turning thermostats to less than 55 degrees for any prolonged period because it involves a risk of frozen water pipes in a home's extremities.

Other nasty things can happen if a home gets too cold. Brian Morris, a resident of Staten Island, N.Y., recently set his thermostat at 60 degrees during a weekend trip. He returned to find that a number of tiles on his bathroom wall had buckled from the cold and that some had cracked. Replacing them cost $16, "which is more than I have saved on heating," he said ruefully.

INSULATION

Experts agree that cracks should be caulked, windows and doors weatherstripped, and goodly amounts of glass fiber or cellulose materials affixed to walls and attic floors. But just how much of the latter is needed varies widely with climate and local heating costs.

Arthur Johnson, director of energy conservation for NAHB Research Foundation Inc., of Rockville, Md., which is owned by the National Association of Home Builders, says that New Yorkers should have at least 12 inches of insulating materials on their attic floors because of the high utility rates for heating there, while homeowners in Chicago and Denver can get by with eight or nine inches. He recommends nine or 12 inches for Miamians—but because of air-conditioning costs, not heating.

Mr. Johnson strongly discourages using cheap substitutes such as crumpled newspaper in place of glass fiber or cellulose as an attic insulator. They can pose a fire hazard, he says.

Storm windows are a must, and Siechi Konzo, who like Mr. Harris, is a professor emeritus of mechanical engineering at the University of Illinois, recommends supplementing them in very cold weather by taping self-sticking polyethylene freezer wrap over inside windows.

Prof. Konzo, who has done research at the University's Small Homes Council for 50 years, says that when the temperature outside is zero, the temperature on the inside of a single window will be 17 degrees if a home is heated in the normal temperature range. If a glass or plastic storm window is added, the inside window surface goes up to 47 degrees. Adding a layer of freezer wrap will raise that to 60 degrees and can result in "significant savings," he says. (The only trouble is you won't be able to see out too well.)

FIREPLACES

Wood-burning fireplaces can provide some psychological sustenance when it's cold out, and they can be valuable as a source of heat if all else fails, but they almost always end up costing the homeowner money if they are used to supplement other heating facilities in cold weather.

Richard Rooney, an official of Majestic Co., a maker of factory-built fireplaces and accessories in Huntington, Ind., explains why this is so:

"You've got to open your chimney flue before you start your fire, and when you do this, you get an immediate heat loss," he says. "Once the fire gets going, it radiates some heat into the room, but it also burns up air that must be replaced by cold air sucked in from outside. This can be a lot or a little, depending on how 'tight' a house is. As the fire burns down, its heating efficiency declines again, and heat loss through the chimney increases. Even so, we recommend that the flue be kept open until the fire is completely out."

Mr. Rooney says it's possible to save money by using a fireplace if it helps a family tolerate much lower temperature in other parts of the house. This is especially true if the fireplace is fitted with a glass screen that restricts the amount of air a fire consumes and can be closed when the fire burns down. A fireplace also can be valuable as a sole, heating source on spring or fall evenings when it's just a bit chilly.

Still, he adds, as a rule, "you usually have some net heating loss when your fireplace is in use."

HUMIDIFIERS

People with respiratory ailments need humidifiers, and their use might make others better able to tolerate lower house temperatures. But they take energy to operate, so any net loss or gain usually is negligible, authorities say.

Setting out open pans of water helps somewhat. So does soaking a rolled-up newspaper and putting it in a coffee can or other container. Humidity also gets into the air through cooking, running water, taking baths or showers, and other normal goings-on.

Too little humidity in the air can result in cracks in wood furniture or moldings, but too much humidity also can injure wood. "If it gets to the point where water is condensing on the insides of windows, you've gone too far," Mr. Chapman says. "The effect is the same as putting a wet glass on a wood table."

WATER HEATERS

Mr. Muller of the FEA says that heating water consumes about 20% of the natural gas burned by an average home with a gas furnace. Reducing the water-heater setting from the standard 140 degrees to 110 degrees can cut gas bills in the East or the Midwest by about 3%, he adds. It also helps to wash and rinse many kinds of clothes in cold water. "If you don't like the way they turn out, run 'em through again," he says.

He also notes that lower water-heater settings will mean that dishes washed in a dishwasher won't be as clean as before and that there might not be enough hot water for the last person in the shower.

FROZEN WATER PIPES

To avoid this catastrophe, basements should be kept heated, and one cold-water faucet in a home should be left on overnight to a trickle "the size of the lead in a pencil," according to the Minneapolis Water Department. Any faucet will do, just so there's movement in your water system.

The potential big problem in many areas is that the ground is freezing below the generally accepted minimum depths at which it has been considered safe to bury water pipes. If the soil around a buried water pipe falls far below freezing, even the fact that water is moving won't keep it from icing closed.

Plumbers say there isn't any basis for the belief that pipes carrying hot water are most likely to freeze. They say the notion probably got started because hot water will turn to ice cubes faster than cold water. But that is only because hot water melts the insulating layer of frost in the freezer compartment and puts the bottom of the ice tray into direct contact with the cold metal of the freezer.

ODDS AND ENDS

On sunny days, open all shades, blinds or curtains on windows facing the sun. Close them again as the sun moves.

Heat to garages should be closed off. If it's very cold, disconnect your car's battery and bring the battery inside the house where it's warm.

Turn off gas lawn or porch lights. They consume more energy than a gas range in many homes.

Some companies are offering to pinpoint home-heat loss with infrared equipment. The devices can't measure heat loss, but they can locate weak spots in insulation.

Double beds are considered more energy-efficient than twin beds.

CONSOLIDATED FINANCIAL STATEMENT OF SENATOR AND MRS. ADLAI E. STEVENSON

Mr. STEVENSON. Mr. President, in accordance with my long-standing practice, I ask unanimous consent that a financial statement for myself and Mrs. Stevenson be entered in the RECORD.

There being no objection, the financial statement was ordered to be printed in the RECORD, as follows:

Consolidated financial statement of Senator and Mrs. Adlai E. Stevenson, January 1, 1977

REAL ESTATE	
Home, Washington, D.C. (cost)	$125,000

PROSPECTS FOR STABILITY IN SOVIET GRAIN SUPPLIES

Mr. HUMPHREY. Mr. President, I wish to bring to the attention of the Senate an article by Alexander M. Derevanny, entitled "The Soviet Grain Crop of 1976: No Sign That Output Is Stabilizing," in the January 31, 1977, issue of Feedstuffs.

One of the important points made in this article is that Soviet grain production for 1976 was 223.8 metric tons, surpassing the record of 1973 by 1.3 million metric tons. In spite of this sharp increase of roughly 85 million metric tons in 1 year, the moisture level of this year's crop is running as high as 35 percent, and it is assumed that there may be heavy losses.

The article also goes into some of the issues relating to Soviet agricultural policy. In particular, Dr. Wadekin suggests that yields on fertile lands could be expanded, rather than promoting new schemes on marginal lands.

In addition, the article goes into a whole host of problems relating to having working equipment on hand when needed at harvest time, the problem regarding spare parts, the extensive problems regarding the availability and distribution of good seed, and the problems of the inadequate transportation system.

The implications of the article are clear. While this past year was a good harvest, there is little to lead one to conclude that next year will be the same. It is more likely that this good harvest will be followed by two mediocre ones.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SOVIET GRAIN CROP OF 1976: NO SIGN THAT OUTPUT IS STABILIZING

(By Alexander M. Derevanny)

(NOTE.—In official Soviet versions, crop failures are inevitably blamed on the weather, while the Soviet planners, the socialist system, the tenacity and patriotism of the Soviet "kolkhosniki" and "sovkhozniki" receive credit in years of abundant crops. In this article, Alexander M. Derevanny evaluates the significance of the 1976 grain crop falling in the latter category. Mr. Derevanny is a journalist trained as a linguist and international trade specialist, who consults on Soviet and Satellite agricultural economics and politics. He has traveled extensively, including in the USSR.)

1976 was a record grain year for the USSR. The final figure just announced is 223.8 million metric tons, surpassing the 222.5 million metric tons recorded in 1973 by 1.3 million metric tons.

Detailed crop data are hard to come by in the Soviet Union. As a rule, it is not before the middle of the year following the crop year that they are being made available officially. The same is true for the figure showing the quantity of grain acquired by the State Grain Purchasing Monopoly. The most recent estimate of the latter is 91.8 million metric tons or 1.3 million metric tons more than in 1973, when 90.5 million metric tons were purchased by the Monopoly. It may be just accidental that the 1976 increase in the volume of grain acquisitions by the Monopoly corresponds to the ton to the increase in the total grain output.

What is of major interest if we wish to determine the trend of Soviet grain production is the degree of variability. As can be seen from the accompanying graph, the current total grain crop deviates from the trend line very little, probably not more than +5½ million tons.

The Soviets are working very hard on making grain output more stable. As yet, the deep valleys and steep peaks shown in the graph do not seem to signal a stabilizing trend for the years to come. To determine whether or not such a trend is actually developing, it will be necessary to wait at least another two, preferably three years. Only then, will it be possible to ascertain whether all the technological and organizational progress of which Soviet officials have been boasting this year, will actually lead to what has been called "less sensitivity to the weather hazards."

Of interest in this connection is the discrepancy between the big total 1976 grain crop and the relatively small wheat crop. The crop was somewhere between 95 million and 100 million metric tons while in 1973, with a total grain crop smaller than 1976, Soviet farmers came through with a whopping 110 million metric tons of wheat.

The reasons for the 1976 wheat output decline, historically Russia's main cereal, are not entirely clear. A somewhat smaller wheat acreage, the forced replanting of 9 million winter killed acres and the ceaseless rains which hampered harvesting operations in European Russia may be some of the reasons. Another disappointment for the Soviets is the 10 million metric tons corn (maize) crop, down from an earlier 14 million metric tons estimate.

In a country of 255 million rye bread eaters a crop of 13 million tons of that cereal (as compared to 15¼ million tons in the "so-so" crop year of 1974) must have come as an unpleasant surprise. No other 1976 Soviet field crop has turned out a poorer performance, however, than the sunflower. The estimate now ranges between 5 and 5½ million tons of seeds, probably closer to 5 million tons and even those, in all likelihood, of low oil and protein content.

Harvesting conditions were exceedingly unfavorable this year, and much seed did not reach full maturity. (By comparison, the 1973 sunflower seed crop was 7.4 million metric tons, the crop of the "mediocre" year 1974 6.8 million metric tons). Other cereals—barley, oats, millet, buckwheat, rice—seem to have done much better.

ORGANIZATION

When all the data on hand at the time these lines were written are addd up, however, there emerges a picture of a much improved functioning organization both at planting as well as harvesting time, an unmistakable increase in the supply of fertilizer, weed killers and pesticides, a better availability of spare parts and machinery, and last but by no means least, an increase in the number of drivers with the necessary skill to operate these machines.

Also, there seems to have been a marked improvement in farm worker morale (supposedly due to the many incentives and bonuses promised for better performance) and generally speaking, a tighter discipline and a better organization directing the huge number of crop workers still needed for a successful harvest in the Soviet Union. As an example, 1 million farm workers, among them 55,000 soldiers with trucks, were needed to get this year's Krazakhstan grain crop—presumably 29 million tons—under cover.

Just the same, to say that the 1976 grain crop was received in good shape would be exaggerated. Especially in European Russia, wheat and other small grains went into bins and silos with a moisture content far above the norm established by the Purchasing Monopoly, and in many places, coarse grains had not reached full maturity.

It should be noted that the State Purchasing Monopoly buys grain from the collectives and state farms on an accounting basis (15-percent moisture, 2-percent foreign matter). In normal years, figuring a 10-percent loss,

also figuring that post-harvest losses in the USSR run between 40 percent and 60 percent of total losses, it is usually possible to estimate the net usable grain crop. Not so this year. In some places moisture content ran as high as 35 percent. The U.S. Department of Agriculture's figure of a 195 million metric tons net usable grain crop, made at a time the gross estimate was 215 million metric tons, could still be valid although the final count now surpasses the 1973 record. Crop losses for 1976 are now conservatively estimated to run in the neighborhood of 14 percent. Applying this percentage to the total crop would bring the usable grain figure to even less than 195 million metric tons.

It may be of significance that, as mentioned earlier, the Soviets are now looking for output stability, rather than for new production records. In his October, 1976 address to the Plenum of the CC, CP-USSR, Secretary General Leonid Brezhnev said ". . . to reach the target of 235 million metric tons annually by the end of the current Five-Year Plan is our central task," explaining ". . . our country is implementing the world's largest land reclamation project. *Zones of guaranteed grain production are being created.*"[1] (Emphasis is the author's.)

LAND RECLAMATION

West German specialists of Soviet agriculture have been wondering for some time why the Soviets have to embark on all kinds of out-of-the-way land reclamation projects (including extensive irrigation of the Siberian "new lands," irrigation and drainage projects of the non-black lands located in the bleak north of European Russia) when all that is needed, to increase their grain output by approximately 20 million metric tons annually, is to push production in the regions which, in terms of fertility and annual precipitation, are very similar to the big crop areas of Central and Western Europe. In the opinion of these scientists, 25-percent yield increases from the present (1971–1974) average of 26 quintals per hectare to 30–35 quintals per hectare should be entirely feasible. These are the regions whose production potential, they think, is not fully utilized: the Ukraine, the central- and north-Caucasus crop lands, to a lesser extent the somewhat more drouthy areas of the Volga region and those regions in northwestern Kazakhstan that had been cropped for centuries long before the idea of plowing up the steppes in the south had been born.

Dr. Karl-Eugen Wadekin, one of the German scientists, says, "It's a vicious circle in which the low yields of the fertile lands force expansion into marginal crop areas; which expansion, in turn, lowers the average level of production."[2]

(Dr. Wadekin insists that the same is true for the Soviet livestock industry which at present uses about twice as many units of nutrition per animal product unit as are used in western livestock countries. If this could be remedied, says the author, the Soviets could save 20–30 million metric tons of grain (in concentrate form), even if the feed utilization ratio was not brought up completely to the level of the countries that have achieved top feed economy efficiency in their animal industries.)

But these are even more striking examples of incomprehensible indolence in the Soviet approach to modern grain farming methods, methods that have been in use in the West not for years but decades and have proven their worth. An example is custom combining.

Two Canadian agronomists delved into this question and came to the conclusion that custom combining in the USSR is entirely feasible except that, unlike North America where custom combining crews move from south to north in one sweep, in the USSR two separate west-south-west to east-south-east runs would be required.

The two Canadian scientists figure that custom combining the main USSR grain regions would reduce the number of tractors now required for harvesting operations in half. Also, according to their calculations, only half as much capital would be immobilized in this case.

Soviet agronomists know that custom combining depends on precise timing. What with the chronical spare parts shortage and the machinery repair problem (see below) they're afraid of disastrous bottlenecks. Also, equipment transfers especially from collectives might be reviewed as another bureaucratic about-face, possibly an attempt to reintroduce the ill-fated "machine tractor stations" of the 1950s. Also, they are wary of the question of how to compensate farms for the use of the equipment, the two Canadians argue.[3]

FOUR "ACHILLES HEELS" OF SOVIET AGRICULTURE

Presumably, the Soviet farm colossus walks on two legs. Even so, we regret to say, he does have four "Achilles heels." In order of importance to the Soviet system, they are: spare parts; agricultural machinery including trucks and tractors; seed production and distribution, and transportation.

Space limitations do not allow us to go into the details of the delays, obstructions, frustrations and demoralizations of farm workers and farm managers, caused by the chronic lack of spare parts and the low quality of those parts that are obtainable. There is an insufficient number of tractors, grain drills, field choppers and combines *in working condition* available just when and where they are needed most (the emphasis is on "working condition" because literally thousands are standing around for months, sometimes for years in the farm machinery lots of "Selkhoztechnika", the agency entrusted with the maintenance and repair of all machinery). Also, the life expectancy of all machines in service is about half of what it is in the West.

(In the four-year period, 1970–1974, collective and state farms received 1,297,000 tractors. Yet, the net increase in working tractors was only 290,000. Similarly, statistics show that 365,000 grain combines were produced during the same period, but the increase in the machinery park was only 50,000. The reason for this state of affairs is obvious—lack of spare parts, unavailable speedy repair facilities and early junking of machinery in use.)[9]

The odd system of seed production and distribution which, even in the bumper crop year of 1976, compelled countless farmers to use seeds that had not been graded, deserves a separate paragraph and so does the all-important question of transportation.

SEEDS

The two facts of life the USSR seed industry has to face every year are:

The better than 500 million of tillable land (315 million in grain) of the USSR require the growing of a great variety of seeds, corresponding to the many faceted soils and climates of that enormous country, and

Nowhere in the Soviet agriculture did the obsession with farm industrialization have a more detrimental effect than in the seed producing industry. Here is how the Soviet seed business works or, better said, is supposed to work: seeds of pure strains developed by a plant breeding station are delivered for multiplication to specialized seed growers. These have to surrender their entire crop to the Government Seed Distribution Agency which in turn swaps the pure strains, to be planted on special plots) with collectives and state farms of the district against ordinary seed.

The trouble with this system is that the districts are far too large. Frequently farms have to take seeds unsuited for their particular soil and climate and, as a rule, there isn't enough of the pure strains to go around. Favoritism on the part of the officials of the seed agency is rampant and even more frequently, the "come and get it" distribution system prevails which, quite obviously, favors the nearby farms.[4] The elephantine slowness with which the various government agencies connected with the seed business work may still allow the timely delivery of winter seeds in the late summer and early fall; In the rush of the short Russian spring planting season, they usually fall hopelessly behind. This seems to have been the case even in the bumper crop year of 1976.[5]

Thus, it should not come as a surprise that, after one of the biggest grain crops in Soviet history, the Central Committee of the CP-USSR, in a scalding attack published in the Russian farm press on Nov. 21, 1976, castigates the All-Union Academy of Agricultural Sciences and the Ministry of Agriculture which has jurisdiction in the matter, and the Ministry of Procurement—seed distribution is within that ministry's jurisdiction—for the lack of progress in seed improvements; the fact that many existing varieties are prone to lodging, have no or only little resistance to rust and other diseases; that the selection of maize (corn), sorghum, oilcrops and grass seeds is inadequate, and that the production of legume seeds especially alfalfa is sorely lagging.

The decree of the Central Committee orders the respective ministeries to proceed immediately with the establishment of a dense net of strategically located plant breeding stations, with adjoining specialized multiplicator farms entrusted with the production of the new seed varieties developed by the stations.

To stimulate the production of these seeds during the transitional period (i.e. until the new stations and their specialized seed growers are functioning), the edict signed both by the CC and the Council of Ministers, proposes to the collectives and state farms a deal whereby for every centner of seed delivered to the State Seed Distribution Agency, farms would receive feed concentrates (not ordinary grain as in the past, mind you!) in a certain proportion, thus:

For 1 centner of approved seeds of any self-pollinating small grain or seeds of parental lines of hybrid corn or single cross corn hybrids—3 centners of concentrates; for 1 centner of sorghum seeds of the above types—2 centners of concentrates; for 1 centner of alfalfa seeds, white and alsike clover—10 centners of concentrates; and for 1 centner of red clover seeds—8 centners of concentrates.[6]

No further comment is needed except possibly that, among others, the mentioned edict is also testimony to the acute shortage of high protein concentrates on many farms.

TRANSPORTATION

Marketing of farm products in the USSR depends almost entirely on the railroads. There are no "superhighways" similar to American "thruways" or European "autostradas." In fact there are only few all-weather paved roads. In rainy weather, dirt roads connecting farms, not only with villages and larger population centers but also with other farms in the vicinity, become a quagmire.

Thus, the railroads are called upon to carry all bulk farm output, including grain, root-crops, fruits, vegetables and slaughter animals as well as all bulk input items such as fertilizer, lime, chemicals and fuel.

However, the Soviet railroad net is thin, the distances enormous. Stations are far apart, sometimes hundreds of miles from agricultural production areas. Freight trains travel at extremely slow speeds. The average speed is 15 kilometers per hour, even for perishable produce such as fresh fruit and vegetable and also meat and milk, which frequently shipped by railroad because of the shortage of refrigerator trucks and tankers.

Footnotes at end of article.

This also explains why fruits and vegetables are grown on farms (and in huge hothouses) in the vicinity of the big northern cities, although poor soil, the rough climate and a short growing season put the economy of the projects in serious doubt.

A similar disregard for economics, prompted no doubt by the government's lack of faith in farm product transportation improvements in the foreseeable future, is the creation of a whole series of farm exploitations in the inhospitable, scarcely populated territories. This includes territory along the new Amur-Baykal Railroad in south-central Siberia, the projected reclamation for livestock purposes of the brush and forest overgrown islands and floodlands of the Ussuri and Amur Rivers, altogether some 23,400 hectares,[7] the "broilertown" Nekrasovka project on 100 hectares near Khabarovsk within sight of the Chinese-Siberian border, said broilertown scheduled to produce 12,000 metric tons of poultry meat annually.[8]

All these projects show the intention of the Soviet planners to make the Far East mining and industrial region independent or at least less dependent on food hauled over literally thousands of miles from the great crop areas of Western Siberia and Southeastern European Russia. These mining and industrial towns are growing fast, while supply conditions based on regionally grown food and feed grains are improving only very slowly. There is no question that for many years to come, Soviet planners will continue to be confronted with the choice of hauling ever increasing quantities of grain and/or flour on the already now badly overloaded railroad system or fill the requirements of the region through Pacific port imports from the U.S. West Coast (white wheat?), Canada and Australia. Even Soviet economists are capable of figuring out that ocean transportation of bulk cargo involves only a fraction of the cost of overland transportation by antiquated railroads which, on top of everything else, are desperately short of rolling stock.

THE FUTURE

Many many more questions are being asked by students of Soviet agriculture as the momentous year 1976 has come to an end and a new crop year is already in the making. Will it be the usual sequence: an excellent year followed by one catastrophic, two mediocre ones?

Nobody knows, since too much depends on the totally unpredictable Russian weather. But even assuming that the clumsy farm organization will work better from now on, there still remains the question of the continually rising demands for dietary improvements of the Soviet peoples. And, directly connected with this demand, the ceaseless build-up of livestock and poultry numbers. Nor should it be forgotten that the Soviets have to take care—for political reasons—of the periodically grain-short three northern tiers satellites (Poland, East Germany, Czechoslovakia). Normally 5 million tons annually are being set aside for that purpose.

Soviet agricultural economists calculate—and foreign specialists agree—that the USSR, to be self-sufficient, needs 1 ton of grain per inhabitant. Theoretically, at least, that would leave an import gap of about 30 million metric tons, even assuming that somehow, annual cereal production will now be stabilized around the 225 billion ton mark.

But not even Russian officials have any illusions that a 225 million ton grain crop can be repeated year after year without fail. Speaking to American audiences recently, representatives of the Soviet government made no secret of their expectations that grain and oil crop imports similar to the present ones will continue for at least five more years, even if domestic farm output should improve as planned.

Also, let us keep in mind one thing: In the USSR, unlike the U.S., the question being asked when projected improvements in farm efficiency are being discussed, is not, "Can it be done?" but, "Will it be done?" Because—and again totally unlike the U.S.—in the USSR, technical and financial feasibilities are not the only criteria leading to a decision.

SOVIET ARREST OF YURI ORLOV

Mr. PELL. Mr. President, as Cochairman of the Commission on Security and Cooperation in Europe, I wish to express my deep concern and disappointment over the detention yesterday of Yuri Orlov by the Soviet authorities. Professor Orlov is one of 11 Soviet dissidents who last May founded the Public Group To Promote Observance of the Helsinki Agreements in the U.S.S.R. More than anyone else, Yuri Orlov has symbolized the courageous response which the Helsinki Accords of 1975 have generated in the Soviet Union and Eastern Europe in an effort to further the cause of human rights.

I am profoundly disturbed by the implications of this most recent Soviet action which comes hard on the heels of a round of similar arrests last week. These events raise questions as to whether a concerted campaign of repression is being initiated to silence all of the voices which might embarrass the Soviet Union this coming June when representatives of the 35 signatory governments to the Helsinki Final Act gather in Belgrade to assess the progress made in fulfilling the promises made in that document. In particular, these arrests call into question whether the Soviets will play a constructive role in Belgrade.

What disturbs me most about the arrests of Yuri Orlov and others is that the Helsinki Final Act was intended to be a code of conduct for East-West relations aimed at "overcoming distrust and increasing confidence" between East and West. A key element in this code of conduct was the body of provisions dealing with human rights known as Basket III. These most recent arrests, which are contrary to both the letter and spirit of Helsinki, only serve to fuel rather than ease tensions between East and West. I fail to see how that can be in the Soviet interest.

I, therefore, urge the Soviet Union to reconsider its attitude toward the Soviet group monitoring the Helsinki Accords and to release Professor Orlov and his colleagues. Surely, a nation as powerful as the Soviet Union can realize, as nations of the West have, that it is possible for governments to tolerate open discussion on the part of individuals and organizations.

TAX STIMULATION PACKAGE

Mr. HATHAWAY. Mr. President, America's small business has traditionally been a vital part of this Nation's social fabric. We are only now beginning to acknowledge its value. Once, the system of small entrepreneurs provided a channel of upward mobility for waves of immigrants. Today, that same system is at the cutting edge of technological innovation in industry, spurring economic growth, and creating an extraordinary number of new jobs.

Prominent among those groups advancing the interests of American small business are the National Small Business Association and the National Federation of Independent Business. A February 8 New York Times article relates the views of these two groups on the upcoming tax stimulation package suggested by President Carter. A program of tax credits for new jobs created in small business, as proposed by these groups, could save the taxpayers up to almost $8,000 per job each year over public works jobs.

Such a tax credit plan, modeled after a bill recommended in the last Congress by Senator GAYLORD NELSON, has now been introduced by Representative BUTLER DERRICK of South Carolina. It is the Small Business Job Credit Tax Act, H.R. 2691. I believe this proposal deserves serious consideration by Congress.

I request unanimous consent that the New York Times article be printed in full in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VOTE OF CONFIDENCE FOR SMALL BUSINESS COMMUNITY

(By Thomas E. Mullaney)

WASHINGTON.—There was a high degree of elation here toward the end of last week among the various lobbying organizations that represent the nation's small-business community. They had just won a big victory in Congress on an issue they feared was impossibly lost a few weeks ago, and they counted rising support among the legislators for their position on a different tax plan to create new jobs in the private sector of the economy.

The ecstasy at the National Small Business Association and at the National Federation of Independent Business—the two principal representatives here for the 10 million small manufacturing and retail establishments in the United States—was prompted principally by an overwhelming vote in their

favor by the Senate last Friday. The Senate agreed to retain its Small Business Committee as a separate panel instead of merging it into the Agriculture Committee, as had been proposed in the broad, controversial reorganization plan of Senator Adlai Stevenson 3d, Democrat of Illinois. In that critical voting, of course, it was more significant that nine other committees scheduled for extinction were also reinstated.

Had the original plan been adopted, the small-business representatives feared, their various objectives for their own constituents would have been accorded less attention by a new Senate committee burdened with too many other responsibilities.

The small-business representatives consider the Derrick bill a good first-stage measure that will be simple and effective in the creation of new jobs quickly—at a relatively low cost to the Treasury and immensely helpful at the same time to a struggling sector of the business world, which accounts for about half the jobs in the national economy.

Mr. Stewart estimated that the net cost to the Treasury of a new job under the Derrick bill would be about $3,100, compared with $8,500 for a new public-service job and between $10,000 and $12,000 for a public-works job. Moreover, he said, in a survey of his organization's 50,000 membership last year, 75 percent said they would use such a job-creation credit and hire an average of two additional workers.

What reception such a proposal will get from Congress is unknown at this point, but comments last week by some members of the Ways and Means Committee indicated growing interest in some such job-credit plan is preference to the two business options offered by the Administration.

James D. (Mike) McKevitt, the Washington counsel for the National Federation of Independent Business, also supported a form of tax credit for small business in a recent interview. With 486,000 members around the country, the federation is the largest trade association for small business.

"We're getting better hearing from Congress," he said, "but we're still waiting patiently for President Carter to get around to us."

"Now we have greater hope that the 95th will indeed be a turnaround Congress as far as small business is concerned," said Milton D. Stewart, president of the National Small Business Association, after the vote result was obtained in a repetition of a theme he has been expressing since last November's election.

Whether that segment of the business community will really have more clout in Washington these days may be better gauged after Congress completes action on the economic-stimulus package of tax and spending proposals that President Carter has submitted to it. The House Ways and Means Committee will start to hear witnesses from the private sector on the package today, and among the early participants will be representatives of small business, Mr. Stewart and Bruce Felding, secretary of the N.F.I.B.

Mr. Stewart said his organization will lend its support to a different type of stimulus package for business than the two alternative options proposed by the Carter Administration. He said the plan that small business espoused should be viewed as a third option for business, not as a conflicting proposal with the Social Security tax credit and the investment-tax credit increase suggested by the Administration.

The plan that he will back is contained in a bill offered last week by Representative Butler Derrick, Democrat of South Carolina, as H.R. 2691, the Small Business Job Credit Tax Act. "We think it's the right step," Mr. Stewart.

That measure would provide a flat 50 percent tax credit of his pay for each new job created in small business up to a limit of 10 positions for each enterprise and a maximum credit of $80,000 per employer.

In the Presidential campaign, the small business groups maintain, the Democratic contender made several strong commitments to their leaders in a written policy statement and at a meeting in Cleveland last October. Mr. Carter promised to consolidate overlapping regulatory agencies to facilitate action on problems and said he would see to it that the growth rate of small business exceeded that of big business and Government.

Small business remains confident that the commitments will be redeemed. Its trade associations have much they would like to talk about in addition to the present job-incentive tax plan. They want less onerous Government regulation for small business, a two-tier investment tax-credit system (with a higher rate for small enterprises) and a bigger share of Government procurement contracts of all kinds.

JEFFERSON COUNTY MENTAL HEALTH CENTER—S. 690

Mr. HART. Mr. President, I am pleased to join my fellow Senator from Colorado (Mr. HASKELL) in introducing S. 690, a private bill for the relief of the Jefferson County Mental Health Center in Colorado. This nonprofit organization has provided services to the residents of Lakewood and the surrounding area for over a decade and is known throughout the State for its dedication and excellence in health care services. It is an invaluable asset to the community it serves. The need for the legislation we are introducing arises from an unfortunate misunderstanding between the center and the Internal Revenue Service. Briefly, the situation is as follows.

For several years, the center had been collecting social security taxes from its employees. However, during a 1975 review of the tax status of nonprofit organizations, the IRS determined that the Jefferson County Mental Health Center had not filed an SS–15 form—a form which must be filed by any nonprofit organization that elects to have its employees covered by social security. The IRS, therefore, concluded that the center was improperly withholding social security taxes and directed the center to reimburse its current and former employees for the FICA taxes withheld. Having been instructed that the IRS would reimburse the center in full, the center immediately began making repayments to its employees.

It was only after the center had paid out thousands of dollars from its own pocket that the IRS reviewed the center's tax files a second time and found that, in fact, an SS–15 form had been submitted by the center in 1963. Because the form had been on record, the IRS informed the center that it could not reimburse the center for the funds repaid to employees.

Mr. President, this bill was introduced in the House and Senate during the 94th Congress. Prior to its introduction, IRS Commissioner Alexander reviewed the case and stated that he had no objection to the legislative remedy proposed by this measure. Unfortunately, however, severe time constraints made it impossible for the appropriate House and Senate committees to consider the bill. I join Senator HASKELL in urging early consideration of this matter. As a result of the confusion with the IRS, the Jefferson County Mental Health Center is facing a financial setback that may threaten its existence. The situation requires immediate attention.

LITHUANIAN INDEPENDENCE DAY

Mr. STEVENSON. Mr. President, another year has passed since we last observed Lithuanian Independence Day. It is a happy occasion when we recognize a proud people who cherish their language, cultural traditions, and religion. But we have great cause for sadness. We cannot observe the 59th anniversary of the Lithuanian Declaration of Independence without simultaneously marking the 37th year of Soviet occupation of Lithuania.

The Lithuanian people have endured, with unfailing confidence and determination, many years and many attempts to force their acceptance of domination by the Soviet Union. Thirty-seven years have not weakened their resolve. It should not weaken ours. They deserve the admiration and support of free people everywhere.

Last year I cosponsored Senate Resolution 319 which expressed the sense of the Senate that there had been no change in the U.S. policy of nonrecognition of the lawless occupation of the Baltic States. We could do no less; perhaps we could do more.

We must at least demand that the Soviet Union accept its commitment to fulfill its obligations as set forth in the International Covenants on Human Rights and in the final act of the Conference on Security and Cooperation in Europe. I remain skeptical over the achievements of the Conference of which the final act, or "Helsinki Declaration," is not legally binding upon the signatories. I believe any benefits of the Conference may have been in favor of the Soviet Union rather than the West. But the Commission on Security and Cooperation in Europe, established last year by the Congress, should at least be in a position to publicize the failings of the Soviet Union to live up to its undertakings in the final act. Firmness with the Soviet Union can promote peace and enhance human rights, as well as mutual economic welfare.

Mr. President, I join the Lithuanian community in the United States in expressing renewed support for the Lithuanian people and for the aspirations of all who yearn for freedom and basic human rights.

GENOCIDE TREATY CREATES NO NEW DANGER OF EXTRADITION

Mr. PROXMIRE. Mr. President, when discussing the Genocide Convention a very important consideration must be the effect the treaty's ratification will

have upon our own citizens. Opponents of the convention have often cited a fear of forced extradition or harassment of our citizens as grounds for their opposition to the treaty.

Although this concern for the welfare of the American people is shared by us all, I am sure that it is greatly exaggerated in this case. The Genocide Convention will not change any of the conditions under which American citizens already live.

Opponents of the treaty feel that its ratification will force the United States to extradite its citizens on trumped up charges of genocide. That situation, however, will be prevented, because extradition can only take place under laws and treaties already in existence. The United States does not extradite people unless their procedural safeguards will be protected and unless there has been a prima facie case established. The Genocide Convention will change none of these practices.

Similarly, the welfare of Americans living in other countries will not be affected by the Genocide Convention. If a foreign power wished to arrest an American for ulterior motives, it need not wait for genocide charges to base the arrest on. Any criminal charge will suffice for an arrest motivated by reasons of personal harassment.

Ratification of the Genocide Convention will not create any new dangers or precarious situations for American citizens. On the contrary, ratification will at the least place Americans in a more favorable light in the world of international opinion.

Mr. President, I urge that we ratify the Genocide Convention immediately.

SCHOOL CONSTRUCTION UNDER PUBLIC LAW 815

Mr. METCALF. Mr. President, we have heard that constructoon projects are not suitable as ingredients of a stimulus package because they take too long to get off the ground and actually generate the jobs necessary to revitalize our economy.

This generalization is suspect for one category at least, school construction under the Public Law 815 authorities. The Office of Education has stacks of approved projects that have been gathering dust on shelves due to lack of support from the previous administrations to redeem these promises to pay.

I therefore posed the question to the Office of Education, and I would like to share with my colleagues the answer I received which to my mind clearly shows that if we provide the necessary money in the supplemental now being considered by the Senate Appropriations Committee work can be started very promptly.

Mr. President, I ask unanimous consent that the January 27 reply from the Office of Education in response to the inquiry from my office be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, OFFICE OF EDUCATION,
Washington, January 27, 1977.

Hon. LEE METCALF,
U.S. Senate,
Washington, D.C.

DEAR SENATOR METCALF: In response to a telephone request from Mrs. Dorothy Tennenbaum, of your staff, we are submitting priority listings of applications under Sections 5, 10, and 14 of Public Law 81–815. We were requested to estimate which projects could go to bid, if funded, within: 90 days, 120 days, 240 days, 360 days.

The priority lists are enclosed, as we currently show them. We do not have data from the Regional Offices on all new applications that were filed for the most recent cutoff date of November 30, 1976. The majority of such applications have not been processed by those offices as yet. However, we do not believe the relative priority order nor the number of project applications listed will change significantly once that action is completed.

The priority list for applications under Section 5 of the Act is believed to be reasonably accurate, in terms of initial eligibility and priority ranking, as the facts are presently known. We would need to revalidate much of the data since 90 percent of the applications have been on file and unfunded since 1972. Fifty percent were filed in the period 1967 to 1969. The Act requires that applications be processed on the basis of the latest and best information available. It is possible that a revalidation would cause a significant number of the older applications to drop from the eligible list owing to reductions in Federal activities that may have occurred over the past decade. Also, some local education agencies may have provided facilities with funds from other sources, thus eliminating totally or reducing significantly the number of unhoused pupils.

Due to the limited funding for Section 5 applicants available in recent years, this office has requested Regional personnel to revalidate only Section 5 applications reported to have the highest priority ranking and which might be considered immediately for funding if the need for assistance remained.

The priority list for Section 14 applicants reflects a different picture. Approximately two-thirds of the applications have been filed within the past three years. Thus, the majority of these applications represent a current need for school facilities. Inasmuch as approximately one-half of the project applications reflect a tentative priority index, (i.e. they have not been firmly processed by Regional Offices), the needs shown in terms of relative priority and dollars needed may be significantly increased when firm processing is completed. Once again, only those applicatants tentatively showing high priorities are processed immediately, due to limited funding and manpower.

The priority list under Section 10 is not as complete, at present, as the list for Sections 5 and 14. In recent years many Federal installations, mostly military, have not filed applications, although their need is real, because no funds were available for new construction under Section 10 and none was foreseen. However, records have been informally and partially updated periodically in recognition of the existence of a major problem. Over the past eighteen months this office has been conducting an in depth analysis of the facilities on these installations. Upon the completion of this study, possibly within the next three months, we expect to have an accurate assessment of the physical and money needs under Section 10. On the basis of data we have already obtained from the in-depth analysis, we know that there will be more applications submitted under Section 10 (direct Federal construction on Federal property), and some of those we are carrying on the current list will be merged with more comprehensive projects.

In addition to the priority index of each application on the enclosed lists, we are showing the estimate of funds needed for each project. For applications submitted under Section 5 the estimate is reasonably firm since those figures are derived by formula. Again, this assumes that basic data underlying them have not altered. But, as noted previously, this is a very suspect assumption.

In the case of applications under Sections 10 and 14, however, we do not believe the cost estimates are reliable, particularly those for projects that have been eligible but unfunded for several years, due primarily to the effect of inflation on construction costs. One exception to this degree of reliability could be the estimate of $42,631,000 submitted by Window Rock School District, Fort Defiance, Arizona. We are not familiar with schoolhousing needs in that district to any appreciable extent. However, we suspect their estimate of construction needs is seriously over-inflated. The funding needs under Section 10 unquestionably will be much greater than our known data currently indicate, once the in-depth analysis is completed and its findings summarized. Our experience over the past few years with respect to Section 14 applications proves that initial estimates submitted by applicants are generally 100% to 200% below what actual project costs turn out to be when the project goes to bid.

On the basis of estimates we have received from different DHEW Regional Engineers who would assume the responsibility for monitoring construction progress once funds become available, we believe all the valid projects on the enclosed lists could go to bid within 360 days from the time funds become available to this office through an Advice of Allotment to this Division from the Office of Management and Budget, thence from our own Budget and Financing Office.

Those applications under Section 5 which involve smaller amounts of eligibility in terms of dollars could be expected to go to bid within 240 days. Most of those applicants, even including the smaller ones, do not normally develop educational specifications nor employ an architect to develop construction plans and specifications until they are notified that funds are reserved for the project by DSAFA. Therefore, we do not believe they could go through the developmental processes necessary to get a project ready for bid, including the various approvals required by State and Federal agencies, before 240 days.

With respect to applications under Section 10, an earlier start could be expected because we would have the authority to approve the use of construction management techniques in which some aspects of the construction program, such as site and foundation preparation work, could proceed while other aspects to follow are being completed. In quite a number of instances our Regional Engineers say they could go to bid within 120 days.

A majority of the Section 14 projects would probably not be expected to go to bid before 360 days. Many of these are large projects, located in isolated areas, and planning requires more time. A few of the Sec-

tion 14 projects have already undergone some preliminary plan work and could be expected to be ready for bid within 240 days. In the case of the project at Hays, Montana, we believe work could commence within 120 days. Here, again, construction management techniques could be expected to speed up work progress.

The priority index listing enclosed are checked to indicate those specific projects we believe could go to bid within the time shown. A summary of the number of applications, by section of the Act, and total cost within each time frame increment is shown in the following table:

ESTIMATED PUBLIC LAW 81-815 SCHOOL CONSTRUCTION SCHEDULE POTENTIAL

Public Law 81-815	90 days		120 days		240 days		360 days	
	Number projects	Estimated funds	Number projects	Estimated funds	Number projects	Estimated funds	Number projects	Estimated funds
Applicable section:								
5	0	0	0	0	282	$49, 881, 165	41	$61, 438, 002
10	0	0	40	$34, 159, 797	10	10, 864, 083	16	34, 627, 422
14	0	0	2	4, 499, 993	30	7, 144, 582	82	241, 952, 854
Total[1]	0	0	42	38, 659, 790	322	67, 889, 830	139	338, 018, 278

[1] The total of funds needed for each section of Public Law 81-815, as shown above is: Sec. 5, $111,319,167; sec. 10, $79,651,302; sec. 14, $253,597,429; total, $444,567,898.

It should be noted that more recent data with respect to Section 10 needs which we are currently developing, in cooperation with representatives of the Department of Defense and others, and the actual needs of Section 14 applicants as these are developed in the process of preparing project descriptions, will undoubtedly generate a school construction need greater than that indicated above for those two sections. The total need estimates shown above may vary considerably by section when actual bid prices for projects under Section 10 and 14 are known. Some portion of this variance could be offset by the failure of the older Section 5 projects to sustain eligibility upon revalidation of data underlying them.

Sincerely yours,

WILLIAM L. STORMER,
Director, School Assistance in Federally Affected Areas.

Enclosures.

Mr. METCALF. Mr. President, I commend to my colleagues careful study of the effects that could be anticipated in each of our States if we funded at $106 million only the 364 projects that could be operative within 240 days. I would certainly prefer to see $445 million provided to bring the backlog down to a current basis.

MORE RED INK

Mr. HARRY F. BYRD, JR. Mr. President, in the January 31 edition of the Richmond News Leader, a thought provoking editorial appeared which contained dramatic figures regarding the interest costs of maintaining the staggering and ever-growing national debt.

When 25 cents of every working person's hard-earned tax dollar goes to pay the interest on the national debt, it should be obvious that we will not get the cost of living under control until we get the cost of government, including interest, under control.

I commend to my colleagues the editorial in the Richmond News Leader, whose editor is Ross MacKenzie, and publisher is D. Tennant Bryan.

Mr. President, I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MORE RED INK

In 1966 the interest paid on the national debt was around $12 billion. In fiscal 1976 the outlay required for interest soared to $37.1 billion. And in the coming fiscal year, the federal government will pay out $44.6 billion in interest on the $650 billion national debt. It is estimated that by 1982 the interest outlay will reach some $55 billion a year.

These figures are so large as to be almost meaningless. The average taxpayer, trying to squeeze a $3-a-pound can of coffee into his budget, simply cannot visualize a billion dollars. As a result, many voters do not perceive the growing federal debt—and the growing sums needed to service it—as political issues that affect them as individuals.

Yet the $44.6 billion slated for interest expense in the coming fiscal year would buy a lot of goods and services if it could be diverted into other programs. The interest cost represents $3 billion more than total federal government outlays for education, transportation, and the environment in the coming year. Or, in another light: If interest costs could be reduced significantly, taxpayers could be given a healthy tax cut. After all, the interest expense will account for more than 25 per cent of the $171.2 billion that the government expects in revenues from personal income taxes in fiscal '78.

But the debt and its consequent interest costs fester away, requiring ever larger chunks of the federal budget pie. Most members of Congress ignore it; adding to the national debt has been a handy way to finance runaway spending in budget deficit years that stretch back to the Eisenhower administration. The deficits in fiscal '76 and '77 and the projected deficit in fiscal '78 total more than $150 billion. If President Carter implements his spending proposals, the total could approach $200 billion—in only three fiscal years.

A measure introduced in the House of Representatives would require the federal budget to be balanced, but its chances of passage are zero. Congress has found it far too convenient to keep running up the deficits—and the debt; its members would be thrown out of office if they had to raise tax rates to pay for their high-flown programs. So the debt will keep growing, and so will the interest payments. Living on the cuff may be the easy way—but no one ever described it as cheap.

ENERGY CONSERVATION THROUGH COGENERATION

Mr. HART. Mr. President, our Nation wastes from a third to a half of all the energy we consume. In 1975, we wasted more fossil fuel than was used by two-thirds of the world's population. Of course, our wasteful consumption of energy resources will not continue forever—it will come to a rather abrupt halt the moment we find there are no energy resources left.

Conserving energy need not be simply painful or difficult. About 17 percent of all our energy is used by industry to produce steam for their industrial processes. About two-thirds of this steam energy floats up smokestacks into the sky. But wherever industrial steam is generated, there is also a potential to generate electricity using only one-half the fuel required by the most efficient central station powerplant. This simple process, called cogeneration, can painlessly save the United States about 1.8 million barrels of oil-equivalent every day, and can produce about 30 percent of the total electric budget projected by ERDA's COAT study for the year 2000—at one-half the fuel cost of central station power.

The present technique for cogeneration at this efficiency, however, requires either natural gas or petroleum. But equipment can be developed for commercial use within 5 or 10 years using coal or solid wastes for fuel.

Mr. President, the ramifications of this intermediate technology will be enormous. Implementing it will not only save tremendous quantities of fuel—it will also reduce capital investment requirements in the electric industry by about $5 billion per year and will considerably reduce air pollution.

I plan to introduce legislation to facilitate commercial utilization of cogeneration techniques using coal and solid wastes for fuel in the near future. In the meantime, I think my colleagues would be interested in reading an article which recently appeared in the Bulletin of the Atomic Scientists by two brilliant and concerned physicists at Princeton University's Center for Environmental Studies, Dr. Robert H. Williams and Dr. Frank von Hippel. A portion of their article, entitled "Energy Waste and Nuclear Power Growth," concisely describes cogeneration technology and its potential for energy conservation, and I ask unanimous consent that the relevant section be printed in the RECORD.

There being no objection, the relevant section was ordered to be printed in the RECORD, as follows:

COGENERATED ELECTRICITY

Cogeneration plants would save on fuel costs by using the waste heat from electric power generation for the production of low temperature steam for industrial process uses. As has already been noted, typically two-thirds of the fuel energy of a central station generating plant goes into "waste heat"—corresponding currently to approximately 16 percent of U.S. energy use. At the same time about 20 percent of all U.S. fuel is used in the production of industrial process steam. Obviously a great deal of fuel would be saved if the waste heat from electrical generation could be used to supply this low temperature heat. In fact it is relatively easy to establish that only about half as much fuel would be required per kilowatt hour of generated electricity at an industrial cogeneration facility as would be required at a central station power plant. (That is, the extra fuel required beyond that which would be needed to produce the process steam separately.)

The key to the practicality of such a proposal is the fact that the scale of operations at industrial process steam-using plants is often large enough to make by-product electricity generation economical. Indeed this practicality is attested to by the fact that cogeneration systems account for approximately 12 percent of West Germany's electrical capacity today. As recently as 1950, 17 percent of U.S. electrical generating capacity was associated with industrial process steam production. This percentage has steadily declined over time, however, to about 4 percent in 1974.

The decline of cogeneration as a major supplier of electricity in the United States can be traced to the remarkable decreases both in fuel costs and capital costs (in constant dollars) enjoyed by the electrical utilities during the 1950s and 1960s. This allowed them to set very low prices for bulk power sold to industrial users (see Figure 3). Cogeneration of electricity at industrial sites was discouraged further by the utilities' refusal to buy at fair prices the cogenerated electricity which was in excess of a plant's owns needs, and by their practice of charging very high fees for contracts to provide replacement power during periods when industrial cogeneration units were shut down for maintenance or repair.

New analyses which take into account the recent and projected increases in the costs both of fuels and utility-generated electricity indicate, however, that the economics of industrial cogeneration have become very attractive. One study prepared for the Federal Energy Administration, for example, concludes that it would be economically justified during the decade 1975–1985 to install equipment in the chemical, petroleum refining, and paper and pulp industries alone to cogenerate the equivalent of almost one-half of the U.S. electricity use in the year 1975.

These numbers were obtained by assuming that cogeneration would be accomplished by using gas turbines to drive the electrical generators while the exhaust from these turbines would be used to provide heat for a process steam boiler. In terms of overall costs, this would probably be the optimal technology for cogeneration. The only problem is that the gas turbine systems in wide use today burn only expensive oil or gas. However, there has been good experience in West Germany over the last 20 years with coal-fired closed cycle gas turbines, and it appears likely that by the 1980s relatively low cost high pressure fluidized bed combustors will be available for firing gas turbines directly with coal (or any other solid, liquid, or gaseous fuel, including solid wastes).

We estimate that by the year 2000 industrial steam-using plants could produce about 30 percent of the total electricity budget projected for the COAT scenario. Such a large amount of electricity would substantially alter the electricity supply mix envisioned by ERDA. In particular, if all this cogeneration electrical capacity were fueled with coal, the extra coal required would amount to about 350 million tons per year—bringing the total coal use for electricity generation in the COAT scenario up to a level approximately 40 percent higher than in 1975.

Most of this cogenerated electricity would substitute for nuclear power for two reasons: (i) nuclear power dominates the COAT electricity supply; (ii) since large process steam users operate around the clock, cogeneration power would also be generated around the clock and would therefore be directly substitutable for the power generated from central station "base loan" plants.* In ERDA's COAT scenario almost all the base load capacity is nuclear (450 out of 510 gigawatts). Cogeneration capacity would therefore tend to displace this capacity. Our estimate would therefore result in the cogeneration capacity replacing up to 230 gigawatts of nuclear capacity in the year 2000, thereby reducing the level of nuclear generating capacity in the COAT scenario from 450 to less than 250 gigawatts.

Although 250 gigawatts would be low relative to ERDA's projections it would be far from low in an absolute sense. It would still be almost 100 gigawatts higher than current industry estimates of U.S. capacity in 1985—and fission power would still generate in the year 2000 three-quarters as much electrical energy as the entire electrical sector did in 1975. It would also involve about 25 percent more nuclear power than in ERDA's "limited nucelar power" scenario, which essentially represents the effects of a moratorium on nuclear power beyond the plants under construction or on order.

A life cycle of this capacity (30 years per reactor) could be supported without plutonium recycle or improvements in reactor technology with about two-thirds of the uranium in ERDA's "reserve" and "probable" resource categories. The total uranium in these categories plus that currently in ERDA's "possible" and "speculative" resource categories would support almost three times this capacity for 30 years or the same capacity for almost 90 years. If the more recent higher resource estimates of the uranium industry are borne out (see note 2), the "once-through" nuclear economy could support twice as many reactor years again. In our view this situation hardly constitutes a "uranium supply crisis" and would appear to provide a period of at least a decade during which a decision regarding plutonium recycle could be postponed without ill effects, while we attempt to develop an alternative future for fission power.

---

*A utility's base load plants would be those plants with the lowest fuel costs. These plants would be operated at periods such as late at night when electricity demand is low in preference to other "intermediate load" and "peaking load" power plants which have higher fuel costs. Base load plants are often also the most expensive plants in terms of capital costs so that it is necessary to run them as much as possible to generate enough electric energy to justify the high capital costs.

BEWARE OF THE BELL BILL

Mr. METCALF. Mr. President, when Congress passed the truth in packaging bill, it might well have extended the coverage to truth in legislative packaging. Every now and then legislation is proposed that bears a title of the Consumer Communications Reform Act. Many Members in both bodies climbed aboard, obviously attracted by such words as "consumer" and "reform." Also, they were deceived by the fact that the prime mover behind this proposal, A.T. & T., retained a low profile, while the active lobbying was carried out by various groups that fronted for Bell, including some labor representatives, as well as representatives of small "independent" phone companies and certain rural cooperative phone companies.

This deceptive packaging is being repeated in this Congress. The bill, rather than helping consumers, would result in higher prices, stifled innovation, and increased concentration in a monopoly industry.

It is a matter of great concern that Members be alerted to the authentic source of the measure. There are considerations even more important than the question of competition in the communications industry. This question of A.T. & T.'s tightening its exclusive hold in communications, unti it has the "perfect monopoly," involves the added question of whether any corporation should be allowed to grow beyond the size where it can be regulated by Government.

I am extending my remarks with an analysis that appeared in the Business & Finance section of the Washington Post on December 12, 1976, by William Jones, entitled "Dealing with A.T. & T. Not an Easy Task, Even for the United States." This article, which I commend to my colleagues as an excellent summary of the impact of Bell on our economy and Government's ability to cope, raises two disturbing questions.

One is the inability of the Antitrust Division of the Department of Justice, which has an annual appropriation of some $25 million, for all its various endeavors, to battle on an equal footing with A.T. & T. Bell is reported to have assigned legions of lawyers, reportedly over 600, to oppose the Government's antitrust actions.

The second concern is the inability of the Internal Revenue Service to properly audit and assess Bell for taxes. This was described by an IRS official who recently resigned. He charged, reported Morton Mintz in the November 9, 1976, Washington Post, that Bell owed the Government nearly $3 billion in corporate taxes, which could not be collected because the IRS is not big enough to audit the Bell systems complicated books. That is of a piece with the amazing fact that the Federal Communications Commission, despite years of "regulating" A.T. & T., still has not determined the size of the company's rate base, which of course must be known in order to provide meaningful economic regulations.

Obviously, if any company is too big for the Department of Justice, too big for the U.S. Treasury, and too big for the FCC, then it is certainly the time to permit legitimate competition to offer some countervailing forces at the marketplace. It certainly is not the time for Congress to aid and abet the further expansion of a corporate entity that is already too big for the agencies of Government.

Mr. President, I take this opportunity to alert my colleagues to the true intent of the "Bell bill," and ask unanimous consent to have printed in the RECORD the two articles to which I have referred.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, Nov. 9, 1976]

IRS HIT ON A.T. & T. AUDITS

(By Morton Mintz)

Over a 10-year period, the Internal Revenue Service has failed to collect at least $2.94 billion in income taxes owed by the American Telephone & Telegraph Co., a former IRS official charges.

The major cause is the inability of an agency with a budget of $593 million for the auditing of all tax returns, individual as well as corporate, to audit fully the return of a corporation with revenues of $26 billion, says Lawrence R. Sloan.

Now a consulting engineer in Orlando, Fla., Sloan for nine years was the principal valuation engineer and acting chief engineer of the Manhattan District of the IRS.

"The error continues with each advancing year, growing larger as the physical plant grows," Sloan says in an article to be published next Monday. A.T.&T., in its annual report for 1975, values its plant at $87.6 billion.

Moreover, the difficulties faced by the IRS in auditing A.T.&T.—the world's largest corporation—probably exist for other phone companies, as well, Sloan suggested.

His article will appear in Tax Notes, issued by Tax Analysts and Advocates of Arlington. A self-described public interest law firm, it does tax analysis for news organizations. Its officers and advisers include former IRS Commissioner Sheldon S. Cohen, among several former high officials of the agency.

Before accepting Sloan's article, Tax Analysts submitted it for comment to the IRS, A.T.&T. and two independent accounting experts, Profs. Charles A. Tritschler of Purdue University and James A. Wheeler of the University of Michigan.

The IRS said it would like to comment but is prevented by law from discussing the tax affairs of a corporation or a person.

AT&T's top executive for federal taxes, Cyrus J. Halperin, rejected all of Sloan's key contentions. One "basic fault in the article is an apparent misunderstanding of the process under which telephone companies are regulated, and the significance of such regulation on a proper application of the tax laws," Halperin told Tax Analysts.

As for the adequacy of the IRS's audits, Halperin said, "As one who devotes a substantial portion of his time (and that of a large staff located both in New York and across the country) in responding to requests from the revenue agents . . . it would be difficult for me to subscribe to a view that the . . . service is not 'up to the job'."

Sloan's article attributes the $2.94 billion tax loss—which he terms "a conservative estimate"—to the tax treatment AT&T gives to certain repairs and depreciation.

He wrote that "a complete mystery to the IRS" is an item accounting for $1 billion of the total loss: the correct tax treatment for certain repairs of switching equipment, which is mainly in AT&T's central offices and in its operating companies throughout the country.

During the 10-year period from 1966 through 1975, this item accounted for more than 30 per cent, or at least $12 billion, of the approximately $41 billion deducted by the Bell System for maintenance of its entire physical plant, Sloan wrote.

His contention is that at least 15 per cent of the $12 billion in switching-gear maintenance actually upgraded the equipment by enlarging its capacity by 25 per cent or more. Upgrading is not a mere repair, he argued, but an addition to AT&T's plant that, "consistent with prudent tax management," ought to be capitalized over the life of the equipment.

But treating upgrading as maintenance is advantageous to the company because, Sloan said, maintenance expense is fully deductible in the year in which it is incurred.

James S. Byrna, director of Tax Analysts, estimated that expensing rather than capitalizing a piece of work costing, say, $1,000, would save AT&T $49 annually. The estimated savings reflects assumptions that the work is an asset, that the asset has a 10-year life, that the cost of capital is 10 per cent and that the investment tax credit is 11 per cent.

Especially because it owns Western Electric Co., which manufactures and rebuilds switching equipment, AT&T "is in a position to manage the cost" of the equipment "so as to maximize the amount that is expensed," Sloan wrote.

Yet the company "has been almost completely unchallenged" by the IRS in making decisions on whether to expense or capitalize work on the equipment, he continued. This, he added, is "a commentary on the inability of the IRS to audit one of the world's largest companies."

Halperin said that regulatory agencies—not AT&T—establish the accounting procedures it follows, that the company is subject to continual, comprehensive audits by independent accounting firms, and that the Federal Communications Commission and state utility commissions assure compliance.

Told of Halperin's statement, Sloan said, "The regulatory commissions, both state and federal, do not write tax laws." Moreover, he said, the courts often have upheld the IRS over regulatory agencies.

Sloan said that the IRS lost at least $1.14 billion in tax revenues largely because of other AT&T tax practices, some of them involving work on equipment other than switching gear.

As a case in point, Sloan cited Western Electric's performance of "all significant repair work on telephone instruments, switchboards, teletypewriters."

Although minor adjustments are made in the field, such equipment is returned to Western Electric in "a planned program of upgrading and rebuilding to the latest standards," Sloan wrote. "Again, this major problem area is a complete mystery to the IRS."

Yet another "major problem area" developed about 20 years ago when, Sloan said, electronic switching became available. It made obsolete the slower electro-mechanical gear.

Rather than replace the old equipment as rapidly as practicable, the Bell System—and other phone companies—began "a planned programs of 'managed' obsolescence" in which, Sloan wrote, much of the old equipment was rebuilt, upgraded and given favorable tax treatment. One result was a tax loss of the government that he figured at a minimum of $300 million in 15 years.

"The IRS has lived with this error because it simply does not have the technical capability to deal with such a problem," Sloan wrote.

AT&Ts Halperin said the record does not bear out any charge of "managed" obsolescence. "For several years now, we have been installing electronic switching equipment at the rate of about one every two days," he wrote Byrne.

Denying that AT&T had assigned unrealistically long depreciation lives, the executive said, "Any investigation will show that all Bell System companies have constantly and aggressively tried to obtain higher depreciation rates than permitted by the regulatory commissions."

[From the Washington Post, Dec. 12, 1976]

DEALING WITH A.T. & T. HARD EVEN FOR UNITED STATES

(By William H. Jones)

NEW YORK.—About 20 leading businessmen gathered in Plains, Ga., earlier this fall for a buffet lunch and a four-hour chat with Jimmy Carter.

John D. deButts, chairman of American Telephone & Telegraph Co., was among those who attended. Thomas R. (Bert) Lance, now director-designate of the Office of Management and Budget, was in charge of organizing the session, and he allotted each of the corporate chiefs five minutes.

"The purpose was to give us an opportunity to talk," deButts recalled in a recent interview at the Bell System's headquarters on Lower Broadway. The AT&T chief said he had expected his fellow corporation chiefs to focus on general problems and he had intended to do the same.

DeButts was placed eighth in the order of speakers and, to his surprise, he recalled, all those who spoke before him devoted their five-minute intervals to specific problems their own companies or industries faced.

So deButts departed from his prepared remarks and gave the future president of the United States a three-minute summary of the AT&T chief's favorite subject today—keeping the world's largest private enterprise as "one system, one policy, universal service," a maxim of the company ever since it was enunciated nearly a century ago by the firm's first professional manager, Theodore Vail.

That policy, which evolved into a government-blessed national monopoly and what is generally regarded as the most efficient and diverse telephone system in the world, is under great challenge today by the federal government itself in a major antitrust suit and by government regulatory policies in recent years designed to give AT&T a dose of free-market competition.

DeButts said he explained to Carter a piece of legislation that will be a major economic issue before the incoming 95th Congress and a tough issue for the Carter administration. It is called the Consumer Communications Reform Act, a title that critics have suggested is so deceptive that it should be attacked under truth-in-advertising statutes.

Nearly 200 members of the outgoing Congress have sponsored the legislation, and the telephone industry virtually is united in support of the Bell System-sponsored legislation, which would enhance the monopoly status which AT&T officers believe should be continued.

According to deButts, Carter "was attentive, took copious notes personally, was open-minded, listened and was extremely knowledgable." The AT&T chief said Carter acknowledged that the future status of the nation's telecommunications industry was an important subject and that Carter's staff has been wrestling with it.

As officials of the departing Republican administration discovered, dealing with AT&T is not an easy task. John Eger, who was acting director of the White House Office of Telecommunications Policy for 21 months, strongly opposed the Bell System legislation

as "sheer folly" because it would scrap Federal Communications Commission decisions opening up some phases of the telephone business to competition.

When Thomas J. Hauser moved into the White House slot last July, however, administration policy was totally altered. "I disagree with John," said Hauser of Eger's position. Hauser said he would remain "neutral" on the legislation.

The FCC, meanwhile, continues its adamant opposition to the legislation, which deButts said will be reintroduced in the new Congress. FCC chairman Richard E. Wiley told a House hearing on the measure this fall that the Bell bill would give AT&T new monopoly powers and immunity from antitrust laws. Wiley asserted that pricing policies of the telephone firm already are forcing some users to pay more than a "fair" share of communications costs, and the FCC will continue to require competition in all areas of the industry except for actual telephone services.

In effect, Wiley said, AT&T was attempting an end run around competition by seeking sanction by Congress to nullify FCC regulation. All the while, the Justice Department is continuing to pursue the biggest antitrust case in American history, an attempt to break up AT&T into separate manufacturing and operating companies.

Nearly everything said about AT&T can be preceded by the word "biggest." It is the biggest privately held company in the world, with $85 billion of assets. It recently reported quarterly profits of $1 billion, the biggest amount of money ever earned by a private firm in three months (only four U.S. firms had profits exceeding $1 billion for all of 1975—Exxon, $2.5 billion; General Motors, $1.25 billion; International Business Machines, $2 billion; and AT&T itself, $3.1 billion).

With nearly 1 million employees, AT&T is the nation's biggest private employer. Stockholders' equity in AT&T of more than $34 billion is the biggest in private industry, and the Bell System has the biggest number of individual shareholders (about 3.6 million). Only in annual revenues can AT&T said to be No. 2—to Exxon Corp.

The question is whether AT&T is too big, and many people in government believe that is the case. FCC officials have worried for years that the Bell System may be "too big" for them to regulate, given the legions of lawyers and accountants the company can throw into battle against an agency with comparatively puny resources. Similarly, questions have been raised about the ability of the Justice Department's Antitrust Division to battle on an equal footing with AT&T. A former Internal Revenue Service employee has charged that the U.S. lost nearly $3 billion in income taxes from AT&T over 10 years because the IRS isn't big enough to audit Bell System books.

In the stock market, AT&T is so big that changes in the price of its stock affect all of Wall Street. When AT&T was charged with antitrust violations by the Justice Department, AT&T and the stock market went down. Last week, as interest rates continued to decline, AT&T's stock advanced because its high dividend made it attractive as an investment; shares of the telephone company hit an 11-year high of $64 on Friday and helped spur a market rally.

DeButts is sensitive to the charge of bigness. Negative reaction to the $1 billion of quarterly profits shows that "the press and public need a lesson in economics," deButts said recently. "The people who are being critical are looking merely at a dollar figure. They overlook the fact that there is $70 billion invested in this business by individual stockholders and bondholders."

In AT&T's view, the profits "aren't high enough," he added. In terms of utility industry profitability, AT&T is not in the top ranks. The rates of return it is permitted by state regulatory agencies are not being achieved. "It sounds like a lot of money, but you have to relate it to something else," deButts said.

According to Fortune magazine, AT&T ranked 37th among the country's top 50 utility firms in profits as a percentage of equity (9.3) in 1975. Northern Natural Gas of Omaha was No. 1 at 18.5 per cent and Western Union was 50th at 5.5 per cent.

Still, AT&T is about to complete its most successful year—appropriate enough for a company celebrating its 100th birthday. DeButts doesn't make forecasts of earnings, but he said it is obvious that 1976 profits will be at a record level. The firm earned $6 a share in the first eight months, and the best previous annual record was $5.28 in 1974. Annual revenues for 1976 will approach $35 billion.

DeButts said AT&T is earning about 8.89 per cent annually on total capital investment compared with between 9.3 per cent and 9.5 per cent permitted in most states. To boost revenues, the firm's subsidiaries are seeking $1.4 billion of rate increases from regulatory agencies in 22 states—including $337 million of higher rates in New York and $272 million in Texas.

In all AT&T rate cases, the company's subsidiaries are pushing a Bell System goal of making individual customers pay for actual services they use. This takes the form of higher charges for calls made from pay telephones, charges for information calls (soon to be proposed for interstate information calls, as well), and "message-unit" timing, like that in metropolitan New York, under which callers pay for each minute of a call instead of on a per-call basis.

Seated in a small parlor adjacent to his office here, deButts pondered the status of being big. "In a lot of people's minds, bigness is bad. But that overlooks that fact that only bigger companies can give the public what it wants," deButts stated.

If the Justice Department succeeds in breaking up AT&T or if the FCC succeeds in reducing its business hold, "customers will pay more because the (surviving) companies would be unable to raise capital as we can, as a system," the AT&T chief executive continued.

"We don't think we're getting a fair shake from the FCC," said deButts, complaining about an inability to offer new services or change rates without prior government approval. AT&T is going to Congress because "FCC action is contrary to the best interests of the American public. I'm absolutely convinced of it. They're forcing us to halt policies that are for the benefit of the public."

On the antitrust case, deButts expressed complete confidence that AT&T will be victorious, as the company has been in the past when faced with serious challenge by government. "Frankly, I'm not concerned about it," he said, vowing that the Bell System will not agree to any consent agreement this time as it did to settle a previous antitrust suit started in 1949, which sought to separate AT&T from Western Electric, the Bell System's manufacturing company from which most telephone equipment is purchased. The earlier case ended in 1956 and left AT&T intact.

DeButts said he has 600 people working on the case now, which he said will cost $300 million for gathering data, take a decade to complete and add up to "billions of pieces of paper." A federal court here has not ruled out the antitrust case in the face of AT&T claims that "pervasive" regulation now existing takes the place of antitrust laws. Proceedings are continuing in the "discovery" stage, setting ground rules for the big battle.

As for the legislation, it will be introduced next month and could lead to a thorough review of the FCC and government telecommunications policies. DeButts rejects the idea that the Bell bill is designed to "stifle competition." Rather, he said, it is designed to keep other companies—some big giants, such as IBM or RCA Corp., and some small, such as MCI in Washington—from taking away the most profitable intercity telephone business from large-volume users and leaving AT&T only with a costly plant and less profitable rural and residential service to perform.

If competition is to be mandated, it would be under the same ground rules for all companies under the Bell-backed bill. The measure also would prohibit the FCC from requiring AT&T to charge rates higher than Bell officials want, so long as the rates cover costs. Small communications companies view the last provision as one that would permit AT&T to cut rates and put competitors out of business.

To date, deButts said, AT&T is losing $275 million in revenues a year to small firms that offer specialized business services. When compared with $35 billion of revenues, the amount is tiny. But "that is not the point," deButts stated. "To whatever degree they take revenues away, we have to increase residential rates by that amount," he declared.

"We've only seen the tip of the iceberg. If the FCC goes on (permitting more competition), it will expand," pushing local telephone rates up in the process. That predicted outcome has been denounced by chairman Wiley of the FCC and by the small competing firms, who say costs can come down.

DeButts said AT&T has made no comprehensive survey of "damage" allegedly inflicted on the interstate telephone network by the use of switchboards and other non-Bell devices, which under FCC policy AT&T is supposed to connect.

On other topics, deButts:

Said AT&T is forecasting 1977 growth of about 13 per cent in revenues and 10 per cent in long distance calls. The current 8 per cent growth in long distance calls is below expectations.

Forecast AT&T capital spending next year of about $10.4 billion, with national inflation of 5.8 per cent.

Said the new administration could encourage the economy by ending a double taxation on dividends that are reinvested in stock.

Expressed "sympathy" for the steel industry in seeking to increase prices because "they have to get their earnings up" to attract capital for expansion. DeButts is a director of U.S. Steel Corp., the industry's leader.

PHIL HART: THE BEST OF US ALL

Mr. MUSKIE. Mr. President, it was 18 years ago this January that I first took my seat in the Senate.

It was a memorable day—filled with the excitement of a new adventure, and the anticipation of young men looking into the future with supreme confidence.

We were the Class of 1958. We became friends, and those of us who are still here treasure the memories of those who have left and the special relationship we all enjoyed.

The Senate Chamber is noticeably emptier with each departure.

None is missed more than Phil Hart.

He was my seat mate in this back row for 16 years. We spent hundreds of hours in these seats, sharing our views on the issues before us, watching our colleagues in action, participating in the debates, discussing parliamentary strategy.

He would often observe, in the course

of a particularly heated debate on the floor, "We attach a significance to what we do in the Senate that is not shared by anyone outside this Chamber."—a sense of humility that should commend itself to each of us.

We both had young families who went home for the summer months. Phil and I and Gene McCarthy spent long summer evenings together, dining wherever it pleased us, enjoying our summer bachelorhoods together.

Phil was a very special friend. Now he is gone, and each time I sit in this chair, the Senate becomes a lonely place.

The Senate needed Phil Hart. He made it a better place. He was convinced of his own inadequacy, determined to rise above it, and, without realizing it, became the best of us all.

I do not find it easy to say what is in my heart today. Perhaps I can do it best by reading something I said last summer.

It was a time when Phil was visibly wasting away. Jane and I invited a few friends to share the evening with him. It was a memorable evening, filled with good talk, and the love and warmth of friendship. Phil asked me to record the toast I gave that evening so that his Jane might hear it. This is what I said:

First, I would like to welcome you to our home. Jane and I are delighted that you could all come. This has been our home since the spring of 1961. We have lived here longer than we have lived in any other house. Our youngest child was born here. We don't have many parties. We are having this one because we love Phil Hart.

I have known Phil for more than twenty years—longer than we have been in the Senate. He is my dearest friend in the Senate. I love him more than anyone outside my family.

So Jane and I thought it would be nice to gather a few friends congenial to Phil as testimony of that friendship. It is not my intent to make a long speech, but rather I have tried to find some other way to symbolize what Phil means to me and to others of us.

What I selected, finally, are these sea gulls.

The sea gull is not the noblest of birds in all its habits. The species which is identified with Maine and New England is often called the "laughing gull" because of its strident call which sounds like coarse laughter.

But the sea gull which inhabits Maine's coastline is a symbol of the oceans to us in Maine—and the tempestuous forces which lie under the surface and the distant lands beyond the furthest horizon which we can see on a clear day.

The sea gull is at home in those vast expanses and those great forces. It is not confined to the sea—but follows our rivers and streams and lakes into the lonely wilderness forests which still inhabit so much of the northern regions of Maine.

It does not fear the unknown or the elements with which it lives.

In flying, it is a thing of grace and beauty.

It is not a perfect symbol—or the complete symbol—of the decency, integrity, courage and compassion which we all identify with Phil.

But in its grace, beauty and willingness to dare the unknown, it is the kind of free spirit we see in Phil Hart.

So, I present them to him, as a symbol of the friendship which has brought you all to this house this evening.

WASTEWATER TREATMENT PLANT CONSTRUCTION

Mr. ANDERSON. Mr. President, earlier this week I wrote the Chairman of the Council of Economic Advisers, Mr. Charles Schultze, and urged that President Carter consider amending his economic recovery package to include at least $14 billion for Federal grants to accelerate the construction of municipal wastewater treatment plants throughout the Nation.

As many of my colleagues are aware, present allocations for this program, the largest and most important Federal environmental protection grant program, will be exhausted this fiscal year in 32 States, including Minnesota. My proposal would provide $4 billion of economic stimulus beyond the $10 billion that is assumed for fiscal year 1977 and 1978 in S. 57, introduced by Senator MUSKIE. This additional $2 billion each year could permit thousands of municipalities across the country to improve water quality in their communities through the expansion and modernization of municipal sewage treatment plants, and, create productive construction jobs.

Mr. President, I ask unanimous consent that Chairman Schultze's letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., February 8, 1977.

Hon. CHARLES SCHULTZE,
Chairman, President's Council of Economic Advisors, Executive Office Building, Washington, D.C.

DEAR MR. SCHULTZE: I most appreciated the presentation of Messrs. Blumenthal and Lance and yourself last Friday at the Senate Budget Committee regarding President Carter's economic recovery package. I would like to expand on the statements I made at that time. I strongly urge that you modify the President's proposals to provide at least $14 billion for the construction of wastewater treatment facilities throughout the nation.

Thousands of communities in Minnesota and elsewhere are prepared to put those dollars to work immediately to hire skilled construction workers, purchase goods and services, and clean up the nation's water resources. In my judgment, such a step would also support the President's strong and longstanding commitment to the environment.

Senator Edmund Muskie has introduced S. 57, which authorizes $5 billion for this fiscal year and fiscal 1978 for this program. I have cosponsored this measure because of my experience with the program as Governor of Minnesota. Unless funds are made available by March of this year, the most significant federal-state-local partnership to clean up the nation's water will all but end in 32 states, including Minnesota.

In my state, 457 communities have wastewater treatment facilities in need of expansion or modernization to bring them in compliance with the secondary treatment standard of Public Law 92-500. In 1976 dollars, this effort will require $1.2 billion, and the national need is $76.2 billion.

Without an appropriation this year, 200 Minnesota communities will not be able to upgrade their wastewater treatment plants. About 40 communities are ready to begin construction, with contractors and construction workers prepared to start work this spring; the remainder could be under construction in 1978.

As you are aware, the Council on Environmental Quality estimates that every $1 billion appropriated for wastewater plant construction produces 40,000 jobs, 20,000 of them in the depressed construction industry. A $7 billion appropriation would therefore translate to a large number of jobs and substantial purchases of construction materials and equipment, in addition to fulfilling the environmental purposes of P.L. 92-500.

As Senator Muskie pointed out at the hearing, appropriation of federal funds for this program should be considered in terms of ongoing versus stimulus impacts to the economy. The second budget resolution for the current fiscal year assumed $5 billion for this program, and the Muskie legislation recommends an additional $5 billion for Fiscal Year 1978. Increasing the amount to $7 billion per year would thus provide an immediate $4 billion stimulus to the economy.

My recommendation of $7 billion each year is based on the EPA judgement that this amount could be successfully absorbed during the current fiscal year. Using my own state as an example, the additional funds would allow at least 150 more communities to begin planning construction now and let contracts in Fiscal Years 1978 and 1979.

When that additional impact is expanded across the 32 states that will exhaust their previous allocations this year, thousands of additional municipalities throughout the nation could have facilities under construction over the next two years, through the accelerated program I am recommending.

In summary, I recommend that you propose inclusion of the following in the President's economic recovery package:

1. Authorization and appropriation of $7 billion for fiscal year 1977 for the federal share of the construction of municipal wastewater treatment facilities.

2. Authorization and appropriation of at least $7 billion for fiscal year 1978 for this program, with the final amount to depend on EPA analysis of the maximum amount of federal dollars the system can absorb.

3. Authorization for fiscal 1979 of necessary funds to continue this program at an accelerated level.

As Governor, I strongly supported the municipal treatment program and observed the impact of federal dollars that put people to work in productive projects that improve our water resources. I know of no better way to stimulate the economy and protect the natural resources of this country for our children and grandchildren.

With warmest personal regards.

Sincerely,

WENDELL R. ANDERSON,
U.S. Senator.

A NATIONAL ENERGY POLICY

Mr. STEVENSON. Mr. President, I want to call to the attention of Members of the Senate an article in the February 8 issue of the Christian Science Monitor.

The article is a reprint of a letter by President Franklin D. Roosevelt to the 75th Congress admonishing it to act on a national energy resource policy.

The United States is the only major industrialized nation in the world without a national energy policy. Mr. President, my colleagues will find President Roosevelt's vision admirable and the Nation's failure all the more disturbing. President Theodore Roosevelt and Gifford Pinchot saw the need to convert coal

into oil. And still we have not acted decisively to conserve and produce. Alone among all the industrialized nations, gasoline is still cheap. Alone among all the producing nations, we are still somewhat a national oil and gas corporation, still hostage to the industry and its minions.

President Carter has indicated that his administration will submit a comprehensive national energy policy to the Congress in April. I await his proposals with hopes they will reveal, not the visions, but the courage that has been missing in America for a long time.

Mr. President, I ask unanimous consent that the Roosevelt letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ENERGY: HOW LONG WILL IT TAKE?

FEBRUARY 19, 1939.

TO THE CONGRESS: This report represents the joint effort of many specialists both within and outside the Federal Government. It suggests policies, investigations, and legislation necessary to carry forward a broad national program for the prudent utilization and conservation of the Nation's energy resources.

Our resources of coal, oil, gas and water power provide the energy to turn the wheels of industry, to service our homes, and to aid in national defense. We now use more energy per capita than any other people, and our scientists tell us there will be a progressively increasing demand for energy for all purposes.

Our energy resources are not inexhaustible, yet we are permitting waste in their use and production. In some instances, to achieve apparent economies today, future generations will be forced to carry the burden of unnecessarily high costs and to substitute inferior fuels for particular purposes. National policies concerning these vital resources must recognize the availability of all of them; the location of each with respect to its markets; the costs of transporting them; the technological developments which will increase the efficiency of their production and use; the use of the lower grade coals; and the relationships between the increased use of energy and the general economic development of the country.

In the past the Federal Government and the States have undertaken various measures to conserve our heritage in these resources. In general, however, each of those efforts has been directed toward the problems in a single field; toward the protection of the public interest in the power of flowing water in the Nation's rivers; toward the relief of economic and human distress in the mining of coal; or toward the correction of demoralizing and wasteful practices and conditions in the industries producing oil and natural gas. It is time now to take a larger view; to recognize—more fully than has been possible or perhaps needful in the past—that each of our great natural resources of energy affects the others.

It is difficult in the long run to envisage a national coal policy, or a national petroleum policy, or a national water-power policy without also in time a national policy directed toward all of these energy producers—that is, a national energy resources policy. Such a broader and integrated policy toward the problems of coal, petroleum, natural gas, and water power cannot be evolved overnight.

The widening interest and responsibility on the part of the Federal Government for the conservation and wise use of the Nation's energy resources raise many perplexing questions of policy determination. Clearly, there must be adequate and continuing planning and provision for studies which will reflect the best technical experience available, as well as full consideration for both regional and group interests.

Some Federal legislation affecting the energy resources will expire at the end of this fiscal year, other legislation at the end of a few more years. This report sets forth a useful frame of reference for legislative programs affecting these resources and illustrates another approach to the systematic husbandry of our natural resources. Specific recommendations are advanced for solution of the most pressing problems.

President FRANKLIN D. ROOSEVELT.

SPENT REACTOR FUEL AND NUCLEAR WEAPONS SPREAD

Mr. CRANSTON. Mr. President, there are several encouraging signs that President Carter is wasting no time in taking a strong, unambiguous stand against the further spread of nuclear weapons.

The President has called upon the Soviet Union to join with the United States in a major reduction in nuclear weaponry and in a prompt and complete halt to all testing of nuclear explosive devices—a ban that would include the testing of so-called peaceful nuclear explosions.

President Carter is also pressing the leaders of West Germany and France to cancel their planned exports of sensitive nuclear-fuel plants to Brazil and Pakistan, respectively, and to join with the United States in providing alternative sources of nuclear fuel to these and other reactor customers. Cooperation among nuclear suppliers in assuring a reliable supply of reactor fuel is essential to halting the global spread of uranium enrichment and plutonium reprocessing plants. The spread of these plants must be halted because they can be used to produce material for atomic bombs as well as fuel for reactors that generate electricity.

At the same time, there is considerable activity in the executive branch to give the nuclear-proliferation problem the priority attention that it deserves. Most noteworthy, the principal responsibility for nuclear-transfer activities has been shifted from the promotionally minded Energy Research and Development Administration to a new antiproliferation unit in the State Department. This unit, headed by Joseph S. Nye, Deputy Under Secretary for Security Assistance, Science and Technology, is now directing an interagency review of U.S. nuclear export policy, which President Carter has ordered to be completed by February 28.

Mr. President, each of these developments should serve as an early, clear signal to the world that the United States is deeply troubled by the rapid spread of nuclear equipment and material that can be applied to weapons purposes. The initiatives of our new President hopefully will demonstrate to our competitors in the world nuclear market, particularly West Germany and France, that the United States is sincerely interested in engaging in multinational cooperative efforts and in submitting to stricter international nuclear controls. Above all, it is essential that U.S. sincerity is established beyond a reasonable doubt so that other nations will no longer have any reason to believe that our antiproliferation efforts are designed to gain commercial advantage in the sale of power reactors.

The principal objective of U.S. antiproliferation efforts should be to insure that power reactors are available to nations with legitimate energy needs, but not the weapons-grade uranium and plutonium that are associated with the fuel cycle of these reactors. Since virtually all present day power reactors are fueled either with natural or low-enriched uranium, neither of which is suitable for weapons-making, the principal problem is with the spent fuel of these reactors because of the large amounts of plutonium that it contains. The plutonium is a chemical byproduct of the nuclear fission process, and a 1-year output of the typical reactor sold today is enough to produce 50 to 75 Nagasaki bombs if the plutonium is reprocessed from spent fuel.

It should be evident, therefore, why reprocessing of spent fuel, if it is to take place at all, should be under the strictest international management and control, and should be deferred until such time as it becomes absolutely necessary to recycle the byproduct plutonium and depleted uranium as fresh reactor fuel because of a scarcity of uranium—a situation that is not anticipated before the end of the century, at the earliest.

Unfortunately, Mr. President, the most immediate proliferation problem faced by President Carter stems from a hasty decision made in the closing days of the Ford administration to permit the commercial reprocessing in Europe of U.S. supplied nuclear fuel that has been used in Japanese, Swiss, and Spanish reactors. Unless President Carter moves quickly to reverse this ill-advised decision—a decision by the way, made by the National Security Council over the objections of both the State Department and the Arms Control and Disarmament Agency—the first large-scale reprocessing of spent fuel will take place before the international controls being sought by President Carter can be arranged.

As President Carter said in his first interview as President on January 23:

> We are quite concerned about the reprocessing of spent fuel where you change normal radioactive materials, which have been used for the production of electric power, into weapon quality. We would like to have this put under international control, subject ourselves to the restraint along with those who have been reprocessing this material for a number of years, and prohibit completely, within the bounds of our capability, the expansion of the reprocessing plants in the countries that don't have it.

The principal consideration is that the countries in which the U.S.-approved reprocessing of commercial reactor fuel is to take place—France and Great Britain—are, like the United States, nuclear weapons states whose reprocessing activities have been related almost entirely to production of nuclear weapons. To permit commercial reprocessing to proceed on a large scale at this time could establish a dangerous precedent that other nations—especially nonnuclear weapons states in the developing world—will be anxious to follow.

President Carter could consider an option available to the United States under our bilateral nuclear agreements with Japan, Spain, and Switzerland, to approve the transfer of spent fuel out of those countries but to withhold approval of reprocessing. This would permit the safe storage of the spent fuel in France and Great Britain and the freeing up of scarce spent-fuel storage space in Japan, Spain, and Switzerland—without which some reactors might have to shut down. In this way, the immediate needs of the involved nations would be served without prejudicing the chances of negotiating an effective international system of storing spent fuel and providing nuclear fuel services with a minimum risk of weapons proliferation.

It should be stressed, Mr. President, that the main incentive for proceeding with reprocessing now is not to provide fuel for present-day reactors—for which there are ample reserves of uranium—but rather to provide plutonium for the next generation of reactor, the so-called breeder. This reactor, which is being developed on a higher priority basis overseas than in the United States, poses special proliferation dangers because it will breed more plutonium than it consumes as fuel—thereby introducing ever-increasing amounts of weapons-grade material into the nuclear fuel cycle. It is essential, therefore, that breeder utilization, like spent-fuel reprocessing, be subject to the greatest possible restraint—if permitted to proceed at all—with the highest possible degree of international cooperation and control.

Mr. President, the special problems posed by spent fuel, reprocessing and the breeder, are addressed imaginatively in a "Proposed United States Agenda for Proliferation Control," by Paul L. Leventhal, former staff counsel to the Senate Government Operations Committee, who is now writing a book under a grant from the Ford Foundation on the proliferation problem. As the highest-priority item on his agenda, Leventhal urges that—

> The United States press for prompt agreement among the suppliers to require that all commercial spent fuel, including the suppliers' own, be removed to international depositories for storage in unaltered form, pending final resolution of the reprocessing and breeder questions.
>
> The United States cannot provide effective leadership in combatting proliferation unless there is an unambiguous change in U.S. policy and policy assumptions—at least to the extent of forestalling plutonium reprocessing and breeder development until an urgent energy need is clearly demonstrated in the next century.

In explaining why international storage of spent fuel should be given the highest priority, Leventhal states:

> Spent fuel is the key ingredient in any meaningful non-proliferation regime because, under present technology, the most feasible weapons route for nations and terrorists alike is via plutonium that has been reprocessed from spent fuel. . . . Even if reprocessing is forestalled or internationalized, every nation that possesses spent fuel will have its own "plutonium mine" for future contingencies. This will place it but one step from having atom bomb material—a small step in the throes of a regional or world crisis.

Mr. President, in view of the fact that by the year 2000, the world inventory of spent fuel will contain the energy equivalent of 97 billion barrels of oil and the weapons equivalent of 1 million Nagasaki bombs, the issues raised in Mr. Leventhal's agenda deserve the closest scrutiny. He has presented his agenda to the Council on Foreign Relations and to the arms-control programs at Harvard and Stanford Universities, and I ask unanimous consent that it be printed in the RECORD, along with some newspaper articles describing recent developments in the proliferation area in the United States and abroad.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

PROPOSED U.S. AGENDA FOR PROLIFERATION CONTROL

BASIC ASSUMPTIONS

Underlying this proposed agenda of United States non-proliferation initiatives are four basic assumptions:

First, it is assumed that little time (18 to 36 months) remains to establish controls over national and international nuclear commerce that are sufficient to reverse, or at least to slow, the present spread of nuclear weapons capabilities.

Second, it is assumed that achievement of an effective control system is not beyond the mind or the institutions of man.

Third, it is assumed that there never has been a more opportune time for the United States to exercise diplomatic and commercial leadership for the establishment of such a system, and that a successful system cannot be developed without strong United States leadership. And,

Fourth, it is assumed that the major obstacle to achieving this system is an "institutional blindspot"—a collective form of "denial"—within the nuclear bureaucracy and the industry with respect to the inherently world-threatening and unmanageable character of the nuclear fuel cycle.

This last problem is largely attributable to the promotional mandate of the Atomic Energy Act of 1954, which resulted in the United States developing nuclear power domestically and worldwide to the exclusion of potentially rival energy technologies. The ensuing Atoms for Peace program has been based on the assumption that civilian nuclear power is, or can be made, safe in all respects, including the fuel cycle, and should be permitted to evolve into an inexhaustible energy source.

However, an effective non-proliferation regime would have to limit nuclear power development to some extent—probably to the extent of limiting reactor development to the present light- and heavy-water reactors. This is anathema to the nuclear agencies and industry which do not perceive an unmanageable world threat in the tens of thousands of pounds of plutonium presently associated with these reactors, and the tens of millions of pounds projected for a breeder economy by the year 2000.

Inherent in the Atoms for Peace program is the concept of an indefinitely enduring nuclear fuel cycle. This concept, and the technology it has produced, conflicts directly with the non-proliferation interest in limiting nuclear power to an interim energy source.

The United States cannot provide effective leadership in combatting proliferation unless there is an unambiguous change in U.S. policy and policy assumptions—at least to the extent of forestalling plutonium reprocessing and breeder development until an urgent energy need is clearly demonstrated in the next century.

The key to non-proliferation is controlling where the world is headed by promoting those nuclear technologies that are clearly manageable, while curbing development and export of those technologies that are not. This effort should be tied closely to crash programs for non-nuclear energy development and for energy conservation, and these programs, particularly energy R. & D. should be tailored to meet the needs of the developing world.

The following agenda proposes a series of United States initiatives at home and abroad involving close coordination among the Executive Branch, the Congress, the regulatory agencies and the nuclear industry. It assumes strong Presidential leadership and close Congressional and regulatory scrutiny to ensure that the proposed policies and programs are carried out.

In particular, the agenda assumes that a proliferated world would be a disaster for the United States and for mankind and that the way to assure a proliferated world is to assume its inevitability.

AGENDA

General approach

Generally, the United States should move swiftly and forcefully on the non-proliferation front to capitalize on the momentum that has been generated by an increasingly aroused Congress, by the campaign statements of the President-Elect, by the environmentalist interventions in nuclear fuel export licensing cases, by the Fri Report and, finally, by the Presidential policy pronouncement of October 28.

The hardening American line has had a direct bearing on the recent French and West German decisions to withhold future exports of reprocessing plants, on India's willingness to negotiate the return of spent fuel to the United States, on South Korea's cancellation of a French reprocessing plant, on Taiwan's apparent suspension of a national reprocessing effort, and on the recent positions taken by the Soviet Union, Finland and Canada favoring broader application of IAEA safeguards. The United States obviously still wields enormous influence in the world nuclear market even though its share of reactor sales has eroded from 70% to 50%.

Priorities

In order of priority, the United States should take the following actions:

1. Spent fuel. Press for prompt agreement among the suppliers to require that all commercial spent fuel, including the suppliers' own, be removed to international depositories for storage in unaltered form, pending final resolution of the reprocessing and breeder questions. Until the depositories are established, seek a supplier agreement to withhold approval of any movement or alteration of spent fuel that is generated domestically or by foreign customers. A survey should be begun for sites in neutral nations and on suitable off-shore islands that would be dedicated to the IAEA or to a new INTELSAT-type organization. Big-power or UN security guarantees would apply to each site. Switzerland, which is now seeking U.S. permission to forward spent fuel to France for reprocessing, should be persuaded to retain the fuel, to forego reprocessing and to enlarge its storage capacity to serve as the first international spent-fuel depository. To help meet environmental concerns in Switzerland and in other densely populated European nations, the United States should follow up on President Ford's offer to provide an international storage site—preferably an island.

2. Fuel-facility exports. Maintain the pressure on Pakistan to cancel its reprocessing plant order with France and on Brazil to cancel its order for reprocessing and enrichment plants from Germany. At the same time, move to formalize into a new supplier

guideline the recent French and German policies barring future fuel-facility sales.

3. Fuel-cycle and reactor-sales arrangements. Offer to enter into market-sharing arrangements with the suppliers group to ensure the supply of fuel services rather than fuel facilities to reactor customers and to eliminate the cutthroat competition in reactor sales that led to the original offering of fuel facilities by France and Germany. These arrangements can lead to an assured supply (a five- or 10-year stockpile at a minimum) of low-enriched uranium to customers that agree to forswear nuclear explosions and to accept IAEA safeguards on all of their nuclear activities. This uranium could be provided bilaterally or brokered through the IAEA as a credit against plutonium contained in spent fuel that is placed in international depositories. The suppliers also can agree under such arrangements to modify the design of export reactors to bar the use of mixed-oxide fuel (containing plutonium).

4. Universal application of IAEA safeguards. Strongly support the Soviet proposal at the suppliers conference to require, as a condition of export, that non-weapons countries accept IAEA safeguards on all activities, but press for the Canadian version, which requires a no-explosion pledge as well. Inasmuch as the Canadians have adopted this policy unilaterally, the United States may be required to let the strict Canadian conditions apply to exports of Canadian-source uranium that is enriched in the U.S.

5. Nuclear Test Ban. Vigorously pursue President-Elect Carter's commitment to negotiate a comprehensive test ban treaty with the Soviet Union and to urge the Russians to join in a total ban of all nuclear explosions, including so-called "peaceful nuclear devices," for at least five years. Without such a superpower example, non-NPT nations, particularly India, have a built-in excuse for not forgoing nuclear-explosion programs.

6. Renegotiation of Agreements. Promptly renegotiate nuclear agreements, particularly with non-NPT nations, to require the return or the international deposit of spent fuel, to bar nuclear explosions, to require IAEA safeguards on all nuclear activities, to make available to the U.S. the results of IAEA inspections and material-balance audits, to prevent replication of U.S.-supplied technology or re-export of U.S.-supplied material outside the reach of IAEA safeguards, and to establish minimum physical-security standards. Most U.S. nuclear agreements do not contain such provisions, and the loopholes should be closed even in the absence of a prior suppliers agreement.

7. Non-proliferation legislation. Enact strong legislation establishing strict criteria to govern U.S. nuclear export policy—at a minimum requiring U.S. prior approval of reprocessing of U.S.-supplied fuel or of other fuel burned in a U.S.-supplied reactor. Such prior approval should be triggered by a finding that safeguards are adequate to detect a diversion of a weapons-quantity of plutonium at least 90 days before it can be placed in a weapon—a finding that experts generally agree cannot be made under present technology. The legislation should strengthen the independent export-licensing role of the NRC, the advisory role of ACDA, and it should amend the Atomic Energy Act to promote the sale of nonnuclear energy systems abroad.

8. Middle East. Delay submitting to Congress the pending nuclear agreements with Egypt and Israel, both non-NPT nations, at least until they can be renegotiated to require safeguards on all nuclear activities and on all nuclear materials produced after the agreement takes effect. This would permit Israel to retain unsafeguarded plutonium already obtained from its Dimona research reactor, but would freeze its weapon-making potential at the present level. It would be preferable to withhold all nuclear exports from the Middle East until a peace settlement can be reached. At any rate, an agreement with Iran should be delayed until alternative energy options, particularly natural gas, are explored and until Iran agrees to forego reprocessing in return for an assured supply of enriched uranium.

9. India. Seek to dissuade the Soviet Union from proceeding with an export of heavy water to India to take the place of material withheld by Canada and the United States following India's nuclear explosion. In return for Soviet cooperation, the United States could agree to withhold the pending shipment of low-enriched uranium to India to permit a joint effort by the superpowers to persuade India at least to accept IAEA safeguards on all future nuclear activities and to return all spent fuel produced thus far with outside assistance. Such an effort would be in keeping with the recent Soviet proposal at the suppliers conference.

10. Sensitive Technologies. Announce an indefinite delay of plutonium reprocessing and breeder development within the United States and urge the other suppliers to follow suit, pending further study. Export of high-enriched uranium and plutonium in support of these programs should be stopped, or at least made contingent on an agreement by recipients not to export breeders, plutonium or mixed-oxide fuel. Development of laser-separation and of fusion-reactor technologies should be substantially slowed, preferably in concert with other suppliers, until the proliferation risks can be fully assessed.

11. Strengthening IAEA safeguards. Embark on a major program of financial and technical assistance, in coordination with other suppliers, to establish a more uniform, less secretive safeguards system. In particular, IAEA inspectors should be better trained, less subject to intimidation by host countries, operate under a uniform bookkeeping system and have unlimited access to the facilities they visit. Remote-control cameras and tamper-proof seals should be installed at the discretion of the IAEA, not of the host country, and all details of the so-called subisidiary safeguards arrangements between the IAEA and a customer country should be known to the supplier. The United States should set an example of openness with respect to IAEA safeguards that will be applied soon on a voluntary basis to U.S. commercial facilities.

12. Physical security. Press at the suppliers talks for the completion of an international convention on physical security of nuclear facilities and materials, as proposed by Secretary Kissinger in 1974. Use of the IAEA as an escort service for international shipments of weapons-grade material should be considered because these are subject to national diversions as well as terrorist attack. Participation of the NRC in ERDA's physical-security inspection trips abroad should be assured so that the Commission has full access to sensitive information needed to make export-licensing decisions.

13. Sanctions. Make clear that explosion of a nuclear device by a non-weapons state, or unauthorized reprocessing or enrichment, or trade in sensitive nuclear fuel facilities will result in a cutoff of nuclear assistance by the United States, and possibly in other U.S. sanctions as well. The United States also should make clear that in return for providing a reliable supply or enriched uranium, it expects the fullest possible cooperation from suppliers and customers alike in attaining non-proliferation objectives.

CONCLUSION

Although each of the agenda items is important, and to a large degree interconnected, first priority should be given to the problem of taking spent fuel out of national hands and placing it under international control. Spent fuel is the key ingredient in any meaningful non-proliferation regime because, under present technology, the most feasible weapons route for nations and terrorists alike is via plutonium that has been reprocessed from spent fuel. This was foreseen when the IAEA was established, but the agency, lacking supplier support, has not exercised the authority contained in its statute to establish and operate spent-fuel depositories.

As its first order of non-proliferation business, the new Administration should press hard for a suppliers agreement on spent fuel prior to the conference that the IAEA has scheduled next spring in Salzburg on multinational fuel centers. If at the conference the suppliers can announce an agreement to require that all commercial spent fuel, including their own, be placed in international depositories, the conference then could deal directly with the question of spent-fuel storage as its main order of business.

Resistance to international custody of spent fuel is intense, however, among the Europeans and Great Britain, which have their sights fixed on the breeder and, therefore, prefer that the Salzburg meeting deal with multinational management of reprocessing plants.

The need for international spent-fuel depositories should be obvious, however. Even if reprocessing is forestalled or internationalized, every nation that possesses spent fuel will have its own "plutonium mine" for future contingencies. This will place it but one step away from having atom bomb material—a small step in the throes of a regional or world crisis.

By the year 2000, the present world inventory of 4,000 tons of spent fuel will grow 100-fold to 300–500,000 tons, according to an industry estimate. The energy equivalent will be 97 billion barrels of oil; the weapons equivalent will be 1 million Nagasaki bombs. Two-thirds of the material will be outside the United States.

Spent fuel, therefore, will be a major foreign policy consideration in the years ahead.

NUCLEAR POLICY STUDY SET, TOUGHER STANCE HINTED

(By Don Oberdorfer)

The Carter administration has ordered a review of U.S. efforts to halt the spread of nuclear weapons amid indications of a tougher position on the issue from the White House and State Department.

Among the items to be considered are U.S. efforts to block or modify the West German sale to Brazil of a nuclear fuel reprocessing plant, which would be capable of manufacturing weapons material from used nuclear fuel.

The German-Brazilian deal was among the subjects discussed by Vice President Mondale and German Chancellor Helmut Schmidt on Tuesday in Bonn, and is the topic of continuing discussions between Secretary of State Cyrus R. Vance and Peter Hermes, a senior official of the German Foreign Ministry.

The Ford administration also opposed Germany's sale of reprocessing technology and equipment to Brazil, though some of its opposition evidently was only for form's sake.

Then-Secretary of State Henry A. Kissinger supposedly protested the sale in a meeting with German Foreign Minister Hans-Dietrich Genscher in June, 1975, shortly after the deal was signed, but senior German officials later publicly denied the subject had come up.

According to a knowledgeable diplomatic source the topic actually was not discussed, except for brief comment by Kissinger to the Germans just before a press briefing that "something will have to be said to satisfy

the press and Congress" about the Brazilian sale.

In an interview with the Associated Press and United Press International last weekend, President Carter called for use of "all diplomatic means" to restrain the spread of nuclear weapons capability, and said "we are quite concerned" about the reprocessing of reactor fuel into weapons material.

Even before inauguration day, Carter reportedly gave personal approval to the government review of antiproliferation policy, one of 15 immediate foreign policy studies set in motion by the National Security Council as the new administration came into office. The "presidential review memorandum" ordering the study calls for its completion by Feb. 28, informed sources said.

Joseph Nye, a Harvard expert on international relations and energy policy, is expected to be working chairman of the study group. Nye has joined the State Department as chief of antiproliferation policy, to be centered in the office of former League of Women Voters president Lucy W. Benson. Benson has been named under secretary of state for security assistance, science and technology, a job previously known as under secretary for security assistance.

An interagency study ordered by President Ford last summer culminated in an Oct. 28 announcement making more firm the U.S. antiproliferation stance. The new study is expected to lead to a considerable additional stiffening of the U.S. position.

It is considered significant that the Ford study was headed by Robert W. Fri, then deputy administrator of the generally pronuclear Energy Research and Development Administration (ERDA), while the Carter study is to be headed by Nye, a State Department official whose major responsibility is blocking the spread of nuclear weapons capabilities abroad.

The Nuclear Regulatory Commission, which regulates overseas sales of U.S. nuclear fuel, technology and equipment, is to take a much larger role in the new study than in the earlier one. The nuclear industry, on the other hand, is expected to have a smaller role than before.

Among the items to be studied are future U.S. policy in the semisecret London conference of nuclear suppliers, the renegotiation of "agreements for cooperation" in nuclear matters that the United States has signed with foreign countries, the future of the proposed atomic reactor sales to Israel and Egypt supported by former Presidents Nixon and Ford, licensing of new shipments of U.S. nuclear fuel to India, and broader questions of overall policy.

Another matter to be studied is an 11th hour decision by Ford's National Security Council to permit the commercial reprocessing in Europe of shipments of U.S.-supplied nuclear fuel owned by Japan, Spain and Switzerland.

The decision, which was not publicly announced, first came to light in the nuclear industry press. The Natural Resources Defense Council, a non-profit environmental group, obtained details under a Freedom of Information Act request.

Decision papers provided under the FOI request indicated that the Arms Control and Disarmament Agency sought unsuccessfully to hold up reprocessing of the Swiss fuel, and that the State Department in November withdrew its earlier approval of reprocessing of the Spanish fuel. However, the National Security Council approved the reprocessing for all three countries in the last week of December.

The Oct. 28 Ford declaration included a shift of U.S. policy against commercial reprocessing, partly because of the danger that the plutonium produced by such an operation can be used in atomic bombs.

Neither Japan, Spain nor Switzerland is a nuclear weapons state, although the countries where the commercial reprocessing is to be done (England and France) have made and exploded nuclear weapons. Under agreements with the United States, any plutonium extracted from the recently approved shipments of nuclear waste cannot be transferred back to Japan, Spain or Switzerland without additional U.S. approval.

U.S. approval is required if U.S.-supplied nuclear material is to be retransferred to a different country from the one that purchased it originally. Some 575 retransfers of U.S.-supplied material were approved from 1961 to 1974, but only a few of these, if any, were for commercial reprocessing.

NUCLEAR ENERGY A FADING HOPE AS OIL ALTERNATIVE

(By Bernard D. Nossiter)

LONDON.—Two years ago, a Western world worried by its growing dependence on Arab oil thought it saw a ray of hope in nuclear power, which, the Organization for Cooperation and Development predicted, would expand rapidly. By 1985, the OECD said, nuclear energy would provide the equivalent of 15 million barrels a day of oil, more than all of Western Europe now imports.

Just last week, OECD gave its patrons, the rich West and Japan, the bad news. By 1985, nuclear power is now expected to supply only the equivalent of little more than 9 million barrels a day, a staggering drop of nearly 40 per cent.

What has happened in two short years? OECD begins its list of explanations this way:

"The continual markdown of nuclear expansion results from resistance to nuclear energy by conservationists and environmentalists. . . ."

A key policy urged to expand energy supply is "moderation of environmental requirements of new energy development, particularly coal and nuclear power."

The report reflects thinking in the nuclear power establishment of OECD member governments. So it probably exaggerates the importance of the nuclear opposition while simultaneously ignoring its political concerns.

John Surrey of the Science Policy Research Unit at Sussex University has made the most thorough study yet compiled of the resistance to nuclear power. He is convinced that "nearly all the cutback would have taken place anyway" for economic reasons. "The opposition was the icing on the cake that contributed to increased capital costs."

Like other students of the nuclear slowdown, Surrey believes that the more modest growth now foreseen in Western economies coupled with an inflationary buildup of financing and construction costs—both due in considerable measure to the big jump in oil prices since 1973—have been far more important than citizen opposition in curbing the plants.

But the OECD has put its finger on a central point. There has been a big climbdown in plans for nuclear expansion and determined groups of citizens have played some part in this.

The opposition has taken dramatic form in France and West Germany, two nations like Japan that bet heavily on nuclear power to escape the Arab and oil company yoke.

At Brokdorf, West Germany, last fall, 600 security guards turned tear gas, water cannons and dogs on several thousand demonstrators trying to halt the building of a plant on a site surrounded by a moat and a 10-foot-high concrete wall topped by barbed wire.

The governor of North Rhine-Westphalia, West Germany's most industrialized state, has refused to license any more nuclear plants until the problem of their radioactive wastes is solved. Dump your "atomic excrements" somewhere else, he declared.

At least three nuclear installations in France were bombed in 1975. The government there has cut back from 40 to 25 or 30 the number of plants it expects to order by 1980.

There is no evidence, however, of a widespread public demand to halt nuclear power. Its opponents lost a half dozen referenda in the United States last year. But where the opposition forms, as economist Surrey has observed, it is acute and often effective.

Four rural communities in France held votes on nuclear plants in 1975. Three, largely well off and stable, voted against. But a fourth, in an area where worked-out iron mines had left a residue of high unemployment, approved the building.

In Britain, a royal commission under Sir Brian Flowers recently delivered a terrifying report on the dangers from plutonium economy, one that uses nuclear plants breeding large quantities of the poisonous, explosive man-made element.

Flowers foresaw the possibility of accident on a catastrophic scale, terrorists stealing the stuff of which bombs are made, a clampdown on civil liberties to protect plants from theft or saboteurs, plutonium in the hands of a Col. Muammar Qaddafi or an Idi Amin.

The report created barely a ripple. A call for a "mass" demonstration in Trafalgar Square brought out only a few hundred and on a Saturday, too.

Britain has not ordered a new nuclear plant since 1969 because its sluggish economy does not need one. This lack of visibility has muted the foes.

Sweden is frequently cited as an example of a nation that has voted against nuclear power. The facts, in that land of hard-headed materialists, are otherwise.

It is correct that Thorbjorn Falldin, campaigning on a pledge not only to stop but roll back nuclear plants, is now premier. But for the first time in 12 years, his party's share of the vote dropped and three-quarters of the Swedes voted for parties favoring nuclear expansion.

Falldin, in office, has had to junk his pledge. He has charged one reactor and approved building of others, although he says they will not be turned on until their safety is assured.

Despite this mixed picture, the nuclear foes can claim considerable success. They can do so even in the face of well substantiated claims that the nuclear industry so far has a better safety record than most.

A study for the old U.S. Atomic Energy Commission calculated that the worst imaginable reactor accident could cause 3,300 deaths and injure or poison 45,000. But this was likely to happen only once in 1 billion years of reactor operation. The low probability, however, may still sound unconvincing to those at the site where a new plant is going up.

More recently, citizens and politicians have begun to worry about atomic garbage, the wastes that must be buried for thousands of years before their radioactivity dies out. In West Germany, the waste has been buried in salt caverns in Lower Saxony that are said to be geologically stable. But there, too, the governor has said he will take no more until he is convinced there is no risk of leaks.

Apart from those frightened by their nearness to nuclear installations, a new wave of opposition has been building, largely on political grounds.

These people worry about nuclear explosives falling into the wrong hands.

Fuel burned in today's nuclear plants is chemically cooked or reprocessed to be used again, thereby saving on limited uranium. But in this reprocessing, plutonium, the ingredient of bombs, is created and shipped back to the nuclear plant for reuse.

What if a terrorist seizes a shipment, nuclear foes ask. Twenty pounds are enough to make a crude but devastating bomb, and the technique for making one is now well known.

Another private study has predicted that Britain could, by the end of the century, destroy its civil liberties to protect its plutonium. The report envisages thousands of armed guards, widespread wiretapping, opening of mail and similar techniques to guard against and detect theft.

Governments also are concerned about the misuse of nuclear power and its prospects for enlarging the select club that can now make bombs. This is why the United States has called for halting the sale of reprocessing plants, the plutonium producers, to nations that lack the bomb. In Britain, the government has stopped the planned expansion of its plant that reprocesses fuel for Japan and others.

A new type of power plant, the fastbreeder reactor, lies at the heart of the concern expressed by Britain's royal commission. It creates more plutonium than it burns, an economical technology that also multiplies bombmaking capacity around the world.

The royal commission urged the government to postpone "as long as possible" any decision to plunge ahead with fast breeders. Eminent scientists from East and West at the Pugwash conference last summer took a similar stance. They agreed that both reprocessing of used fuel and the introduction of fast breeders could be put off for 10 years without any shortage of uranium for existing plants.

It was once taken as an article of faith that fast breeders would not only provide most of the nuclear power of the future but also meet growing demands for all energy until the end of the century. Now Surrey of Sussex thinks the scientific doubts are so strong that fast breeders may never come into widespread use.

The mounting tide of opposition, both scientific and lay, has alarmed the atomic establishment—governments, energy commissions, reactor builders and electric utilities. They are engaged in unpublicized studies of ways to neutralize it.

One of the most provocative is conducted by the Risk Group, an international collection of anthropologists, economists, social psychologists, physicists and others in Vienna. The Risk Group was set up by the International Atomic Energy Agency, the U.N. body devoted to promoting nuclear energy in the Third World, and the International Institute for Applied Systems Analysis. This last is a product of the Lyndon Johnson administration, a think tank that draws on scholars from both East and West to apply the business-school technique of systems analysis to social problems.

The Risk Group leader is Harry Otway, an American nuclear physicist. He says, "we are simply trying to understand how people's attitudes are framed, how to integrate their social values with technological systems."

He vigorously denies that his project aims at defusing nuclear opposition, but at least some of its work points in that direction.

Are governments then faced with a Hobson's choice, either taming their opponents or halting nuclear expansion? Surrey says, "No, there is another route, meeting the legitimate concerns of the nuclear foes."

He points to several instances where this is being done or considered.

The U.S. Arms Control and Disarmament Agency, for example, suggests that fears over reprocessed plutonium could be allayed by a new technique. It would cook spent fuel but not separate plutonium from uranium. Then the product could be used again, but its bomb making substance would be difficult to extract.

The safety and civil liberties problems might be eased through nuclear parks, grouping huge complexes of plants in one remote and more easily guarded place.

Governments have already yielded to the fears of those near nuclear plants. Five years ago, they planned to build new ones in the center of towns and cities; nobody makes blueprints for that anymore.

Finally, a host of new safety rules have been introduced, both for domestic reactors and export sales. They make nuclear energy more costly and prolong its birth, but they also meet some of the opposition demands.

The sharp slowdown in nuclear output, largely a product of the world economic situation but partly due to the protests of scientists and citizens, is also forcing attention toward new energy sources.

Research and development of energy from the sun, wind and waves has been starved of funds, Surrey observes. Nuclear power has gobbled up a lion's share. But with the pressure to slow nuclear growth, some shift in research money is now likely.

[From the New York Times, Jan. 30, 1977]

GERMANY'S SALES OF NUCLEAR REACTORS SPARKING DISCORD

(By Craig R. Whitney)

BONN—Chancellor Helmut Schmidt and President Jimmy Carter appear headed for a showdown this year over the sale of potentially dangerous nuclear technology to developing countries.

West Germany owns no atomic weapons itself; nor does it intend to try to spread them around the third world. But some of the technology used in "peaceful" reactors in nuclear power plants can also be used to make weapons. Right now, West Germany is the only country in the world that has not banned the sale of such technology. Indeed, with protests against nuclear plants growing at home, the German industry is looking to the export market for sales. But Mr. Carter's opposition has been unequivocal.

"In my judgment," he told the United Nations last year, "it is absolutely essential to halt the sale of such plants." West Germany has contracted to supply Brazil with both uranium-enrichment and reprocessing plants to serve eight large nuclear power plants the Brazilians will buy from West Germany by 1990.

West Germany entered the atomic age optimistically. Nuclear technology is the industry of the future, its leaders and businessmen felt. The country has 10 nuclear power plants and is to have 35 by 1985. But now they are having serious second thoughts. Some citizens are almost superstitiously worried that terrorists might attack a nuclear plant or a plane crash into one.

A terrifying novel on the subject, "Die Explosion," by Hans Heinrich Ziemann, became a best-seller early last year and was serialized in the mass-circulation magazine, Stern. It tells the story of a radical student who bombs a power plant near Frankfurt, sending it out of control.

None of Germany's 62 million citizens lives more than two or three hours' drive from the nearest plant, and suddenly official assurances that the plants are safe ceased to placate, and American opposition to sales to the third world has heightened feelings.

Demonstrations against nuclear power plants have been growing bigger and more violent. In November in the foggy coastal village of Brokdorf, northwest of Hamburg, thousands of protestors—a few communists and anarchists among them, but also farmers, fishermen and ordinary folk—clashed with police in clouds of tear gas, leaving the field strewn with nearly 200 injured people. Later there were counterdemonstrations by employees of the nuclear industry.

Peter Dietrich, a young entrepreneur who lives in the village of Wewelsfleth a few miles along the Elbe River dike from Brokdorf, said: "People don't understand nuclear power and are afraid of it. The real problem is the politicians were asleep—they get their advice about energy from the same consultants the nuclear-power industry uses, and they didn't realize how much general opposition there is to it."

They realize it now, and Mr. Schmidt has decreed that construction on future nuclear power plants will begin only when the question of what to do with the spent fuel and where to reprocess it has been solved for each reactor.

One reason West Germany wanted to sell Brazil the equipment to reprocess and enrich its own uranium is that noboby is eager to bring the dangerous radioactive material back here to reprocess.

Environmentalists also object to the Government's plans to deposit spent—but still-radioactive—fuel in underground salt caverns in North Germany, and a battle is shaping up.

Nevertheless, officials are at present trying to choose a site in the state of Lower Saxony for a reprocessing plant and another for an enrichment plant and do not seem to be worried about a serious protest movement after they pick the sites. The 1985 targets, however, were scaled down last fall by eight power plants. That put pressure on the industry to export.

"We now have 26 nuclear plants on our order books," said Joachim Hospe, a spokesman for the West German Kraftwerk Union consortium in Offenbach. "Our capacity is six plants a year, and we assume we'll get three or four contracts a year for plants here in West Germany. That means we have to look for two to three plants a year abroad."

But, Mr. Hospe concedes, the outlook for that is not good. "We lost the market in the Soviet Union last year when they gave up a plan to buy West German reactors in Kaliningrad", he said. "The market in Sweden, Spain and most of Western Europe is already gone. We've sold two 1,300 megawatt reactors to Iran, and yet since last spring, the situation has been just about stagnant."

Officials of the Research and Technology Ministry say no other countries are now engaged in intensive negotiations here for a complete nuclear-fuel cycle agreement like Brazil's. They agree that the danger of nuclear proliferation necessitates strong safeguards over such equipment, but they maintain over American disagreement that West Germany's 1975 agreement with Brazil has these—through the Vienna-based International Atomic Energy Agency.

Some German officials believe that the Carter position is arbitrary, and gives the third world the impression that the industrialized countries don't want to share their technology. One solution, they feel, would be to put fuel reprocessing centers under multinational control.

Jobs have grown scarcer in West Germany since the recession began two years ago, and German industry agrees that it has to concentrate on producing and exporting high-technology products if it is to survive. Nuclear power plants are one such product. In the counterdemonstrations last fall one of the employees' banners read: "Without power plants, no jobs."

TRIBUTE TO THE HONORABLE J. WILLIAM MIDDENDORF II

Mr. MUSKIE. Mr. President, on January 18, 1977, the Honorable J. William Middendorf II, the outgoing Secretary of the Navy, was honored at a ceremony held at the Washington Navy Yard. During this ceremony, hosted by Adm. James L. Holloway III, Chief of Naval Operations, and Gen. Louis Wilson, Commandant of the Marine Corps, Secretary Middendorf was presented with a proclamation depicting his accomplishments during more than 3½ years of service to the Navy. The words inscribed on that proclamation, speak for his official record of accomplishments as Secretary of Navy. To that record I would add my own expression of the personal satisfaction I derived from dealing with a gentleman of his competence and character. I look forward to a continued friendship with him as a private citizen and shall recall with fondness Bill's service as Secretary.

I ask unanimous consent that the Certificate of Accomplishment be printed in the RECORD.

There being no objection, the Certificate was ordered to be printed in the RECORD, as follows:

CERTIFICATE OF ACCOMPLISHMENT

Presented to J. W. Middendorf II in recognition and appreciation of his extraordinary accomplishments in support of the United States Navy and Marine Corps during his tenure as Secretary of the Navy from 10 June 1974 to 20 January 1977.

His public appearances and persuasive arguments contributed to the development of a clear recognition within the Department of Defense, the Executive Branch, the Congress and the American public of the urgent requirement to rebuild the declining United States fleet in the face of the Soviet Navy buildup. During his tenure he visited 350 ships and every major Navy and Marine Corps installation in the United States and worldwide. Under his personal leadership:

Approval was received for construction of 157 ships over the next five years.

Department of the Navy Budget was significantly increased from $26.9B appropriated in FY74 to $40.3B requested for FY78. Shipbuilding funds increased from $3.5B appropriated for FY74 to $6.5B requested for FY78.

Special emphasis was given to procurement of a new class of guided missile destroyers (DDG–47), surface effect ships, and hydrofoil patrol boats (PHM).

CH–53E heavy lift helicopter was developed for Navy and Marine Corps.

Development of improved Harrier (AF–8B) began along with major initiative to develop a new generation of tactical VSTOL aircraft (Type A and B) including the thrust augmented wing (TAW).

Development began on numerous Navy and Marine Corps weapons systems, including TRIDENT, HARPOON, TOMAHAWK, VULCAN, PHALANX, Lasers and Major Caliber Lightweight Gun.

Indian Ocean fleet support facility was established at Diego Garcia.

Free world navies were urged to contribute more to collective security effort.

Research and development began or was accomplished on SEAFARER fleet ballistic missile submarine communications system, advanced twin-hull surface ships, amphibious assault craft, and gas turbine propulsion.

Approval was received for consolidation of Naval Oceanographic Program, and relocation at Bay St. Louis began.

Downward trend of ship readiness was reversed.

Improved physical fitness standards were instituted in Navy and Marine Corps.

Student Research Program instituted at the Naval War College with Middendorf Award for outstanding students.

Personal participation in Committee on Excellence of Education to review all service schools.

Navy participation in U.S. Bicentennial was extensive, highlighted by Operation Sail & International Naval Review of 4 July 1976 in New York Harbor.

Important actions were taken in Navy historical programs, including:

Tingey House and Washington Navy Yard designation as National Historical Landmarks and funding for Tingey House restoration.

Establishment of Naval Historical Center at Washington Navy Yard.

Personal sponsorship of major Naval Historical Museum exhibits and strong support of Naval Combat Art Program.

Numerous important management program actions were taken, including:

Establishment of Navy/Marine Corps Acquisition Review Committee.

Strengthening of Project Manager staffs.

Increasing shipyard productivity.

Implementation of Joint Uniform Military Pay System in Navy and Marine Corps.

As a gifted musician, he left a legacy of marches dedicated to the Navy, Marine Corps, Coast Guard and Naval Academy.

J. L. HOLLOWAY III,
Admiral, U.S. Navy, Chief of Naval Operations.

LOUIS H. WILSON,
General, U.S. Marine Corps, Commandant of the Marine Corps.

(This concludes additional statements submitted by Senators.)

AUTHORIZATION FOR THE SECRETARY OF THE SENATE TO TAKE CERTAIN ACTION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that during the period of nonlegislative days of the Senate until Monday, February 21, at the hour of 12 noon, the Secretary of the Senate be authorized to receive messages from the other body or from the President of the United States and appropriately refer them.

The PRESIDING OFFICER (Mr. FORD). Without objection, it is so ordered.

AUTHORIZATION FOR THE VICE PRESIDENT, THE PRESIDENT PRO TEMPORE, THE DEPUTY PRESIDENT PRO TEMPORE, AND THE ACTING PRESIDENT PRO TEMPORE TO TAKE CERTAIN ACTION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that during the period of nonlegislative days of the Senate until February 21, 1977, the Vice President of the United States, the President of the Senate pro tempore, the Deputy President of the Senate, and the Acting President of the Senate pro tempore be authorized to sign all duly enrolled bills and joint resolutions.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION TO FILE REPORTS DURING RECESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that, on Thursday, February 17, 1977, between the hours of 10 a.m. and 2 p.m., all committees be authorized to file reports.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR PERIOD FOR TRANSACTION OF ROUTINE MORNING BUSINESS ON MONDAY, FEBRUARY 21, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate convenes on Monday, February 21, 1977, after the two leaders or their designees have been recognized under the standing order and following the reading of George Washington's Farewell Address, there be a period for the transaction of routine morning business of not to exceed 1 hour, with statements limited therein to 10 minutes each and for the purpose only of the introduction of bills, resolutions, petitions, memorials, and statements into the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, later in the day, following morning business, the Senate will, hopefully, likely proceed to consideration of calendar order No. 17, Senate Concurrent Resolution 10, the third concurrent budget resolution. In any event, let it be known that the transaction of business on Monday, February 21, will not be held up because of the reading of George Washington's Farewell Address, as has been the custom in recent years. The Senate has conducted business on that day and will do so in this instance.

Also coming up on that day following the reading of the Farewell Address will be, possibly, in addition to the third concurrent budget resolution: S. 234, amend-

ing the Small Business Act and the Small Business Investment Act of 1958; also H.R. 2647, an act to amend the Small Business Act and the Small Business Investment Act of 1958, to increase loan limitations and to increase surety bonds authorizations. So, Mr. President, there will be business transacted on Monday, February 21. Rollcall votes may occur.

The reading of the Farewell Address generally consumes about 45 minutes, I believe, as I recollect, give or take a little bit. Then there will be a period for the transaction of routine morning business, which can take up to an hour. So I would venture to say that no rollcall votes are likely on Monday, February 21, before the hour of 2 o'clock p.m. But rollcall votes may occur during the afternoon.

RECESS UNTIL MONDAY, FEBRUARY 21, 1977

Mr. CRANSTON. Mr. President, if there be no further business to come before the Senate, I move that the Senate stand in recess, in accordance with the provisions of House Concurrent Resolution 106, until 12 o'clock meridian on Monday, February 21, 1977.

The motion was agreed to; and at 3:50 p.m. the Senate, in accordance with House Concurrent Resolution 196, recessed until Monday, February 21, 1977, at 12 meridian.

CONFIRMATIONS

Executive nominations confirmed by the Senate February 11, 1977:

DEPARTMENT OF DEFENSE

W. Graham Claytor, of the District of Columbia, to be Secretary of the Navy.

Clifford L. Alexander, Jr., of the District of Columbia, to be Secretary of the Army.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

HOUSE OF REPRESENTATIVES—*Wednesday, February 16, 1977*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

May God be gracious to us and bless us, that Thy way may be known upon Earth, Thy saving power among all nations.—Psalms 67: 1, 2.

Eternal God, our Father, whose love never fails and whose light never fades, in this reverent moment we would be still and know that Thou art God. Breathe Thy spirit upon us that we may receive strength to walk with Thee and to work for Thee this day and all days. Help us to minister to the needs of our Nation and our world—feeding the hungry, strengthening the weak, healing the wounds of our common humanity, and building bridges of understanding and good will over the chasms which separate people. Being one with Thee may we become one with each other.

Bless our Nation and make her a blessing to all, that Thy kingdom of peace and justice and good will may come upon this planet.

In the spirit of Christ we offer this our morning prayer. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Is there objection to the approval of the Journal?

Mr. EDWARDS of Oklahoma. Mr. Speaker, I object.

The SPEAKER. Objection is heard.

Mr. EDWARDS of Oklahoma. Mr. Speaker, I withdraw my objection.

The SPEAKER. Is there objection to the approval of the Journal?

There was no objection.

CONCERNING INCENTIVES PRESIDENT MAY OFFER TO INCREASE EXPLORATION AND DRILLING UNDER H.R. 3317

(Mr. ALLEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ALLEN. Mr. Speaker, in order to avoid any misinterpretation of that section of H.R. 3317 which authorizes the President to enter into agreements to share in the losses of those producers who hazard their money for the exploration and drilling to find more natural gas, I offer this clarification.

This is simply a discretionary tool that should be placed in the hands of the President, which he may or may not see fit to use, as he may deem appropriate in the national interest.

The bill would grant the President authority to encourage and provide financial incentives to natural gas companies and others, to speed up and greatly expand their exploration and drilling for more natural gas, by providing that the Government will share the risk of the cost of drilling, by agreeing to reimburse—not 50 percent—but up to and not to exceed 50 percent of the net losses suffered by certain producers where such drilling results in a dry hole, where no natural gas, oil, or other valuable minerals are found.

You will note that this provision applies only to net losses, and such agreements are to be entered into by the President with such producers, and under conditions, rules, and regulations which are to be determined by him, "within his sole discretion."

In this connection, I should point out that the giant oil and gas companies and other big producers, whose profits are taxed at 48 percent plus, are already recovering from the Government a minimum of 48 percent of their costs and net losses as a result of their exploration and drilling which may end up in dry holes. They do this by simply charging this off as a loss and expense on their income tax returns, thereby reducing their Federal income taxes by at least 48 percent already.

On the other hand, there are many independent and small producers, and even wildcat drillers, who fall in a much lower income tax bracket, and who have limited capital to invest, who cannot recover the same percentage of their losses as the giant corporations and big producers.

This bill would give the President the authority to enter into agreements with such independent and small producers to reimburse them for their losses where their drilling ventures prove to be unprofitable, by agreeing to reimburse them an amount of their net losses resulting from such unprofitable drilling as the big producers recapture through reduced income taxes.

Conceivably, the President could agree to reimburse the big producers say as little as 2 percent of their net losses, who already recapture 48 percent of such losses, and agree for the Government to pay and reimburse the independent and smaller producers a greater percentage of their losses, so as to equalize their net reimbursement from the Government with that of the large corporations and big producers.

Indeed, he could do this, or more, for all producers, or do nothing at all, if upon finding from the monthly reports required to be filed with him and the FPC of the inventories and reserves on hand, that no additional incentives are needed other than the establishment of rates and prices at the wellheads which will assure the producers a fair rate of return.

In other words, this provision would simply place in the hands of the President an additional tool to meet the present shortage of natural gas, whether that shortage is real or contrived, but the decision of whether or not he needs to offer this incentive to encourage the expansion of drilling for more gas to meet the future needs of the Nation will be left entirely to the President—to use or not to use as he sees fit.

SCOPE OF NEW FPC REGULATION

Contrary to one or two news reports, the bill does not take away from the States the power to regulate the distribution, sale and rates of natural gas from local distributors to ultimate consumers, but extends the regulatory authority of the Federal Power Commission only to the producers, pipeline companies, and others not now regulated by the States.

Thus, the production, distribution, sale, and rates to be charged for all nat-

ural gas would be subject to proper regulation at either the Federal or State level, to protect the consumers from unconscionable rates that would most certainly follow if all regulations and price controls were lifted at this time of critical shortage, whether contrived or real.

At the same time, H.R. 3317 would provide for the establishment of rates by the FPC and the State regulatory agencies which would assure producers, pipeline companies, and the local distributors a fair rate of return—but only a fair rate of return—to which they are justly entitled.

SALARY INCREASES FOR GOVERNMENT OFFICIALS

(Mr. ANDERSON of California asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ANDERSON of California. Mr. Speaker, it was 30 days ago today that President Ford presented his budget to the Congress for fiscal year 1978. Included in the former President's budget were recommendations for salary increases for Government officials in the executive, judicial, and legislative branches.

The law states that unless one House of the Congress disapproves the President's pay recommendations, they become effective in 30 days. That means that as of today, our salaries are increased from $44,600 to $57,500.

I regret that we have not had an opportunity to vote on this issue. I believe that the increase of nearly $13,000 in our salaries is excessive. At the same time, Mr. Speaker, I believe that some pay adjustments are needed. Members of Congress, and the judicial and executive officials covered by the pay increases, have had only a 5-percent increase since 1969—a period during which most Federal employees have received pay increases of 66 percent while the cost-of-living index has risen 61 percent.

I am personally aware of many Members of the House, especially younger Members, who find it difficult to support their families and maintain two homes on their present salaries.

It has not been easy for me to reconcile my own opposition to these large salary increases and my understanding of the economic difficulties faced by some Members of Congress.

Our pay raises are now effective and I will accept the increased salary. But, as I have stated before, I believe the increases to be excessive. As such, my wife, Lee, and I have decided to give $7,000 of our salary increase to two of our favorite charities: $3,500 to the American Cancer Society and $3,500 to the American Heart Association.

I want to add, Mr. Speaker, that the Commission on Executive, Legislative, and Judicial Salaries, in recommending these salary increases, strongly suggested that these pay adjustments be made "in the context of reform."

I fully endorse this suggestion by the Commission and I will support such reforms as full financial disclosure, strict limitations on outside income, and full accounting of expense funds.

FOREIGN MILITARY AIRCRAFT SALES AND 2 MILLION AMERICAN JOBS

(Mr. MILFORD asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. MILFORD. Mr. Speaker, almost daily, our news media carries items and commentaries concerning foreign sales of military aircraft. Our new administration has expressed the desire that this Nation will not become the arms merchant of the world.

I for one would welcome the day when no nation would merchandise weapons of war. I would strongly support international agreements to stop selling, not only military aircraft, but also all other weapons.

At the same time, I would be strongly opposed to this Nation taking unilateral action to stop selling American aircraft, while allowing foreign friends and adversaries to continue.

While foreign military aircraft sales have been widely discussed in the current national debate, one very important factor has not been covered. That is the impact of these sales on our ability to compete with the rest of the nations in the sale of wide-bodied jets and other civil air transport aircraft.

I have just sent a letter to the President which discusses this important factor. I would like to include a copy of this letter in the RECORD:

HOUSE OF REPRESENTATIVES,
Washington, D.C., February 14, 1977.

President JIMMY CARTER,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: The subcommittee on Transportation, Aviation and Weather, under Science and Technology, is charged with authorization and oversight of civil aviation research and development. As Chairman of this subcommittee I have become painfully aware of an acute problem facing our Nation—we are losing our aerospace preeminence in people, base technology and products.

The sale of aircraft and aerospace products constitutes our second ranking export item, being exceeded only by agricultural goods. Over 2,000,000 Americans are directly employed in our aerospace industry. These American jobs, our favorable balance of trade from aerospace sales, and the associated federal, state and local tax base are now in serious jeopardy.

In the 94th Congress, our subcommittee conducted extensive hearings with industry, government, labor and financial experts in a major study of our aerospace problems and rendered a comprehensive report ("The Future of Aviation", Volume I, II and III, October 1976). I strongly urge careful review of these findings by the Department of Transportation and the Department of Defense.

In the year-long study, referenced above, the most important finding of the committee is the fact that this nation is losing its preeminence in aerospace sales to foreign competition. The United States is the only major supplier nation that has a significant free enterprise system. Our industries must constantly compete against foreign government-owned or foreign government-subsidized companies in the sale of products.

The subcommittee report stands as a product of a careful and systematic study. It is not the result of quick overviews, or tightly scheduled decisions. Overpowering reasons must be presented before government policies are established that would ignore the conclusions in this report. Our nation simply cannot afford the loss of benefits to our domestic economy that are gained through the sale of aerospace products on the world market.

While *civil* aviation is the primary concern of this subcommtitee, our civil aircraft sales are now and will be inseparably linked with foreign military aviation sales. Each major aeronautical manufacturer—whether airframe, engine, avionics, support systems or component parts—is involved in the production of both civil and military products.

The economics of civil air transport production are dependent upon military sales in the world market, and vice versa. This situation is just as true for our foreign competitors as with American companies. Foreign governments recognize this fact and are actively supporting their sale of both civil and military aircraft through subsidies and attractive "offset" proposals to customer countries. Once a supplier is established with an air carrier or customer, there are powerful operational and economic reasons to continue the relationship. This alone can explain the reason that competition is keen in established and emerging markets.

World preeminence by U.S. companies, in the sale of civil and military aircraft, has provided the continuing base for this nation to excel in the development of new technology, new materials and superior manufacturing processes. At this point, I must emphasize *that under existing world competitive conditions,* this nation could not have maintained our prior preeminent status in civil aircraft sales without the benefit of foreign military aircraft sales.

Many of my aviation-oriented colleagues in Congress, as well as the entire aerospace industry, have become alarmed by recent press accounts of alleged new policies concerning the curtailment of foreign military aircraft sales by your administration. To limit military aircraft sales to various parts of the world, without careful study of all impacts to the U.S., while having no mechanism to prevent our foreign competitors from making these same sales, would be devastating.

There is no doubt that a plan to reduce world armament is a lofty goal, but *only* if we have an iron-clad agreement including validation with our foreign competitors wherein they would also cease military aircraft sales. Premature and unilateral action of this nature on our part should be strongly opposed. Our foreign competitors will gain a tremendous advantage, in the sale of civil air transport aircraft, if they could also continue military aircraft sales.

American withdrawal from foreign military aircraft sales would allow our foreign competitors to keep their manufacturing facilities, technical teams and trained labor intact, while our manufacturers would lose theirs and be forced to close down production lines. Our loss of income from international sales would mean a loss of our ability to continue vital technology development and other R & D efforts. The single greatest American asset that has allowed us to overcome foreign government subsidized competitors has been our ability to develop superior technology, mate-

rials and manufacturing processes. Although not the purview of my committee, it was obvious that long term relationships and foreign policy options must be adversely involved.

If we were to unilaterally cease foreign military aircraft sales, we would lose a vital source of income. Foreign military sales support the same manufacturing facilities and manpower that allow this nation to produce superior civil air transport aircraft.

A modern aircraft manufacturing line or facility cannot be turned "on" and "off" in the manner of a faucet. Long lead times and tremendous expenses are involved. Our aerospace manufacturers spend years developing their technical teams, manufacturing processes, plant facilities and servicing organizations. It should also be noted that aerospace manufacturers have been very strong employment supporters of minorities and Vietnam veterans. They understand our NATO and other alliance commitments. While all of these can be terminated with the stroke of a pen or the pronouncement of a policy, their revival will take years of time and billions of dollars.

In summary, foreign military aircraft sales have a direct bearing on this nation's ability to compete in the sales of civil air transport aircraft on the world market. At the present time American manufacturers compete with foreign manufacturers for the sale of both civil and military aircraft. An iron-clad agreement, between all aircraft manufacturers of the world, to cease military sales would be a laudable accomplishment. Such an agreement when validated would leave a balanced situation between American aircraft manufacturers and our foreign competitors. A unilateral action to prevent only American sales of military aircraft in the world market would be devastating to our aerospace companies. Such a move would seriously cripple our ability to compete in the sale of civil air transport aircraft in the world market.

Failure to export all types of aircraft concurrently—military and civil—will increase our own defense budget; will increase the cost of our commercial exports; will cost thousands of jobs; will increase employment and retraining problems, will make us less competitive in the world market; will reduce our Research and Development base and abilities; adversely impact our balance of trade; would seriously hamper our economic recovery; and increase the cost of American airfares.

I would plead that you take note of this situation and make known the specific policies that will be followed by your Administration.

Sincerely yours,

DALE MILFORD,
Member of Congress.

PROPOSED PAY RAISE

(Mr. PRESSLER asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. PRESSLER. Mr. Speaker, a prominent national news network—CBS—has polled all Members of Congress on whether or not they want a pay raise—310 said yes and only 9 said no. Many of those 310 are silently absent today. Mr. Speaker, where are they today?

Mr. Speaker, I wholeheartedly endorse the efforts of the distinguished minority leader, Mr. RHODES, to get the unanimous consent of all Members to bring the pay raise issue onto the House floor for discussion—and a vote.

If we do not have a vote today or tomorrow, the last line of defense we have is my suit which is pending before the Supreme Court challenging the constitutionality of the automatic pay raise for Members of Congress. We must vote on whether or not to accept pay increases. The Founding Fathers, in their debates at the Constitutional Convention of 1787, determined that Members of Congress must vote on their pay if they are to be paid out of the Federal Treasury. James Madison, in answering those at the Constitutional Convention who felt paying Members of Congress in this manner would lead to raids on the Federal Treasury, stated that there would not be a raid as long as Congress recorded the votes of Members on pay issues.

I believe James Madison's reasoning was eminently practical. Congress has not voted for its pay since 1967. Should this 28.9 percent pay raise for Members of Congress go forward, we will indeed have the raid on the Treasury predicted by those attending the Constitutional Convention in 1787.

As a matter of public policy, Congress should vote on its pay if we are to urge steel companies to use restraint in raising prices, or labor unions to refrain from raising wages. We cannot demand from other groups what we do not demand of ourselves.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
February 14, 1977.

Hon. THOMAS P. O'NEILL, JR.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: Pursuant to the permission granted on February 9, 1977, the Clerk has received this date the following messages from the Secretary of the Senate:

That the Senate passed H.J. Res. 239, a Joint Resolution extending the filing date of the 1977 Joint Economic Report; S. 385, an Act to name a certain Federal Building in Grand Rapids, Michigan, the "Gerald R. Ford Building"; S. Con. Res. 8, a Concurrent Resolution authorizing the printing of the committee print entitled "The Accounting Establishment" as a Senate document and the Vice President appointed Mr. Jackson as vice chairman of the Joint Committee on Atomic Energy.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
February 11, 1977.

Hon. THOMAS P. O'NEILL, JR.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: Pursuant to the permission granted on February 9, 1977, the Clerk has received this date the following message from the Secretary of the Senate:

That the Senate passed H.J. Res. 240, a Joint Resolution to give congressional approval to certain governing international fishery agreements negotiated in accordance with the Fishery Conservation and Management Act of 1976, and for other purposes.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.
By W. RAYMOND COLLEY,
Deputy Clerk.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
February 11, 1977.

Hon. THOMAS P. O'NEILL, JR.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 12:45 P.M. on Friday, February 11, 1977, and said to contain a message from the President wherein he transmits the first in a series of reports that he will be submitting on the progress toward a solution of the Cyprus dispute pursuant to Public Law 94–104.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.
By RAYMOND COLLEY.

FIRST REPORT ON PROGRESS TOWARD A SOLUTION OF THE CYPRUS DISPUTE—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–74)

The SPEAKER laid before the House the following message from the President of the United States; which was read and referred to the Committee on International Relations and ordered to be printed.

To the Congress of the United States:

This report on the progress toward a solution to the Cyprus dispute is the first of a series that I will submit pursuant to Public Law 94–104. Through these reports and continuing close consultations with the Congress, I will keep the American people fully informed of developments in the negotiations.

Helping to promote an equitable and lasting solution to the problems of Cyprus is a high priority for my Administration. The work has already begun. At my request, former Defense Secretary Clark M. Clifford will leave on February 15 for a special mission to Greece, Turkey and Cyprus, as my personal emissary. Through consultations in Greece

and Turkey, he will seek to improve our bilateral relations with these valued NATO allies. With regard to Cyprus, I have asked for his personal assessment of the situation on the island, prospects for early movement toward a negotiated settlement, and how we might be of assistance in this process. Mr. Clifford will consult with the Congress before he departs and again—with other senior officials—after his return, in an effort to produce policies which are effective and which have the broad support of the American people.

We intend to stay in close touch with our other European friends. Vice President Mondale raised the subject during his recent trip and received welcome indications that member states of the European Community continue to share our interest in doing what is possible to encourage a negotiated solution.

We will also continue to maintain close contact with the United Nations in its efforts to promote a peaceful solution. Secretary General Waldheim has worked tirelessly to this end since the summer of 1974. He will soon visit Nicosia for discussions with Cypriot leaders. We hope that through his continued efforts the talks between the two communities might resume in the near future.

Recent positive developments offer some prospect of further progress. One such event was the meeting last month between President Makarios and Turkish Cypriot community leader Denktash, the first meeting between the two in thirteen years. I can assure the Congress that the United States will do all it can to build on these positive developments and advance the cause of a negotiated settlement for Cyprus.

JIMMY CARTER.

THE WHITE HOUSE, *February 11, 1977.*

APPOINTMENT AS MEMBERS OF FEDERAL RECORDS COUNCIL

The SPEAKER. Pursuant to the provisions of 44 United States Code 2701, the Chair appoints as members of the Federal Records Council the following Members on the part of the House: The gentleman from Missouri (Mr. BURLISON), and the gentleman from Minnesota (Mr. FRENZEL).

APPOINTMENT AS MEMBER OF FEDERAL COUNCIL ON THE ARTS AND THE HUMANITIES

The SPEAKER. Pursuant to the provisions of section 2(a)(8), Public Law 93–133, the Chair appoints as a member of the Federal Council on the Arts and the Humanities the following Member on the part of the House: The gentleman from California (Mr. STARK).

LITHUANIAN INDEPENDENCE DAY

(Mr. STRATTON asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. STRATTON. Mr. Speaker, the rash of recent reports of a wholesale Soviet and East European crackdown on freedom of expression only represents the tip of an iceberg of political repression that continues in the Communist world in spite of all the pledges of the Helsinki agreement. I mention this because today is the 59th anniversary of the Republic of Lithuania, a free nation that was forceably "incorporated" into the Soviet Union in 1940, and to this day remains a captive nation of the Soviet Communist empire.

Fifty-nine years ago, on February 16, 1918, the Republic of Lithuania formally declared its independence, and thereupon was recognized as an independent nation under the Treaty of Brest-Litovsk by the existing Bolshevik government. Three years later, in 1921, this new republic was formally accepted as a full-fledged free and independent member of the League of Nations.

For nearly 20 years thereafter the Lithuanian people devoted themselves to building a free and prosperous country and to enjoying the other benefits of freedom. However, in 1940 Lithuania was taken over by the military forces of the Soviet Union. Whatever may have been the unusual military circumstances that existed at the time, in the face of the surprise Nazi attack, that led to the 1940 actions in Lithuania, there is no legitimate or moral reason why Lithuania should still be held in bondage today, 37 years later.

Nevertheless, in spite of this bondage, the faith and resolution of the Lithuanian people have never diminished. Their courage has inspired freedom-loving peoples the world over. Their hopes are warmly remembered by all Americans of Lithuanian descent, by all friends of Lithuania, and by the U.S. House of Representatives, which on November 20, 1975, approved House Resolution 864, expressing the sense of Congress that the signing by the United States of the final act of the Helsinki Conference on Security and Cooperation did not in any way change the status of Lithuania or of any other captive nation in the Baltic insofar as its basic right of freedom and independence was concerned.

Mr. Speaker, 34 nations will meet this summer in Belgrade, Yugoslavia, to review the implementation of the Helsinki agreement. High on the agenda for that discussion must certainly be the glaring Soviet noncompliance and outright violations of the so-called Basket Three provisions on human rights in the Helsinki agreement. This quest for human rights must not be limited only to those states which are ostensibly sovereign within the Soviet bloc, such as Czechoslovakia, Hungary, and Poland, for instance, but also to those nations like Lithuania, whose existence was wiped out entirely by Russian military control but which nevertheless continue to nourish the hope of freedom, independence, and sovereignty. We in the United States must take the lead in pressing that precise point in Belgrade.

THE REGULATORY AGENCY APPOINTMENT REFORM ACT

(Mr. MIKVA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MIKVA. Mr. Speaker, today I am introducing a bill which will help to restore the confidence of the American people in Government and to revitalize the effectiveness of the regulatory agencies. The Regulatory Agency Appointment Reform Act establishes a Federal Regulatory Agency Nominating Board which will provide the President with the names of three individuals for appointment to a vacancy on any of the 11 Federal agencies. The President will be limited to appointing commissioners from the names submitted by the Board. The agencies included in this bill are multimember commissions with broad authority to regulate rates, prices, and supply mechanisms for the entire country. Under the bill, the President and the Senate retain their constitutional authority to nominate and advise and consent, but the process is made more effective through the Nominating Board's screening and suggestion authority.

The Nominating Board consists of 15 members appointed by the President for 3-year terms. At least 8 of the 15 members are individuals who are representatives of the public at large—individuals who have had no connection with any industry regulated by the 11 agencies for 3 years prior to their appointment and who have demonstrated a commitment to the public interest. This provision assures the participation of experienced and knowledgeable business men and women, but the potential for domination of the Board by the business community is eliminated.

The bill will also put an end to the "revolving door" practice of an individual within a regulated industry being appointed as a commissioner of an agency regulating that industry and then returning to that industry at the end of his or her term as a commissioner. Commissioners would be prohibited from accepting employment or compensation from any industry regulated or directly affected by the activities of the agency where he or she served for 2 years following the conclusion of agency service.

The bill represents a new approach to the agency appointments process that profoundly changes the previous system without compromising the constitutional directives. The genesis of the bill is rooted in the realization that the President and the Senate can no longer devote to the appointments process the time and energy necessary to insure that the public interest is truly served. The bill is also an honest admission that the nature of politics is such that the pressures to reward valued service can reach proportions that even the best of us may sometimes find difficult to withstand. The Regulatory Agency Appointment Reform Act was drafted in recognition of both these facts of life. The independence of the Board will assure that both of these

problems will be reduced and will mark a significant step forward in reforming the Federal regulatory agencies.

TIME HAS COME FOR A PERMANENT ACROSS-THE-BOARD REDUCTION IN TAX RATES

(Mr. KEMP asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KEMP. Mr. Speaker, it is obvious to most observers today that the time has come for a permanent across-the-board reduction in tax rates. The high rate of taxation in America today is the biggest drag on our economy. It is a disincentive to production, to employment, and investment. Congress must take immediate steps to increase the after-tax income of all the American people, and the after-tax rewards of American productivity, so that both unemployment and inflation can be attached simultaneously.

In the early 1960's we faced similar economic conditions of unemployment and unused plant capacity. President Kennedy said at the time that the main block to full employment is an unrealistically heavy burden of taxation. "The time has come," he said, "to remove it." That was true then and it is true today.

President Kennedy cut the rates from between 20 and 90 percent to rates of 14 to 70 percent in the high income range, and cut the corporate income tax from 52 to 48 percent. He supported accelerated rates of depreciation and put on an investment tax credit tax of 7 percent. As a result of his actions, both unemployment and inflation dropped and we experienced a growth in our economy that has been unmatched since. Best of all, rather than a net loss of revenue, we experienced an increase in revenue due to the stimulation of business activity and new jobs.

Mr. Speaker, I strongly believe the Congress should address itself to the real problems of the country, not just surface problems, and should seek to increase production and full employment by means of tax reductions. What the country needs is a full across-the-board reduction in the tax rates on both personal income and business income in order to stimulate output, enhance real economic growth, and provide jobs for the American people.

INTRODUCTION OF RESOLUTION DISAPPROVING RECOMMENDATIONS OF FEDERAL PAY RAISES

(Mr. GRASSLEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GRASSLEY. Mr. Speaker, today I have reintroduced, at the request of some of my colleagues, a resolution to disapprove recommendations which would increase the salaries of certain Federal employees and officials. More than 50 Members have cosponsored or introduced similar legislation.

The fact that so many Members of the House have expressed opposition to Federal employee salary increases at this time reflects what I believe to be the prevailing sentiment among the people of the United States.

Recent surveys indicate that a majority of the Members of the House would like to see this matter brought to the floor of the House so that all Representatives can vote their convictions—one way or the other.

On this date I have introduced a resolution, to be referred to the Rules Committee, which would allow the House to consider this matter before the February 20 deadline for disapproval is reached. This is a highly unusual procedure, but it is required by the circumstances.

I would also like to advise my colleagues that my efforts to bring the issue at hand to a vote will continue. If that requires numerous requests to consider House Resolution 115 by unanimous consent—so be it.

The House should not adjourn this week without a vote. I pledge that I will do everything within my power to see that such a vote does take place. The American people want their elected officials to be accountable for what the Federal Government does. I do, too.

A CALL FOR A VOTE ON CONGRESSIONAL PAY INCREASES

(Mrs. FENWICK asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. FENWICK. Mr. Speaker, I, too, have just returned from my district. I have talked to many people, and I think all of us are keenly aware of the sentiment of the American people in regard to this pay raise.

I do not think it is so much the money that is at issue; it is the method. The criticism is that without a vote and without being able to stand up and be counted on it, we are accepting a very large pay increase without living up to the conditions under which it was recommended. This to me is one of the worst aspects of the proposal.

We have not adopted the reforms which we were cautioned should be the conditions for this large pay raise. We are moving ahead and accepting, thanks to a bad system, without a vote, more benefits from the taxpayers who are already hard pressed.

Mr. Speaker, I urge the House and the leadership to consider this matter further. I do not know how we can reach a vote. What is the mechanism by which this could be brought to the floor? Why are we afraid of bringing it to the floor? Where is the power that could release a simple measure for our consideration?

There are many measures in the Committee on Appropriations and in this House; there are resolutions and bills that have been introduced. Can we not get them out and at least vote on them?

CONGRESSIONAL PAY RAISES

(Mr. DON H. CLAUSEN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DON H. CLAUSEN. Mr. Speaker, during the past few days, while traveling through my congressional district, I was impressed by the large number of people who either asked me about or told me their opinion of the proposed congressional pay raise. The sentiments of the vast majority of them coincide with my own feelings on the subject. The issue of congressional pay should not be linked to other salary questions, but rather should be voted on separately and openly, so the public knows not only what salaries their Representatives are receiving, but also where their Representatives stand on that subject.

Members of Congress have a responsibility to insure that Federal employees and judges receive a fair wage, but as long as the Congressmen's pay is tied to their salaries, it is very difficult to be objective.

It is essential that Members of Congress vote on their own salaries separately from other considerations. They also should not profit from their own vote.

In order to accomplish these objectives, I have joined with several of my colleagues in advancing legislation which would accomplish three things:

It would separate consideration of congressional pay from other pay matters.

It would require a majority vote of both Houses of Congress before any congressional raise could go into effect.

It would provide that no pay raise for Congress take effect until the following Congress.

I feel that the sentiments of many of the people in the Redwood Empire of California are eloquently expressed in a recent editorial in the Santa Rosa Press Democrat, the major newspaper in the largest city in my district, which states:

SEPARATE PAY FOR CONGRESS

We were disappointed to see the U.S. Senate voted for a pay raise for Congress, including the senators themselves.

The decision for the raise came in a 56–42 vote to table a motion which would have vetoed the raise. Either the Senate or the House of Representatives had to veto the pay raise, or it would have become law.

The House simply did not vote on the issue. As the result, the pay for members of Congress will go from $44,600 to $57,500.

We are not saying the raises are not justified. It is the first since 1969 except for a 5 per cent cost of living increase.

But the spectacle of congressmen voting for their own raises is rather disturbing to the average taxpayer.

A number of Congressmen are opposed to the present method of determining congressional pay, including the Redwood Empire's Congressman, Don Clausen. But, as he points out, the recommendations for the pay raises are transmitted to Congress by the President, and pay raises for other high government officers and the Supreme Court are included in the overall proposal. Under present rules, it is impossible to separate the Congress pay from the others.

Congressman Clausen would like to see the Congressional pay a separate issue.

We would favor that proposal, and we also would favor a bill which is being proposed to prevent members of Congress from raising their pay while they are in office. California, along with 36 other states, prohibits legislators from raising their own salaries during their term of office. We think the same thing should apply to members of Congress.

CONSTITUENTS' VIEWS ON PROPOSED CONGRESSIONAL PAY INCREASE

(Mr. LAGOMARSINO asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LAGOMARSINO. Mr. Speaker, I, like most of the Members, have just returned from my district. I talked to a number of people about various matters and issues that are facing the American people and facing the Congress of the United States.

The only one, though, that they were really interested in, the only one they were talking about was the proposed pay increase for Members of Congress. I talked to some people who agreed with the need for Congress to get a pay raise. There were not very many, but there were some who agreed that there is a need perhaps for some kind of a pay raise.

However, I did not talk to one single individual who went along with the idea that the pay raise should go into effect without a vote of the Members of this House. They all asked, "What is wrong with the Members of the House of Representatives standing up and being counted if they want a pay raise?"

I cannot imagine any reason at all myself why we should not be allowed to do that.

Mr. Speaker, I urge the leadership of this body to allow a resolution to come before us so that we can stand up and be counted and respond to the logical and rightful demands of our constituents.

PROPOSED PAY INCREASE

(Mr. HAMMERSCHMIDT asked and was given permission to address the House for 1 minute).

Mr. HAMMERSCHMIDT. Mr. Speaker, as the sponsor of a resolution calling for the disapproval of the proposed congressional pay increase, as recommended by the President's Commission on Executive, Legislative, and Judicial Salaries, I consider it extremely important that this question be brought to the floor for a vote, so that the Members of this body may properly express themselves.

At a time when our Nation and its people are beginning to emerge from a severe economic recession, I find the question of a pay raise highly inappropriate and I urge its rejection. There is little doubt in my mind that Federal expenditures have a significant impact on the Nation's economy. The proposed resolution of disapproval, therefore, stands as a symbol of our willingness and desire to be prudent with tax dollars.

In the past, I have always opposed salary increases and, in fact, have never voted for one since coming to Congress. Very simply, I feel that a vote on the disapproval resolution will afford us an opportunity to stand up and be counted on this crucial matter. Let us prove to the American people that we are earnest in our desire to hold down Federal spending and that we mean what we say when we assure them of our support for restraint and responsibility in our actions that involve their tax dollars.

ADMINISTRATION'S REQUEST FOR AUTHORITY TO SUBMIT EXECUTIVE BRANCH REORGANIZATION PLANS TO CONGRESS

(Mr. LEVITAS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LEVITAS. Mr. Speaker, on February 9, 1977, along with 16 other members of the Government Operations Committee, I introduced H.R. 3407, the administration's request for the authority to submit executive branch reorganization plans to the Congress. An outline of the President's proposal is embodied in his message to the Congress on February 7, 1977.

The Government needs to be reorganized. There is virtually no debate on that subject. As the priorities and needs of the Nation change, so must the institutions which implement them. We must seek simplicity and openness, competence and coordination, efficiency and economy. Civil servants and political officials can do their work better when their responsibilities are clearly delineated and do not overlap with those of other organizational units. Members of Congress can perform more effective oversight of Government functions and programs when they are arranged in simple and coherent organizational patterns. The people benefit from a Government which is less complicated—which can be understood and can respond to their priorities and problems.

The Carter administration will need several means to effect a comprehensive Government reorganization, including administrative direction, legislation, and, very importantly, reorganization plans submitted to Congress by the President.

As early as 1923, the Congress recognized the need for a President to modernize the Federal Government. Subsequently, the Reorganization Act of 1949 authorized the President to transmit reorganization plans to the Congress. The authority requested by President Carter is very similar to that available to Presidents from 1949 to 1973. Under the procedure, reorganization plans are sent to the Congress by the President and take effect after 60 days unless either House disapproves the plan. The few changes requested by the administration include allowing the President to withdraw or amend a plan for 30 days after submittal to the Congress, permitting the submission of more than one plan every 30 days, and deleting the requirement that potential savings resulting from the proposal be enumerated in the plan. The administration has also requested that authority be granted for 4 years.

This reorganization plan process has helped to bring about needed changes efficiently for more than 25 years. It is a cooperative approach that will facilitate a joint effort of the executive branch and the Congress to improve the way that Government works for this great Nation. The President has pledged that Members of Congress, their staffs, and interested public and private organizations will be involved not only during the 60 days that plans may be before the Congress, but also during the formulation of reorganization proposals.

Support for the bill giving the President authority to submit proposals does not necessarily mean support for the plans. There may well be proposals or parts of proposals that I won't go along with. But, we have to have a starting point.

It is not accurate to say, as some here do, that Congress does not have any control over what is done under this measure. Congress will be consulted and involved in the formulation of the plans themselves. Congress plays a very real role in controlling the reorganization when either House can reject a plan without the concurrence of the other body.

Congress can make suggestions while a plan is pending which will allow the President to make amendments more in line with congressional desires before the plan is acted upon.

Any Member can introduce a bill which embodies reorganization plans and could be adopted after the veto of a Presidential plan.

The important point is whether or not the Congress is serious or just giving lip service to the idea of Government reorganization. If we are serious, and our constituents are serious, then we should join with the President in granting him the authority to get the job started.

Government reorganization is not an end in itself; it is a process designed to aid the President in shaping his administration to become an effective, fair, and responsive Government. Reorganization authority is a tool required to assist this process. I urge you to support the President's request.

MAKING IN ORDER ON TUESDAY, FEBRUARY 22, 1977, OR ANY DAY THEREAFTER CONSIDERATION OF THIRD CONCURRENT RESOLUTION ON THE BUDGET FOR FISCAL YEAR 1977

Mr. GIAIMO. Mr. Speaker, I ask unanimous consent that it may be in order on Tuesday, February 22, 1977, or any day thereafter to consider House Concurrent Resolution 110, the third concurrent resolution on the budget for fiscal year 1977.

The SPEAKER. Is there objection to

the request of the gentleman from Connecticut?

Mr. ROUSSELOT. Reserving the right to object, Mr. Speaker, can the gentleman assure us that by waiving this point of order, the only thing we are doing is allowing this third concurrent resolution on the budget to come to the floor ahead of the expiration of the 10-day rule? Additionally, can the chairman of the Budget Committee assure the House that there are no other points of order waived; is that correct?

Mr. GIAIMO. Mr. Speaker, if the gentleman will yield, that is correct.

As the gentleman knows, the 10-day layover period will not expire until the 23d of February, and it may well be the desire of the leadership to bring this matter up on Tuesday, the 22d. This will enable the leadership to do that.

Mr. ROUSSELOT. Further reserving the right to object, Mr. Speaker, the minority side, including my distinguished minority Member, the gentleman from Ohio (Mr. LATTA), and other minority Members feel that we should waive that 10-day requirement because there has, in fact, been more than adequate consideration of this matter in the committee. However, the gentleman can assure us, I assume, that no other points of order are being waived?

Mr. GIAIMO. I can assure the gentleman that there are no points of order being waived with respect to the budget resolution.

Mr. ROUSSELOT. Mr. Speaker, I thank the gentleman. We do not object on this side.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

INTRODUCTION OF RESOLUTION DISAPPROVING SCHEDULED PAY RAISE FOR MEMBERS OF CONGRESS AND OTHER TOP LEVEL GOVERNMENT OFFICIALS

(Mr. RHODES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RHODES. Mr. Speaker, at the earliest appropriate time today, I plan to seek recognition by the Chair for the purpose of asking unanimous consent for the immediate consideration of House Resolution 115, a resolution disapproving the scheduled pay raise for Members and other top level Government officials introduced by the gentleman from Iowa (Mr. GRASSLEY).

I realize that under normal procedure, I am not entitled to recognition for this purpose. I also realize that my action is extraordinary. However, it represents the last possible course of action for those of us who believe strongly that Congress has an obligation to go on public record on the subject of our own pay.

Last week, Mr. Speaker, CBS conducted a very enlightening poll which I want to share with my colleagues.

CBS found that—aside from Members' attitudes concerning the merits of the proposed pay increase—310 Members of the House say they favor taking a vote on the issue. Only nine Members say that they do not favor taking a vote on the issue.

Mr. Speaker, it is clear that an overwhelming majority of this body agree that, regardless of the merits of the pay raise, it is wrong for us to allow the increase to take effect without a vote.

We have to have greater respect for the intelligence of the American people than to believe that they will not see through this charade. We must have a greater respect for the dignity of this body.

In short, Mr. Speaker, we must face up to our responsiblity and have a recorded vote on this issue.

Mr. Speaker, in the event that this effort fails I hope the majority leadership will bring up H.R. 1968, which I introduced, which would make the discharge of a disapproval resolution a matter of privilege and thereby allow it to be called up by any Member.

Mr. Speaker, in the event that the Pay Commission continues in existence—and sometimes I hope that it will not continue in existence—but if it does, I hope that its findings as contained in the budget of the next 4 years would be a matter which would be brought up for a vote and H.R. 1968 would provide such a procedure.

Mr. Speaker, the people of this country expect this. They expect us to face up to our responsibilities and to do it openly.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. RHODES. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Speaker, I appreciate the gentleman's yielding.

As a member of the Committee on Post Office and Civil Service, I was present when the committee heard many, many Members of Congress, even some who favored the pay increase, say they want the resolution of disapproval open to a vote on the floor of this House. Therefore, Mr. Speaker, it is not just those who approve the resolution of disapproval who are asking that they be given a chance to vote, but even those who favor the pay increase want a vote.

Mr. Speaker, I think the gentleman from Arizona (Mr. RHODES) who has made an excellent point in asking that the leadership allow the entire membership to vote on this vital issue tomorrow.

Mr. BROOMFIELD. Mr. Speaker, I rise in support of the statement of the distinguished minority leader urging a rollcall vote on the congressional pay-raise proposal. At a time when the credibility and ethics of the Congress are under attack as never before, that is the very least we can do. For my own part, I am prepared to vote against the pay raise because I do not believe it can be justified at a time when Government is asking the American people to make sacrifices in their own lives. There are those who disagree with that assessment and can offer persuasive arguments in support of a Federal pay raise. All we are asking, Mr. Speaker, is that those arguments be placed on the record along with the votes of the Members for the Nation to consider and judge.

With or without a rollcall vote, I cannot understand how this body can accept a salary increase of this magnitude in view of its failure to first act on a meaningful code of ethics. Every responsible authority on the subject has concluded that the very minimum condition for granting a congressional salary increase must be the prior approval of a thorough and binding code of ethics I know the appropriate congressional committees are now at work drafting such a code and that it is a difficult and time-consuming task. Yet, we owe it to the Nation to deny ourselves a pay increase at least until such a code is properly drafted and implemented. Mr. Speaker, if we are truly concerned about restoring public trust and the credibility of the Congress we must begin by facing and voting on difficult issues such as this.

Mr. SKELTON. Mr. Speaker, at this time, I would like to express my opposition to the proposed congressional pay increase. I have just returned from a visit to my home district, the Fourth District of Missouri, where I received a number of comments about the pay raise and the manner in which it has been handled by the Congress.

I have heard the arguments for and against this pay raise. For reasons which I will detail later, I have chosen to oppose it. However, I would first like to say that I deeply regret that this measure has not come to the floor for a rollcall vote. If the Members of Congress feel that this salary increase cannot stand public scrutiny, then it should not pass. Certainly it should not be slipped in through the back door while the Congress adopts a "see-no-evil" posture.

A few weeks ago a major news magazine described this Nation's mood as "hopeful—sort of." After a series of political scandals, economic shock waves, and natural disasters, the American people are looking to Washington eagerly for a new brand of leadership. It is of paramount importance that this Congress not give them "politics as usual."

As for the pay raise itself, I am opposed to it because of what I fear will be its inflationary impact on the economy. One of Missouri's most famous sons, Harry Truman, was well known for using the motto, "The Buck Stops Here." If the United States is to make a start on curbing inflation, there could be no more appropriate originating point than the Halls of Congress. The example we set here can encourage healthy fiscal responsibility around the Nation—or it can trigger one more round of the "me-too-ism" that has plagued the economy in recent years. At the very least, we owe it to the Nation to discuss the proposal openly and submit it to a rollcall vote.

Mr. MARRIOTT. Mr. Speaker, last night I sent you a telegram asking that you exert your leadership and do what is necessary to bring the issue of the congressional pay raise to the floor for a vote.

My offices in Utah and here in Washington have been swamped with calls and letters protesting our letting the

pay raise go into effect automatically. Anything as important as this requires that we accept our responsibility and vote as Members on the floor, rather than ducking behind a procedural hedge. We must be accountable to the citizens who pay our salary. For us to avoid a vote on the pay raise is to shirk our basic responsibility. If indeed this raise is deserved, then let us vote out in the open.

I personally resent the fact that I probably will not be given the opportunity to vote against the increase. I think 30 percent is excessive.

My constituents in Utah know where I stand, but I wanted to take this opportunity to follow up my telegram and let all my colleagues know of my desire that this matter be settled on the floor of the House.

Mr. BUCHANAN. Mr. Speaker, I join the distinguished minority leader in calling for a vote on the proposed pay increase prior to the February 20 deadline.

I voted against the legislation which created the Pay Commission precisely because it made possible the raising of salary levels for Members of Congress and other high Government officials without a vote as apparently will be the case this year.

If a vote occurs, I will vote against the proposed increase.

Mr. MILLER of Ohio. Mr. Speaker, we are fast approaching this week's deadline for which the proposed pay raise for Members of Congress will automatically become effective.

The Post Office and Civil Service Committee has chosen to keep the disapproval resolution, House Resolution 115, which I am cosponsoring, under wraps and let the 30-day waiting period expire without full House debate and vote.

If this pay raise is allowed to slide through in this manner, a crushing blow will be dealt to the already sinking credibility of this body. The American people will have every reason to question where Congress places its priorities and interests.

It may be true as some have argued that there is no good time to have a pay hike but now has to be the absolutely worst time. American families have been struggling for a long time to make ends meet in their own budgets. And a record-breaking cold winter has even made those hardships more acute. Congress cannot ask our ctizens to make continued sacrifices while at the same time seeking a pay raise that immunizes itself from the very hardships they are forced to endure.

If Congress is willing to accept any pay raise, it should be equally willing to be publicly recorded on its passage or defeat. I hope we will find a way this week to overcome the committee's obstruction and bring up the discharge resolution so we may have an opportunity to vote on it.

GENERAL LEAVE

Mr. RHODES. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the subject of my 1-minute speech today.

The SPEAKER. Is there objection to the request of the gentleman from Arizona?

There was no objection.

FAVORING A VOTE ON CONGRESSIONAL PAY RAISE

(Mr. WYLIE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WYLIE. Mr. Speaker, I rise in support of the distinguished minority leader's position to bring the question of the congressional pay raise before the House. I do so as one who voted against Pay Commission procedure in the first instance.

I do not now argue the merits or the demerits of the proposed pay increase. But I am firmly of the opinion that this is a matter on which the House should have the courage to vote on the record so that all of those we represent will have the opportunity to know who stands where on this issue.

THE HOUSE SHOULD VOTE ON PROPOSED PAY RAISE

(Mr. QUILLEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. QUILLEN. Mr. Speaker, I support the position taken by the minority leader, the gentleman from Arizona (Mr. RHODES) on the proposed pay raise. I believe he should be recognized for such a unanimous consent request. Should that be done and there is no objection, then I support the fact that the pay raise should not go into effect. Assuming that that does not come about, then as the ranking member on the Committee on Rules, I call upon the Committee on Rules for an immediate meeting to discharge the legislation from the Committee on Post Office and Civil Service and bring it to the floor of the House.

Yesterday I told some of my constituents in a speech that I was coming back to Washington to assist in every way possible to try to get a vote on the pay raise in order to vote against it.

REQUEST FOR IMMEDIATE CONSIDERATION OF HOUSE RESOLUTION 115

Mr. RHODES. Mr. Speaker, I rise for the purpose of seeking recognition, and having been so recognized, I now ask unanimous consent for the immediate consideration of House Resolution 115, disapproving the recommendations of the President with respect to the rates of pay of Federal officials transmitted to the Congress for the fiscal year ending September 30, 1978, which resolution was introduced by the gentleman from Iowa (Mr. GRASSLEY) disapproving the proposed pay raise.

The Clerk read the resolution, as follows:

H. RES. 115

Resolved, That the House of Representatives, in accordance with section 225(i) of the Federal Salary Act of 1967 (81 Stat. 643; Public Law 90-206), hereby disapproves all of the recommendations of the President of the United States within the purview of subparagraphs (A), (B), (C), (D), and (E) of section 225(f) of the Federal Salary Act of 1967, transmitted by the President to the Congress in the budget for the fiscal year ending September 30, 1978.

The SPEAKER. Is there objection to the request of the gentleman from Arizona?

Mr. CHARLES H. WILSON of California. Mr. Speaker, I object to the request of the gentleman from Arizona.

The SPEAKER. Objection is heard.

CALL OF THE HOUSE

Mr. EDWARDS of Oklahoma. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present. Without objection, a call of the House will be ordered.

There was no objection.

The call was taken by electronic device, and the following Members failed to respond:

[Roll No. 21]

Abdnor	Emery	Murphy, Ill.
Addabbo	English	O'Brien
Akaka	Fary	Oakar
Anderson, Ill.	Findley	Patterson

Early	Moorhead, Pa.	Zeferetti
Eilberg		

The SPEAKER. On this rollcall 301 Members have recorded their presence by electronic device, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

CONGRESSIONAL, EXECUTIVE, AND JUDICIAL PAY RAISE

The SPEAKER. Under a previous order of the House, the gentleman from

Maryland (Mr. BAUMAN) is recognized for 60 minutes.

Mr. BAUMAN. Mr. Speaker, I greatly regret the earlier action that occured here in the House today when a unanimous-consent request was made by the distinguished minority leader, the gentleman from Arizona (Mr. RHODES) who sought to call up a resolution of disapproval regarding the congressional, executive, and judicial pay raise. It may well be that the request made by the gentleman from Arizona will be the only chance that the people's House, the U.S. House of Representatives, has to act upon this matter.

As I think the membership knows, and by now the public well knows, there appears to be little chance that the ad hoc subcommittee dealing with the pay raise, which meets this afternoon, can mark up this legislation and report it out to the full Committee on Post Office and Civil Service. Certainly the full committee probably will not report it to the House for action in time to disapprove before the February 20 cutoff.

I think this entire matter has to be placed in perspective. Ten years ago a previous Congress of the United States passed the law which made it all but inevitable that precisely this kind of situation would come into being; that Members would not be required to face a roll-call vote on the issue of raising their own pay.

Mr. Speaker, I happen to believe it is our constitutional duty to go on record whether we are for or against this pay raise and any increase of the other emoluments and perquisites that Members of the House may have.

Unfortunately, the operation of that law allows an outside commission—in this case, the so-called Peterson Commission—to make recommendations, submit them through the President to the Congress, and within 30 days if no action is taken by Congress, nothing can be done about the pay raise, no change can be made in the amount, and no vote to disapprove in whole or in part may be had.

So we find ourselves in this predicament, as the deadline comes up this weekend.

It appears to the gentleman from Maryland, without any rancor or any questioning of anyone's motives obviously, those in the leadership, who feel the pay issue should not be voted upon, have made it virtually impossible to do so. I would offer my opinion that if the leadership of the Congress on the majority side wished to have this matter on the floor, it would be here today. We are meeting here after a 6-day recess. We have absolutely no legislative business to deal with. The one resolution scheduled was pulled from the floor. We have no legislative business tomorrow. It would be a simple matter, by suspension or other means, to have this matter brought to the floor. The issue is not so much the pay raise, which I would vote against, but I regret the procedure by which a vote is being prevented. It is all being done legally, carefully; it is all being done so that there will be no trace of a record as to where any Member stands on the matter. As an informal poll of CBS said, well over 300 Members said they would like to have a chance to vote, so why should not the House be permitted the right to vote? If the leadership wishes, we will be permitted. There the blame must rest.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from California (Mr. ROUSSELOT), a distinguished member of the Committee on Post Office and Civil Service.

Mr. ROUSSELOT. Mr. Speaker, I appreciate the gentleman's yielding to me.

Mr. Speaker, as ranking member of the ad hoc subcommittee to the Committee on Post Office and Civil Service, several members including myself sat last week and listened to the testimony of a substantial number of Members of the House. A few of the Members favored the pay increase, and so stated. But these Members asked that the committee find a way to make sure that the entire House have an opportunity to vote on the issue.

I, too, am disappointed because the leadership has decided, for whatever reasons, not to allow—or it appears that they decided not to allow—the entire House membership to have an opportunity to vote on a resolution of disapproval, or some other resolution if the Committee on Post Office and Civil Service would allow the issue to come to the floor.

We had a substantial number of people from outside the Congress who testified, some of whom favored the pay increase for the legislative, judicial, and executive branches, but felt also that the entire House membership should have the opportunity to vote on the Commission recommendations.

Mr. Speaker, I join my colleagues in appealing to the leadership of the House of Representatives. There are several precedents for going to the Committee on Rules and getting a rule, which brings the bill to the floor, allow an hour or two of debate, and vote up or down on a resolution. Or another suggestion I have had is to schedule it under suspension of the rules, which, of course, would be a disadvantage to the gentleman in the well and myself who favor a resolution of disapproval because it would require a two-thirds vote.

Even with that disadvantage, I still believe that we should have a full opportunity in the House of Representatives to vote on the issue. Even though the suspension of the rule procedure would disadvantage the position that the gentleman from Maryland (Mr. BAUMAN) and I both take, since it would only require a one-third plus one vote to sustain the position that the Speaker of the House and other leaders evidently take, we would at least have a chance to vote on the issue. The other body at least had a motion to table on which to vote. So it is clear how each of them stand and the Senators will at least be accountable to their constituents.

I believe it is a major mistake for the House of Representatives not to schedule this issue for consideration tomorrow. As a member of the committee, I congratulate my worthy fellow colleague, the gentleman from Maryland (Mr. BAUMAN), for taking this special order today to discuss the pay increase package. It should be made clear to the American public that we could vote on this issue if the leadership would just schedule the vote on or before Friday, February 18.

Several of the newspapers have said that we are going to kind of wink at each other and let it go through by doing nothing. I am not winking. I am going to go to the committee meeting that we have scheduled today at 2:30 p.m. and try to encourage my colleagues on the committee to vote out a resolution of disapproval. Whether I win that vote or not, I believe the full House should have a chance to vote on this matter.

Our minority leader, the gentleman from Arizona (Mr. RHODES), has said that although he will vote for the pay increases he, too, favors the idea of giving the House of Representatives an opportunity to vote up or down on the issue.

Again, Mr. Speaker, I want to thank my colleague, the gentleman from Maryland (Mr. BAUMAN) for taking this time. He and I both know that it is totally possible for us to vote on this issue tomorrow or Friday. There are several ways by which it could be brought to the floor. We could all be present here on the floor within 15 or even 10 minutes tomorrow after President Portillo speaks to our joint session.

We could easily go to the Committee on Rules tomorrow morning and obtain a rule. We could have the issue here for a vote within a couple of hours after the Rules Committee meets.

Mr. Speaker, it could happen, it should happen, and I hope that my colleagues in the House will be persuaded to allow us a chance to at least vote on the issue.

My colleagues should be aware of the categories of support and opposition that were presented to the ad hoc committee:

EXPRESSIONS OF SUPPORT AND OPPOSITION

Category	Opposes all increases	Opposes only Members' increases	Wants vote on issue	Wants increase deferred	Favors increases	Only favors judges

Mr. BAUMAN. Mr. Speaker, I thank the gentleman from California (Mr. ROUSSELOT) for his statement. I know that he has been in the forefront of the activities of the committee concerning these pay raise hearings. The gentleman has testified, and others have testified. I think he has done his level best as one Member to try to bring this matter to the floor.

I think that probably a very few influential Members could bring this to the floor if they had the will to do it and if the leadership were willing to do it. I certainly agree with what the gentleman from California (Mr. ROUSSELOT) has said.

Mr. ROUSSELOT. Mr. Speaker, if the gentleman will yield further, I agree with what my colleague has just said. There is every possibility that this issue could be brought to the floor tomorrow. I think we should do it. I believe the other Members of the body should encourage the Committee on Rules, as the gentleman from Iowa (Mr. GRASSLEY) and others have tried to do, to bring a rule out tomorrow allowing an accountability vote by each Member of the House.

Mr. HYDE. Mr. Speaker, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Illinois.

Mr. HYDE. Mr. Speaker, I thank the gentleman for yielding.

I wish to commend the gentleman from Maryland (Mr. BAUMAN) for taking this special order, and I associate myself with his remarks.

Mr. CRANE. Mr. Speaker, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Illinois.

Mr. CRANE. Mr. Speaker, I thank my colleague for yielding.

I, too, want to applaud the remarks made by the distinguished gentleman from Maryland (Mr. BAUMAN).

I would suggest further that the procedures that we are following here in the first place, that is, depending upon an outside commission to make recommendations affecting our pay raise, represent, I think, something of a copout. I think that Congress should maintain total responsibility for making such recommendations about whether pay increases are in order or not and not employ such a device as this.

Second, however, I think clearly Congress has the responsibility to vote on this issue if it is going to maintain any kind of credibility in the eyes of the voters as an institution. All public opinion surveys indicate that perhaps the credibility of Congress is at an all-time low in this century at least. I think that we should face the responsibility of addressing ourselves publicly on this question, whether for or against.

I have heard many good arguments in behalf of pay raises, but, on the other hand, if we take into account the automatic escalator that will go into effect and increase our pay, as I understand it, on October 1, on top of this raise, Congress will virtually have doubled its pay since 1968. Yet the cost of living has only increased that period by approximately 70 percent. For that reason I would seriously question the argument that this pay raise is in order based upon cost-of-living increases, because this is vastly in excess of that.

More importantly, however, is this question of ducking a critical vote. That is what is in the minds of the voters, and it is just because of this kind of practice that the Congress suffers such low esteem today.

Mr. Speaker, again I congratulate my colleague, the gentleman from Maryland (Mr. BAUMAN), for the position he has taken on this issue.

Mr. BAUMAN. Mr. Speaker, I thank the gentleman for his remarks.

Mr. McCLORY. Mr. Speaker, will the gentlman yield?

Mr. BAUMAN. I yield to the gentleman from Illinois.

Mr. McCLORY. Mr. Speaker, I thank the gentleman for yielding.

I commend the gentleman from Maryland (Mr. BAUMAN) for taking this special order today. I want to associate myself with the remarks of the gentleman from Maryland, but I also wish to commend my colleagues, the gentlemen from Illinois (Mr. HYDE and Mr. CRANE), for their support of the position which the gentleman from Maryland is advancing.

Mr. Speaker, there is great public interest in this subject, and I think that the Congress is not responding to the public interest on this subject. I think it is a dereliction on our part in finding ourselves in this very inexcusable position at this time.

Mr. Speaker, I join my other colleagues who are today expressing themselves on the proposed salary increases for certain top level personnel in the executive branch as well as for the judiciary and Members of Congress.

The manner in which these salary increases are being approved is most objectionable—particularly as relates to the increases for Members of the Congress. We should face that issue directly—instead of avoiding the issue as we are doing in the pending proceeding. My constituents are most anxious that I, as their Representative in the Congress, should have the opportunity to debate—and vote upon the various issues involved in the comprehensive salary increase resolution.

Mr. Speaker, we are not enhancing the reputation of the House of Representatives by evading this issue. Instead, we are prolonging the unfortunate and largely mistaken attitude of the American public toward this body. We should move forward toward regaining the respect for and confidence in the House of Representatives which are so vital to the strengthening of our representative form of government.

Mr. BAUMAN. Mr. Speaker, I thank the gentleman from Illinois (Mr. McCLORY).

Mr. HANSEN. Mr. Speaker, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Idaho.

Mr. HANSEN. Mr. Speaker, I also want to commend the gentleman from Maryland (Mr. BAUMAN) for this opportunity to express ourselves with regard to the proposed pay increase since it appears that we are not going to have any other opportunity to do so.

I think it is unfortunate that we do not meet these issues head on. I think it shows some sort of political cowardice. I think the people of the Nation feel the same way. Certainly my mail is running very strong in this regard.

Mr. Speaker, I think that at a time when inflation is running rampant and a good share of it has to be laid at the doorstep of excessive Federal spending, this is really an inopportune time for Congress to be raising its salary. I think the people of the country feel this way. If they have to withstand the ravages of inflation, why should the Congressmen reward themselves by putting the people in this position?

Mr. Speaker, I think it would be far wiser to have legislation that would cause Congressmen's salaries to be reduced by a proportionate amount if the country suffers further inflation. In other words, a 5-percent increase in inflation would mean a 5-percent reduction in salary for Congressmen.

Mr. Speaker, I think a proposal like this would be much more in order so as to bring about more responsibility in this body.

Again, Mr. Speaker, I thank the gentleman from Maryland, and I associate myself with his remarks.

Mr. BAUMAN. Mr. Speaker, I thank the gentleman from Idaho (Mr. HANSEN) and I commend him for his comments.

Mr. SAWYER. Mr. Speaker, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Michigan.

Mr. SAWYER. Mr. Speaker, I would like to commend the gentleman from Maryland (Mr. BAUMAN) also; and I would like to associate myself with the remarks he made. They were well stated and they express my own feelings.

Mr. BAUMAN. Mr. Speaker, I thank the gentleman.

Mr. GRASSLEY. Mr. Speaker, will the gentleman yield?

Mr. BAUMAN. Mr. Speaker, I yield to the gentleman from Iowa (Mr. GRASSLEY), who has been in the forefront of this entire matter and who was one of the earliest Members to raise his voice regarding automatic increases of congressional salaries.

Mr. Speaker, he has proved himself in every way to be a worthy successor to his predecessor, the former Member from Iowa, the Honorable H. R. Gross. I think

all of us owe a debt of gratitude to the gentleman from Iowa (Mr. GRASSLEY), and I gladly yield to him.

Mr. GRASSLEY. Mr. Speaker, I thank the gentleman for yielding.

I likewise want to commend the gentleman from the Maryland (Mr. BAUMAN) for taking this special order to bring this issue to the attention of the people and to bring it up for discussion on the floor of the House where it ought to be discussed.

Mr. Speaker, I especially commend the gentleman for his endeavors in trying to bring this matter to a vote. Obviously, it ought to be brought to a vote because when things like this are brought to a vote, usually the results are somewhat different than they are going to be if this issue is not brought to a vote.

Mr. Speaker, I need not remind the Speaker nor the Members of this distinguished body that last fall, by a vote of 325 to 57, this House said that we should not have a pay raise, for various reasons, obviously; but at that time that we should not have one.

I think the verdict would be about the same this time if we had a vote on this issue.

Mr. Speaker, I would say to the gentleman from Maryland that even though this special order and our activities today may not result in a vote on this issue at this time, there will be at least two other times in this term of office, during 1977 and 1978, when there will be pay raise issues before this House again. I think that the efforts of the gentleman from Maryland today may be directed toward reminding the public that not only on February 20, when we may be getting a $13,000 raise, but on October 1, 1977, we should be getting a cost-of-living raise on top of that $13,000 raise, on top of the $44,600 we are now making. Then on October 1, 1978, we may again, without a vote of this House, get an automatic cost-of-living raise, in addition to the cost-of-living raise we got on October 1, 1977, in addition to the $13,000 raise that we may get on February 20, and in addition to the $44,600 salary we are presently getting; all of them compounded and piled on top of one another.

Mr. Speaker, there seems to be no end to the opportunities that we are going to have in this way and in many other ways to educate the public as to how we have insulated ourselves against the cost of living.

In any event, Mr. Speaker, we have discussed the procedure up to this point. I think some reminder to the public and to our colleagues in the House needs to be made about just how large a $13,000 raise is.

It is large enough that the average family in America of four lives on it. That is what our salary increase is going to be.

I suppose that this was most strongly brought to my attention the other day when I held a meeting in my district at which there were four elderly people. I might add that this body is more concerned about our senior citizens than any other group in American society. As I say there were four of those people present and the total annual salary that they are living on is less than we will get in just this one raise. This means that there are four senior citizen households, who represent the average in America, who live on just what this increase is going to amount to.

Then in addition to the monetary aspects of this, let me say that at least I feel some shame that we spend such a great amount of our time in this organization trying to bring about respect for the institutions of Government, and then fighting the thing that tears down the very respect that people have to have if this institution and if in fact representative government is to survive, and if the public faith in the constitutional form of government is going to survive.

Mr. BAUMAN. Mr. Speaker, I think the gentleman from Iowa for his remarks and also for his leadership in this matter.

I now yield to the gentleman from Maryland (Mr. STEERS).

Mr. STEERS. Mr. Speaker, I also would like to associate myself with the remarks made by my colleague, the gentleman from Maryland (Mr. BAUMAN) and also to associate myself with the statements made by the gentleman from California (Mr. ROUSSELOT). I believe that the gentleman from California chose the word "opportunity" to vote on this issue, but, on top of the "opportunity" which I seek, I believe I have a duty to vote on this issue, and so do my constituents. I do not want to vote on it in the sense that it is pleasing to me, but because I believe I have something higher that I ought to answer to than my own wishes, and that is my duty to my constituents.

It was for this reason that I have cosponsored a bill introduced by the Congressman on a pay raise deferral.

There is only one other additional point on which I distinguish myself, perhaps, from the others who have the same views, and that is that one measure of whether the congressional salary at the present time is adequate is whether or not there were other applicants for the job. I am a freshman Congressman and there were 22 candidates for the seat I now occupy. I think that is a pretty clear indication that the current salary is fully adequate.

Mr. BAUMAN. Mr. Speaker, I thank my distinguished colleague, the gentleman from Maryland (Mr. STEERS).

Mr. Speaker, I now yield to the distinguished gentleman from Oklahoma (Mr. EDWARDS).

Mr. EDWARDS of Oklahoma. Mr. Speaker, this is my first opportunity to address this body, and I do so, Mr. Speaker, because I feel very strongly about the fact that the Congress of the United States is now going to tell the people of this country that they are about to accept another pay increase that amounts to more money than many Americans make.

As my distinguished colleague, the gentleman from Iowa (Mr. GRASSLEY) has pointed out this proposed increase only makes the Members of this Congress less able to identify themselves with the real problems of the people they represent.

Mr. Speaker, in order that we may somehow bring ourselves back to something that is consistent with reality, I have introduced today a bill that provides that the salaries of the Members of Congress will be tied to the cost-of-living index, in reverse. What I propose is that the Members of this body decide upon what would be an acceptable rate of inflation and for each percentage point that the rate of inflation exceeds that acceptable rate, then the pay of the Members of Congress would be reduced by that same amount.

I believe, Mr. Speaker, that if we took that kind of a step we would find that we could actually restore the public faith in the integrity of this body, which I believe is now sorely lacking.

Mr. BAUMAN. Mr. Speaker, I thank the gentleman from Oklahoma for his remarks.

Mr. Speaker, I now yield to the gentleman from North Carolina (Mr. MARTIN).

Mr. MARTIN. Mr. Speaker, I thank my colleague, the gentleman from Maryland (Mr. BAUMAN), for yielding to me and also wish to thank the gentleman for the special order he has taken today. It also gives me the opportunity to cast my vote right here in favor of the objections that the gentleman from Maryland has raised concerning this proposed pay raise.

The irony of it is that the gentleman from Maryland speaks for me in the statements he has made and I suspect that he speaks for the majority of those of us in the Congress yet, ironically, because of the parliamentary position and maneuvering, we are not going to have an opportunity to vote other than in the way that I just have.

Again I thank the gentleman from Maryland for at least giving us this occasion to express the views that he has and we have in opposition to this maneuver.

Mr. BAUMAN. Mr. Speaker, I want to thank my colleague, the gentleman from North Carolina (Mr. MARTIN), and all of the other colleagues who have participated today in making these remarks.

I earlier made the statement that I think it is true that if the majority leadership of the House wished to have this matter brought before the House for a vote that it could be done.

Mr. Speaker, I should like to personally appeal to the Speaker, since he is in the chair—a gentleman for whom I have the greatest respect—if he in any way could use the considerable powers at his command as the leader of the majority party and as the Speaker of our House, this one Member is asking him to do so in order to bring this legislation to the floor for a vote.

The SPEAKER. The Chair is sure that the gentleman from Maryland, being one of the most erudite students of the laws and the rules of this House, knows that there is no way that the Speaker of the House personally can bring this legisla-

tion to the floor. If there is, would the gentleman make the Chair aware of it?

Is there any way that the gentleman from Maryland knows personally that the Chair can bring this matter to the floor?

Mr. BAUMAN. Mr. Speaker, I should be glad to draft a resolution this afternoon and send it to the Speaker's office for introduction, directing the Committee on Post Office and Civil Service to be discharged immediately from further consideration of whichever appropriate disapproval resolution the Speaker chooses. Such a resolution could be called up for action in the House under a special rule, which I am sure the Speaker could direct the Committee on Rules to adopt this afternoon, since the majority members of that committee are appointed with your approval.

The SPEAKER. It is unusual for the Chair to have a dialog, and the Chair would not wish this to be construed as a colloquy, but rather as a parliamentary inquiry.

Mr. BAUMAN. I am greatly honored that the Chair sees fit to respond to the gentleman from Maryland.

The SPEAKER. But the gentleman from Maryland is not stating any manner in which the Speaker may do it. He is saying if the Chair informally requested the Committee on Rules to report a special resolution, that the matter could then come before the House.

As the gentleman knows, he is trying to put the onus on the Speaker of the House, and the gentleman from Maryland, as one of the better parliamentarians in the House, knows that there is no way that the Speaker personally can do it.

Is the Speaker right on this?

Mr. BAUMAN. I would respond to the Speaker by saying that this gentleman has been here a very brief time, but he recalls an occasion just a few years ago when the energy legislation was being considered and within the space of one evening we voted three or four times on special resolutions of this nature that were rushed through the Committee on Rules, brought to the floor of the House, brought up under a suspension procedure, I believe, and then voted upon, when the bills the resolutions made in order were not even on the floor in printed form.

The SPEAKER. Those matters were brought up under suspension, and motions to suspend the rules are not in order during the balance of the week. But may the Chair state to the gentleman from Maryland, knowing the gentleman as he does, he would doubt very much whether he would want a dictator in this chair. The Speaker has no intention of being a dictator.

Mr. BAUMAN. The Speaker is to be commended for his concern about the abuse of power, but power rightly used, the gentleman from Maryland feels, is not abused. I would again renew my request. If there is any possibility of the Speaker's expressing the wish that the pay raise issue be brought to the floor, it would not only clear the atmosphere, but assure a vote on this important matter.

The SPEAKER. The Chair has said that if it could be brought to the floor, he is one who would vote for the pay raise for the Members of Congress. The Chair has always respected the gentleman as a free and independent man, and the leadership on his side would never be able to twist his arm. The Chair does not intend to do that to Members on his side, and hopes the gentleman respects that position.

Mr. BAUMAN. The gentleman has the utmost respect for the Speaker and the gentleman from Maryland thanks the Speaker for his personal indulgence in responding to my request of him.

The SPEAKER. Does the gentleman from Maryland desire to yield further time?

Mr. BAUMAN. The gentleman from Virginia (Mr. DAN DANIEL) asked me to yield time.

Mr. DAN DANIEL. Mr. Speaker, I am opposed to the proposed pay increase, not because I think it is excessive but because of its adverse impact on the economy.

While the amount proposed is relatively insignificant, the psychological impact on inflation might very well be significant.

I thank the gentleman from Maryland for yielding.

Mr. BAUMAN. I thank the gentleman from Virginia.

Mr. MOFFETT. Mr. Speaker, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Connecticut.

Mr. MOFFETT. Mr. Speaker, I have considerable sympathy with what the gentleman from Maryland is saying about the necessity and the desirability of having a vote on this matter, but the gentleman addressed a question to the Speaker with respect to what the Speaker can do, but I would think that, given the gentleman's concern in this area, that the gentleman from Maryland should do what he can and use his influence with the minority leader (Mr. RHODES) so that Mr. RHODES would change his position with respect to his current opposition to any limits on outside income that is earned.

I do not know where the gentleman from Maryland stands on that particular issue and I am not trying to divert attention from the issue at hand on which the gentleman is focusing, but I did hear the minority leader (Mr. RHODES) and I saw him on the television this morning saying he is not in favor of any limitations on outside income. I think many of us who do favor such a limitation would like to have a vote on both these matters and I would like to see the gentleman change his position.

Mr. BAUMAN. The gentleman has a right to his position on this matter, but I do suggest that what we are talking about is not the merits of the pay raise or of limitations on outside income, but the desire to have a chance to vote on the pay raise issue. That is the fundamental concern many Members have expressed. I think we will have a chance very shortly to address the question of outside income when we act on the recommendations of the Commission on Administrative Review.

Mr. HARKIN. Mr. Speaker, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from Iowa.

Mr. HARKIN. Mr. Speaker, I was one of those involved in fighting the pay raise 2 years ago and I am on record as opposing this raise, but it seems to me 2 years ago when the pay raise came up and was voted on it won by one vote. I think there were 212 Members who voted against it. I think that is a conscience vote. A lot of times when legislation passes through and we are opposed to it we have to live with the decision on it, but that was something we could do something about in our own individual capacities and we could turn the raise back in. We did not have to accept it. I know the gentleman voted against the pay raise the last time and I wonder if he turned it back in the last time?

Mrs. FENWICK. Mr. Speaker, will the gentleman yield?

Mr. BAUMAN. I yield to the gentlewoman from New Jersey.

Mrs. FENWICK. Mr. Speaker, I would like to ask the gentleman: How easy is it to turn back the money? I do not know if the gentleman tried to turn back the 5-percent pay raise he said he was not in favor of. What experience did the gentleman have in trying to turn it back?

Mr. HARKIN. I wrote a check and sent it in to the Treasury.

Mrs. FENWICK. So did I.

Mr. HARKIN. But there are two ways in which it can be done and in one way the income tax is taken into account and the other way it is not taken into account. It can be done in one of two ways. It can be paid back so one does not pay the income tax or it can be done so one does pay the income tax.

Mrs. FENWICK. But I was informed the only way I could do it was to send the check back and then it all was so complicated that I decided to send it back and just swallow the income tax.

It is not so easy just to say we do not want it. This is one problem we are facing. The gentleman from Illinois (Mr. ANDERSON) was saying earlier that he is going to give the Red Cross half the funds. I do not think we have properly assessed the difficulties encountered by those who do not approve.

Mr. HARKIN. I think it took me about 10 seconds a month to write out the check. It is not that big a problem.

Mrs. FENWICK. It is a big problem.

Mr. HARKIN. Why should one have a double shot at it?

Mrs. FENWICK. But if one is not enjoying the money, then why should one have to pay the income taxes on the money?

Mr. HARKIN. I question why 212 people, most of them on that side of the aisle, voted against it but did not turn it back in.

Mrs. FENWICK. How does the gen-

tleman know? I have never been questioned, and I do not know what others may have done and neither does the gentleman know. We should not be questioned on what we do with our own money.

Mr. BAUMAN. The gentleman from Maryland, following the practice since 1970 when he first was elected to the Maryland State Senate, has been completely disclosing his own finances each year. An examination of his statement which is on file with the House Committee on Standards of Official Conduct will show he did not turn back the pay raise nor will he turn back the pay raise that may come about as a result of the action in question. The gentleman from Maryland has the notion that he is worth as much as anyone else in this body. Some may well disagree, but the gentleman from Maryland does not have a wife who is employed as an attorney, as does the gentleman from Iowa. The gentleman from Maryland lives on the income from his job. The gentleman from Iowa advances the same argument used by that great moralist from Ohio, Mr. Hays, who repeatedly attempted to intimidate those who opposed the pay raise by advising them to reject the money. By that reasoning only those who vote for the pay raise would be permitted to accept it, which would allow the profligate to profit from their own fiscal irresponsibility.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. BAUMAN. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Speaker, I wish to make the point as to why I think it is important that we should have a chance to vote on these salary increases. I agree with my colleague, the gentleman from Maryland, that a vote on this issue can be arranged because the House can move quickly on legislative proposals through the House leadership.

I have seen that happen many times. We have moved very quickly on all kinds of bills, so I know the Committee on Rules can meet tomorrow and allow a rule on a resolution of disapproval, which we both recommend, and it could come to the floor. Let me make another point. Members of this body, the gentleman from Ohio (Mr. WHALEN), and several others, who incidentally favor pay increases, wish to see the basic law amended so that no pay raises could be favorably voted upon in the current term in which we serve. That is a good idea, but if the 20th of February passes without any action all the increases go into effect. Other proposals will not even receive consideration. The only way that Members of this House can truly debate those issues, as we do on taxes or other major issues, is to ask the leadership to go to the Committee on Rules and see that the Commission proposal comes to the floor.

Mr. Speaker, I hope that those who have addressed themselves to this issue today do as my colleague, the gentleman from Maryland (Mr. BAUMAN) has, make a request to our good Speaker to see that the Committee on Rules does indeed meet tomorrow and bring a rule to the floor to allow all Members of the House to have an opportunity to vote.

Mrs. HOLT. Mr. Speaker, the Congress professes concern about its low reputation with the public. Well, then, how can we justify allowing a $13,000 a year pay raise for Members without ever having Congress face a vote on the issue?

Some Members say they need the money because inflation has eroded their earnings, but they seem to forget that the Congress is the primary cause of inflation because of the monstrous deficit spending it has been authorizing for years.

We should not seek to escape the penalty of inflation; we should not accept a huge pay raise without the courage to vote on it, and there is no justification for a pay raise that exceeds what most of our constituents earn in a whole year.

I urge the Speaker to make us accept the responsibility of voting on this issue. I urge the committee to bring a bill to the floor.

Mrs. HECKLER. Mr. Speaker, as I testified before the Subcommittee on Presidential Pay Recommendations, I feel it is my duty on behalf of the constituents of the 10th District of Massachusetts to protest the proposed legislative pay increase. The essence of the pay raise issue and of the way in which it was handled cuts deeply into the more vital issue of public confidence in Government officials. I find it incredible that we are willing to allow this increase to be enacted without a recorded vote on the House floor. I am strongly opposed to the increase for the legislative branch and to the "backdoor" maneuvering which is involved in its enactment.

Former President Ford urged the Congress to accept the proposed increase saying:

> This will not only restore public confidence in national leaders, but it will permit the country to be able to attract the most qualified citizens to these important posts.

In July of 1975, during the last congressional pay raise debates, I received hundreds of letters in opposition. I voted against that increase. My constituents are contacting me again concerning this latest proposal, and I can assure you that the increase is not restoring confidence in national leaders, and if given the opportunity I would vote against it again. My constituents are rightfully demanding that the Congress come to grips with the continuing problems of inflation, unemployment, energy, et cetera, before providing itself with a $13,000 salary increase—an increase which is more than the annual salary of many of the people I represent.

As a cosponsor of the resolution to disapprove this salary increase, I implore my colleagues to demand a public accounting on this issue. Our constituents deserve openness in Government, and in the interest of public service, we must exercise our public responsibility by voting on this very important matter.

Mr. YOUNG of Florida. Mr. Speaker, I would like to thank my colleague, Congressman BAUMAN, for requesting the special order that permits us to make comment on the President's recommendation for congressional pay raises. It is a shame, that every attempt to bring this very important matter to a vote before the full House of Representatives has been abortive. Many of my colleagues joined me in testifying before the subcommittee on Presidential pay recommendations, to request the passage of a resolution which I cosponsored, to bring this matter to a vote. Congressman RHODES asked for an expression of unanimous consent by this body to provide for such a vote. All of our efforts have failed. However, this special order at least gives us an opportunity to speak on this subject and to tell the American people how we, as individuals, feel about a pay raise for Members of Congress at this time.

My constituent mail is heavy these days from American wage earners, senior citizens on fixed incomes, and disabled war veterans and World War I and II veterans who have their pensions reduced by every increase in social security benefits. In one year, their living expenses have gone up considerably. The cost of housing has risen 5.5 percent, health care 6.7 percent, transportation 8.8 percent. Basic services such as laundry and haircuts have gone up 7.3 percent, gas and electricity 12.2 percent, and the price of a used car 19 percent.

Inflation of this magnitude is caused in large part by high Government spending. By increasing salaries of Federal officials at this point, we will again be contributing to this spiraling inflation cycle. As Congressmen as well as Americans we face the same raises in the cost of our living. But, we must remember that foremost we are leaders of a nation that has enormous fiscal requirements. Our country's deficits are mounting at an alarming rate. Our national debt increases every year, and this year the interest alone on that debt is $42 billion. Members of Congress should take the initiative in providing responsible fiscal leadership and now, on this issue, would be a good time to start.

I abhor the procedure which allows us to have a raise by doing nothing. If there is to be an increase in pay for Members of Congress, there should be a vote to establish that increase, and every Member should have an opportunity to record his or her vote for or against.

Mr. SAWYER. Mr. Speaker, before another travesty should occur allowing further automatic congressional pay raises, it is imperative that Congress take positive action to halt this activity. To provide a safeguard against the next ruthless attack on the Federal Treasury, I am introducing legislation to repeal the provision of law allowing automatic cost-of-living adjustments in the salaries of Members of Congress. The people primarily responsible for inflation ought not to be insulated from its impact.

Under current law, Members of Congress will be entitled to a cost-of-living raise on October 1 of this year. This

amount could add upwards of $3,700 to the pay check of Congressmen and at the same time take away from the already eroding credibility of the American people in their elected officials. Furthermore, as in the recently provided raises, the only action which the Congress must take is no action.

I was opposed to the recent pay raise, fought to have it brought out for a vote, and I have cosponsored legislation requiring Members to vote on increases and to provide that any raise does not become effective until after the term in which is is approved; yet, the Congress has not acted and remains unresponsive to the flood of public opinion on this issue.

The time to put a stop to this pay increase is now. I hope my colleagues will join me in supporting this measure to end, once and for all, this reoccurring scenario and that we will be able to carry on with the constructive legislative business for which we were elected.

Mr. GILMAN. Mr. Speaker, I wish to commend the distinguished gentleman from Maryland (Mr. BAUMAN) for taking the time for this special order, and I join with my colleagues in expressing my opposition to the congressional pay raise.

There are several disturbing aspects of this congressional salary proposal, which I set forth in my testimony before the House Committee on Post Office and Civil Service on February 11, that necessitate my opposition.

At a time of economic distress for so many Americans, when so many in our Nation are experiencing extraordinary burdens of spiraling inflation, of unemployment, of energy hardships, such a substantial pay increase is improper.

Although many of us in the minority party in the House attempted, unsuccessfully, to bring about a vote on this issue, there still is no record of the way that each Member felt about the proposed salary increase. This type of parliamentary maneuvering does not inspire the trust and confidence of our constituents, and only serves to widen the gap between Washington and the people.

The arguments favoring an increase in salaries for Members of Congress, for the judicial and executive branches, have been convincingly argued in both the House and the Senate. But the need for such an increase stems from something which is not articulated strongly enough and that is the urgent need for congressional reform, and the necessary task of cleaning our own Houses before considering any increase in congressional salaries. While it is timely to take a serious, introspective look at the problems that Members of the Congress face in "making ends meet," it is also time for the Congress to confront its own bureaucratic and archaic systems and to make a serious attempt to keep pace with the changing times and the economic trends the country has been facing. We should be examining the increasing costs of personnel, equipment, and other necessities that contribute to running efficient offices. There should be reforms in the funding of the operational needs of congressional offices, bearing in mind that our foremost obligation is to serve our constituents. Efficient, adequate offices enable Members to more effectively serve and respond to their constituents and to overcome the bureaucratic barriers that so often come betwen the people and their government.

In considering any proposed salary increase, I urge my colleagues to consider the following proposals:

First, Members should have the opportunity to stand up and be counted on any congressional salary increase. Their vote should be recorded for reference purposes after the issue is discussed fully, openly, and without restraint?

Second, congressional salary increases should remain separate and apart from any judicial or executive salary consideration;

Third, the Members of Congress should discuss and vote upon salary increases, not for the present Congress, and not for themselves, but should decide upon any proposed increases for Members of the following Congress;

Fourth, prior to, and possibly in place of any salary increment, congressional reform should be understaken to find more adequate ways of funding efficient congressional offices. Service to constituents should be a first priority; and

Fifth, any proposed salary increase should be tied to more stringent congressional ethics, such as limited and full disclosure of any outside income.

This is an issue that is important not only to all of us, but to all of our constituents. In the spirit of congressional reform, the spirit which demanded changes in campaign laws and stricter controls over the workings of the Congress, I urge my colleagues to disapprove this untimely and poorly presented proposed pay increase, and to concern ourselves, instead, with working toward a more modern system which could obviate the necessity for such an increase.

GENERAL LEAVE

Mr. BAUMAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the subject of my special order.

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

There was no objection.

WHY DON'T MORE DEMOCRATS SUPPORT PERMANENT REDUCTIONS IN TAX RATES?

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. KEMP) is recognized for 30 minutes.

Mr. KEMP. Mr. Speaker, I recently reintroduced a bill designed to provide permanent tax rate cuts for both individuals and businesses in order to stimulate economic growth and jobs creation in the private sector.

I have been discussing this bill for over 2 years now and, although I have received broad support from within the Republican Party, I am frankly amazed that more Democrats have not endorsed this concept, despite the fact that many Democrats support its provisions.

As a matter of fact, it was John F. Kennedy and his chief economic adviser, Prof. Walter Heller, who proved that tax rate cuts across the board do stimulate the economy without inflation and without increasing the deficit.

President Kennedy announced his plan for a tax cut to stimulate the economy early in his administration. In an address to the Nation on August 13, 1962 he said:

> The single most important fiscal weapon available to strengthen the national economy is the Federal tax policy. The right kind of tax cut at the right time is the most effective measure that this Government could take to spur our economy forward. For the facts of the matter are that our present tax system is a drag on economic recovery and economic growth, biting heavily into the purchasing power of every taxpayer and every consumer.

President Kennedy repeated this point many times throughout 1962 and 1963, in response to criticism from both liberals and conservatives. As he put it in his economic report to Congress on January 21, 1963:

> The main block to full employment is an unrealistically heavy burden of taxation. The time has come to remove it.

Walter Heller was at that time the Chairman of the Council of Economic Advisors. Thus it fell to him to explain why taxes had risen to such a high level that they were choking off economic growth. He later elaborated his position in a book called "New Dimensions of Political Economy":

> In a growth context, the great revenue-raising power of our Federal tax system produces a built-in average increase of $7 to $8 billion a year in Federal revenues (net of the automatic increase in transfer payments). Unless it is offset by such "fiscal dividends" as tax cuts or expansion of Federal programs, this automatic rise in revenues will become a "fiscal drag" siphoning too much of the economic substance out of the private economy and thereby choking expansion.

We do not hear much about "fiscal drag" any more. Apparently the liberal Keynesians, like Heller, who used to complain about it have decided it really is not such a bad thing after all for the Government to automatically pick up billions of dollars of new revenue each year without having to pass a tax increase. This way there is more money available for expensive new spending programs.

The truth is that increased spending does not adequately return to the economy this "fiscal dividend," which results because our tax rates are progressive, thus pushing people into higher brackets as the economy grows and they earn higher incomes. The problem is that incomes have been rising steadily not as a result of real economic growth, but

because of inflation. This pushes people into higher tax brackets without increasing their real incomes and results in an actual decline in purchasing power. It also builds in a powerful disincentive to work harder, produce more, and invest in the future. This cannot be offset by increased Government spending, but only by a reduction in the tax rates.

This is a phenomenon which is well documented. The Congressional Budget Office, for example, estimates that every 1-percent increase in the price level will bring about an automatic 1.2 percent increase in tax revenues—Background Paper No. 9, June 18, 1976, page 21. Thus the Office of Management and Budget estimates that given the projections for economic growth and inflation contained in the Federal budget for fiscal year 1978, median family income for a family of four would rise from $17,300 in 1976 to $28,460 in 1982. This would increase the percentage of Federal income taxes paid for 11.4 percent in 1976 to 15.8 percent in 1982, assuming no changes in present tax law.

The problem of inflation-induced increases in the tax rates is much more serious today than it was when President Kennedy announced his tax reduction plan. Consequently, the positive effects on employment, investment, and production which would result from an across-the-board cut in tax rates could be expected to be much greater today. President Kennedy, in fact, underestimated the benefits from his own program. He thought there would be an increase in the budget deficit from the cut in taxes but felt that this would be made up in the long run. As it turned out, the increase in productivity and economic growth caused an immediate increase in tax revenues after the tax cut which exceeded Treasury estimates for the next 6 years. The following table illustrates this:

[In billions]

Year	1963	1964	1965	1966	1967	1968	Tota
Treasury-estimated revenue losses	−2.4	−5.2	−13.3	−20	−23.7	−24.4	−89
Actual reveune gains	+7.0	+6.0	+4.0	+14	+19.0	+4.0	+54

[1] Library of Congress study done at my request.

There is every reason to believe that the same thing would happen if comparable tax cuts were put into effect today. Dr. Alice Rivlin, head of the Congressional Budget Office, recently estimated that a 5-percentage point reduction in each personal income tax bracket rate enacted in the third quarter of 1977 would raise GNP $42 billion above what it otherwise would have been in the fourth quarter of 1977, and $75 billion above what it would have been in the fourth quarter of 1978—CONGRESSIONAL RECORD, January 26, 1977.

Furthermore, this only assumes that a tax cut would stimulate the economy in the same way an equal amount of Government spending would. This is clearly not true, so that the effects of such a tax cut would be expected to be even greater than Dr. Rivlin's estimates. Interestingly, she also has said that public works spending is much slower in affecting unemployment than a tax cut would be—New York Times, January 25, 1977.

Of course, if one is to believe the public statements by President Carter and members of his administration, there is no reason why they should differ with these conclusions. Treasury Secretary Blumenthal, for example, has repeatedly spoken about the need for changing the tax system so that all income, including capital gains, would be taxed at a uniform, lower rate. He also believes that this would increase Government revenues:

The simple-minded notion underlying all this is that, if it works, I would hope that there would be a bigger pie, and higher levels of activity producing more revenue. You know, it's like the old joke in business—"we're losing money, but we'll make it up on volume." (Washington Post, January 23, 1977)

President Carter has also made statements which would seem to indicate he is in sympathy with the economic approach embodied in the Jobs Creation Act. As he said in an interview with Fortune magazine in May 1976:

In the first place, contrasted with some of my opponents, I would consider the private sector the primary supplier of jobs. I hope that everything the government does will be oriented to magnify the influence of taxpayers' money by providing more jobs in the private sector.

He has also repeatedly endorsed the idea of eliminating the double taxation of dividends, which are now taxed once on the corporate level and again after distribution to stockholders. As he said in an interview with Business Week on May 3, 1976:

I don't think it's right to tax corporate income and then also tax dividend income.

He also told Fortune:

I would tax all income the same.

And lest one ignore these statements as campaign rhetoric, I would note that Bert Lance, Director of the Office of Management and Budget, recently said in an interview with U.S. News & World Report for February 7, 1977:

One thing the President will try to do is eliminate double taxation of corporate dividends—once on the corporation and again on the stockholders. It's a vital step toward regaining a healthy capital-formation level, and to make sure that companies can get into the equity market.

The importance of this change in the tax law cannot be overestimated. Over the past quarter century there has been a steady trend of declining stock issues for capital accumulation, and greater reliance on debt issues. Among other things, this severely restricts new businesses and small businesses seeking to expand. This trend would be reversed by elimination of the double taxation of dividends. Since, presumably, the amount of dividends paid out would rise tremendously, this would raise the value of all stocks in rough proportion to existing price/earnings ratios. This would not only make it much easier to float new stock issues but would raise the book value of every pension fund in America, since they rely heavily on stock ownership. This, in turn, would greatly benefit the working people who depend on these funds.

Of course, taxes would be continued to be levied on the dividends when they are received by the stockholder—assuming that the double-taxation is eliminated on the corporate side. Since the tax rates are much more steeply progressive on individuals than they are on corporations, one cannot say that this is any kind of gift either to big business or the rich. And the benefits to small business and the economy in general by making it easier to raise capital will eventually benefit everyone through increased productivity and new jobs. This is why it is a key feature of the Jobs Creation Act and, apparently, President Carter's tax reforms as well.

Since a lowering of the tax rate on individuals and businesses and elimination of the double taxation of dividends are the key features of the Jobs Creation Act, and since President Carter, Secretary Blumenthal, and Director Lance have indicated by their public statements that the Democratic administration supports these aims, it is somewhat amazing that so much discussion about how to stimulate the economy has revolved around increased Government spending and the employment tax credit. Neither of these programs can possibly produce any long run benefits, and insofar as they work at all it is in the nature of a "quick-fix" which will soon wear off.

The basic fallacy is that Government spending and the employment tax credit work only on the demand side of the economy. Without a corresponding increase in supply, this must lead to inflation. Charles Schulz, Chairman of President Carter's Council of Economic Advisers, made this clear in his testimony on the Humphrey-Hawkins bill before the Senate Committee on Labor and Public Welfare on May 14, 1976:

The basic problem with achieving and maintaining full employment is not that we lack the economic tools to generate increased employment. The traditional weapons for stimulating economic activity—easy money, tax cuts, and government spending for worthwhile purposes—are perfectly capable of generating an increased demand for public and private goods and services, thereby inducing employers to hire more workers. Moreover, we do not need to have the government hire people directly on special programs for public service employment as a long run device to reduce unemployment. The real problem is that every time we push the rate of unemployment towards acceptably low levels, by whatever means, we set off a new inflation. And, in

turn, both the political and economic consequences of inflation make it impossible to achieve full employment, or once having achieved it, to keep the economy there.

The reason for this is, as I said, the emphasis on the demand side of the economy without consideration for increasing the supply of goods and services at the same time. It is assumed that this will result from some kind of "trickle-up" process in which increased demand will increase supply by itself. Experience shows that this simply does not happen. Since the Government is running a deficit, it can only increase spending by borrowing it from the private sector—which drives up interest rates and crowds out private borrowers, which in turn deprives industry of the capital it needs to expand production and hire more workers—or by printing it up. This must result in inflation either way.

Similar criticism may be leveled at the employment tax credit—an idea floating around both sides of the aisle recently—because it also concerns itself solely with demand and not supply. Furthermore, as Secretary Blumenthal recently argued, it taxes efficiency and productivity by being biased in favor of labor intensive industries. It would also give an unwarranted tax break to companies expanding for market reasons and would hurt companies with stagnant or shrinking payrolls—New York Times, February 13, 1977. The New York Times also noted that the employment tax credit would subsidize growing regions of the country—primarily the South and West—at the expense of economically stagnant areas in the Northeast. It also doubted that the program would fulfill its claims under any circumstances.

The Jobs Creation Act, on the other hand, recognizes that any program for lasting, real economic growth without inflation must start on the supply side of the economy. By removing the tax disincentives to increased production, by making it easier to raise capital, by raising take home pay for workers, the Jobs Creation Act would immediately result in greatly expanded GNP, new investment, the creation of millions of new jobs, and increased tax revenues as well. And, since it accomplishes this by increasing the total supply of goods and services, it will lead to a real increase in the standard of living without inflation.

This may seem like more than any one bill can possibly accomplish. But I would remind you that the evidence of history and economic theory both agree that this would happen. In almost every case in which high tax rates were cut across the board there has been this vast increase in production, investment, and employment. It happened dramatically in the 1920's when Treasury Secretary Mellon cut the wartime tax rates, and it happened again in the 1960's when President Kennedy did the same thing.

A permanent, across-the-board cut in tax rates is the most economically sound and politically sensible way in which the Congress can restore economic growth, reduce unemployment, and fight inflation. I have embodied this approach in my Jobs Creation Act and I hope that my Democratic colleagues will join me in enacting this legislation.

REGULATORY REVIEW ACT

The SPEAKER. Under a previous order of the House, the gentleman from Delaware (Mr. EVANS) is recognized for 5 minutes.

Mr. EVANS of Delaware. Mr. Speaker, I am today introducing the Regulatory Review Act of 1977. This measure is designed to ease the crushing regulatory burden on our economy by providing for a legislative veto of unwise, overlapping or even silly, and at times nonsensical regulations.

In recent years a fourth branch of Government has grown up to rival the legislative, executive, and judicial branches in its ability to affect our daily lives. That branch includes both the independent regulatory bodies and Cabinet departments, which have authority for everything but responsibility to almost no one, particularly the taxpayer.

In my judgment, the almost unrestrained power of these agencies is one of the prime reasons why people are convinced that Government is doing things to them, instead of for them.

According to the Office of Management and Budget, the Federal Government now employs an army of some 84,773 regulators, 4 percent of all Federal employees excluding the military, to watch over our daily lives, at a direct cost of nearly $3 billion. Further, the indirect costs to consumers of these regulatory efforts is calculated by OMB at an incredible $390 billion a year.

Last year alone, over 57,000 pages of Federal regulations were published in the Federal Register. If these regulations were put in a single pile, they would stand about 10 feet tall. And every single regulation affects the lives of our citizens in some way.

These regulations also give rise to more paperwork—Federal forms. There are currently in use by the Federal Government 4,354 repetitive report forms, 381 single report forms, 293 major tax forms, and an estimated 500 independent regulatory agency forms. That comes to a grand total of some 5,536 Federal forms. It is estimated that businesses and individuals now spend an estimated 130 million man-hours filling out these Government forms.

The legislation I am introducing, the Regulatory Review Act of 1977, would attempt to curb this uncontrolled growth of regulatory power. The act would require that all proposed Federal regulations be submitted to the Congress 60 days prior to their implementation. During that time, either the House or Senate may adopt a resolution disapproving in whole or in part any such regulation, thus preventing that proposal from going into effect.

Further, the regulatory agency proposing the rule will be required to give the Congress an "economic impact statement," estimating the costs to be incurred by all levels of government and by the private sector, including businesses and consumers, should the proposed rule be implemented. Thus, for the first time, the Congress and the American public will know the costs, as well as the benefits, of regulatory actions before those actions take place, and can better judge the desirability of any proposed rule. By bringing the actions of regulators into account by elected officials, I am confident that we will not only have less regulation, but even more importantly, we will have better regulation.

This legislation would improve the regulatory process in several ways.

It would require, for the first time, that Federal rules and regulations be reviewed by a governmental body directly responsible to the voters.

Second, the Federal departments and agencies, knowing that their proposals are going to come under the scrutiny of those who drafted the legislation requiring the regulations, will be more likely to work with the Congress in drafting regulations and determining legislative intent before issuing those rules.

Third, redundant or contradictory regulations from different agencies will be more likely to be identified and eliminated through the congressional review process.

Fourth, this legislation will force Congress to take its oversight responsibilities seriously again, and continuously oversee the Federal bureaucracy.

Finally, this review of agency regulations and rules will give the Congress needed feed back in developing future legislation.

Mr. Speaker, this legislation will give our citizens the right of legislative appeal on burdensome regulations and I urge its prompt consideration.

CONGRESSIONAL PAY INCREASE

The SPEAKER. Under a previous order of the House, the gentleman from Oklahoma (Mr. EDWARDS) is recognized for 5 minutes.

Mr. EDWARDS of Oklahoma. Mr. Speaker, unless the House reacts responsibly within the next 24 hours Members of Congress will receive a totally undeserved pay increase amounting to a 2-year expenditure of approximately $13 million of tax money, for which the citizens of this country will receive no tangible benefit, and which will, in effect, be rewarding the Members of this Congress for their own role as the major contributors to the inflationary spiral in this country.

Mr. Speaker, the American people are already overtaxed and overburdened by inflation. It is a callous betrayal of the public trust for the Members of this Congress to permit themselves to accept a substantial pay increase at a time when the majority of our constituents have serious difficulty being able to afford the food, clothing, housing, health care, and other essentials which make their lives tolerable.

It is as though we have returned to ancient history with the few living in opulence; the few rulers living in plush comfort while the people struggle to make ends meet.

Mr. Speaker, the pay raise which this Congress will receive unless it acts now amounts to more than the total annual income of many Americans. If the Members of Congress were employed by a private business and had done as poor a job in that business as they have done in conducting the public business, they would have all been fired, not promoted and given a pay increase. Those who kept their jobs would probably do so under a warning that the employer would tolerate no more of the same, and they might in addition have to accept not a pay increase but a pay decrease.

Mr. Speaker, because the Members of this Congress so frequently lose touch with reality, I propose that we act at this time to again comport ourselves in keeping with the ways of the real world.

Therefore, I am introducing today a bill designed to connect congressional pay levels with the measure of the quality of work done by the Members of this body. What I am proposing, Mr. Speaker, is that each time the Members of this Congress cause the cost of living to increase, they shall be amply rewarded by a commensurate decrease in their own salaries.

Mr. Speaker, in each election year the members of this Congress return to their home district and give lip service to their belief in the free enterprise system. I am now giving the Members of this great body an opportunity to demonstrate that they do indeed believe in a system in which merit wins reward, and demerit receives the opposite.

I hope that every Member of this Congress who receives a pay increase as a result of this body's irresponsibility and inaction will join as a cosponsor of this legislation to henceforth repeal automatic pay increase provisions and to substitute instead a program whereby congressional irresponsibility will lead to pay decreases.

GENERAL LEAVE

Mr. KOSTMAYER. Mr. Speaker, I ask unanimous consent that all Members may be permitted to extend their remarks and to include extraneous material on the subject of the special order today of the gentleman from California (Mr. EDWARDS).

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

CRIME INSURANCE HELPS AMERICA'S CITIES

The SPEAKER. Under a previous order of the House, the gentleman from Illinois, (Mr. ANNUNZIO) is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, one of the reasons America's cities are now enjoying an era of prosperity and renewal in marked contrast to the upheavals of the 1960's, is a plan which offers Federal crime insurance to inner-city residents.

For those who might have trouble getting insurance from private sources, this program has been a godsend. It has helped save neighborhoods by keeping businesses and residents in, and it has helped renew destroyed neighborhoods by encouraging the return of those who fled during the riots.

The Fair Plan and the FCIP as they are called, provide renewable crime insurance for homes and businesses at reasonable rates regardless of the crime rate in the neighborhood. This insurance covers property against burglary and also insures persons against robbery.

Presently, the Federal Government is reviewing all ongoing programs such as this and as their originator I would like to see them extended. Their benefit to city dwellers is undeniable.

At a meeting of the Banking Committee's Housing Subcommittee this morning, I testified for extending the programs at least 1 year—and preferably for 5 years—primarily because I feel that if we are going to spend such large amounts of time working on ways to make homeownership available to our cities, we must do something to assure the insurance coverage which must go along. For example, if a homeowner cannot get fire insurance and other coverage in a city, there is no way he can get a mortgage.

What happens when the insurance coverage is unavailable is illustrated in a letter I received recently from Mr. Ralph J. Lueders, senior vice president, First Federal of Chicago to Mr. Norman Strunk, executive vice president of the U.S. League of Savings Associations. A copy of this letter was sent to me, because of my interest in the insurance situation.

In part Mr. Lueders writes:

Today for understandably economic reasons insurance companies are writing risks on such a discriminating and selective basis that the availability is beginning to force extreme hardship upon some homeowners and upon the institutions financing these properties. We specifically find this true of the properties financed throughout the greater part of the City of Chicago. We can only assume that this is happening throughout the nation, especially in large metropolitan areas.

Mr. Lueders goes on to say:

While our business attempts to pursue a policy of extending mortgage loan service to all qualified borrowers in our lending area, it is manifestly clear that most if not all the insurance companies writing residential type insurance are practicing what is loosely called redlining. This takes the form of being interested in writing only the preferred suburban business at rates deviated from the manual standards set for the broad range of residential risks. It is also evidenced by their policy of rejecting all risks located in certain less desirable zones or areas that are known only to their underwriting departments. It may take the form of a disqualification of all properties older than X-number of years (except for those residences located in the high-quality stable suburbs). If these properties which insurance companies designate as less desirable are insured, it is often on a temporary basis. Agents will accept and bind a risk but within 60 to 90 days after having been processed by an underwriting department the policy is then cancelled. Other companies will pursue a policy of accepting the less desirable risks but will reduce the range of their coverage by increasing deductible and charging premiums up to five times the rates charged in the industry for standard risks.

Later Mr. Lueders concludes:

An intended relief was the institution of the Fair Plans adopted by about half of the states to satisfy the needs of homeowners not readily served through regular sources. Today, the numbers of those homeowners not being adequately served has expanded dramatically and certainly beyond the numbers for which the Fair Plan was designed to serve. Also the Fair Plans offer only fire and extended coverage protection it is not a satisfactory answer to this need.

Mr. Lueders' letter is indeed a graphic depiction of the problem that many homeowners face in trying to obtain the necessary insurance. While Fair Plans may not be the overall answer they are at the present the best solution that we have to offer, and because of that we must continue the operations of these facilities.

Mr. Speaker, I would hope that during the year extension of these programs that consideration be given to extending the coverage offered by the Fair Plans so that a wide range of insurance policies can be purchased through the plan, including the basic homeowners package and in areas where insurance underwriting is limited that the plan be allowed to offer automobile insurance.

There is an aspect of the Fair Insurance Plan that bothers me and that is the dumping situation. It is my belief that too many insurance companies rather than writing the insurance directly, are forcing customers to the Fair Plan program in order to get a higher premium. In order to overcome this, I suggest that the Fair Plan's operation, and underwriting, be removed from the insurance companies and transferred to the Federal Government. I take a backseat to no one in the belief in the free enterprise system, but when the free enterprise system does not function properly then Government must step in to fill the need. And that is exactly what should happen with the Fair Plan. As the insurance companies do not want to write insurance directly, there should be no problem with the Government taking over the business since the Government will not be interfering in any area in which the insurance companies now function.

Clearly, there is a great deal of precedent for the Federal Government operating the Fair Plan. The Government insures banks, savings and loans, credit unions, farmers, and even home mortgages. There is no reason why we cannot extend that coverage to individual homeowners.

And, of course, the Government is involved in writing crime insurance, a program which grew out of legislation that I

authored. While there are only 30,000 crime insurance policies in force today, I still have a strong feeling that the program is vitally important to many businesses and homeowners. We will never be able to find out the number of crime insurance policies that were written by private industry solely to keep the customer away from the Government program. If the Government program has served no other purpose than to spur renewal in private crime insurance then that fact alone makes the program successful.

I have found through informal sampling, that most homeowners and small businessmen are not aware of the existence of the Federal crime insurance. The biggest fault for this lack of knowledge mostly lies with the insurance industry, because it is that industry that is charged with selling the policies. There has been no effort on the part of the insurance companies to publicize this program.

I have offered a number of suggestions to HUD for encouraging sales of crime insurance. Since it has been felt that the insurance industry is not doing a good job of selling the policies as agents for the Federal Government, why not let the Federal Government market the insurance directly. There is no reason why policies cannot be sold through the Small Business Administration, the Veterans' Administration in its housing programs, the Federal Housing Administration, and through federally insured lenders making home mortgages.

Almost monthly I am approached by some company or someone with a plan to market the crime insurance more effectively. A number of these plans anticipate a direct mail marketing of the crime insurance. My response to all of these plans has been that I will support any plan that will make the insurance more readily available to the public.

I would hope that during the 1-year extension period which is being recommended, that the Department of Housing and Urban Development will come up with bold new concepts for marketing the crime insurance and as I have suggested earlier, perhaps even moving the Fair Plan setup into the direct marketing field with the Federal Government becoming the underwriter for both programs.

It was my understanding that one of the insurance groups that testified today took no position on the extension of the crime insurance. I think that position typically reflects the attitude of the industry toward this program. The insurance companies fought the program from its inception and has done nothing to promote the program. So it is quite fitting that industry would not fight for an extension of this much needed insurance program.

In basic terms, Mr. Speaker, what I am saying is—let us have an understanding with the insurance industry. Private industry can write the type of policy which it feels it is best suited to handle, and most of those policies unfortunately are insuring against flood damage in the desert. In those areas of coverages where the insurance industry does not wish to participate, then let the Federal Government step in and do the job.

Insurance is a necessity today and if we cut people off from insurance then we are greatly limiting the role of our citizens in our society.

HOUSE SELECT COMMITTEE ON ASSASSINATIONS MEETS

The SPEAKER. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 5 minutes.

Mr. GONZALEZ. Mr. Speaker, today, the House Select Committee on Assassinations held its first meeting. I wish to provide for the Members of this House the text of my remarks:

BUDGET DISCUSSION

We are confronted with a serious budget problem. It is, in fact, a problem that grows and compounds with each passing moment. We must clearly understand this, and deal with it without delay.

We are restricted, under terms of the House Resolutions 222 and 11 to expenditures not exceeding the amount spent in December, 1976, until and unless a regular funding resolution is approved.

Under those terms, the Committee has $84,000 per month available to it. The Committee cannot meet its obligations within that amount of money, for the main and simple reason that Mr. Sprague, without my knowledge, consent or approval, arranged for the employment of some 23 persons effective January 1. Had I known of this action, I would have objected in the most strenuous terms, because I know that no Committee expands its employment by 50 percent without some clear knowledge of what its ability to pay is. At that time, the only certain funds that we had were amounts that could be advanced under a continuing resolution.

If staff employees were to receive the salaries that they were promised by Mr. Sprague, Committee costs for personnel, alone, would be exceeding our total funds by $20,000 per month. Committee personnel have taken a 35 percent reduction in pay, simply so that everyone could have something. However, they had no choice in the matter; the Committee on House Administration would have imposed reductions; inasmuch as they can only pay out what is authorized.

The Committee today has few funds to pay its operating costs. January bills have not been paid, but clearly exceed the $770 available. The only way that the January bills can be paid, or for February expenses to be paid, is to reduce staff expenses. This can be done either by reducing salaries further, or reducing the number of personnel. I have a letter from the House Administration Committee regarding this.

After Mr. Sprague last week failed to produce a plan for any kind of reduction in force, I directed him in writing to provide me with a plan of operation whereby the Committee could avoid a reduction in force and still reduce expenses enough to live within the amount of funds we have available. I specified that this plan must be precise, and I directed that it be delivered to me no later than Noon Friday, February 11. This allowed a couple of days for Mr. Sprague to perform.

I finally received his response about midday Monday, and incidentally, it was backdated to February 11. The "precise plan" that I asked for was as follows, and I quote:

. . . "adhering to the pay reductions the staff has agreed to, keeping operating expenses to a minimum, and having the Committee quickly approve a new budget which can be submitted to Congress."

It is hard to imagine anything less responsive than that.

Committee Members will appreciate that no one can assure how much money we will receive for continued operation. We can, however, be sure that we have to pay our bills until we do know what our budget will be. We have no choice but to live within our available funds.

I am willing to explore the possibility, however remote it may be, of covering some of the shortfall by trying to arrange for permission to use any leftover funds from the last Congress to apply against current expenses. This would not, in my judgment, cover our shortfall, but I am willing to explore every possible avenue.

I am also willing to approach the House Administration Committee to ask for a supplemental to cover our shortfall, in the event it is not possible to work out our problems in any other way. However, there is a condition to this: we must make a good faith effort on our own part. We must be able to show that every expense is fully justified. We must be able to show that every person on that staff is qualified, and we must be able to show that every person on that staff is essential. I am gathering as much detailed information as I can, but Mr. Sprague's nonperformance in supplying information on time is a genuine handicap. Based on what I have in hand, my judgment is that the House Administration Committee would not approve any additional funds for the Committee until salaries are realigned and personnel positions adequately justified.

Before we pass on to a discussion of this, I want to emphasize one point: with each passing day, the Committee's financial problems grow deeper. Each day, there are more unpaid bills, and unless circumstances change, every cent of those bills must be paid out of personnel costs—either in the form of additional salary cuts, personnel cuts, or both. Each day we delay, the problem increases, and at a compounded rate.

Keep in mind this situation, and the imperative need to act. There is no way to avoid the problem. It is our responsibility.

I want you to bear in mind that paying the bills for January, let alone February, as I said before, will very likely involve personnel or further salary reductions. We must in any event act within the next day or two.

I know that some of my colleagues were alarmed by what they saw as my precipitate action last week. Let me say simply that when I see a rattlesnake on the doorstep, I don't hesitate; I stomp on it, and answer questions later. This may not always seem elegant, but it is explainable and understandable.

I am prepared to discuss this matter at this time.

I had no alternative but to remove Mr. Sprague. The circumstances were such that I had to move at once, with precious little opportunity to leisurely inform Members of the action or reasons for it. I did everything within my power to inform you at once, and to spell out, in as much detail as possible, the reasons for my action.

Mr. Sprague apparently felt that he had the full authority of a Member of the House, and the full authority normally exercised by the Chairman and the Committee. He explained his general penchant for acting the part of a Member—appearing before the

Caucus, wanting to appear before the Committee on Rules—by saying, on January 11, (quote) "they wanted someone to take the leadership role . . . Fine, I am glad to do it." Regardless of the fact that employees of the Committee are responsible to the Congress, Sprague's instructions were: "Do not discuss our business here with Members of Congress. If you know something about a Member of this Committee, come to me." And, regardless of the fact that only a Member can employ or terminate anyone, Sprague made flat assurances that he—not me, not the Committee—would make good on any pay cuts, by raising salaries once the Committee got a regular appropriation. He assured the staff that he was in complete charge of the Committee. On February 8, he told the staff:

"There may have been some feelings of uncertainty around this office about who runs things—a kind of headless horse. But the head is right here—on me. I am laying out the lines of command in this office. . . . If they (Members of Congress) want to communicate with you, they will do it through me. . . . I do not want you running back and forth with Congressional offices as to what is happening here. If I find that kind of thing going on, they will be fired."

If any one on this Committee can believe that this was anything other than insubordination, and usurpation of any and every authority of this Committee, then there is no such thing as insubordination and usurpation.

Sprague did not believe that this Committee, let alone its Chairman, should—or was—running anything. He was in charge, and he alone. Congress did not appoint and dismiss—he did. Employees of the Committee were not responsible to the Committee, but to him and him alone.

Sprague did not wish for anyone of the Committee to know about this meeting. He told the staff: "I only hope all this remains in the confines of the staff." I found out about the meeting that evening, very late. The next day, February 9, another such pep rally occurred, but there are no records of it, since Sprague demanded that no records be kept—unlike all other cases. The reasons were clear. At that next pep rally, he literally dared the Chairman to try and remove him.

As I said, when I see a rattlesnake, I react.

Any Member who knew what I did would not have hesitated; Sprague had to be stopped, then and there, and I did what I had to do.

Aside from insubordination and a clear effort to usurp the power of the Committee and its Chairman, Mr. Sprague is guilty of failure to perform. I presented Mr. Sprague a series of requests in writing, with deadlines that he had to meet, in order for the Committee to be prepared to proceed about its business in an orderly manner. None of the necessary deadlines were met; information he did finally provide, such as a request for a detailed plan of operation without salary cuts or pay cuts, which he claimed to be possible. You already know that he produced nothing except empty phrases, merely leaving it up to the Committee to obtain more money—how, he did not say.

Much more serious, however, is the fact that Mr. Sprague has placed the Committee in serious financial condition by irresponsibly employing a large number of people without any indication of where the funds to pay them would come from. This action, which took place without my prior knowledge, let alone approval, led directly to the 35 percent salary reduction imposed on the staff during the month of January. This led likewise to the ever-growing inability of the Committee to meet any costs, even the most minimal and essential operating expenses.

Even though I have taken strong action to reduce costs, including placing control equipment on telephones, there is no way to meet all expenses without further reductions in personnel costs.

In part, however, the Committee's financial ills are traceable to a scandalous inflation of salaries. Even though some employees of the Committee accepted pay cuts to join the staff, about two dozen employees were placed on the payroll at salaries vastly exceeding their last previous employment. Six of nine employees from the Washington office of my predecessor are on the Committee payroll. Most of these, I am sure, are well qualified, hard-working persons, but one, at least, received an astonishing 87 percent pay increase. That person previously worked at a salary of $16,000, but was placed on the payroll by Mr. Sprague at a salary of $30,000. Another employee previously earned $14,000, but was being paid at the rate of $24,000—a 65 percent increase. And another employee received a 60 percent increase—from $10,000 to $16,000. One received a 63 percent increase—from $11,000 to $18,000. Another received a 50 percent increase—from $20,000 to $30,000. One received a 41 percent increase—from $24,000 to $34,000, and another a 40 percent increase—from $20,000 to $28,000.

I submit that there is no way this Committee could accept—let alone defend—this kind of salary inflation. There is no other word for it except scandalous.

As I am Chairman of this Committee, I cannot defend it as long as this kind of condition exists. Salaries of this kind are an embarrassment to the Committee, a liability to it, and an insult to the House and to the American people. I must have the authority to clear this situation up immediately: I ask it, and I demand it.

If we are unwilling to confront this and deal with it head-on, there is no hope for this Committee. Need I say more?

It is plain—and I can document what I have said—that Mr. Sprague intended to brook no control from this Committee or its Chairman. He was dishonest, deceitful, and irresponsible in his conduct with the staff and toward the Committee. His advocacy of what amounts to a budgetary blank check could not be justified last winter, and, clearly, cannot be justified today, especially in light of what we now know about the salary structure he was perfectly willing and happy to foist upon me and you.

Mr. Sprague, nor in fact any other member of the staff was required by the former Chairman to ever file a financial disclosure statement, and when I requested he file such a statement, he replied that certain procedures had to be honored first.

I am willing to do this, but I believe that any employee who claims to be acting in good faith—would be more than willing to file a financial disclosure report of his own free will—especially when that person occupies as sensitive a position as that of Mr. Sprague.

In connection with this, let me point out to my Colleagues—Rule XI, Clause 6(a)(3)(B) provides that "professional members of each standing Committee shall not engage in any work other than Committee business."

Mr. Sprague appears to maintain an active law practice, with offices at 1622 Locust Street, in Philadelphia, Pa., and, furthermore, is engaged in the teaching of law at Temple University, also in Philadelphia. It is plain that since the Rules of the House apply to this Committee, Mr. Sprague is in clear violation of the requirement that we have no outside employment. I checked as recently as yesterday, and Mr. Sprague's office reported that he was not in, but would be available during the weekend. The New York Times reported last Saturday morning that Mr. Sprague had taught his usual law course at Temple University on Friday evening.

It seems at least possible—if not likely—that Mr. Sprague, owing to his considerable outside activities, stands in violation of Rule XLIII, Clause 3, and I can assure my Colleagues that he most certainly is in violation of Clause 1 of that Rule, in that he has brought embarrassment and humiliation to this Committee and the House by repeated misconduct, and it is my profound and unhappy duty to report all this to you by way of justifying my actions of last week.

I believe that based on what I have told you, and I can furnish any additional details you may desire; that I have amply shown that no Member of this Congress, let alone a Chairman responsible to it, could for one instant tolerate the kind of insubordination, usurpation and outright malfeasance that it was my sorry lot to discover and be compelled to stop six days ago.

I end as I began: there may be those who wondered at my haste, but when one spies a rattlesnake on the doorstep, there is no time to hesitate. I did not hesitate to act, and in the same circumstances, I would not hesitate again.

LEGISLATION TO ESTABLISH SPAYING AND NEUTERING CLINICS FOR DOGS AND CATS

The SPEAKER. Under a previous order of the House, the gentleman from Rhode Island (Mr. ST GERMAIN) is recognized for 5 minutes.

Mr. ST GERMAIN. Mr. Speaker, today, February 16, 1977, I am introducing legislation to provide Federal loans to enable cities and counties throughout the United States with populations of at least 200,000 persons, to establish and operate low-cost, nonprofit clinics for the spaying and neutering of dogs and cats. The maximum loan per city would be $200,000 through a 4-year loan fund of $4 million per year. An education fund of $1 million will be allocated to the training of paraprofessionals to aid veterinarians in clinics.

I feel that the measures provided through this legislation are vital to all citizens. Our cities are suffering from health problems and nuisance affiliated with the overabundance of homeless dogs and cats, which roam the Nation's streets hungry and diseased. Uncontrolled, unchecked breeding daily adds thousands to the already enormous number of unwanted animals in the United States. The prevalent dog pound system, operated at great expense in all cities, has proven inefficient and ineffective. Every year approximately $100 million is spent in destroying 13.3 million unwanted or stray animals, animals that should not have been born in the first place.

We are faced with the alarming conclusion that something must be done to alleviate the prolific birth rate of these animals and the resultant difficulties accompanying this growth rate. Spaying and neutering are currently the only available methods of decreasing the birth rates. Because of the difficulties in en-

forcing mandatory sterilization, the only feasible alternative lies in doing everything possible to encourage the operations. Since the greatest barrier appears to be cost, the most practical approach is to in some way lower the cost to pet owners. Research has proven that a majority of pet owners have expressed their willingness to pay for spaying or neutering at a reasonable fee, if sufficient facilities are made available and accessible. Therefore, in accordance with these findings, the answer lies in low-cost spay clinics.

May I cite as a precedent, the public clinic established in Los Angeles in 1971, a successfully operated low-cost spaying clinic, where any person may obtain this service for under $20. At the end of a pilot period, the city had created two additional clinics, both equally as successful as the first. Within 2 years, the program had the effect of reducing by an estimated 10 percent, the numbers of homeless cats and dogs. The program demonstrated that long-term savings in a city's animal control costs more than offset initial costs of establishing and operating a public clinic, and that a properly run clinic, once established, need not act as a drain on the public purse at all.

I am sure my colleagues can certainly appreciate the importance of this issue, and I sincerely hope that the 95th Congress will strive to enact this legislation in an effort to better our environment and put an end to the needless suffering of these unwanted animals.

PRESIDENT CARTER PLACES HIGH PRIORITY ON CURTAILING DRUG ABUSE

The SPEAKER. Under a previous order of the House, the gentleman from New Jersey (Mr. RODINO) is recognized for 5 minutes.

Mr. RODINO. Mr. Speaker, last Monday, February 7, a personal message from President Carter was delivered to the 27th session of the U.N. Commission on Narcotic Drugs by Dr. Peter Bourne, his Special Assistant for Mental Health and Drug Abuse.

This message exemplifies President Carter's deep, personal commitment to reducing drug abuse and I know all of us in the Congress welcome the "high priority" he has assigned to this serious problem.

It is evident that there are no easy solutions to controlling the illicit international traffic in hard drugs or to curbing the demand for such drugs in countries around the world. But, as President Carter indicated in his message, it can be "solved only through concerted international cooperation."

In order to achieve that kind of cooperation, it must be made clear to the international community that drug abuse control is an important element of our foreign policy and that the United States stands ready and willing to assist the other nations of the world in their efforts to combat this problem.

Our previous efforts in this area have been dismal. In fact, our State Department in the past has been extremely reluctant to raise the subject of drug abuse during bilateral and multilateral discussions, because it was viewed primarily as a foreign policy irritant.

President Carter made this quite clear in his message when he stated:

We must combine deep compassion for the victims of addiction with a vigorous attempt to eliminate the world supply of illicit drugs through international cooperation.

I am optimistic that major advances will be made in the international arena because of President Carter's personal leadership and because foreign countries are beginning to experience a drastic increase in their addiction rates.

However, progress cannot be achieved until our foreign policy advisers recognize that bold diplomatic initiatives are not only proper, but are essential if we are to promote effective international cooperation.

I am confident that the Congress will give its wholehearted support to the new administration in this effort.

In view of the timeliness of President Carter's message, and the urgency surrounding the drug problem, I wish to insert at this point in the RECORD the full text of Dr. Bourne's address:

STATEMENT BY PETER BOURNE

Mr. Chairman, I am pleased to be here with so many of my friends and colleagues in the international drug community. I have had the pleasure of working with many of you in the past and look forward to continuing our efforts in the future.

President Carter has requested that I be here to convey his personal commitment to reducing the toll of drug abuse and to underscore the importance of international cooperation as the cornerstone of a successful program.

He has asked me to read to you this personal message from him:

"Drug abuse is a major threat to mankind that respects no national boundaries. As I begin my Administration, I recognize that drug abuse, like so many other problems that face us, is global in nature and can be solved only through concerted international cooperation. Drug addiction is the cause of untold human suffering afflicting both the rich and the poor. Of particular concern to us, however, is the recent dramatic increase in addiction and its destructive effect on the limited human and economic resources of many of the less affluent nations of the world.

"We must combine deep compassion for the victims of addiction with a vigorous attempt to eliminate the world supply of illicit drugs through international cooperation. Towards that end, I am making the curtailment of drug abuse a high priority in my Administration. I have designated a highly competent staff in the White House to give this problem special attention. I intend to take a personal interest in this program and will monitor its progress. I am confident that working together in international cooperation we will achieve success. I ask your support in this endeavor."

As Governor of Georgia in the early seventies, President Carter recognized the devastating effects of drug abuse on the citizens of his State. He established a State-wide program to deal with this problem. He visited programs in other States, and spoke with program administrators, clients, and police officials to gain firsthand knowledge about the problem. Characteristically, Mr. Carter set out in a methodical way to read and to learn about the problem of drug abuse. He provided vigorous leadership and support in creating a comprehensive drug abuse program. Those of us in the United States who are particularly concerned with drug abuse are thankful for the President's familiarity with the issue. We are very fortunate to have a President with firsthand knowledge and understanding of the drug abuse problem. We are also pleased to have a President with a deep concern about the issue and a personal resolve to do something about it.

The United States remains committed to a program that balances vigorous law enforcement to suppress the supply of drugs, with readily available and humane treatment and rehabilitation to reduce the demand for drugs. We fully recognize that drug abuse is not merely an American problem, but one that now effects most of the countries represented here and that the addict population is growing around the world. It affects each of our countries in different ways. Yet we cannot any longer see addiction as a problem of one country or a small group of countries but as a common enemy for all of us.

Opium and other drugs can be grown in many places throughout the world. For a long time most countries felt that producing drugs was not terribly harmful since it did not affect their own people. This myth, like so many other that we in the U.S. held dear, has been exploded. It is now widely accepted that nearly every country that produces illicit substances has a substantial abuse problem among their own citizenry.

The nations of the world must acknowledge their interdependence and join together to dedicate their minds, their hearts, and their talents to the solution of this problem which threatens the survival of us all. This cooperation must take several forms. We must exchange information about drug traffickers who have no respect for international boundaries. We cannot allow these criminals to operate in one country and seek shelter in another. We must, through our cooperative efforts, get the message out loud and clear that nowhere in the world will drug traffickers find a safe haven.

We must work together to eradicate the illicit cultivation of various drugs and seek to prevent new sources of supply feeding into the international market.

We must work together and learn together by exchanging knowledge and techniques for more effective treatment and law enforcement programs. Obviously some of what is successful may be culture-specific—but much is subject to modification and application elsewhere. Sharing research findings as to the causes and cures of drug addiction can go a long way to reducing the demand for such illicit drugs.

Lastly, we must find ways of increasing our cooperative efforts to find viable alternatives for those persons whose livelihood have become so dependent on illicit drug production so that a reasonable standard of living can be achieved without dependence on such production.

This special plea for increased cooperation is not made with the naivete that it will be easy. To the contrary, what is being proposed is quite difficult—it will require a total commitment of energy and political priority in each of our countries. However, the alternative is even more difficult to accept—a growing dependence on drugs for larger and larger numbers of people throughout the world. Much of this abuse occurs with young people and with this increased drug use comes the attendant family disruption and a sapping

of strength from our youth—many of whom hold the future promise of our countries.

Let us join together at this time to renew our commitment to do all that will be necessary in the next few days to reverse the alarming trend of increased drug abuse throughout the world. The pledge of the United States and its President are absolute and I look forward to our working together in the coming year.

LITHUANIAN INDEPENDENCE DAY

The SPEAKER. Under a previous order of the House, the gentleman from Indiana (Mr. BENJAMIN) is recognized for 5 minutes.

Mr. BENJAMIN. Mr. Speaker, on the 726th anniversary of the formation of the Lithuanian State and the 59th anniversary of the independent Republic of Lithuania, I thank the Speaker for allowing me to address the House on Lithuanian Independence Day.

As the Congress knows, Lithuania is a country possessed of a long and noble history.

First praised by the Roman historian Tacitus, Lithuania was unified in 1251 and led by King Mindaugas who was crowned in 1253 by a delegate of Pope Innocent IV. It is a land rich not only in fertile soil, beautiful lakes, and majestic forests, but also in culture and traditions exhibited by its language, religion, literature, and art.

Since the publication of the first book in Lithuania in 1547, the Lithuanian people have produced a unique cultural and ethnic identity steeped in the ideals of freedom.

After the third partition of Lithuania in 1795, until the first part of the 20th century, the czarist government attempted to eradicate the language and culture of the country. Ending in failure, these efforts only served to encourage open defiance against the harsh yoke of the foreign power.

The Lithuanians' proud struggle during the 19th century showed that resistance to tyranny and the unfailing will to be free can overcome prolonged oppression.

February 16, 1918, the Republic of Lithuania was finally established. Centuries of trials had been successfully faced and the Lithuanian faith, language, and traditions had endured.

The bittersweet freedom enjoyed by the Lithuanians was jealously protected for the next two decades against ceaseless foreign aggression. Remarkably, domestic progress and a commitment to the future were made during this critical period of time. A constitution was written, a secret ballot introduced, and agrarian reform instituted.

Then, in 1940, 300,000 Soviet troops dragged the people of Lithuania from their freedom and into a night of political bondage as Lithuania was declared a constituent republic of the U.S.S.R. on August 3. Later Nazi occupation and the subsequent reentry of the Soviets constituted a plague of oppression from and under which the Lithuanians have suffered ever since.

Under the dictator's heel, hundreds of thousands have been deported. Repopulation has been forced on the people. Leaders such as Stulginskis have been arrested, religious leaders have been assassinated, people tortured, property confiscated, organizations banned, and presses destroyed.

Lesser spirits would have dimmed, but the Lithuanians have remained steadfast in their courage and their struggle continues today.

The Soviets talk of freedom, but theirs is a system of callous control. They talk of dignity, but of the state, not man. They talk of détente, but there is no peace when religious leaders are murdered and inspired patriots are dragged from their homes.

Let us not delude ourselves. There can be no peace as long as people such as Nijole Sadunaite cannot possess a copy of the Chronicle of the Lithuanian Catholic Church without being sentenced to 3 years of hard labor.

In spite of these poignant and difficult circumstances, the Lithuanian people have remained loyal to their heritage. In their honor we must commit ourselves to the goal of reestablishing a Lithuanian national identity and culture endowed in liberty, freedom, and democracy.

To this end, I call upon the President to continue to speak out for human rights and in particular for the rights of the Lithuanians presently being subjugated and dominated by the Soviets.

We must use the technology, finances, and commodities coveted by the Soviets as a balance and means to end the violence committed against the freedoms of the Lituanian peoples.

Lastly, the House and each Member must oppose Soviet violation of the Lithuanian people's human rights.

By doing these things we will pay tribute not only to the brave Lithuanians now oppressed by the Soviets, but also to their brothers and sisters in this country who have individually and through numerous charitable, scholastic, and aid societies constributed so much to northwest Indiana and to our entire country.

May all Lithuanian people be honored today. May they be granted the perseverance to continue their struggle so that one day, the Lithuanian peoples on both sides of the Atlantic may join hands together and walk into the sunlight of cherished freedom.

LEGISLATION TO PROVIDE EQUAL TREATMENT FOR CRAFT AND INDUSTRIAL WORKERS

The SPEAKER. Under a previous order of the House, the gentleman from New Jersey (Mr. THOMPSON) is recognized for 15 minutes.

Mr. THOMPSON. Mr. Speaker, today I am introducing, along with a number of my colleagues, H.R. 3500, the bill to provide equal treatment for craft and industrial workers, sometimes referred to as the common situs picketing bill. If this gives some of us a feeling of déjà vu, it is perfectly understandable. It is true that we went all through this in the 94th Congress.

The only reason we are going to have to do it all over again in the 95th is that President Ford, at the 11th hour, reneged on his commitment to sign the bill, which passed both this House and the other body by substantial margins. It was, you will recall, that veto by the President which caused his Secretary of Labor, Dr. Dunlap, to resign.

The scope and intent of the bill I am introducing this year is similar to H.R. 5900, which this House adopted in the 94th Congress. I have attempted to simplify and clarify the language and structure of the bill while retaining the basic safeguards against misuse of the right which it creates. It does not include some of the amendments which were added in the other House and which were accepted by the conference committee. Specifically, it does not include the title II which was added by the other body as the price of support by the then Republican administration, support which ultimately turned out to be illusory anyway.

The basic purpose of H.R. 3500 is to restore to construction tradesmen the right enjoyed by industrial workers to picket a working place at which a single interrelated job is being performed in order to support their position in a labor dispute. It is designed to correct a literal and inequitable interpretation of section 8(b)(4) of the National Labor Relations Act made some 16 years ago in the *Denver Building Trades* case, 341 U.S. 675 (1951).

The "secondary boycott" provisions of the Taft-Hartley Act make it unlawful for a union to strike or picket where an object thereof is to force or require one employer to cease doing business with another employer. Senator Taft explained at the time that the purpose of this provision was to protect "the business of a third person who is wholly unconcerned in the disagreement between an employer and his employees." However, as the Supreme Court has noted, the secondary boycott provisions are not intended to interfere with a "labor or-organization's right to exert legitimate pressure aimed at the employer with whom there is a primary dispute. This primary activity is protected even though it may seriously affect neutral third parties". (*NLRB* v. *Operating Engineers*, 400 U.S. 297, 300 (1971).)

The problem was created when the Supreme Court, in its *Denver* decision, affirmed a ruling of the NLRB which had held that because the general contractor and subcontractors on a building site were separate businesses, they were to be treated as neutrals with respect to each other's labor disputes. Accordingly a union having a controversy with one subcontractor could not picket the other contractors and subcontractors at the job site without engaging in a secondary boycott under section 8(b)(4).

The better view, and the one adopted in H.R. 3500, was expressed by Justice Douglas in his dissenting opinion:

> The picketing would undoubtedly have been legal if there had been no subcontractor involved—if the general contractor had put non-union men on the job. The presence of a subcontractor does not alter one whit the realities of the situation; the protest of the union is precisely the same. In each the union was trying to protect the job on which union men were employed. If that is forbidden, the Taft-Hartley Act makes the right to strike, guaranteed by § 13, dependent on fortuitous business arrangements that have no significance so far as the evils of the secondary boycott are concerned. I would give scope to both § 8(b)(4) and § 13 by reading the restrictions of § 8(b)(4) to reach the case where an industrial dispute spreads from the job to another front. (341 U.S. at 694)

H.R. 3500 is designed to conform the law "to the realities of the situation" as noted by Justice Douglas; it overrules Denver, its spirit and its progeny.

In the place of the Denver rule, H.R. 3500 would enact for the construction industry the rule of *Electrical Workers* v. *Labor Board*, 366 U.S. 667 (1961) (General Electric), a case in which the Court refused to apply the principles of the Denver case to a dispute at an industrial site.

As a result of the General Electric case, in manufacturing, an independent subcontractor is not immunized from the labor dispute between the manufacturer and his employees if the work performed by the subcontractor is integrated into the normal operations of the manufacturer. On the other hand, in the construction industry, the identical independent subcontractor who performs work integrated into the normal process in the construction industry is immunized from the labor dispute between the prime contractor and his employees. There seems no practical justification for this distinction.

H.R. 3500 embodies the "connected work" test stated in General Electric. The bill treats the general contractor and his subcontractors as a single person for purposes of the secondary boycott provisions of the law. This approach reflects the economic realities in the building and construction industry where the contractor and all the subcontractors are engaged in a common venture and each is performing tasks closely related to the normal operations of all the others.

The construction of a building is a single, coordinated, and integrated economic enterprise. The contractor can perform the total job, or subcontract various parts thereof. If he decides to subcontract, he chooses the subcontractors and exercises overall supervision. If he chooses to subcontract to a nonunion subcontractor who pays less than the prevailing union wage and wins the bid for that reason, the contractor cannot claim "neutrality" when the unions protest by picketing the jobsite. This view of "nonneutrality" underlies H.R. 3500 and is its essence. The bill, by overruling the Denver case, conforms the law to what should be the proper application of the primary picketing doctrine to the construction industry.

There are numerous safeguards against abuse in the bill. It does not permit strikes or picketing in violation of an existing collective bargaining agreement. It does not authorize strikes or picketing by construction workers at industrial or other nonconstruction workplaces, but only at construction sites; and where a labor dispute is limited to a single construction site, it does not authorize strike activity at any other construction site. The bill does not authorize picketing for organization or recognition purposes which is prohibited by section 8(b)(7). Nor does it permit picketing whose object is the removal from the construction site of any employee on the grounds of race, creed, color, sex or national origin, or to cause discrimination against anyone with respect to union membership or nonmembership. It does not legalize jurisdictional disputes where a rival union is doing the work, and it does not authorize raiding of organized industrial employers by construction unions. There are other restrictions which narrow the scope of H.R. 3500 to merely extending to construction workers the right to picket the economic allies of the employer with whom they have a primary dispute.

Finally, H.R. 3500 requires a local union that wishes to take advantage of the permission contained in the bill to provide a 10-day notice to all the contractors and local unions at the common construction site and to obtain the authorization of the national union with which the local is affiliated, and, at national defense common construction sites, requires also a 10-day notice to the Federal Mediation and Conciliation Service and to the Federal agencies or departments interested in the continuation of the construction.

In sum, H.R. 3500 is carefully drawn to overrule the holding and reasoning of the Denver case, to provide that the basic rule governing manufacturing and construction workplaces is the same, to respect the countervailing rights of truly neutral third parties, and to continue the protections against discrimination presently afforded minority and nonunion employees.

A copy of the bill follows:

H.R. 3500

A bill to protect the economic rights of labor in the building and construction industry by providing for equal treatment of craft and industrial workers

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That

SEC. 1. (a) Section 8(b)(4) of the National Labor Relations Act, as amended, is amended by inserting before the semicolon at the end thereof ": *Provided further,* That nothing contained in this subsection (b) shall be construed to prohibit any strike or refusal to perform services or any inducement of any individual employed by any person to strike or refuse to perform services or threats thereof, at the site of the construction, alteration, painting, or repair of a building, structure, or other work and directed at any of several persons who are in the construction industry and are jointly engaged as joint venturers or in the relationship of contractors and subcontractors in such construction, alteration, painting, or repair at such site: *Provided further,* That nothing in the above proviso shall be construed to authorize a strike or refusal to perform services or any inducement of any individual employed by any person to strike or refuse to perform services, or threats thereof, (1) in violation of an existing collective-bargaining contract; (2) in furtherance of a labor dispute where the issues in dispute concern only the wages, hours, or other working conditions of individuals employed at any other common construction site; or (3) directed at a person who is not engaged primarily in the construction industry who through individuals regularly employed by that person and represented by a labor organization, is installing or servicing products produced by that person, or is doing construction work at a facility owned by that person: *Provided further,* Except as provided in the above provisos nothing herein shall be construed to authorize any act or conduct which was or may have been an unfair labor practice under this subsection, or to prohibit any act or conduct which was not an unfair labor practice under this subsection, prior to the enactment of such provisos: *Provided further,* That nothing in the above provisos shall be construed to authorize picketing, threatening to picket, or causing to be picketed, any person (1) to remove or exclude from a common construction site any individual employed by that person on the ground of sex, race, creed, color or national origin; (2) to cause or attempt to cause a person to discriminate against any individual employed by that person to encourage or discourage membership in any labor organization, or to discriminate against any such individual with respect to whom membership in a labor organization has been denied or terminated for reasons other than his failure to tender the periodic dues and the initiation fees uniformly required as a condition of acquiring or retaining membership; or (3) under circumstances prohibited by paragraph (7) of this subsection (b): *Provided further,* That nothing in the above provisos shall be construed to authorize any picketing of a common construction site by a labor organization to force, require, or persuade any person to cease or refrain from using, selling, purchasing, handling, transporting, specifying, installing, or otherwise dealing in the products or systems of any other producer, processor, or manufacturer: *Provided further,* That in determining whether several persons who are in the construction industry are jointly engaged as joint venturers or in the relationship of contractors and subcontractors at any site, (1) ownership or control of such site by a single person shall not be controlling; (2) where a State law requires separate bids and direct awards to persons for construction, the various persons awarded contracts in accordance with such applicable State law shall not be considered joint venturers or in the relationship of contractors and subcontractors with each other or with the State or local authority awarding such contracts at the common construction site.

(b) Section 8(g) of such Act is amended by redesignating the present section 8(g) as section 8(g)(1), and adding at the end thereof the following:

"(2)(A) A labor organization before engaging in activity permitted by the third proviso at the end of paragraph (4) of subsection (b) of this section shall provide prior written notice of intent to strike or to refuse to perform services, or to induce any person to strike or refuse to perform services, of not less than ten days to all unions and the persons at the common construction site and

to any national or international labor organization of which the labor organization involved is an affiliate: *Provided*, That at any time after the expiration of ten days from such notice, the labor organization may engage in activities permitted by the third proviso at the end of paragraph (4) of subsection (b) of this section if the national or international labor organization of which the labor organization involved is an affiliate gives notice in writing authorizing such action: *Provided further*, That authorization of such activities by the national or international labor organization shall not render it subject to criminal or civil liability arising from activities, notice of which was given pursuant to this subparagraph, unless such authorization is given with actual knowledge that such activities are to be willfully used to achieve an unlawful purpose.

"(B) In the case of any such site which is located at any military facility or installation of the Army, Navy, or Air Force, or which is located at the facility or installation of any other department or agency of the Government if a major purpose of such facility or installation is or will be the development, production, testing, firing or launching of munitions, weapons, missiles, or space vehicles, prior written notice of intent to strike or to refuse to perform services, or to induce any person to strike or refuse to perform services, of not less than ten days shall be given by the labor organization involved to the Federal Mediation and Conciliation Service, to any State or territorial agency established to mediate and conciliate disputes within the State or territory where such site is located, to the several persons who are jointly engaged at such site, to the Army, Navy, or Air Force or other department or agency of the Government concerned with the particular facility or installation, and to any national or international labor organization of which the labor organization involved is an affiliate.

"(C) The notice requirements of subparagraphs (A) and (B) above are in addition to, and not in lieu of, the notice requirements prescribed by Section 8(d) of the Act."

EFFECTIVE DATE

SEC. 2. The amendments made by this Act shall take effect 90 days after the date of enactment.

HOUSE RESOLUTION 287

The SPEAKER. Under a previous order of the House, the gentleman from Illinois (Mr. ROSTENKOWSKI) is recognized for 5 minutes.

Mr. ROSTENKOWSKI. Mr. Speaker, I have today joined with the other members of the House Democratic leadership in introducing House Resolution 287 which emobdies the recommendations of the Commission on Administrative Review. It is obvious that events dictate and public opinion now demands that the House of Representatives take meaningful steps to secure the public trust. Speaker O'NEILL has made it very clear that the adoption of a new code of ethics should be an item of the highest legislative priority. I wholeheartedly agree. I would particularly like to offer my personal congratulations to both the congressional and public members of the Commission. Theirs was an unenviable task.

While my support for the major portion of the Commission's work is solid, I do, however, have some misgivings about some of their recommendations. I refer specifically to the provisions dealing with ouside income limitations as well as some of the reporting requirements of the financial disclosure section.

By imposing an arbitrary limitation of 15 percent on the amount of earned outside income, the Commission has placed a heavier burden on those Members who do not have significant independent sources of income. The Commission has, in my opinion, drawn a rather unfortunate distinction between earned and unearned income. While the distinction is clear, it is the philosophy behind it that I find troublesome. We are, in fact, placing our imprimatur on a policy which rewards Members with significant financial holdings while penalizing those who by necessity find it necessary to supplement their present income. This distinction bears little relevance to the amount of time and activity which may be involved in the accrual of either type of income. For example, the Congressman who possesses a significant investment portfolio may in fact spend more time "passively" monitoring his holdings than the Congressman who from time to time actively renders services for remuneration.

It is my firm conviction that the amount of a Congressman's outside income has little necessary connection to potential sources of conflict of interest. It is the nature of his outside income activity and the amount of time spent thereon which are at issue here.

It is my strong hope that the Committee on Rules, in further developing this historic legislation, will give serious consideration to eliminating the 15-percent limitations on outside income. I would also hope that the members of the Rules Committee would attempt to improve the present ethics package by refining some of the more burdensome reporting requirements in the area of financial disclosure. If they do not, I fear we will find ourselves spending an inordinate amount of time involved in unnecessary recordskeeping with no appreciable gain in the degree of public confidence. Absent any action by the committee in this direction, I intend to actively and enthusiastically support all perfecting amendments when the resolution reaches the House floor.

Mr. Speaker, I think that every Member of the House should now take a very long and realistic look around and within himself. In a few days we shall hopefully see a significant increase in the annual amount of congressional and other Federal salaries. Many people, including myself, believe that this is necessary in order to bring these salaries in line wtih those paid to persons in private business and industry. These increases are also necessary if we are to stem the increase in the congressional retirement-resignation rate. These new salaries will be of great assistance in eliminating the growing difficulty that the Government presently has in recruiting qualified executives. We are obviously moving in the right direction. Let us be very careful that we do not offer inducements with one hand and deterrents with the other.

CONGRESSIONAL PAY INCREASE

The SPEAKER. Under a previous order of the House, the gentleman from Georgia (Mr. LEVITAS) is recognized for 5 minutes.

Mr. LEVITAS. Mr. Speaker, I wish to express, with as much strength as I have, my vehement opposition to the proposed salary increase for Members of Congress. To permit this pay increase to go into effect is to do the wrong thing, for the wrong reason, at the wrong time, and in the wrong way.

The Salary Commission believes it has put together compelling arguments to justify dramatic salary increases for Members of Congress, Federal judges, and high ranking Federal bureaucrats. Arguments related to the "merits" of this raise simply beg the question. Who honestly would challenge the fact that these persons' present salaries have been affected adversely by inflation since 1969? As real as that may be, it in no way follows logically that the proposed pay raises are justified to be implemented.

Has Congress alone been singled out by the fates to suffer the adverse consequences of inflation? Unquestionably, no. Millions of Americans, as a result of inflation, have suffered a decline in income in real terms. Their dollars buy less—just as our dollars buy less. At best—or, more appropriately, at worst—all this pay raise does is to pick out very selectively one group of people to raise their wages to insulate them from the ravages of inflation.

Have we forgotten in just 3 months since the national elections that we pledged to be the servants of the people? The working people of America have already been pushed to the breaking point by excessive Federal, State, and local taxation. It is from these citizens' taxes that our salaries are paid. This ill-advised pay raise could well be the last straw.

Moreover, if we permit this raise to go into effect, how can we in good conscience call for restraint in the private sector, after having set the worst possible example in managing our own affairs? At a time when our Government is calling on ordinary citizens to make financial and personal sacrifices in the interest of curbing inflation and conserving energy, our failure to disapprove the pay raise will rightfully be considered a failure of leadership which is our responsibility and a blatant display of executive and congressional impropriety. In granting ourselves a lavish pay raise, we will clearly and in one fell swoop demonstrate that we are doing no more than paying lip service to the idea of restraint. The question at stake is public confidence in Government. At this time in history, are we willing to exchange congressional integrity for $12,900?

Much has been made over the "need" to raise congressional salaries in order to attract qualified persons. During the November elections, I observed no lack of candidates seeking those offices. Those candidates must have been aware of the rate of pay that went along with senatorial and congressional offices and were willing to accept those offices on those

terms. It may be that the responsibilities and expenses of congressional service and the sacrifices made to serve honorably merit a salary increase. That may be. But that is not the question. The question is should a pay raise be permitted only 2 months into the term for which we were elected?

Along this line, I have always believed that increases in the salaries of public officials should not take effect until after an intervening election, thus giving the public an opportunity to vote those officials out of office before their pay raise is realized. It is for this reason that I have cosponsored the Congressional Pay Raise Deferral Act both in the 94th and in the 95th Congress which embodies just such a procedure.

Mr. Speaker, most of all, I am concerned about the indirect way in which these increases will be put into effect. It is deceitful. We have a responsibility to take a stand here individually and collectively as an institution through a direct vote on the raise itself. If we individually believe that these raises are warranted, can we not at least have the courage to stand up and vote our convictions and let the public judge our decision—as it judges our other votes? I have tried to find every way I can to force a record vote on this matter and will continue trying. The public has this right at least.

I must add after the foregoing that if the House refuses my demand for a direct vote, I believe the public will consider our inaction a positive vote by this institution and its Members to accept a pay raise. Despite the fact that I believe Congress is attempting to hide behind the recommendations of a little-known Commission, the public is not deceived—it understands the end result. At least we owe the public the honesty of stripping the pay raise question of frivolous procedural tieups, subterfuge, and legislative chicanery. I urge the Congress to go on record through a direct rollcall vote and to reject this inappropriate salary increase at this time.

WALTER J. THOMAS

The SPEAKER. Under a previous order of the House, the gentleman from Massachusetts (Mr. MOAKLEY) is recognized for 15 minutes.

Mr. MOAKLEY. Mr. Speaker, last year the U.S. Department of State established a minority middle level hiring program with the stated goal of recruiting 30 minority and women employees annually. The program was a sincerely launched effort by Secretary Kissinger and the Deputy Under Secretary for Management, Mr. Lawrence Eagleburger, to improve the dismal underrepresentation of women and minorities in middle- and upper-level positions in the Department.

Now that Messrs. Kissinger and Eagleburger have left office, it must be recognized that the program was a complete failure. The Department never approached its goal of 30 recruitments a year. In fact, when they left office, a total of only five appointments had been made under the program in 1975 and 1976.

The problem is one that too many managers in the Federal Government have learned through similar failures. I have no reason to challenge the former Secretary's sincerity. The real problem is that the program generated no enthusiasm in the bureaucracy that operated it. The situation got so out of hand, that it would not be overstating the case to say that the program was sabotaged.

By way of example, Mr. Speaker, I would present to the House the case of Mr. Walter J. Thomas of Dorchester, Mass.

Mr. Thomas was assigned as Associate Country Director for Venezuela by the Peace Corps in 1972. In the summer of 1974, a new Country Director was appointed and soon thereafter acted to terminate Mr. Thomas. On a Civil Service appeal, the examiner conducted lengthy hearings and ruled that not one of the charges could be substantiated in fact. The examiner determined that Mr. Thomas, a black, had been the victim of discrimination and ordered the termination rescinded. He further recommended that Mr. Thomas be reassigned to a comparable post in another country.

While retaining Mr. Thomas for the balance of his contract, ACTION made no effort to comply with the spirit of the ruling. Thomas was assigned to a position at Washington for which he had been overqualified when hired and was subjected to a number of petty reprisals which are still the subject of legal action by Mr. Thomas.

In any event, Mr. Thomas then could reliably conclude that his contract would not be renewed and began to make arrangements for new employment. He was one of the first black applicants under the then newly established middle level minority hiring program at the Department of State.

In the initial phases, his application fared well. He did well on his test. He received a medical clearance on November 13, 1975. A month later, his security file was presented to medical, which responded on December 31, 1975, that the security file contained no information which would preclude appointment from a medical standpoint.

With two favorable reports from medical and a complete security investigation that revealed no derogatory information, the principal security reviewer recommended a security clearance.

All that stood between Walt Thomas and a career Foreign Service appointment was the routine approval of the reviewer's findings by his supervisor.

But his finding were not approved. The supervisor had before him a security file that had attracted no special attention prior to that and an ACTION personnel file indicating no serious problems—although it would have reflected his successful fight against discrimination and subsequent reprisals.

Citing "financial difficulties," the supervisor overruled a clearance and ordered a new investigation. Yet the security file contained a rather unexceptional list of indebtedness and the personnel file from ACTION contained only a single letter relative to a late retail credit payment on a stereo which had only cost $600 to begin with. There was nothing in the file to indicate that the matter had not been resolved by that single letter. Since the file would also have indicated that Mr. Thomas was living in Venezuela at the time, some confusion in the forwarding of payments on a single account should have attracted no attention. In his statement to a State EEO investigator, the original security invesitgator, who recommended clearance, stated—

> I originally recommended clearance. To me it was a standard transferee case. I recognized a few points, number one was his financial problems—although I didn't think it was enough to recommend further investigation. My supervisor did, however.
>
> Generally my supervisor and I agree, so in this respect this case was unusual.

It is clear that a decision was made in security at that time that Walt Thomas would never work for the State Department. Whether there was a direct suggesion from ACTION or security acted on its own initiative, the decision was clearly made that Thomas should not be hired at State, because he had pursued an EEO claim at ACTION.

While the individual investigators may not have known why, the signal was clear. When the report came back it was apparent what they were being asked to do. For 6 months, friends, coworkers, neighbors, and people who barely knew Walt Thomas were interviewed at length.

And, to his credit, Walt Thomas clearly passed the reinvestigation; no basis could be found to deny a security clearance.

But the ingenious bureaucrats at the State Department have figured out a method for dealing with such situations when they strongly desire not to hire an otherwise qualified person. The medical department—or more particularly two specific physicians in medical—accommodate security in such cases. Findings based on suitability or security grounds can be contested on grounds easily understood by anyone to whom an appeal might be made. But medical disqualification is an area few are qualified to argue. In addition, I think most experts would agree that a vast array of standards makes it impossible for even an Olympic gold medalist to get past a physician who genuinely wants to disqualify him.

The problem facing medical was that they had already cleared Mr. Thomas. But there is a doctor at State whose job it is to get around these technicalities. It is not part of his job definition—he is actually called the liaison between medical and security—but that is how he earns his living—arranging for medical standards to be used to eliminate personnel whom the Department does not want to hire; nonmedical reasons which may not lawfully be admitted.

On May 7, 1976, security was aware it could not disqualify Mr. Thomas and ordered medical to reexamine. On May 11, Mr. Thomas' medical clearance was revoked and he was ordered to undergo reexamination. Two grounds were cited:

First, information developed by security that Thomas was taking medication and had not indicated it on his first examination, and second, that he had been medically evacuated from Venezuela and had not reported that.

In fact, neither assertion had any foundation. At his first examination, it was suggested that Mr. Thomas should lose weight even though he was within departmental standards. He subsequently saw his own doctor and received a diet and a prescription. Mr. Thomas had answered the question honestly and had nothing to hide; he was in fact the source of the information "developed" by security. The situation could have been resolved by phone calls to Mr. Thomas, his doctor, or the pharmacy. But medical did not take that step until after the second physical.

The medical evacuation simply was not true and a phone call to ACTION would have confirmed that.

So medical, instead of making two to four phone calls, ordered the very expensive procedure of a full second medical examination even though it was improper under the Department's own procedures manual.

Even though there was no information to indicate that there was reason for a psychiatric examination, one was ordered. The memorandum ordering the exam is astonishing:

> In addition to this, while serving as a Peace Corps Director in Venezuela, his performance was so adamant and trying to the Peace Corps that he was recalled home. Because he was suddenly called home, he launched a grievance against the Peace Corps, the status of which I believe at the present time is not active. There was a statement, however, to the fact that he did not appear to even know what the job was all about while serving in the Peace Corps in Venezuela.
>
> For this reason, the need for psychiatric interview seems to be indicated to be held in conjunction with his second physical exam.

This narrative is sharply at variance with the one I have read into the RECORD. But mine is based on an extensive body of records from ACTION, State, and the Civil Service Commission. The doctor's version, regretfully, is based on malice and distortion. Thomas was not recalled, he was transferred on the basis of a hearing examiner's recommendation. His appeal was no longer active, because he had won. The allegations about performance, in that face of the Civil Service hearing examiner's findings, is simply slander.

It seems clear from the tone of the memo and its specific wording that there is some kind of oral history to this case. Certainly, these ugly assertions came from somewhere other than the official record from which the doctor was supposed to be working.

The psychiatrist refused to be used for the purpose and went far further than required in finding Mr. Thomas totally qualified from a psychiatric viewpoint.

But, by using figures from the first or second examinations as happened to suit his purpose, the doctor who wrote this memo developed three specific, if somewhat borderline, grounds for medical disqualification. I think the blood pressure is a good example of how this was done.

On the first examination, Mr. Thomas' BP was well within limits. At the second physical, with Walt Thomas now unemployed and aware that some problem had developed, he was subjected to an interrogation—intended to make it clear that all his problems at ACTION had followed him—and promptly thereafter tested for blood pressure. Under this kind of psychological pressure a diastolic reading two points over normal was obtained and used as grounds for disqualification.

In response to my request for "any and all reasons for medical disqualification," the doctor, in a letter signed by Assistant Secretary McCloskey, listed obesity. Yet Thomas was within published limits on his first examination. By the time of his second examination, after starting the diet suggested by State, Thomas had lost 11 pounds and was 20 pounds under the published limit. Confronted by this prevarication during an EEO investigation, obesity was dropped as grounds; a new disqualification was listed, which had not been included in the letter sent in response to my request for any and all reasons.

Mr. Speaker, it is with deep regret that I have asked leave to address the House today. For I am required to present a larger issue than Walt Thomas' personal tragedy or even the total failure of the State Department minority hiring program. Mr. Thomas pursued all the avenues of appeal Congress has opened to protect Federal employees from racism. Yet men in the Department of State, who consider those who fight for their rights, troublemakers, have devised a covert system for thwarting the will of Congress, of the President, and the management of their own Department.

If they can succeed, all the laws we have enacted might just as well be repealed. If they can succeed, then the Founding Fathers have failed; and ours will have become a government, not of laws, but of men.

CONGRESSIONAL PAY RAISE

The SPEAKER. Under a previous order of the House, the gentlewoman from Maryland (Mrs. SPELLMAN) is recognized for 5 minutes.

Mrs. SPELLMAN. Mr. Speaker, I am adamantly opposed to the manner in which the Presidential Commission's pay proposal is being handled by this Congress, for I feel it is the right of every American to know how his Representative would vote on this measure if it were allowed to come before this House for a recorded vote. I have expressed these views, along with my request for such a vote, in identical letters to the Honorable ROBERT NIX, chairman of the Post Office and Civil Service Committee, and the Honorable WILLIAM FORD, chairman of the Ad Hoc Committee on Presidential Pay Recommendations. At this time, I would like to share the contents of those letters with my colleagues:

FEBRUARY 15, 1977.

DEAR MR. CHAIRMAN: I strongly believe that it would be most unfortunate to have the Presidential Commission's pay proposal languish in Committee past the effective date without having it come before the full House to be voted upon. The scores of phone calls and letters from my constituents bear out my beliefs that the American people share my concern over the manner in which the Congress is dealing with the issue.

It is my sincere desire to see an appropriate resolution be considered on the floor of the House regarding the proposal, and I respectfully urge your assistance in effecting that action.

Sincerely,

GLADYS NOON SPELLMAN,
Member of Congress.

THE HISTORIC PRESERVATION POLICY ACT OF 1977

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. SEIBERLING) is recognized for 5 minutes.

Mr. SEIBERLING. Mr. Speaker, I am today introducing the National Historic Preservation Policy Act of 1977, to establish a national policy and a coordinated program for historic preservation. The legislation would, for the first time, provide a focal point for the many and varied historic preservation efforts in our Nation and provide Federal leadership and support for historic preservation both at home and abroad.

The concept of historic preservation in the United States has expanded greatly in recent years. What started in the 19th century as a small movement to save certain historically significant sites and buildings—like Mount Vernon and Monticello and Independence Hall—now embraces entire towns and city neigborhoods—such as the village of Peninsula near my home in Ohio, Chinatown in San Francisco, a barrio in San Antonio, a farming area in Greensprings, Va.

Today, people are finding that historic preservation makes good sense, both economically and esthetically. As the Advisory Council on Historic Preservation has pointed out:

> Preservation activities are significantly more labor intensive than new construction . . . 109 jobs per million dollars are created through renovation as compared to 69 jobs per million for new construction.

Throughout our country, adaptive use has become a way of giving new life to old structures. This has happened at Quaker Square in Akron, where a 19th century mill has been transformed into a shopping complex. In several cities, unused railroad stations are being converted into commercial and cultural centers. The Old Main Post Office in Washington, D.C.—once threatened with demolition—is now being revived for use as Federal office space. Decaying neighborhoods are being revitalized and preserved, not as museum pieces but as living communities, adapted to modern

society but retaining their original character, scale, and charm.

CONGRESSIONAL ACTIONS

The growing interest and the growing needs of historic preservation have had an effect on Congress. Last year alone, three major bills were enacted that will directly benefit the preservation movement:

The Land and Water Conservation Fund Act was amended to include an historic preservation fund, with moneys derived from offshore oil revenues. This fund will raise authorizations for the matching grant program for historic preservation from the present $24.5 million a year to $100 million a year in 1978 and 1979 and to $150 million in 1980 and 1981.

The Public Buildings Cooperative Use Act will require the Federal Government, for the first time, to look at historical and architecturally significant buildings before constructing new office facilities.

The Tax Reform Act of 1976 contains tax incentives for preserving historic properties and disincentives for demolishing them. The act also expands the qualifications for deductions of donations for conservation easements on both natural and historic properties.

In addition, historic preservation benefited from the recent Public Works Act, earmarked for projects in areas of high unemployment, which gave special points to projects for restoring properties on the National Register of Historic Places. The Park Mining Act provides for a 2-year study by the Advisory Council on Historic Preservation to determine what steps can be taken by the Federal Government to protect natural and historic landmarks from surface mining and similar activities.

PRESENT PROBLEMS

I think that I can safely say that in the 1970's there has been a renaissance of historic preservation actions in Congress. Yet we have not begun to match what the people themselves have been doing. Ours has been a catch-up game, and we are still running far behind.

For example, in 1966 the National Historic Preservation Act was enacted to establish a partnership between the Federal Government and the States for historic preservation. However, the Federal Government has never lived up to its share of that partnership. Last year the administration requested only $10 million for the State grant program. Congress upped that to $17.5 million. Yet the States had certified requests for over $200 million. This year's requested budget—the previous administration's proposal—is for $35 million, nearly two-thirds less than the amount authorized by Congress.

In 1973, the United States was the first Nation to ratify the World Heritage Convention, adopted by the UNESCO General Conference. The Convention affirms that it is the duty of national governments to conserve the cultural and natural resources that are of universal significance. The United States has, as yet, developed no process or procedures for implementing our role in that program.

At home, our preservation efforts on the Federal level have lacked both focus and definition. Several departments and agencies deal with various aspects of historic preservation—the National Park Service, the Advisory Council on Historic Preservation, the Department of Housing and Urban Development, to name a few. No single one of them has been given the clear authority to guide or monitor Federal historic preservation programs.

In 1971, Presidential Executive Order 11593 was issued, directing Federal agencies to adopt measures for the identification and nomination of properties in their ownership which may be eligible for National Register listing. The Executive order has never been fully implemented. As a result, Federal agencies often make decisions without any knowledge of the historic properties that will be affected. The burden of historic proof is too often shouldered by the States and localities, with little support from the Federal agencies who are making the decisions.

LEADERSHIP FOR PRESERVATION

Last fall, President Carter emphasized the need for leadership in national historic preservation efforts when he wrote, to the National Trust for Historic Preservation:

> The World Heritage Convention is the starting point on the international level for nourishing the sense of preservation that must emerge from all of us at home. We must make conservation of our cultural heritage a priority in our nation, a goal to be shared with other nations as well. . . . We must offer federal support and leadership in this effort, both here and abroad, to preserve and protect those elements that are of local and state and national and universal significance.

The legislation I am introducing today, the National Historic Preservation Act of 1977, is directed at meeting the goals which President Carter so eloquently articulated. The bill would establish a national policy, consistent with the U.S. obligations under the World Heritage Convention, that the Federal Government has a duty to preserve and enhance this Nation's historic and cultural resources and to cooperate with other nations—and with States, local communities, and private organizations and individuals—in the preservation of their significant historic and cultural resources.

To implement this policy and to insure a coordinated national program that complements existing State programs, the bill would focus administration of the national historic preservation program in one agency, the Council on Historic Preservation—formerly the Advisory Council on Historic Preservation. The bill directs the Council to coordinate, in cooperation with the Department of State, the U.S. activities pursuant to the World Heritage Convention. The Council would be given the necessary authority to carry out the national historic preservation program, including providing technical assistance and establishing a program, in cooperation with the National Trust for Historic Preservation, for the emergency acquisition of properties listed in the National Register of Historic Places threatened with immediate demolition.

In addition, the bill would provide all Federal departments with the necessary authority to carry out their responsibilities under the act, including clarification of their responsibilities to identify historic and cultural properties. It would authorize the Secretary of the Interior to study federally owned properties included in the National Register and recommend to Congress those which should be managed by the National Park Service.

The legislation would establish guidelines for the use of the Historic Preservation Fund to provide the National Trust for Historic Preservation with a floor on its annual allocations and to provide for a 10-percent contingency reserve account for up to 2 fiscal years for the fund. It would permit fund moneys to be used on projects receiving other Federal assistance. Fund money could not, however, be used to match any other Federal funds. It would also authorize Federal agencies to spend their funds to maintain properties included in the National Register under their jurisdiction or control and to reimburse State historic preservation agencies for up to 75 percent of the costs for administrative and preservation review activities undertaken by Federal agencies to fulfill their responsibilities for such properties.

Mr. Speaker, the historic preservation movement in our country began as a people's movement, which emerged from the love, dedication, and work of individuals who realized the value of preserving for the future the significant elements of our past. The National Historic Preservation Policy Act of 1977 would build upon their efforts and provide the needed leadership and direction on both the national and international levels. Most importantly, it would assure that the Federal Government coordinates its efforts with State, local, and private activities—to bring back the movement to where it began, with the people.

I urge my colleagues to support this legislation.

LITHUANIAN DAY

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. CORMAN) is recognized for 5 minutes.

Mr. CORMAN. Mr. Speaker, it is my privilege to know some Lithuanians personally. My experience has been that they are bright, industrious and, in the main, beautiful people.

SENATOR HUMPHREY BACK TO OLD FORM AFTER SERIOUS ILLNESS

(Mr. BRADEMAS asked and was given permission to extend his remarks at this

point in the RECORD and to include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, the distinguished senior Senator from Minnesota, HUBERT HUMPHREY, is back to his old form after a serious illness last year. Senator HUMPHREY's many friends here in the House of Representatives wish him well and look forward to seeing him and, needless to say, hearing from him often in the years ahead. The gentleman from California, Mr. HAWKINS, recently wrote a warm tribute to Senator HUMPHREY that appeared in the Los Angeles Sentinel of January 20, 1977, and I would like to insert it in the RECORD:

HAPPY WARRIOR PRACTICES "MAGIC" IN ALL WAYS!

(By Congressman GUS HAWKINS)

My great friend, Sen. Hubert Humphrey, the "Happy Warrior," was interviewed the other day about the relationship between his current political fortunes and his recent battle with cancer.

In that interview a series of questions arose about his rapid recovery and his high spirits.

Mr. Humphrey said that he thinks positively, and that he lives each day as it comes.

He felt that good thoughts, and fully living each day, have a way of giving one the edge in times of great stress and strain.

If anyone is the living proof that this kind of philosophy has the power to fight off adversity, Mr. Humphrey is such an example.

We could all take a page from Mr. Humphrey's life and use it to great advantage.

During the senator's stay at the New York City hospital where his surgery took place, I understand that Senator Humphrey's bouyant spirits so dramatically changed the atmosphere on his floor that patients did things which sped their recoveries along, which were not ordinarily done prior to Mr. Humphrey's cheerful ministrations.

One nurse was quoted as saying that the hospital was not going to be the same when Mr. Humphrey left.

In other words, it was going to return to its routine dullness.

Mr. Humphrey practices the same kind of magic in the Senate.

(At least, I think it's magic!)

He's an activist, interested in doing and accomplishing.

He takes victory in its stride—and does not despair in defeat.

He's committed to the best in American idealism and never backs away from a fight, especially if the fight is over principle.

I once heard him lay his commitment on the line, when school desegregation and busing was taking its usual beating.

(And when respected liberals wanted to make some serious compromises.)

Mr. Humphrey said, in essence, that his whole political life was one dedicated to the delivery of equal opportunity to all Americans; that equal access to education by black Americans was America's greatest challenge, and that he, for one, was not going to be deterred from the struggle by the weak-kneed, who wanted to pick up their marbles and run home.

Mr. Humphrey intended to stick to his guns on school integration, and not retreat one inch.

No one's seen him retreat yet!

The miracle is that he continues on—and how much better we are for his strength.

Surely it would be understandable, if he were to slow down a bit, develop some pessimistic viewpoints, begin to complain about the restrictions of the American ideal and talk about amending the Constitution (instead of amending our wrongful ways of resolving the nation's problems.)

But this is not how Mr. Humphrey operates; he's not a pessimist, he's an optimist.

He thinks we can all be better than we are.

And he's right! So right!

CONGRESSMAN BRADEMAS REPORTS ON NATURAL GAS POLICY DISCUSSIONS

(Mr. BRADEMAS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, I take this time to make a brief report on my visit last weekend to my congressional district in northern Indiana. This area has experienced an extremely harsh winter evidenced by the fact that January 1977 was the coldest month in Indiana's recorded history and that annual snowfall to date has nearly matched the alltime record of 110.6 inches set in the winter of 1966–67.

Moreover, beginning on Friday, January 28, and extending throughout that weekend, the entire State of Indiana was stunned with a harsh winter storm. My own congressional district underwent what the weather service declared to be Arctic blizzard. President Carter declared a state of emergency in our State.

In addition to this severe weather, the residents of my congressional district have also experienced natural gas shortages. For varying periods of time, plants have been closed and many people have been out of work.

I am pleased to report that the crisis was short lived. Yet, the effect of this shortage has been significant with economic and personal loss to hundreds of businesses and thousands of individuals in my district.

Mr. Speaker, the supply and cost of natural gas have been the subjects of important debates in this body in recent years. We have heard the views of consumers and producers alike and we must continue to listen and learn their ideas and seek out new solutions.

THIRD DISTRICT BUSINESS AND INDUSTRIAL LEADERS

For this purpose, I met on Saturday with some of the key business and industrial leaders in my congressional district. They included Philip Faccenda and Stephen McTigue, president and executive vice president, respectively, of South Bend-Mishawaka Area Chamber of Commerce; Joseph O'Callaghan, president and chief executive officer of Wheelabrator-Frye, Inc.; William Corbett, plant manager of White Farm Equipment; Keith Meade, executive vice president of the Elkhart Chamber of Commerce; Mr. John Hufft, assistant vice president for Corporate Facilities of Coachman Industries, Inc.; Clinton Hartman, chairman of the board of the CTS Corp.; Clarence Beller, executive president of the Chamber of Commerce of Goshen, Inc.; and Mrs. Beller; Mel Kosnoff, past president of the Chamber of Commerce of Goshen, Inc.; James Locke and William Rippy; executive vice president and vice president for governmental affairs respectively of the LaPorte Chamber of Commerce; Lewis Mahoney, division manager of Allis-Chalmers; James Cannon, manufacturing manager of Chrysler Plastic Products; and Thomas Bucher and Michael Pryor, division managers for the St. Joseph Valley Division and Dunes Division, respectively, of the Northern Indiana Public Service Co.

NATURAL GAS POLICY IDEAS

I found our meeting most rewarding and would like to share with the Members of the House some of the suggestions made by these business leaders during our discussion:

First. Industry, business organizations, and utility companies might form joint committees to search out new and better methods for energy conservation and to monitor fuel supplies for the future.

Second. Government regulatory agencies should more fairly balance the interests of energy, the environment, and the economy in establishing standards for the future use of coal and nuclear fuels.

Third. An excess profits tax might be implemented to prohibit windfall gains if natural gas is deregulated.

Fourth. An investment credit might be extended to natural gas producers to stimulate exploration and additional drillings.

Fifth. Only new gas discoveries should be deregulated so that the increase in price to the consumer would be gradual.

Sixth. An agency similar to the World War II Materials Control Board should be established, bringing experts together from all sectors of the society, to assist with energy conservation and supply.

Seventh. Tax credits might be offered for home insulation and energy savings to further energy conservation by individual consumers.

Eighth. Utility rate structures should be revised, especially in the area of volume discounts, so as not to encourage overusage of natural gas.

Mr. Speaker, I believe these suggestions of leaders of business and industry in my own home district to be thoughtful and constructive, and I am pleased to share them with my colleagues.

ZERO-BASE BUDGETING BILL INTRODUCED

(Mr. REGULA asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. REGULA. Mr. Speaker, I am pleased today to reintroduce my bill on zero-base budgeting, with 20 of my colleagues as cosponsors.

The introduction of this bill with its bipartisan support comes at a timely moment. In recent weeks, the House held hearings on general budget trends, and on President Carter's much-publicized economic stimulus package. The House Budget Committee passed a third budget resolution, increasing current Federal outlays $5.7 billion over the second resolution, and hiking up the Federal deficit for fiscal year 1977 to $70.3 billion, an increase of almost $20 billion.

These actions lend glowing evidence to

a real need—a need for implementing zero-base budgeting. The fact that a third budget resolution was required in order to spur us on to economic recovery demonstrates that the budget process as it now stands is not enough.

We do not need more cures after the fact to patch up the Federal budget. What we do need to control the budget is preventative medicine. This is what my bill offers. With a comprehensive examination of spending before it occurs, we need not rely on present measures to dig us out of miscalculations and mistakes in programming and spending later on.

With this as its focal point, my bill mandates the complete review of all Federal programs and expenses on a 6-year cycle. All items are to be reviewed as if about to be funded for the first time. This corrects our present evaluation system, which is incremental—reviewing upcoming increases only as compared to previous year's funding.

Once programs are examined from the ground up—from zero—results of context evaluation will be used as funding guidelines. If a program is obsolete or ineffective, it will be abolished or restructured. Funding will reflect modifications.

Under my bill, there is a tremendous amount of program and funding waste that will have nowhere to hide any longer.

Most importantly, my bill differs from other zero-base legislation in its implementation approach. Mine says, here is the policy we want implemented, and we will entrust the design of guidelines to the appropriate House committees involved. Other bills spell out each detail of implementation, before we have had any experience in such a complex process to use as background. It may turn out that some of the guidelines proposed in other bills are valid; but it may just as well turn out that they become an unwelcomed addition to congressional bureaucracy, hindering effective evaluation in favor of redtape. I view the flexibility of my bill as its biggest plus; and the most realistic approach that can be taken. We must form the specifics of zero-base budgeting through experience.

I urge my other colleagues to join us in cosponsoring this legislation.

THE CASE FOR TAX CUTS

(Mr. ROUSSELOT asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ROUSSELOT. Mr. Speaker, the key phrase now being bandied about in the Halls of Congress, heard from various Carter administration spokesmen before committees and found in the writings and speeches of economists, is "economic stimulus package." Under the Congressional Budget and Impoundment Act of 1974, Congress has the responsibility to establish aggregate targets for Federal spending and revenues. The third concurrent resolution on the budget will be debated next week, and Congress must consider what it will do to stimulate the economy. In simplified terms, what all this discussion about the economic stimulus package means is how do we get the American economy moving again and what measures are needed by the Federal Government to accomplish this end.

A substantial number of us in Congress believe very strongly that now that we have been out of the Vietnam war for almost 4 years we should give the 88 million working people of this country a Federal tax reduction. That would do more than anything to stimulate and encourage the American economy. A tax reduction would really increase employment and reduce unemployment. Several of us are, therefore, advocating a 10-percentage-point reduction in personal income tax across the board because we know that each one of those 88 million working people would use that tax windfall, either through spending or saving, far more productively than the Federal bureaucracy. This is not a "pie in the sky" proposal and let me give you a few illustrations why. Prime Minister James Callaghan, the leader of the Labor Party Government in Great Britain, has recently stated:

> We used to think that you could spend your way out of a recession . . . I tell you, in all candor, that that option no longer exists, and that insofar as it ever did exist, it only worked by injecting bigger doses of inflation into the economy followed by higher levels of unemployment as the next step. That is the history of the past twenty years.

Arguing on behalf of permanent tax rate reductions, Dr. Robert Mundell of Columbia University has observed that:

> The government budget recycles tax dollars into the spending stream through expenditures, but in doing so it reduces the incentive to produce and lowers total production. After all, if total taxes and expenditures become confiscatory, all economic activity would cease and the government tax bite would be one hundred percent of nothing.

There are historical precedents which show that permanent tax rate reductions effectively stimulate the economy. An example in recent times is the Kennedy tax cuts of 1962–65. Arguing in favor of the Kennedy tax cuts—which amounted to reductions in the corporate and individual tax rates equivalent to $30 billion in today's economy—the former Ways and Means Committee Chairman Wilbur Mills stated the following on the economic benefits of tax cuts:

> There are two roads the government could follow toward a larger, more prosperous economy—the tax reduction road or the government expenditure road . . . The tax reduction road gets us . . . to a bigger, more prosperous, more efficient economy with a larger share of that enlarged economic activity initiating in the decision of individuals to increase consumption and business concerns to increase their productive capacity.

Many expressed concern that the rate reductions proposed by Kennedy would result in massive revenue losses. His Secretary of the Treasury argued that 6-year revenue losses would total $89 billion. The fact is there were gains of $54 billion realized over a 6-year period as the following chart illustrates:

[In billions]

Year:	1963	1964	1965	1966	1967	1968	Total
U.S. Treasury estimated revenue losses	2.4	5.2	13.3	20	23.7	24.4	$89
Actual revenue gains	7	6	4	14	19	4	$54
Difference in estimates							$143

Another example was when Congress enacted President Coolidge's recommendations in 1924 for large cuts in personal and corporate taxes. At that time, the Secretary of the Treasury advocated large tax rate reductions from the high level that had been imposed to finance World War I. It was his belief that when a person's initiative "is crippled by legislation or by a tax system which denies him the right to receive a reasonable share of his earnings, then he will no longer exert himself, and the country will be deprived of the energy on which its continued greatness depends."

In 1924, Coolidge endorsed, and the Congress enacted, the Treasury Secretary's proposal to cut the personal income surtax from 50 to 25 percent and the inheritance tax to a top of 25 percent, with an 80-percent credit against State inheritance levies. In analyzing the effects of these reductions, Jude Wanniski wrote the following in an article for the National Observer:

> The low tax rates not only produced an enormous expansion of the economy, with real per capita income increases approaching 4 percent a year, but they also produced sufficient revenue to pay off almost a third of the national debt, slicing it back to $17 billion by 1928. In eight years American productivity—output per man-hour—increased by 30 percent.

In considering the economic stimulus package in preparation for the third budget resolution, it is hoped that Congress will learn from history and act now with personal income tax cuts.

DEDICATION OF THE C. & O. CANAL NATIONAL HISTORICAL PARK TO JUSTICE WILLIAM O. DOUGLAS

(Mr. OTTINGER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. OTTINGER. Mr. Speaker, today Congressman DON EDWARDS and I are re-

introducing a bill we originated last year, along with Senator EAGLETON, to dedicate the entire 185-mile stretch of the C. & O. Canal to Justice William O. Douglas. Our bill does not rename the canal, instead it honors the Justice by placing on all existing and future signs bearing the name "Chesapeake and Ohio National Historical Park" the words, "Dedicated to Justice William O. Douglas." The cost of altering the signs to include the Justice's name is minimal—approximately $15,000.

Early last fall, when the bill was being considered by the Interior Committee, the Washington Post and Washington Star newspapers ran editorials supporting this legislation, which we would like to bring to the attention of our colleagues today:

[From the Washington Post, Sept. 15, 1976]

JUSTICE DOUGLAS AND THE C. & O. CANAL

In "Go East Young Man," retired Justice William O. Douglas told of a mountain climbing experience. A horse fell on him, fracturing more than 20 of Mr. Douglas' ribs. The doctors told the patient that he was lucky to be alive and that, at the least, his mountain climbing days were definitely ended. Mr. Douglas had a unique reaction: "To see whether or not the doctors were correct, I decided to cross the Himalayas in India."

The story and its moral—if you choose to do something, go all the way—is worth recounting because Congress is about to decide whether to dedicate the entire Chesapeake and Ohio Canal to Justice Douglas or only a three-mile section of it. The Senate unanimously passed legislation that would go all the way—dedicating the entire canal to the man who did so much to make it into a national historical park rather than the highway others had in mind. But the House Interior Committee has reported a bill that would dedicate only a three-mile stretch—between Locks 22 and 24.

We agree with the Secretary of Interior, nearly all the national conservation groups, as well as local C. & O. clubs, that dedicating the entire canal is the most fitting way to honor Mr. Douglas. We remember a letter to The Post from the Justice in 1954 urging preservation of the canal. His championing of that cause reminded many citizens of the treasure we had in our area. As time passes, still others will need to be reminded, and a way to that is through dedicating the canal to the man who fought to preserve it.

A chance exists that the House Interior Committee will reconsider its position. It is expected to take up the issue today. It is clear that many have been making a persuasive case that the entire canal be dedicated to Justice Douglas. For the committee to block this movement would be a rebuff not only to countless naturalists who support the idea, but also to the spirited style of conservation that has marked William Douglas' career—all of his career, not just a short stretch of it.

[From the Washington Star, Sept. 10, 1976]

DOUGLAS DEDICATION

William O. Douglas, who was a justice on the Supreme Court for 36 years before he retired a few months ago, has always been a man of strong views and plain speaking. Controversial.

But, on one of the subjects closest to his heart, it would be hard to disagree with him. He summed it up when, as he was leaving the Court, he was asked how he would like to be remembered: "I hope to be remembered," he said, "as someone who made the Earth a little more beautiful."

To Justice Douglas, that meant conservation. Growing up among the sparkling sublimities of the Pacific Northwest's Cascade Mountains, as he did, would make a nature lover of just about anybody. In Justice Douglas, it shaped a sensibility profoundly attuned to wilderness grandeur, and he devoted many of his formidable energies to preserving them.

The Washington of his Court career could never compete with his native state of Washington in outdoor splendors. Even here, though, he found areas of unspoiled nature to enjoy and areas of threatened nature to protect. It is because of his championing that the old Chesapeake & Ohio Canal is today a national historical park instead of the highway it was slated to become in the 1950s.

Justice Douglas dramatized the charms of the Canal with an eight-mile hike along the towpath that still provides such agreeable weekend walks for Washingtonians. It was a gesture that got results: the highway detoured and, in 1971, legislation went through to make the C&O a park.

Now Sen. Thomas Eagleton is pushing a bill to dedicate the Canal to the justice. There is also a House proposal to do a little less, designating a three-mile stretch between Locks 22 and 24 as the Justice William O. Douglas Level.

The renaming of everything from high schools to peninsulas for national figures is a practice regularly carried too far.

Nobody's proposing to change the C&O's historic name in making the dedication, though, and this is a case where person and place have a vital connection. That it would cost a little more in sign alterations to go the Senate route, dedicating the entire canal to Justice Douglas, seems an unworthy reason for choosing the lesser tribute. Both the man and the site are on too grand a scale.

The C. & O. Canal—which we all enjoy as one of the nicest amenities of our Nation's Capital—would not have been preserved without the hard work and good sense of Justice Douglas.

Twenty-three years ago, when the bed and towpath of the canal were destined to become a freeway, Mr. Douglas mobilized forces and organized one of the most effective lobbying campaigns against some of the toughest opponents—the administration, the Congress, and the Washington Post. He led an 8-day protest march from Cumberland, Md., to Georgetown to plead his case for conservation. The hike increased public participation in the Justice's case, and, gradually, with the help of the Canal Association, he was able to convince his toughest adversaries to accept and support preservation. His work came to fruition when the bill to establish the C. & O. Canal National Historical Park was signed into law in 1971.

Justice Douglas devoted a major portion of his life to refining the quality of the environment. In his own words:

I have taken part in almost innumerable crusades across the country to have a river here, a lake there, a bit of woods somewhere else.

Preservation of the C. & O. Canal is certainly one of Justice Douglas' significant environmental achievements, and it is important that we make note of the Justice's accomplishment and share it with future generations by permanently dedicating the C. & O. Canal National Historical Park to him.

The text of the bill follows:

H.R. 3590

A bill to dedicate the Chesapeake and Ohio Canal National Historical Park to Justice William O. Douglas in grateful recognition of his contributions to the people of the United States

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Chesapeake and Ohio Canal National Historical Park, as described in the Chesapeake and Ohio Canal Development Act (16 U.S.C. 410y—410y–6), is hereby dedicated to Justice William O. Douglas in grateful recognition of his long and outstanding service to the people of the United States as a teacher, writer, jurist, and naturalist. The Secretary of the Interior shall have the words "Dedicated to Justice William O. Douglas" prominently displayed on all existing and future signs bearing the name "Chesapeake and Ohio Canal National Historical Park" or any abbreviation thereof, and shall take such other appropriate actions as may be necessary to call to the atention of the public the fact that such park has been so dedicated.

SEC. 2. There are authorized to be apropriated such sums as may be necessary to carry out the purposes of this Act.

COWARDLY PROCEDURE ON SALARY ADJUSTMENTS

(Mr. DEVINE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DEVINE. Mr. Speaker, it is deplorable Members are not permitted to cast their vote and go on record, for or against, the proposed salary adjustment for members of the executive, legislative, and judicial branches of Government.

Our constituents overwhelmingly object to this kind of shenanigans and the whole image of the Congress is further eroded.

I hope the media makes it clear to the public that this House is totally under the control of the Democrat majority by more than two to one, and that leadership will not afford the rest of us the vote on this issue. Unfortunately, all Members are subjected to the ridicule foisted upon us at the whim of the Democrat majorities.

Consistent with this position, I have often sponsored legislation changing the Rules of the House, mandating record rollcall votes on all legislation involving the expenditure of public funds.

CONGRESSIONAL PAY INCREASE

(Mr. HALL asked and was given permission to exclude his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HALL. Mr. Speaker, under a unanimous-consent motion, I would like to include in the RECORD my testimony before the Post Office and Civil Service Committee concerning my opposition to the

congressional pay raise now before the Congress:

TESTIMONY OF REPRESENTATIVE SAM B. HALL, JR.

Mr. HALL. Mr. Chairman, and members of the Committee, I am Sam B. Hall, Jr., representing the First Congressional District of Texas.

Having completed within the last nine months four campaigns, I am acutely aware that the salary of a Congressman is somewhat short of adequate.

But I believe sincerely that a committee of this Congress should examine the alternatives and reach its own decisions and that the question of a pay raise should be faced squarely by the members on the Floor of the House.

We should not rely upon the Executive Branch to take care of that matter for us.

Many of the remarks that have been repeated today by those who have preceded me have nearly stated what I had to say, however, I must differ with a few of the remarks made by those who have already addressed this Committee—I do not believe the Congress, as a whole, is held in such low esteem as some have stated, although I think there is always room for improvement. I feel that in many instances today the Congress is over-reacting to some of the events that have occurred in the past (without me mentioning those events, I think all of us are familiar with the four or five individuals who have created the majority of the problems). I do not believe that the people of the First District of Texas look upon me with disfavor merely because I am a member of Congress, nor do I think that they, as a whole, look upon the members of the Congress as an inferior group. I have not had that feeling conveyed to me by any of those with whom I have come in contact.

My purpose before this Committee today is to state that in the First Congressional District of Texas (and I have made it a policy to visit the District quite often during the past nine months), the vast majority of those with whom I have talked are, like me, against this Congressional pay raise and in addition, they expect us as a body to vote upon matters that affect ourselves.

I do believe, however, in all sincerity, that the tenor of the times today is such that when a Congressman's salary is increased in one fell swoop in the amount of $13,000.00 (which is about the amount today that the average citizen makes annually), and done in the manner in which it is being accomplished, the people are going to take a dim view of the way we handle our own business.

Now all of the things that have been said before with reference to the adequacy of the salaries and the amounts that have been allocated for the judiciary and the others, I am not one to say that the judicial salaries are adequate, because I don't think they are, and I am not here protesting in any way that increase, because I don't know of any other method to get the increase in judicial salaries other than the manner in which it has been done, since that body would not be able to vote themselves increases. But I think the Congress itself, being the body that is most responsible to the people, should, without any equivocation, stand up and be counted on something of this nature, especially at this time. I just honestly believe that there is a right and a wrong way to accomplish something and I cannot make myself believe this is the right way for a member of Congress to vote himself an increase in salary.

As was said by one of the gentlemen who testified earlier, I am constrained to believe that the people of the United States, regardless of the outcome of the vote, would have a kinder feeling toward the members of the Congress if they knew that they took a public stand on such a vital issue, rather than allow someone else to do it for them. I think it gets down to that basic elementary fact.

I sympathize with this Sub-Committee because I know it is taking the brunt of this pay increase matter and I sincerely wish there was a full Committee present to assist you in that burden, however, I believe that the House of Representatives should be the one to fill in the gap and share that responsibility.

I appreciate the opportunity to make this short statement to you.

Mr. FORD. Thank you. I would like to compliment you on the most helpful statement I have heard in the hearings and I appreciate the sincerity with which you delivered it.

Would you care to give us some assistance on what you would like us to report to the floor?

Mr. HALL. Mr. Chairman, I think that to answer that question—I certainly appreciate the kind remarks the Chairman made—but I think that if this group of gentlemen would report out that it was the consensus of this body, of this Committee, that it should be the House of Representatives acting as a body to come and state whether they want to vote themselves an increase, not to become effective this term, but to become effective at the beginning of the next term.

I say that for this reason: I think there are some 40 legislatures in the United States that have passed legislation which indicates that pay raises would become effective two years hence or at the beginning of the next session.

And I can't see why that sort of intelligence would not work here as well as it has worked in the state houses.

I think the people would respect the Congress more even if it did vote an increase, but not to become effective until the beginning of a new term.

As the Chairman pointed out a moment ago concerning persons who may be running for Congress knowing that they are going to earn $57,500.00, you are going to have people interested in running for Congress as long as that body exists. So I don't believe that whether you vote an increase or not, you are going to destroy the desire of people to run for Congress. I merely believe that the right thing to do would be letting the Congress vote on this pay increase.

Mr. FORD. That is with respect to the Congressional pay increase?

Mr. HALL. Yes, sir.

Mr. FORD. What about the Executive level pay, the Judicial, and the 22,861 people who are not getting this lawful increase because of compression?

Mr. HALL. I have no objection to those other than the members of Congress being handled in the manner in which it has been handled, through Executive Order.

I am speaking primarily about the members of Congress at this time.

I had a very active law practice, both federal and state, before being elected to Congress, and frankly I don't think that the federal judiciary system is adequately compensated. I would have no objection to the matter being handled on all other areas of this pay increase as it is now being done.

Mr. FORD. Well, thank you very much.

CONGRATULATIONS TO OUTGOING SECRETARY OF THE NAVY J. WILLIAM MIDDENDORF II

(Mr. O'NEILL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. O'NEILL. Mr. Speaker, on January 18, 1977, the Honorable J. William Middendorf II, the outgoing Secretary of the Navy, was honored at a ceremony held at the Washington Navy Yard. During this ceremony, hosted by Adm. James L. Holloway III, Chief of Naval Operations, and Gen. Louis Wilson, Commandant of the Marine Corps, Secretary Middendorf was presented with a proclamation depicting his accomplishments during his more than 3½ years of service to the Navy.

Before inserting the words inscribed on that proclamation I would like to add my own personal words of congratulations and thanks to Secretary Middendorf.

The following words were inscribed on that proclamation:

CERTIFICATE OF ACCOMPLISHMENT

Presented to J. W. Middendorf II in recognition and appreciation of his extraordinary accomplishments in support of the United States Navy and Marine Corps during his tenure as Secretary of the Navy from 10 June 1974 to 20 January 1977.

His public appearances and persuasive arguments contributed to the development of a clear recognition within the Department of Defense, the Executive Branch, the Congress and the American public of the urgent requirement to rebuild the declining United States fleet in the face of the Soviet Navy buildup. During his tenure he visited 350 ships and every major Navy and Marine Corps installation in the United States and worldwide. Under his personal leadership:

Approval was received for construction of 157 ships over the next five years.

Department of the Navy Budget was significantly increased from $26.9B appropriated in FY 74 to $40.3B requested for FY 78. Shipbuilding funds increased from $3.5B appropriated for FY 74 to $6.5B requested for FY 78.

Special emphasis was given to procurement of a new class of guided missile destroyers (DDG–47), surface effect ships, and hydrofoil patrol boats (PHM).

CH–53E heavy lift helicopter was developed for Navy and Marine Corps.

Development of improved Harrier (AF–8B) began along with major initiative to develop a new generation of tactical VSTOL aircraft (Type A and B) including the thrust augmented wing (TAW).

Development began on numerous Navy and Marine Corps weapons systems, including Trident, Harpoon, Tomahawk, Vulcan Phalanx, Lasers and Major Caliber Lightweight Gun.

Indian Ocean fleet support facility was established at Diego Garcia.

Free world navies were urged to contribute more to collective security effort.

Research and development began or was accomplished on Seafarer fleet ballistic missile submarine communications system, advanced twin-hull surface ships, amphibious assault craft, and gas turbine propulsion.

Approval was received for consolidation of Naval Oceanographic Program, and relocation at Bay St. Louis began.

Downward trend of ship readiness was reversed.

Improved physical fitness standards were instituted in Navy and Marine Corps.

Student Research Program instituted at the Naval War College with Middendorf Award for outstanding students.

Personal participation in Committee on Excellence of Education to review all service schools.

Navy participation in U.S. Bicentennial was extensive, highlighted by Operation Sail & International Naval Review of 4 July 1976 in New York Harbor.

Important actions were taken in Navy historical programs, including:

Tingey House and Washington Navy Yard designation as National historical Landmarks and funding for Tingey House restoration.

Establishment of Naval Historical Center at Washington Navy Yard.

Personal sponsorship of major Naval Historical Museum exhibits and strong support of Naval Combat Art Program.

Numerous important management program actions were taken, including:

Establishment of Navy/Marine Corps Acquisition Review Committee.

Strengthening of Project Manager staffs.

Increasing shipyard productivity.

Implementation of Joint Uniform Military Pay System in Navy and Marine Corps.

As a gifted musician, he left a legacy of marches dedicated to the Navy, Marine Corps, Coast Guard and Naval Academy.

PRINTING OF RULES OF THE COMMITTEE ON THE BUDGET

(Mr. GIAIMO asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GIAIMO. Mr. Speaker, pursuant to rule XI, clause 2(a) of the Rules of the House of Representatives, the Rules of Procedure of the Committee on the Budget are submitted for publication in the CONGRESSIONAL RECORD:

RULES OF PROCEDURE OF THE COMMITTEE ON THE BUDGET

MEETINGS

1. Regular Meetings [1]—

The regular meeting day of the Committee shall be the 2nd Monday of each month at 11:00 a.m., while the House is in session.

The Chairman is authorized to dispense with a regular meeting when he determines there is no business to be considered by the Committee, provided that he gives written notice to that effect to each member of the Committee as far in advance of the regular meeting day as the circumstances permit.

Regular meetings shall be cancelled when they conflict with meetings of either party's caucus or conference.

2. Additional and Special Meetings—

The Chairman may call and convene additional meetings of the Committee as he considers necessary, or special meetings at the request of a majority of the members of the Committee in accordance with House Rules XI, clause 2(c).

In the absence of exceptional circumstances, the Chairman shall provide written or verbal notice of additional meetings to the office of each member at least 24 hours in advance while Congress is in session, and at least 3 days in advance when Congress is not in sesion.

3. Open Business Meetings—

Each meeting for the transaction of Committee business, including the markup of measures, shall be open to the public except when the Committee, in open session and with a quorum present, determines by rollcall vote that all or part of the remainder of the meeting on that day shall be closed to the public. No person other than members of the Committee and such congressional staff and departmental representatives as they may authorize shall be present at any business or markup session which has been closed to the public. This rule shall not apply to any meeting that relates solely to matters concerning the internal administration of the Committee.

4. Quorums—

A majority of the Committee shall constitute a quorum. No business shall be transacted and no measure or recommendation shall be reported unless a quorum is actually present.

5. Recognition—

Any member, when recognized by the Chairman, may address the Committee on any bill, motion, or other matter under consideration before the Committee. The time of such member shall be limited to 5 minutes until all members present have been afforded an opportunity to comment.

6. Consideration of Business—

Measures or matters may be placed before the Committee, for its consideration, by the Chairman or by a majority vote of the members of the Committee, a quorum being present.

7. Rollcall Votes—

A rollcall of the members may be had upon the request of at least 20% of those present.

8. Proxies [2]—

Any member of the Committee may vote by special proxy if the proxy authorization is in writing, asserts that the member is absent on official business or is otherwise unable to be present at the meeting of the Committee, designates the person who is to execute the proxy authorization, and is limited to a specific measure or matter and any amendments or motions pertaining thereto; except that a member may authorize a general proxy only for motions to recess, adjourn or other procedural matters. Each proxy to be effective shall be signed by the member assigning his or her vote and shall contain the date and time of day the proxy is signed. Proxies may not be counted for a quorum.

HEARINGS

9. Announcement of Hearings—

The Chairman shall publicly announce the date, place, and subject matter of any Committee hearing at least one week before the commencement of that hearing, unless he determines there is good cause to begin such hearing at an earlier date, in which case public announcement shall be made at the earliest possible date.

10. Open Hearings—

Each hearing conducted by the Committee shall be open to the public except when the Committee, in open session and with a quorum present, determines by rollcall vote that all or part of the remainder of that hearing on that day shall be closed to the public because disclosure of testimony, evidence, or other matters to be considered would endanger the national security or would violate any law or rule of the House of Representatives. The Committee may by the same procedure vote to close one subsequent day of hearing.

11. Quorums [3]—

For the purpose of hearing testimony, not less than two members of the Committee shall constitute a quorum.

12. Time for Questioning Witnesses—

Committee members shall have not to exceed five minutes to interrogate each witness until such time as each member who so desires has had an opportunity to interrogate such witness.

After all members have had an opportunity to ask questions, the round shall begin again under the 5-minute rule.

In questioning witnesses under the 5-minute rule, the Chairman and the ranking minority member may be recognized first after which members may be recognized in the order of their arrival at the hearing. Among the members present at the time the hearing is called to order, seniority shall be recognized. In recognizing members to question witnesses, the Chairman may take into consideration the ratio of majority members to minority members and the number of majority and minority members present and shall apportion the recognition for questioning in such a manner as not to disadvantage the members of the majority.

13. Subpoenas and Oaths—

In accordance with House Rule XI, clause 2(m), subpoenas authorized by a majority of the Committee may be issued over the signature of the Chairman or of any member of the Committee designated by him, and may be served by any person designated by the Chairman or such member.

The Chairman, or any member of the Committee, may administer oaths to witnesses.

14. Witnesses' Statements—

So far as practicable, any prepared statement to be presented by a witness shall be submitted to the Committee at last 24 hours in advance of presentation, and shall be distributed to all members of the Committee in advance of delivery.

15. Committee Prints—

All Committee prints and other materials prepared for public distribution shall be approved by the Committee prior to any distribution, unless such print or other material shows clearly on its face that it has not been approved by the Committee.

BROADCASTING

16. Broadcasting of Meetings and Hearings—

It shall be the policy of the Committee to give all news media access to open hearing of the Committee, subject to the requirements and limitations set forth in House Rule XI, clause 3. Whenever any Committee business meeting is open to the public, that meeting may be covered, in whole or in part, by television broadcast, radio broadcast, and still photography, or by any of such methods of coverage, in accordance with House Rule XI, clause 3. However, a majority of the Committee may decide at any time to exclude radio, television, and still camera equipment from the Committee room.

STAFF

17. Committee Staff—

Subject to approval by the Committee, and to the provisions of the following paragraphs, the professional and clerical staff of the Committee shall be appointed and may be removed, by the Chairman.

In addition to the staff referred to in the above paragraph, the Chairman shall appoint five professional staff consultants and four clerical staff, recommended by the majority members of the Committee, who shall provide additional staff assistance to the majority members, and three professional staff consultants and two clerical staff, recommended by the minority members, who shall provide additional staff assistance to the minority members, and such other staff as may be from time to time required. The remuneration of such majority and minority professional consultants and clerical staff shall be determined by the Committee.

[1] Written rule required by House Rules.

[2] Written rule required by House Rules.

[3] Written rule required by House Rules.

Committee staff, and consultants, shall not be assigned any duties other than those pertaining to Committee business, and shall be selected without regard to race, creed, sex or age, and solely on the basis of fitness to perform the duties of their respective positions.

All Committee staff, including the majority and minority professional consultants and clerical staff, shall be entitled to equitable treatment including comparable salaries, facilities, access to official Committee records, leave, and hours of work.

18. Staff Supervision—

Staff shall be under the general supervision and direction of the Chairman, who shall establish and assign their duties and responsibilities, delegate such authority as he deems appropriate, fix and adjust staff salaries (in accordance with House Rule XI, clause 6(c)) and job titles, and, in his discretion, arrange for their specialized training.

Staff assigned to the minority shall be under the general supervision and direction of the minority members of the Committee, who may delegate such authority as they deem appropriate.

COMMITTEE RECORDS

19. Preparation and Maintenance of Committee Records—

An accurate stenographic record shall be made of all hearings.

The proceedings of the Committee shall be recorded in a journal which shall, among other things, include a record of the votes on any question on which a record vote is demanded.

Members of the Committee shall correct and return transcripts of hearings as soon as practicable after receipt thereof.

Any witness may examine the transcript of his own testimony and make grammatical or technical changes that do not substantially alter the record of testimony.

The Chairman may order the printing of a hearing record without the corrections of any member or witness if he determines that such member or witness has been afforded a reasonable time for corrections, and that further delay would seriously impede the Committee's responsibility for meeting its deadlines under the Congressional Budget Act of 1974.

Transcripts of hearings and meetings may be printed if the Chairman decides it is appropriate, or a majority of the members so request.

20. Access to Committee Records—

The Chairman shall promulgate regulations to provide for public inspection of rollcall votes and to provide access by members to Committee records (in accordance with House Rule XI, clause 2(e)).

Access to classified testimony and information shall be limited to members of Congress and to House Budget Committee staff and stenographic reporters who have appropriate security clearance.

Notice of the receipt of such information shall be sent to the Committee members. Such information shall be kept in the Committee safe, and shall be available to members in the Committee office.

APPLICABILITY OF HOUSE RULES

21. Applicability of House Rules—

Except as otherwies specified herein, the Rules of the House are the rules of the Committee so far as applicable, except that a motion to recess from day to day is a motion of high privilege.

CONFEREES

22. Appointment of Conferees—

Majority party members recommended to the Speaker as conferees shall be recommended by the Chairman subject to the approval of the majority party members of the Committee. The Chairman shall recommend such minority party members as conferees as shall be determined by the minority party, provided that the recommended party representation shall be in approximately the same proportion as that in the Committee.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. AKAKA (at the request of Mr. WRIGHT), for February 16 and 17, on account of official business.

Mr. DEL CLAWSON (at the request of Mr. RHODES), for today and the balance of the week, on account of illness in the family.

SENATE BILL AND CONCURRENT RESOLUTION REFERRED

A bill and concurrent resolution of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 385. An act to name a certain Federal building in Grand Rapids, Michigan, the "Gerald R. Ford Building"; to the Committee on Public Works and Transportation.

S. Con. Res. 8. Concurrent resolution authorizing the printing of the committee print entitled "The Accounting Establishment" as a Senate document; to the Committee on House Administration.

ENROLLED JOINT RESOLUTIONS SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled joint resolutions of the House of the following titles, which were thereupon signed by the Speaker:

H.J. Res. 239. Joint resolution extending the filing date of the 1977 Joint Economic Report; and

H.J. Res. 240. Joint resolution to give congressional approval to certain governing international fishery agreements negotiated in accordance with the Fishery Conservation and Management Act of 1976, and for other purposes.

ADJOURNMENT

Mr. DOWNEY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 24 minutes p.m.), the House adjourned until tomorrow, Thursday, February 17, 1977, at 11 a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

[*Submitted February 14, 1977*]

710. A letter from the Chairman, Commission on Administrative Review, U.S. House of Representatives, transmitting a report on financial ethics, pursuant to section 5 of House Resolution 1368, 94th Congress, together with minority views (H. Doc. No. 95–73); filed with the Speaker pursuant to the order of the House of February 8, 1977, and ordered to be printed.

[*Submitted February 16, 1977*]

711. A letter from the Director, Office of Management and Budget, Executive Office of the President, transmitting the cumulative report on rescissions and deferrals of budget authority as of February 1, 1977, pursuant to section 1014(e) of Public Law 93–344 (H. Doc. No. 95–75); to the Committee on Appropriations and ordered to be printed.

712. A letter from the Director, Office of Management and Budget, Executive Office of the President, transmitting a report that the appropriations to the Department of the Treasury for the Internal Revenue Service—"Salaries and expenses," "Accounts, Collection and Taxpayer Service," and "Compliance"—for fiscal year 1977, have been reapportioned on a basis which indicates the necessity for a supplemental estimate of appropriation, pursuant to section 3679(e)(2) of the Revised Statutes, as amended; to the Committee on Appropriations.

713. A letter from the Assistant Secretary of Defense (Comptroller), transmitting a report on the value of property, supplies, and commodities provided by the Berlin Magistrate, and under the German Offset Agreement, during the quarter ended December 31, 1976, pursuant to section 719 of Public Law 94–419; to the Committee on Appropriations.
